When they found out that not only did they lose the house but on the same day they lost the election for a president pro tempore of the senate, thereupon they filibustered the legislature for 60 days to keep a bill from being passed. The lieutenant governor was in the chair, and he refused to permit anything to move at all. By that process they managed to keep everything from going through the legislature. A filibuster is a good thing. [Laughter.] I know what it is, because I sat there for 60 days helpless while they held my legislature.

Then it was that I went before the people of Louisiana, never having wanted to run for the United States Senate, and said to the people of Louisiana, "Do one of two things"—for every one of them came out and wanted to put me out of office—I said, "If I am not elected to the United States Senate, I will retire as governor of this State; and if I am elected to the United States Senate, I expect every one of these gentlemen to be recalled or to be made to carry out this platform and let me lift the State out of this mire."

The results of the election were disappointing. The old New Orleans organization stood loyally by their anti-Long forces. They carried the city of New Orleans against me by 4,600, but the country came in with enough of a majority to beat the city vote, and I came to the Senate with a total of about 40,000 majority. I was never supported by the New Orleans organization for any public office I ever held. They fought me for governor in 1924 when I carried the country and was overcome in the city. They fought me when I was elected governor in 1928. They fought me when I was elected to the United States Senate. They fought me until they had nothing left to fight with, but at all times they participated. The very same gentlemen tell you now that the New Orleans organization, the city-hall organization, with which I have had nothing to do, whose support I had never received—that same city-hall government which gave the present senior Senator from Louisiana the majority that overcame the country vote against him when he first came to this body, is at fault. It was the city hall that gave the votes to try to impeach me as governor of the State.

It was the city hall that fought me in every election I had ever had, and when they had been beaten, and it did not make any difference what they did, then it was, after I had been elected to the Senate, that I called the legislature into session on 48 hours' notice, and the same legislature, the same men who had voted 60 to 39 to impeach me for stealing $900 and for carrying a pistol and stealing a cord of wood, voted to give me nearly $100,000,000 to spend, just one year after the time they tried to impeach me. They marched in there, the committee from the same house that came to impeach me, and withdrew the impeachment charges, and the senate passed a resolution dismissing the charges upon their request.

I thought the matter was closed. I thought this matter was over with, but apparently it was not. We came out with a ticket to complete the work. The distinguished senior Senator from Louisiana [Mr. BROUSSARD], wrote a letter to the people of Louisiana. I had never uttered a word against him in any public or private place that I know of, certainly in no public place, except to lament the very fact that he failed to come when I thought he should have come to help me in those fights.

But, lo and behold, the senior Senator decided to break the ice, so he wrote down to the State of Louisiana in the year 1931 calling upon the people to get together and defeat every candidate for public office who had been supported by HUEY P. LONG in any capacity. Since he was one, himself, I thought he was going to resign, but he did not. There was but one thing for him to do when he wrote the letter that anybody had my help to be elected by LONG ought not to be elected again. I thought he would resign. But he did not. He waited to run.

Somehow even that advice was not accepted by the people of Louisiana. The nine candidates out of nine of the State administration were accidentally elected by majorities varying all the way from 100,000 down to 40,000. Then came along the election for United States Senator in 1932 that I have discussed. That was the election.

Mr. President, what do agreements mean? I want to quote a statement made by the Broussard counsel and adduced before this committee. They stated:

> We agreed to abide the decision of the arbitration committee.

That is what they said:

> We agreed to abide the decision of the arbitration committee.

That was made after the election, that was made before the senate committee, and now they come here and tell you they have to have a great deal of exposure.

Mr. President, I have not undertaken to charge the committee with any responsibility for what has been published in the press. I simply want to get this matter before the Senate in a proper way so that it will be understood. But in order that it may be understood I am sure my colleague would desire that I mention another matter, and in deference to what I think would be his own wishes I shall do so.

There has been a practice down in our State for a number of years of filing what are known as dummy candidates. I want to explain that to the Senate. There will be five or six candidates for an office and one of the organizations will slip in at the eleventh hour and file about five more candidates, never intending that those candidates will really go to the polls. They are filed because every candidate has the right to put a name to be drawn from to choose the election commissioners. They draw the election commissioners in that way from among a list of names which is gotten in that way. Every candidate for a local office files his list

of prospective commissioners. Then they take the name of the candidates for commissioners and put them all in a hat, and the first five that are drawn are named as the five election commissioners.

In other words, if there are 15 candidates who put in names friendly to you and the other man has six, you would have two and one-half times as good a chance for drawing commissioners as he would have. They did that down there long before I knew what politics was. When I first ran for governor I was not wise to it. I was wise the second time, but I was not the first time. I learned how after having been beaten once. If I could not learn from my enemies I do not know from whom I could learn.

But we decided to try to stop the practice. We decided we were going into court and try to stop the faction who had started this business of filing dummy lists of candidates, because it was a terrible expense to us. We had to get money enough to pay to file candidates that we knew were not going to run against the candidates that they were filing that we knew were not going to run. So we went to court to stop it, but we lost the case. My colleague's side beat us in court twice. The case went to the Supreme Court of Louisiana. We lost the case in the lower court and, of course, that court was no good, to hear them tell about it, but we went to the supreme court and the supreme court said:

Neither such officer nor the committee itself has jurisdiction to question or inquire into the truth of a declared candidacy.

That is what the supreme court said, that neither the court nor the committee could question those dummy lists which had been filed on us at about midnight one night. They did not say it once. They went over it in another case and said it again. The point I want to bring to the attention of Senators is that I am reading particularly from Justice Odom, who was the organ of the court. They beat us in another case, two judges dissenting and five judges concurring. But Justice Odom, the organ of the court—and I might now state to the Senate that Mr. Justice Winston Overton, a brother of the Senator elect, is a member of the supreme court, and he concurred with the five justices in deciding against us that the committee and the court had no jurisdiction in that case. That was Justice Winston Overton deciding against us, a good virtuous judge as long as he decided against the faction with which his brother was affiliated.

In the public service commission campaign, when they had filed dummies all over the State—not for Senator, but when they had filed as many as 20 in one parish, we filed 8, they say, and for the purpose of argument we will admit that for the present. Why not? They went to court again. They had won both of those cases, the court holding that the committee could not disqualify a candidate who filed and swore he was a candidate. The court held the committee could not inquire into it. But lo and behold, they waited until the commission campaign commenced and then they came before the court to contest these candidates. They went into court on a day when it would be too late for us to prepare petitions and go into court even if they won.

Lo and behold, the court got corrupt, to hear them tell it. How did the court get corrupt? It got corrupt, gentlemen of the Senate, because it would not reverse its decision that had been made against us.

The court got corrupt because Judge Winston Overton, who had held that the committee had no jurisdiction when he decided against us, refused to change his opinion when the matter came back again before the court. The court did not get corrupt when it upheld the opposition and held that neither the committee nor the court had any jurisdiction to inquire into the regularity of the filing of a candidate. It did not get corrupt when Judge Odom changed his opinion when it came up against us and held that we should be disqualified. Oh, no; that was not corrupt. Just as long as the judge held to his opinion or changed it to vote against us every time the case went to court, he was a good and holy and righteous judge. But woe be unto the man who had decided twice against us and who held to the same opinion the second time and the third time, who maintained the opinion he had rendered in the original case.

That is the dummy candidate business about which they are raising so much Cain.

But that was not all they did. Let me show how they handled these dummies. They had control of committees in some parishes and we had control of committees in some parishes. In the parish of East Baton Rouge, the domicile of the Standard Oil Co., they have control. In that parish they filed 18 dummies and we filed our 8. What did they do? They rejected our 8 on the ground that it was immoral to use them, but upheld their own 18, and yet we beat the life out of them. I have here a telegram from the secretary of state, which I want to read:

BATON ROUGE, LA., *January 30, 1933.*

Senator HUEY P. LONG,
United States Senate:

Replying inquiry, 18 candidates for parish school board, ward 3, East Baton Rouge Parish, and 1 candidate for public service commissioner—

Making 19 in all—

second district, for Democratic primary, September 13, were withdrawn after drawing of commissioners for said election. J. C. Pearce, chairman Democratic executive committee, ascertained from this office last minute candidates could be withdrawn so as not to appear on ballot. Pearce withdrew 18 candidates in one letter dated August 30. Pearce was active supporter of Broussard-Borron faction.

Borron was the candidate for Congress.

Senate Committee Investigator Holland examined these documents and has this information.

C. E. CONWAY, *Secretary of State.*

I send this telegram to the desk and ask that it may be published in the RECORD entire at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See Exhibit C.)

Mr. LONG. So wherever there were dummy candidates who were friendly to us they rejected them and used the dummy list of candidates who were opposed to us; but when it came to the parishes over which they had control they used the names of their dummies in the parish of Iberia and threw out the 8 that we filed, and they used the 19 that were filed by our opposition in the parish of East Baton Rouge and threw out the 8 that we filed, and the district judge enjoined us from filing them again.

Mr. President, since the campaign I have undertaken not to be anything less than generous. I have not undertaken to fight the campaign over again. I have not undertaken to boast of any victory, I hope, and I have never thought it part of a good sport in any political victory to do anything that reflected upon or affected the feelings of any defeated candidate. I know what it means to be beaten for public office. I have been beaten myself; I have taken my beatings. I expect some day that I will have to take others. I have done so in nearly every campaign we had in some quarter or other.

But, now, these reports have been circulated from one end of this country to the other as though there was an exceedingly unfair election. I have filed with the Senate the records and documents which I hope afford prima facie a reasonable and sufficient answer.

EXHIBIT A

NEW ORLEANS, LA., *September 16, 1932.*

To the Overton Campaign Headquarters:
To the Broussard Campaign Headquarters:

The undersigned members of the arbitration committee desire to submit this report of their activities on September 13, 1932:

I

In ward 17, precinct 7, complaint was made that Anthony Christina, who was a Broussard commissioner in this poll, was not permitted by the other commissioners to serve for the reason that he was a candidate for the parish committee in the precinct in which he was a commissioner. The committee was of the opinion that the question of eligibility, under the circumstances, was more or less doubtful; but it was unanimous in the opinion that good morals and the spirit of the primary law justified the committee in holding that he should not serve as a commissioner.

Mr. Irwin Williams, who made this complaint, stated that it was agreeable to him to substitute another Broussard commissioner. The committee recommended that some other qualified supporter of the Broussard faction should be permitted to serve as a commissioner in Christina's place, and that if the vacancy had already been filled the commissioner elected should resign and permit the Broussard faction to substitute a commissioner for Mr. Christina.

It was reported that Christina had been arrested and charged with disturbing peace. The committee felt that the fact that he had a commission doubtless justified him in arguing for his rights and in fairness to him the committee requested Recorder Emile J. Leonard to discharge Mr. Christina when he came before him for trial. This was done.

II

In ward 8, precinct 1, complaint was made by Mr. Garland, of the Overton faction, that a Broussard commissioner was serving in this precinct, notwithstanding the fact that he was a candidate for the parish committee. The committee made the same ruling in this case as in the Christina case, but suggested to Mr. Garland that in view of the lateness of the hour, the complaint having been made in the middle of the afternoon, it would be advisable not to disturb the situation. The committee heard nothing further of the complaint.

III

In ward 6, precinct 8, complaint was made that Mr. Bourgeois, a Broussard commissioner in this precinct, was not permitted to serve on the ground that he did not reside in the ward notwithstanding the fact that he was registered in the precinct. The committee, upon inquiry, was informed that the registrar of voters had scratched Mr. Bourgeois's name from the registration rolls. The committee ruled that it could not go behind the registration rolls, and accordingly Mr. Bourgeois could not serve as commissioner.

IV

In ward 9, precinct 3, complaint was made that Peter Searbars, an official watcher, was ordered to go out of the barriers and upon his refusal was arrested and charged with refusing to move out of barrier. The committee ruled that an official watcher has a right to remain in the barrier provided he does not electioneer, and recommended the immediate release of Mr. Searbars. In view of the orders issued by the mayor that all persons arrested for disturbances on election day would not be paroled until after the close of the polls, the committee requested the mayor to revoke this order in this particular case, and the mayor complied with this request and Searbars was released.

V

In ward 13, precinct 6, a similar complaint as the preceding one was made when Arthur Johnson, an official Broussard watcher, was ordered out of the barriers and arrested for refusing to move therefrom. The committee made the same request of the mayor and Mr. Johnson was released.

VI

Several inquiries were made during the morning concerning the right of the official watchers to remain within the barriers, and two or three complaints were received to the effect that they were not being permitted to remain within the barriers. The committee ruled that official watchers should be permitted within the barriers provided they did no electioneering and instructions were issued accordingly. As far as the committee knows, all such instructions were carried out.

VII

In ward 7, precinct 11, Mr. Alvin Cobb advised the committee that the commissioners and watchers representing his faction were now supporting the other candidate, and asked whether an unofficial watcher could be placed by him in front of the door of the poll in the street immediately outside of the barrier, either in a parked automobile or standing. His position would be about 3½ feet from the polling booths in which the voters marked their ballots. After full consideration the committee came to the conclusion that it was the intent of the primary law to keep all persons other than commissioners, official watchers, and those casting their votes a reasonable distance away from the polling booths by the construction of barriers along the curb for a distance of 50 feet and that no one should be permitted in the street immediately in front of or close to the polling booths. The committee was of the view that the law provides for barriers immediately along the curb and not out into the street, on the theory that no one will be permitted to stand in the public streets, and, therefore, it was not necessary to close the streets by the erection of barriers. The committee was of the view that it was contrary to the theory of the primary law to permit citizens to stand immediately up against the polling booths in the public streets. The committee therefore advised that Mr. Cobb station his unofficial watchers on the sidewalk across the street at such locations where they could have unobstructed view of the ballot boxes and the poll. The committee advised the police officer at that poll that any automobile or other obstruction which would interfere with the view should be removed.

VIII

Mr. Harold Nathan, representing the Honest Election League, reported during the late afternoon that two or three of the polls were so located that watchers did not have an unobstructed view of the ballot boxes. Mr. Nathan was subsequently informed that it was impossible at that time to recommend the rearrangement of any polls but that, if Mr. Nathan would have the police officers assigned to the precincts in question communicate with the arbitration committee, instructions would at once be issued to have the ballot boxes so placed in the polls as to permit an unobstructed view by the official watchers and the public. No further requests in this respect were made of the committee.

IX

In ward 17, precinct 5, complaint was made by Broussard headquarters that the Overton commissioners had started an argument with the Broussard commissioner and that he was being threatened with arrest. The committee, through the police department, communicated with the officer located at the poll, and was informed that the trouble had been straightened out and that the commissioners were performing their duties peaceably.

X

In ward 9, precinct 10, a Broussard commissioner advised the committee at about 10 o'clock a. m. that he lived in the eleventh precinct but had received a commission to serve in the tenth precinct; he reported in the morning at the eleventh precinct and, upon discovering his error, immediately went to the tenth precinct, arriving at 5 minutes of 6 in the morning by his watch. He stated that the other commissioners had elected a commissioner to serve in his place and had already opened the poll and received votes, contending that it was 6.10 a. m. by their watches at the time he reported. He insisted that he had verified his watch with the official time and that his watch was correct. The committee concluded that it had no way of determining the disputed question of fact concerning the time of arrival, particularly in view of the late hour at which the complaint was made, and that there was nothing the committee could do. The complainant was advised that if he had reported the matter immediately upon its occurrence the committee could have then been in a position to determine the merits of the controversy.

XI

Two inquiries were made of the committee concerning the right of persons to vote whose names were upon the registration rolls, but whose right to vote might be questioned on the ground that they had subsequently removed from the precinct. The committee advised that the commissioners could not go behind the rolls, and anyone whose name was on the official poll list had the right to vote, subject, of course, to challenge.

XII

One inquiry was made whether a voter who had mislaid or lost his poll-tax receipts could cast his vote. The committee advised that if the name of the voter appeared in the official poll-tax lists in the possession of the commissioners, he should be permitted to vote without the production of the original receipts.

XIII

One inquiry was made from the seventeenth ward, at 10 minutes to 7 p. m., as to whether a voter who had left his registration receipt at home and did not have time to get it and return before 7 should be permitted to vote. The committee advised that if the voter was personally known to all of the commissioners, if his name appeared on the official rolls, if he had cast his vote in previous elections, and if he had not voted that day, he should be permitted to vote.

XIV

In ward 10, precinct 5, report was made to the committee that McIntyre, an Overton supporter, had beaten up Babin, an official Broussard watcher, and that both of them had been taken to the sixth precinct station where McIntyre had been paroled and Babin taken into custody. Upon investigation, the committee found that both McIntyre and Babin had been arrested, charged with fighting and disturbing the peace, that neither of them had been paroled, and that both had been sent to the court for trial. The committee accordingly ruled that in view of the fact that the case was in the hands of the court it should do nothing in the matter.

XV

Patrick McGill telephoned to ask whether an elderly lady who was sick and unable to come to the poll, and who desired to cast her vote for sentimental reasons, could be permitted to vote if a commissioner of each faction went to her residence. The committee discussed the matter, and Mr. McGill was told to have the commissioners telephone the committe. Nothing further was heard of the case. The committee therefore expressed no opinion in the case. In subsequent discussion among the members of the committee it was agreed that such a vote could not be legally cast. Later a similar question arose and the committee unanimously ruled that the vote could not be cast.

XVI

At about 6 p. m. the Broussard headquarters and the Honest Election League informed the arbitration committee that they had received complaints to the effect that the official watchers were advised that they would not be permitted to witness the count after the closing of the polls in 3 precincts, 1 in the eighth ward, 1 in the sixth ward, and 1 in the fourteenth ward, and that there were rumors to the effect that similar action would be taken in every precinct throughout the city. The committee ruled that all official watchers had the right to enter the polls and witness the count and talley after the closing of the polls. The committee communicated with Superintendent Reyer at police headquarters and requested him to dispatch a motor-cycle

officer to each of the three precincts in question to see that all official watchers were permitted to enter the polls after the close of the voting and watch the official count. In addition, request was made of Superintendent Reyer by the committee that he issue an all-station message instructing all officers at the polls to see that official watchers were permitted to enter the polls and watch the count and talley, and to see that all doors of the polls were kept open and the lights kept burning. The action of the committee was reported to Broussard headquarters and to the Honest Election League.

XVII

Complaint was made in one of the precincts of the seventeenth ward to the effect that the doors of the poll were closed during the count, although the official watchers were permitted inside. The committee communicated with the police officer stationed at that precinct and instructed him to see that the doors were opened and the lights lit and the public permitted to witness the count from outside the poll. The committee was subsequently advised that the doors were opened, the official watchers permitted inside the poll, and a bar placed across the doorway which permitted the public to see the count but not to enter the poll.

XVIII

Mr. Alvin Cobb made several complaints to the effect that in the fifth precinct of the seventh ward the doors of the polling booth had been closed during the count and all watchers refused admission. The Honest Election League also made the same complaint. The committee immediately communicated with Superintendent Reyer at police headquarters and requested him to dispatch a motor-cycle officer to the place in question, with instructions to see that doors were opened and all official watchers permitted entry.

XIX

Broussard headquarters inquired whether the public had a right to enter the polls after the close of the voting and witness the official count. The committee ruled that only commissioners and official watchers had a right under the law to enter the polls for that purpose, but that the doors should remain open, the lights lit, and the public permitted to witness the count from the outside, with due regard to public order and decorum.

XX

Complaint was made in ward 7, precinct 1, to the effect that a ballot box had disappeared and had subsequently reappeared. The committee advised that there was nothing it could do in a matter of this kind and that this was matter of contest before the proper tribunal.

XXI

Complaint was made from one of the precincts, during the morning, that the poll list showed six more people as having voted than had been checked off and counted by one of the official watchers. The committee advised that there was nothing it could do in a matter of this kind and that this was likewise a matter of contest before proper tribunal.

* * * * * * *

The committee began its proceedings at 5.45 a. m. and adjourned at 9 p. m.

All complaints came over the telephone with the exception of the one made by Mr. Garland, who called in person.

All complaints were investigated, fully discussed, and every decision was unanimous. It is the opinion of those members of the committee who have previously served on similar committees that there were far less complaints than in any previous election in recent years, and from the standpoint of the arbitration committee it was the most peaceful and orderly election in many years.

All public officials cooperated fully with the committee with a view to carrying out all of the committee's rulings.

Respectfully submitted.

A. MILES CAL.
WM. J. GUSTE.
BERTRAND COHN.
MICHEL PROVOSTY.
NICHOLAS CALLON.
RENÉ A. VIOSCA (BROUSSARD),
Chairman.

EXHIBIT B

NEW ORLEANS, LA., *October 7, 1932.*

LOUISIANA DEMOCRATIC ASSOCIATION,
New Orleans, La.

MY DEAR FRIENDS: On September 15 Senator LONG announced his resignation as chairman of the organization and in his stead you did me the honor to select me as his successor. I was not present at the meeting when his resignation and my selection occurred.

On the day following, however, I made public the statement that I would call the association together at an early date and submit my resignation as chairman and suggest the selection of Dr. Joseph A. O'Hara as permanent chairman of the organization.

Doctor O'Hara, however, asked that I delay calling the association to any meeting for the purpose of selecting him as chairman until a check up had been made and all debts of the organization had been fully paid. Doctor O'Hara stated he was entirely too much occupied with his private and official duties to assume the burden of heading the organization unless he could take it with the organization free of debt. I agreed with Doctor O'Hara that I would remain as chairman until we could raise sufficient funds to retire your indebtedness, after which he would be formally selected as your chairman.

Our obligations consisted of the following:

Deficit for complete-the-work campaign, January, 1932, including candidates supported for governor, lieutenant governor, secretary of state, State auditor, treasurer, attorney general, superintendent of public education, registrar of the State land office, State senators and representatives	$9,500
Obligations contracted for literature, stamps, stationery, sound truck, and traveling expenses for Wade O. Martin, (candidate for public service commissioner)	4,500
Obligations contracted for circular issued in reference to J. Y. Sanders, jr., being on public pay roll	400
Deficit for special train expense, New Orleans to Baton Rouge, for organization to opposition mass meeting opposing State administration's program	2,500
(NOTE.—Balance of expense amounting to about $1,100 was contributed by ward organizations in cash.)	
Deficit for account of unemployment-relief work in New Orleans and surrounding parishes	8,500
(NOTE.—This was aggravated after January, 1932, when failure to sell State bonds stopped public work and threw several thousand employees off public pay roll.)	
Deficit expense accompanying Federal Flood Control Committee	650
(NOTE.—This expense has not been charged because it should have been borne by Louisiana Flood Control Committee.)	
Total	26,050

These accounts could only be segregated by approximation, but round figures herein given represent as nearly as we can give you the obligations of the organization.

To this there should be added the further deficit figure of approximately $8,000, which I undertook to raise as the association's contribution to the national Democratic fund. On account, however, of the technicalities it has been deemed necessary to keep this account separate, and for that reason a bank account under the name of "Victory fund" was established at the American Bank & Trust Co. to cover this item, so that the national organization could secure daily information relative to full contributions whenever it so desired.

The Franklin Printing Co., Earle J. Christenberry, Mr. Abe Shushan, the Roosevelt Hotel, and myself, along with many other creditors, had carried these deficits and many of us have advanced the funds which were required on the same.

We had a time when the association could catch a breathing spell and secured sufficient contributions to balance these accounts.

The campaign managers for Senator OVERTON elected to keep contributions to his campaign and expenses of the same separate. For this reason the persons who would ordinarily contribute funds direct to me for the association contributed to the Overton campaign instead. In order to raise these funds I have called upon all of our friends for voluntary contributions.

It will be remembered that this association and all of the State employees of its various boards and departments contributed 5 per cent of their monthly salary over a period of approximately 10 months, beginning the 3d of July, 1931, and until April 11, 1932, which contributions were turned over to the New Orleans Welfare Committee, an organization which has been established by the civic authorities of the city, but which was about to cease functioning for lack of funds until this association undertook, with the regular Democratic association, to supply funds for the continuance of this work.

Practically all of our employees acceded to this request for 5 per cent a month for welfare work during the entire 10 months; as a result of which the city of New Orleans and adjoining parishes had no bread line during those months of depression. When the civic boards called on our then Governor LONG for help for this purpose when welfare work was about to cease, at a meeting with bankers and civic agencies of the city Governor LONG requested me to advance $15,000 until contributions could be taken up to repay me. In due course I was repaid this $15,000 by the welfare committee from the 5 per cent contributions. I collected and turned over to the New Orleans Welfare Association, on this account, approximately $300,000. This money was well and judiciously spent in a nonpartisan and nonpolitical way, and was audited and approved by public agencies of the public.

The same committee was deemed to have done such splendid work that in the organization of the United States welfare relief work members of this committee were named to head the agencies of the State for handling Federal unemployment relief.

Upon bonds being voted by citizens of New Orleans to care for this unemployment relief work, the State employees were not asked to further contribute. However, certain ward political workers had become so identified with this work that it became necessary that they continue in the interim with some of the unemployment relief, and expenditures were made which amounted to quite a sum of money. This sum we had hoped to have reimbursed by the city funds or from the Federal unemployment fund. It was deemed unwise, however, to undertake to reimburse from such funds because it would be misunderstood, so the association should assume and should discharge the remaining obligations.

The city of New Orleans voted the $750,000 unemployment relief bond issue by an overwhelming majority. This evidences the public approved the kind of work and methods by which the same were handled.

In order to raise funds to pay off the deficit of the association prior to Doctor O'Hara taking the chairmanship of the association, is was suggested to the employees of the State that if they could contribute as much as 10 per cent of one month's salary the same would close up our account for all welfare work, campaign, and other public work deficits, and with the Federal Government having come into the unemployment relief work that hereafter much of the welfare work could be assumed by the State agencies handling such Federal funds. This can not be entirely true, however, because some of the rules and regulations which were made in order to secure Federal funds are a great deal narrower and stricter than the rules of the New Orleans Welfare Committee.

The reconstruction act under which relief funds were made available makes a very definite distinction between persons unemployed and those poor unfortunates who are unemployable. These figures made it necessary that this association should try to keep up its welfare work to some extent in the future and as much as possible to try to help persons in need who can not secure help from other sources.

At this time we have about raised funds sufficient to pay off the deficits. Many persons in private life have given us substantial contributions. Many of the officers and employees of the State have contributed as much as 10 per cent of their salary for one month. There have been a large number of State employees who did not feel they could contribute as much as 10 per cent of one month's salary but who have contributed something. A large number have not felt able to give anything. However, this should not be taken as an act of disloyalty to our organization or to the work which we have undertaken to do, because they have been called upon so steadily and so regularly to contribute to the unemployment relief funds and have done so solely and by themselves, having paid up to even $300,000 within the last year or so, that it would manifestly be unfair to feel agrieved at any of the large number of employees who did not feel like contributing anything at this time, particularly when the contributions this time, to a large extent, are political, whereas when funds were being contributed at the rate of 5 per cent of each month's salary for the unemployment relief over a period of 10 months, it is fair to say over 90 per cent contributed regularly to this fund.

We have been, to some extent, hampered in our political work and in our welfare work by reason of false newspaper reports, usually circulated through the Times-Picayune. In many instances when funds were being collected to care for the sick and needs of this city, this newspaper has undertaken to spread the impression that large and unwholesome campaign funds were being collected for this or that campaign; in fact, in order to pay up deficits above listed. When we called for contributions this newspaper immediately reported day after day that the same was to pay a deficit for the Overton senatorial campaign. We could not see and explain matters to all of our friends, and no doubt this accounts for the fact many of them did not contribute this time, in the belief that the reports in the Times-Picayune were founded on some basis of fact, and while this newspaper yet tries to get the impression to the public that all of the unemployment relief fund collected has been for political purposes, the public at large has been aware to the contrary, and has most generously supported the efforts of this association for civic improvements. It should be a mark of pride to every member and worker of this association that from year to year, by constantly mounting majorities, the acclaim of the people of this State and of this city, has never wavered in this association.

I therefore submit you this, my resignation as chairman of this association, and place in nomination for my successor, Dr. Joseph A. O'Hara.

Yours truly,

ROBERT S. MAESTRI.

EXHIBIT C

BATON ROGUE, LA., *January 30, 1933.*

Senator HUEY P. LONG,
Senate Office Building:

Replying inquiry 18 candidates for parish school board, ward 3, East Baton Rouge Parish, and one candidate public service commissioner, second district, for Democratic primary September 13 were withdrawn after drawing of commissioners for said election. J. C. Pearce, chairman Democratic executive committee, ascertained from this office last minute candidates could be withdrawn so as not to appear on ballot. Pearce withdrew 18 candidates in one letter dated August 30. Pearce was active supporter of Broussard-Borron faction. Senate Committee Investigator Holland examined these documents and has this information.

C. E. CONWAY, *Secretary of State.*

Mr. BROUSSARD. Mr. President, I was sick all last week, but on Saturday, when notified that the junior Senator from Louisiana [Mr. LONG] would make the speech which he has made to-day, I got out of bed and came here. I was again notified this morning that he would make the speech to-day. So I am here again.

The entire matter discussed by the junior Senator from Louisiana is before a committee of the Senate. There are five members of that committee, not one member of which—one of whom is now presiding over the Senate [Mr. BRATTON in the chair]—can say that I ever approached him or suggested anything in connection with the Louisiana primary election as to which I felt it to be my duty to declare that I had been robbed. I have not said anything to anybody about the proposed investigation to members of the committee. I have not been in Louisiana. My friends have reproached me for not going back there. I made the protest to the committee with great reluctance. I have served here for 12 years. Many Members of the Senate have known me during the entire period of my service, and some of them for lesser periods during that time. I hope I have never done anything in this body that would cause me to lose the respect of any honorable gentleman here.

I do not claim I was nominated; I do not claim any office; but the State of Louisiana has been degraded to such an extent that I felt I owed it to the people who have honored me and members of my family for nearly a century back to do something for Louisiana, when corruption and bribery and intimidation—even intimidation of the bankers of the State—exist to such an extent that no honorable man dare offer himself for public service. If those now in control think he is honest he can not get past.

I shall not now attempt to answer the junior Senator from Louisiana. I want first to read his speech. I do not want at this time to answer it in detail; but when he insinuates that he elected me to the United States Senate he states something that is untrue. I was elected to the United States Senate in 1920, when I did not know him. His brother supported me, but the brother to whom I am referring did not support him when he ran for United States Senate. His brother also supported me in the last election. I did not know the junior Senator from Louisiana in 1920, but I was elected.

In 1924 he ran for governor and came in third. I came up for reelection in 1926, and he came to my support but insisted that I promise to support him for governor, which I refused to do. I told him there were hundreds of men in the State of Louisiana who I thought better fitted than he was for the governorship. So he left my campaign. Mr. Robert Ewing, against whom he turned later, brought him back into my campaign, and he made speeches for me. He claims he elected me. I was elected in 1920 when I did not know him. I was elected in 1926 when the people to whom he refers, the organization in New Orleans that he condemns, opposed me, as they have been opposed to my father, to my brother, and to me in politics in the State of Louisiana for nearly 80 years.

I have not interrupted the junior Senator from Louisiana because since the day he entered this Chamber I have not spoken to him. I will not let him speak to me; but whatever the committee may find—and that is something I am not referring to to-day—that is left to the committee. I have never spoken to anybody about the proposed investigation, as every member of the committee knows and as the investigators know.

I need no defense, not at least before the people of Louisiana, against any charges which may be brought by people who are now dominating the State through an issue of obligations of over $300,000,000. I stand with respectable people even if I am charged with being with the Standard Oil Co. I never was. Nobody here or in Louisiana can charge me with that.

Whatever has been said here has been noted. I shall read the speech to-morrow. I want to answer it properly, and when I answer it I shall not answer for the men who have bought the votes; I shall answer for the respectable element of the State of Louisiana.

Mr. LONG. Mr. President, the Senator is somewhat beside the facts. I will not dispute anything as to private conferences that he says occurred, because the Senate would have nothing but his word against mine. I will not dispute

that in 1920 he was elected without my help; he was. I had nothing to do in opposing him or electing him in 1920. I am sorry he brought up that point. I wish to say, however, that in 1920, being a reformer and interested in the race for governor, I had promised my support to Governor J. Y. Sanders, if he supported John Parker for governor, and later I found myself faced with three Parker men running, following that promise, but I kept my word and voted for Sanders, though otherwise I took no hand. So the Senator is right about that.

I am sorry that he mentioned 1926. He states the truth when he states that I asked him to support me for governor if I went out and supported him. That is true. He states the truth when he says that he refused to support me if I supported him. That is true. What I now state I take it the Senator did not know. It is true I was brought into that campaign with the promise that I would be supported for governor by Dr. Thomas Stark, of Lafourche, sheriff of that parish, and by T. A. Landry, sheriff of the parish of Iberia, and many other Broussard supporters, who said that if I would come into the campaign, they felt that I was entitled to their support. It is true that when I came up for governor that I got some of that support and some I did not get.

The Senator is also stating the truth when he says that he never supported me for any public office. I admit that.

The Senator is in error on another matter, as to which we have only the cold public record. The Senator says that we spent $300,000,000 in bonds to control the State. Mr. President, the facts are the State of Louisiana does not owe $300,000,000 worth of bonds, or anything like that sum. It does not owe half that much; but of the bonds the State of Louisiana does owe, $11,000,000 were voted during the carpetbag régime before my distinguished friend or I were born; $41,000,000 were floated under governors who have always opposed me, making $52,000,000. There have been floated since I have been governor about $60,000,000 of highway bonds, about $5,000,000 of bonds to build a State capitol, and I think somewhere near three or four million dollars for education. So, instead of $300,000,000, the Senator is in error, in that the amount would probably be $70,000,000, and not more than that.

The Senator has a right, however, to blame me for $41,000,000 floated by governors with whom he is on intimate terms and with whom I am not, because when they floated the bonds they never provided revenue with which to pay interest or maturities, and when they began to come due in 1930 these distinguished gentlemen who had floated and signed the bonds joined in solid company with my distinguished friend here and did all they could to keep me from having a tax levied so as to pay the bonds, the money derived from which they had spent and which bonds bore their own signatures.

One thing further. I wish to say that the Senator states a further truth when he says he has not spoken to me since I have come into the Senate. He further says that he is waiting for me to speak to him. Well, I hope the Senator will not hold his breath for that to happen. [Laughter in the galleries.]

The PRESIDING OFFICER. Let there be order in the Senate, and this admonition applies to the galleries.

Mr. LONG. I have received a telegram giving me the exact figures to dispute the statement of my colleague as to the pay rolls of the State when he ran.

Levee roll: September, 1931, $42,409.13; September, 1932, $31,413.30—a decrease of $11,000 in the year that he ran, as against the year that he did not run.

That is the levee roll.

Board of health: September, 1931, $20,143.92; September, 1932, $26,086.78. That is an increase of that pay roll of $6,000.

Dock board: September, 1931, $181,342.35; September, 1932, $156,229.93—a decrease of $34,000 of September, 1932, over September, 1931.

Highways: Here is the great charge. Highways: September, 1931, $523,705.63. That is the highway commission a year before this race—$523,705.63. September, 1932, $201,788.25—a decrease of about 60 or 65 per cent.

I ask that this telegram of figures may be printed at the conclusion of my remarks as an exhibit.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Exhibit D.)

Mr. LONG. Now just one further remark:

The senior Senator from Louisiana does not regret any personal feeling that he has toward me as much as I do. I know how the Senator feels. He probably feels that I should have supported him in 1932. I wish I could have. When I was tied hand and foot by my enemies; when they were strangling that State, trying to disbar me as a lawyer, trying to put me in the penitentiary, raising hundreds and hundreds and hundreds of thousands of dollars, and publicly advertising that they had raised them—in those days when I had to carry revolvers in order that my life might be safe, I wish that when I called upon my friend I could have received his help. When I had never uttered one word against the Senator's name in my lifetime, I wish he had not seen fit to go back to the State of Louisiana to awaken me on a Sunday morning with an 8-column headline saying that any man who received the support of HUEY P. LONG in a State election had to be beaten because he was corrupt, or else he would not receive that kind of support. And I wish the Senator could do one further thing:

I wish the Senator, instead of indulging in generalities and instead of expressing his feelings, such as we all have when we receive a defeat—I wish the Senator, when he consented to an arbitration committee, with two members on each side, would abide by the report of that arbitration committee. When I went out and let the two members appointed by them handle the election, and when they came back and said they had handled it and it was fair and square, and that every public agency was placed at their disposal to conduct the election as they thought it ought to be conducted, and when the Senator received their report that it was the fairest, the squarest, and most orderly election that had been held in years, instead of filing with this committee a document charging fraud without a single, isolated specification of fraud, I wish that before he made these statements of fact and filed that document he had consulted the public records of the State and had been guided by the report of his own arbitrators.

I have not said anything against the good name of the Senator. I have not accused him of ever stealing anything. I have not accused him of a single act of rascality. I do not accuse him of it now. I gave him credit for all good motives; and nothing have I ever said in any respect to reflect upon him or his career except as I disagreed with him in his public conduct, and as he had a right to disagree with me. But, Mr. President, when the Senator has stood on this floor and made these statements as to these miscalculations and misinformation, so-called facts that are not borne out and are disputed by the record, so-called facts that are disputed by his own arbitrators, charges that his own men in charge of the election, who were agreed upon to run that election, and whose report everyone agreed to abide by, say are positively not true and are false, I say that the Senator owes to this body and he owes to me a greater consideration for facts easily ascertainable than to allow this kind of publicity to have gone the length and breadth of this country.

What greater damage could be done to a State than for a Member of the United States Senate to charge that I had issued $300,000,000 worth of bonds when the record shows than it is less than $70,000,000 worth of bonds? And compare what has been done with it:

When I left that State it had 2,000 miles of paved roads. It had a new State capitol. Its illiteracy has been decreased. The State university had gone from third-rate up to first-class. Free school-books were furnished to the school children. Port work had been done. Money had been put up to pay off the bonds that had been issued by other governors, for which I was not responsible. The work

is there; and the Senator forgot to tell you something, Mr. President; I will never state a fact against the Senator—my colleague here, who was my friend once, and I was his friend—I will never state a fact against him that will ever be left without everything in his favor. How was that money spent, Mr. President? They have not told you this, and I want the Senate to know it.

I knew that some day they would want to charge fraud and graft against my administration. I knew the publicity I was getting from those corporations, that I had to get it. I allowed my enemies in that State to take 19 leading citizens, and I wrote their names into the constitution of the State of Louisiana, and provided that not one dime of that money could be spent unless it was approved by the 19 men. On that board were the attorney general of the State and the lieutenant governor of the State, two of the worst political enemies I had in the world. There never was a dollar of the money spent that all 19 out of 19 did not approve, before it was spent and after it was spent. There never has been a copper cent of money spent by HUEY P. LONG as Governor of the State of Louisiana that was not signed by the 19 men, including the man who was lieutenant governor, who was trying to take my office away from me by impeachment at the time.

Why was it if there were any charge of fraud that we never could hear it with 19 men approving everything; that with enemies of mine on the board and friends of the Senator on the board there was never one charge of fraud filed before that body up until that time?

Now, at this late date, with 19 men picked by them having said that the expenditures were regular; with 19 men picked by them, including my enemies, having approved everything that has been done; with everything having been shown to the Senate, including the fact that instead of pay rolls having been increased they were reduced an average of 50 per cent at the time the Senator was a candidate for office. I think the Senator does owe the Senate another speech. When the Senator makes that other speech, he owes to this Senate and to me an apology.

EXHIBIT D

NEW ORLEANS, LA., *January 30, 1933.*

Senator HUEY P. LONG,
Senate Office:

Levee roll, September, 1931, $42,409.13; September, 1932, $31,413.30. Board of health, September 1931, $20,143.92; September, 1932, $26,086.78. Dock board, September, 1931, $181,342.35; September, 1932, $156,229.93. Highway, September, 1931, $523,705.63; September, 1932, $201,788.25.

THE FRENCH DEBT

Mr. HOWELL. Mr. President, on Saturday, January 28, there appeared in the New York Times an editorial which would seem to question the correctness of certain figures that I had given with reference to debt payments by France. I read this editorial in part:

Part of the French war debt, Senator HOWELL stated last week, consists of $400,000,000 which France agreed to pay the United States for surplus war material valued at $2,000,000,000.

Then the editorial proceeds to quote me.

"All France has paid to us," he said, "is not equivalent to what she has received from the sale of those supplies."

According to the Treasury Department, France has paid us $486,075,891. According to the same authority, the supplies were sold by us for $407,341,145.

This is the portion of the New York Times editorial which I wished to read.

Mr. President, it suggests that I had made an incorrect statement with reference to the payments made by France.

I now quote from the CONGRESSIONAL RECORD of January 20, 1933, the statement in part which I made at that time.

Mr. President, this other fact ought to be reemphasized; part of this debt of $4,231,000,000 was the $400,000,000 France agreed to pay us for $2,000,000,000 worth of supplies and other property which we sold France when our Army came home. France began to sell those supplies. She accounted publicly for what she received on this account until the amount reached something like $236,000,000. Then, as I understand, France no longer published such receipts. Thus all France has paid us since the date of settlement is not equivalent to the money she obtained from supplies and other property sold by us to France, and yet France has insisted that her indebtedness for these supplies and other property was purely of a commercial character.

I stated, Mr. President, that since the date of settlement all that France has paid us was $200,000,000, and that this was less than France had received from her sales of the supplies and property we had sold her. That is absolutely correct. It is true that, all told, beginning with January 8, 1918, France has paid us $486,075,891. Two hundred million dollars of that amount was paid after the date of settlement; $286,075,891 was paid prior to the date of settlement, beginning with January 8, 1918. But, Mr. President, it is a significant fact that during that period, though France paid us $286,075,891, she borrowed from the United States, and received in cash, $1,832,000,000 and more.

Therefore, it is not remarkable that she was able to pay us during that period $286,000,000 plus. She borrowed from us during that period $1,832,000,000. The difference between the two amounts is some $1,546,477,000 which France was ahead.

What I wanted to make clear was this, that the statement I made on the floor of the Senate with reference to the payments by France was correct. She has paid us $200,000,000, and that is all, since the date of settlement. I have learned recently that the amount received by France from the sale of supplies and property we sold her for $407,000,000 is in the neighborhood of $300,000,000. Yet all she has paid us, including interest on that debt from the time it was incurred, is less than what she has received from the sale of the supplies and property which France acquired.

Mr. President, I have endeavored to be accurate in connection with the figures I have afforded in reference to the French and other debts, and I regret very much that I should be misquoted in a manner which might reflect suspicion upon the statements I have made.

Mr. KING. Mr. President, will the Senator yield?

Mr. HOWELL. I yield.

Mr. KING. I did not hear the entire statement made by the Senator, but as I came into the Chamber I heard his statement that we had sold to France supplies aggregating more than $400,000,000, and my understanding is—and I received the understanding from a representative of our Government, who, in connection with General Dawes, handled those supplies—that they consisted largely of railroads which we had constructed, and which, of course, were worthless, and depots, and facilities constructed for the reception of supplies which were no longer needed; and that much of the property which we let them have was of no value to us; that if we had attempted to transship it, to tear up the railroads and bring back the lumber and other supplies that were there, we would have realized just about enough from them to pay the cost of transportation. So that the contention of the gentleman to whom I have referred was that France had not received anything near the amount which the Senator states in actual value of property that was usable and available.

Mr. HOWELL. Mr. President, I have been informed, upon what I have regarded as excellent authority, that in the neighborhood of $300,000,000 has been received by France from the sale of the property concerned, and, furthermore, France has made no reports recently respecting the additional amounts she may have received.

Mr. FLETCHER. Mr. President, will the Senator state how much we have loaned France since the armistice?

Mr. HOWELL. Mr. President, I can give this information. The amount of the French debt on June 15, 1925, on account of post-armistice loans, was $1,653,325,913.05. That was the amount of the post-armistice debt at the date of settlement.

LIGHTERAGE IN NEW YORK HARBOR

Mr. WAGNER. Mr. President, on Saturday Mr. Earl M. Steer, an examiner for the Interstate Commerce Commission, rendered, after exhaustive hearings, a decision which I think is a serious menace to the port of New York, in which decision he favors the abolition of free lighterage in New York Harbor. At a more appropriate time I expect to

discuss this matter more fully upon this floor. Just now I ask unanimous consent to have printed in the RECORD the decision itself, and, with it, an editorial appearing in this morning's New York Herald Tribune commenting upon the decision and criticizing it. Their editorial is a very just criticism.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, January 30, 1933]

A SERIOUS THREAT TO THE PORT

No more important decision, so far as the business welfare of New York City is concerned, has been handed down in recent years than the recommendation of Earl M. Steer, examiner for the Interstate Commerce Commission, in favor of the abolition of free lighterage in New York Harbor.

Lighterage is, in respect to shipping, much like store-door delivery in the case of the merchant. Under the tariffs existing up to now, railroads with terminals on the Jersey shore have been permitted to deliver freight coming from the West at the various shipping points in Manhattan and Brooklyn without extra charge, thus putting New York on an equal competitive basis with New Jersey. Should the recommendation of Mr. Steer be accepted by the Interstate Commerce Commission, this equality would be ended. Railroads serving New York City would be compelled to add lighterage charges, which would raise their rates 60 cents a ton on carload lots of everything except grain and 30 cents a ton on that commodity.

The implications of this decision are extremely serious. It would mean that the concept of a New York port, upon which the New York Port Authority was erected 12 years ago and for whose integrity the executives of this State and city have fought since the establishment of that body, would be overthrown for the aggrandizement of special interests; it means that the millions of dollars invested in terminal properties in Manhattan and Brooklyn on the strength of this same concept would be placed in serious jeopardy, and it means that the consumer in New York City would find himself at a price disadvantage as compared with his neighbor across the river.

It is difficult to understand how New Jersey can find, as it seems to find, cause for widespread jubilation in a decision which threatens such a dangerous disruption of the highly organized facilities of this port. For, even granting the possibility of a temporary advantage that it carries for the Jersey ports, there would seem to be a very real possibility that both New Jersey and New York might ultimately be the losers, since the granting of this differential to New Jersey suggests that it will likewise be granted to Boston and Philadelphia, which have intervened in the case.

The chief comfort to be derived from the decision by New York is that it is not final; the chief lesson that business interests here must throw off their complacency and fight back for their rights. In the first skirmish New Jersey has emerged victorious; but the issue remains to be fought out before the Interstate Commerce Commission and, if necessary, in the courts. It is difficult to believe that if New York City, through its representatives and its business men, seriously challenges this well-organized and strongly financed attempt to break down the economic organization of the port it can fail to reverse the unfortunate decision.

LIGHTERAGE CASES, NO. 22824,[1] STATE OF NEW JERSEY *v.* NEW YORK CENTRAL RAILROAD CO. ET AL.

1. Grouping of New Jersey points with New York City, N. Y., at the same rates on traffic from and to points west of the Hudson River found not unreasonable, unduly prejudicial, or otherwise unlawful, except as noted below.

2. Free lighterage and car floatage or trucking in lieu thereof at New York Harbor, on traffic from and to points west of the Hudson River, found unduly prejudicial to New Jersey points and unduly preferential of New York City and points within the lighterage limits of that harbor. Separate charges required for lighterage and its substitutes on such traffic.

3. Rates to and from points in New England and via the rail-water or rail-water-rail routes to and from points in the South and Southwest found unduly prejudicial to New Jersey points and unduly preferential of New York City. Such preference and prejudice ordered removed.

4. Free lighterage and car floatage or trucking in lieu thereof at the port of New York, on export, import, coastwise, and intercoastal traffic from and to points in New England, found unduly preferential of that port and unduly prejudicial to Boston, Mass. Separate charges required for lighterage and its substitutes on such traffic.

5. Rates on export, imports, coastwise, and intercoastal traffic from and to Boston as compared with Philadelphia, Pa., Baltimore, Md., and Hampton Roads, Va., found not unreasonable, unduly prejudicial to Boston, or preferential of the other ports named.

6. Various other issues disposed of as shown in the report. Previous decisions in other cases modified in so far as necessary to carry into effect findings herein.

[1] This report also embraces No. 23040, New Jersey Traffic Advisory Committee *v.* New York Central Railroad Co. et al., and No. 23327, City of Boston et al. *v.* New York Central Railroad Co. et al.

William A. Stevens, John J. Hickey, William S. Bronson, J. Raymond Tiffany, Milton P. Bauman, Charles J. Fagg, Samuel Silverman, Johnston B. Campbell, George H. Parker, and W. W. McCoubrey, for complainants.

John J. Hickey, William S. Bronson, J. Raymond Tiffany, John M. Zachara, G. E. Mace, Milton P. Bauman, Charles J. Fagg, Robert C. DeKroft, Josiah D. Greene, Joseph E. Warner, Frank S. Davis, and Harold Horvitz, for interveners in support of complaints.

Hamilton Ward, John J. Bennett, jr., Hiram C. Todd, Parker McCollister, Charles Dickerman Williams, Arthur J. W. Hilly, Charles Horowitz, Vincent Victory, Frank E. Carstarphen, Philip J. Sinnott, Parker McCollister, Lord, Day & Lord, Julius Henry Cohen, Wilbur La Roe, jr., Frederick E. Brown, William H. Chandler, J. P. Magill, Charles J. Austin, Harry B. Chambers, Cullen & Dykman, Theodore H. Burgess, Sigourney B. Olney, A. C. Welsh, P. W. Moore, Harper A. Holt, Charles E. Cotterill, John F. Finerty, George T. Bell, J. L. Carling, William S. Benton, Van M. Parshall, Edward L. Hefron, A. H. Ferguson, Edgar J. Rich, Francis J. Dowd, William J. Mathey, George F. Hichborn, A. T. Zwack, Hugh Miller, R. H. Goebel, and William A. Moore for interveners in opposition to complaints.

William A. Schrader, G. Coe Farrier, S. H. Williams, Henry S. Drinker, jr., Edwin A. Lucas, M. R. Beaman, S. H. Williams, Henry W. Wills, J. M. Davison, William A. Lockyn, William Preston Lane, jr., R. E. Lee Marshall, John Philip Hill, A. Walter Kraus, Charles R. Seal, G. Stewart Henderson, H. J. Wagner, William H. Day, E. T. Foxenburgh, Fred M. Renshaw, W. E. Maloney, Frederick W. Burton, Frederick M. Varah, Edwin B. Ericksen, Harry F. Masman, W. M. Carney, William E. Rosenbaum, Dabney T. Waring, Ernie Adamson, W. O. Buckley, L. J. Wadsworth, R. W. Ostrander, E. D. Sheffe, R. D. Rynder, C. C. Furgason, and J. K. Hiltner for interveners.

Clyde Brown, Thomas P. Healy, Henry Wolf Bikle, J. L. Seager, H. A. Taylor, A. H. Elder, E. H. Burgess, Charles R. Webber, C. A. Halpin, W. W. Meyer, Bronson Jewell, John F. Finerty, Harper A. Holt, Charles E. Cotterill, J. R. Bell, G. H. Muckley, William Simmons, J. T. Green, and W. I. Woodcock, jr., for defendants.

REPORT PROPOSED BY EARL M. STEER, EXAMINER

A. Introduction

These three cases are closely related because they are all based to a large extent on the terminal services performed at New York, N. Y. In accordance with the commission's practice, therefore, they were heard together upon a common record and will be disposed of in one report.[2] A table of the contents of this report may be found in Appendix A hereto.

A–1. COMPLAINTS

State of New Jersey: The complaint in No. 22824 was originally filed by the State of New Jersey on October 31, 1929, and an amended complaint was filed on April 7, 1930.[3] As amended, it attacks the freight rates of every description between (a) points in New Jersey as compared with (b) New York City and points within the free-lighterage limits of New York Harbor on the one hand, and (c) points throughout the United States, Dominion of Canada, and Mexico on the other hand. All of these rates are alleged to be unreasonable; unduly prejudicial to New Jersey, localities therein, shippers from and to the same, and their traffic; and unduly preferential of New York and points within said lighterage limits, shippers from and to such points, and their traffic. The complaint covers all-rail rates to and from New York as well as those to and from New Jersey points, but certain allegations are based on the terminal services performed at New York Harbor by car float, lighter, and motor truck. The performance of such services and others incidental thereto at defendants' cost and expense, or the giving of allowances therefor, while refraining and refusing to do so at points in New Jersey, is alleged to violate sections 2 and 3 of the interstate commerce act. The maintenance of the same rates where lighterage, car-float, and trucking services are performed as where such services are not performed is alleged to be unduly prejudicial to New Jersey points and unduly preferential of New York. The inclusion in the rates between New York Harbor and points in New Jersey of certain factors or amounts as compensation for lighterage and car-float service while no such separate factors are included in the rates between New York Harbor and points west of the Delaware River is also alleged to be unduly prejudicial to New Jersey points and unduly preferential of New York and points west of said river. The giving of the allowances referred to for lighterage, car-float, truck-

[2] The New York interveners requested that the Boston case be heard separately from the two New Jersey cases. While the New Jersey complainants did not express themselves, the Boston complainants opposed this request, and it was also opposed by the trunk-line defendants. The separation requested would have necessitated a duplication of much of the record and made it less convenient for the commission to hear and dispose of the cases. The request was therefore denied by the commission, although separate hearings were held to receive the evidence of the New Jersey and Boston complainants, respectively, as well as that of the defense.

[3] The allegations of this complaint are set out with greater detail in Appendix B hereto. The original complaint expressly disclaimed any attack upon rates in connection with car-float service, which are included in the amended complaint. The latter also broadened the issues to include the all-rail rates to and from New York in comparison with those to and from New Jersey points.

ing, and other services is further alleged to result in violation of the long-and-short-haul rule of section 4. Free lighterage at New York Harbor is specifically assailed as an unlawful practice in violation of sections 2 and 3, and the failure to publish separate charges for lighterage and trucking services is alleged to violate section 6 (1). It is also alleged that New Jersey points are being deprived of the natural advantages of their location in comparison with New York and the development of industry and commerce in New Jersey is retarded through the alleged violations of the act, and that the ports of one State are thereby preferred over those of another State in violation of Article I, Section IX, clause 6 of the United States Constitution. The commission is asked to require defendants to cease and desist from the alleged violations of the act, to establish just and reasonable rates to and from New Jersey points and New York City, and to publish separate charges for lighterage, car-float, and trucking services at New York Harbor.

New Jersey traffic advisory committee: The complaint in No. 23040 was filed by the New Jersey traffic advisory committee on January 4, 1930.[4] This complainant is a voluntary organization of municipalities, chambers of commerce, and shippers and receivers of freight in New Jersey. It assails as unreasonable the freight rates between (a) points in New Jersey for rail origin or delivery, on the one hand; and (b) points reached via the rail-ocean and rail-ocean-rail routes to, from, and through Savannah, Ga., New Orleans, La., and Galveston and Houston, Tex.; (c) points in New England, points on the Long Island Railroad, and points in that part of New York State north and east of Utica, N. Y.; and (d) all other points in official territory outside of Canada, on the other hand. It further assails the freight rates as unduly prejudicial to New Jersey points and unduly preferential of the respective compared points as follows: (a) Between points in New Jersey as compared with New York and points within the lighterage limits of New York Harbor, also Philadelphia, Pa., and Baltimore, Md., on the one hand, and other points throughout the United States, Dominion of Canada, and Mexico, on the other hand; (b) between rail points in New Jersey as compared with New York City, on the one hand, and points reached via the above-mentioned rail-ocean and rail-ocean-rail routes, on the other hand; and (c) between rail points in New Jersey as compared with Philadelphia, on the one hand, and points in New England, on the other hand. The commission is asked to require defendants to cease and desist from the alleged violations of the act and to establish just and reasonable rates between the above-mentioned points.

Boston complaint: The complaint in No. 23327 was filed by the city of Boston and the Boston Port Authority on April 5, 1930, and was amended January 12, 1931. As amended and interpreted at the hearings, it attacks all of the freight rates applicable on export, import, coastwise, and intercoastal traffic moving between (a) the port of Boston as compared with (b) New York and other North Atlantic ports, on the one hand, and (c) points throughout the United States and the Dominion of Canada, on the other hand. Such rates to and from Boston and adjacent communities are alleged to be unreasonable, both absolutely and relatively, and the port differentials or relationships are alleged to be unduly prejudicial to Boston and unduly preferential of the other North Atlantic ports. Allegations are made similar to those in No. 22824 that the performance by defendants at their expense or the giving of allowances for lighterage, car-float, trucking, and other accessorial services at New York which are not accorded at Boston is in violation of sections 2 and 3. The failure to publish separate charges for lighterage, car-float, trucking, and other accessorial services is also alleged to violate section 6 (1). It is further alleged that Boston is being deprived of its natural advantages of location with respect to foreign ports and the benefits of its port facilities through the alleged violations of the act, and that the ports of one State are thereby preferred over those of another State in violation of Article I, Section XI, clause 6, of the United States Constitution. The amendment to the complaint attacks the storage-in-transit privileges and demurrage provisions applicable at New York as more favorable to shippers than at Boston and thus unduly prejudicial and preferential. The commission is asked to require defendants to cease and desist from the alleged violations of the act; to establish reasonable rates and differentials to and from Boston and the other North Atlantic ports, using the minimum rate power if necessary; and to publish separate charges for lighterage, car-float, trucking, and other accessorial services at New York and the other North Atlantic ports.

A–2. REQUESTED RESTRICTION OF ISSUES

Previous cases: During the hearings objections were made by the defense to the receipt of evidence regarding the class rates and the rates on iron and steel articles, and such objections are renewed upon brief. The principal ground for the objections is that as these rates were prescribed in Eastern Class Rate Investigation (164 I. C. C. 314) and Iron and Steel Articles (155 I. C. C. 504), they should not be reviewed in these cases. The facts are that the carriers proposed a plan for making rates to and from the so-called New York rate group which was presented in both of the cases cited. In the Iron and Steel case, which was decided first, it was noted at page 577 that the carriers submitted little evidence in support of their plan, but on the other hand practically no evidence was offered in opposition to it. This statement is confirmed by the present record which includes all of the evidence in that case regarding the New York group. Nevertheless, the plan was approved in the Iron and Steel case without prejudice to any different conclusions which might be reached in the Eastern Class Rate case. In the latter case there was apparently more evidence regarding the New York group, but it was noted at page 435 that the evidence regarding terminal costs was "extremely fragmentary and insufficient to serve as a basis for even an approximate conclusion." In approving the carriers' plan in that case the commission referred to the present New Jersey complaints as follows, at page 432:

"Since the hearings in the instant case were concluded, the northern New Jersey interests have filed formal complaints, as yet unheard, bringing in issue their relation to New York City. It hardly need be stated that our conclusions and observations in this report are without prejudice to those which may be called forth by the evidence in these pending complaints."

Commission practice: It has never been the practice of the commission to refuse to consider complaints or to limit their scope because they include rates which have been approved in previous cases. To do so would not only be unfair to complainants such as those here who were not parties to the previous cases, but it would seem contrary to the provisions of the act authorizing the filing of complaints. It has been many times held by the commission and the courts that the doctrines of stare decisis and res adjudicata are not applicable to the commission's decisions. The wisdom of this is especially apparent in these cases where the evidence is so much more comprehensive than in the previous cases with respect to the issues here under consideration. The present record contains 7,843 pages of testimony, 533 exhibits aggregating nearly 5,000 pages, and 2,552 pages of briefs. This is directed in large part to the propriety of grouping New Jersey points with New York City, and it includes a comprehensive study of the cost of performing terminal services in New York Harbor. It is especially directed to the propriety of the free-lighterage practice, a question which was not even discussed apart from the grouping in the cases cited, and apparently no consideration was given in them to the imposition of a separate charge for that service.

Rates not in effect: A further objection was made to the consideration of rates prescribed in the Eastern Class Rate case on the ground that such rates had not yet gone into effect when the hearings were held in these cases. Nevertheless, evidence was introduced by the defense as well as complainants with respect to the new class rates. The issues in these cases, however, are not concerned with particular rates so much as with rate relationships and practices which were in large part unchanged by the Eastern Class Rate case. The hearings were postponed to allow the defense more time to prepare their evidence regarding the new class rates, but to have postponed the hearings until such rates took effect would have meant an additional delay of a year or more, and it would have served no useful purpose. The record contains all the necessary information regarding the new rates which are now in effect.

Southwestern case: Similar objections were made to the receipt of evidence regarding the rates via the rail-water and rail-water-rail routes to and from the Southwest on the ground that such rates were prescribed in the Consolidated Southwestern cases (123 I. C. C. 203), herein referred to as the Southwestern case. That was a complaint by northeast Texas points who were principally interested in their relationships with other Southwestern points, and the report does not indicate that there was any evidence regarding the question of grouping New Jersey points with New York City. As will be seen later, the grouping prescribed in that case is at variance with that under the other two cases cited. However, the Southwestern case has been reopened for further hearing as to these rates and the effective date of the order indefinitely postponed (139 I. C. C. 535) and the case is still pending on further hearing.

All of the foregoing objections are without merit and should be overruled.[5]

A–3. INTERVENERS

Supporting complaints: Petitions of intervention were filed and evidence was offered in support of the New Jersey complaints by the cities of Newark, Jersey City, and Hoboken, N. J., the New Jersey State Chamber of Commerce, the chambers of commerce of northern Hudson County and of the cities of Hoboken, Bayonne, Paterson, Passaic, Harrison, and Trenton, N. J., the New Jersey Industrial Traffic League, and various industries in New Jersey. Similar petitions were filed and evidence was offered in support of the Boston complaint by the Commonwealth of Massachusetts through its department of public works, the maritime association of the Boston Chamber of Commerce, the Foreign Commerce Club of Boston, and others. Each of the complainants also intervened in the other cases.

[4] One of the principal differences between this complaint and that of the State of New Jersey is that this one specifically attacks the rates via the rail-water and rail-water-rail routes, also those to and from New England, and certain others which are or were on a higher basis than that applicable to and from New York. This complaint also brings in issue the relationship of rates to and from New Jersey points as compared with Philadelphia and Baltimore.

[5] The hearings in these cases were marked by an unusual number of objections to evidence on technical grounds, but the briefs do not request the commission to review any of the other rulings of the examiner, with one exception, which was requested by the Boston complainants. Nevertheless, in view of the possibility of the commission's decision being contested in court, some of the examiner's rulings are reviewed in a general way and certain corrections made in Appendix C hereto.

Opposing complaints: Interveners in opposition to the three complaints include the State of New York, the city of New York, the New York State Chamber of Commerce, the New York Produce Exchange, the Merchants' Association of New York, the Maritime Association of the Port of New York, the Brooklyn Chamber of Commerce, and the Queens Borough Chamber of Commerce. Petitions were also filed by the chambers of commerce of several other cities in New York State and by various organizations and industries in New York City. The Port of New York Authority intervened and actively opposed the Boston complaint but did not participate in the New Jersey cases.

Other interveners: The Commonwealth of Pennsylvania, the city of Philadelphia, Pa., and various commercial organizations of that city intervened to protect the interests of the port of Philadelphia. The State of Maryland, the mayor and city council of Baltimore, Md., the Baltimore Association of Commerce, and the Baltimore Chamber of Commerce intervened to protect the interests of that port. The Norfolk Port Traffic Commission also intervened to protect the interests of Norfolk, Va., and numerous other petitions were filed by counsel listed in the appearances.

A–4. PRELIMINARY MATTERS

The New Jersey complainants and interveners presented their evidence jointly through the same witnesses, but separate briefs were filed by complainants in the two New Jersey cases as well as the Boston case. The defense to all three complaints was presented jointly by the defendants serving New York Harbor and the New York interveners, and references to the defense will be understood to cover both the defendants and interveners in opposition to the complaints. It will be most convenient to consider first the contentions and evidence of the New Jersey complainants, then of the Boston complainants, followed by the defense to all three cases, then the evidence of the Philadelphia and Baltimore interveners, and finally the summary and conclusions. Rates will be stated in amounts per 100 pounds unless otherwise indicated.

B. New Jersey's contentions and evidence

B–1. IN GENERAL

The State of New Jersey seeks the establishment of lower rates for the "lesser service" to and from New Jersey points than for the "greater service" to and from New York and points within the lighterage limits, where the rates are now the same from and to points west of the Hudson River. It also assails the performance of lighterage and other accessorial services free or without additional charge as unlawful, but it takes the position that if this practice can be justified it must be extended to other points in New Jersey. The New Jersey Traffic Advisory Committee vigorously supports the State's contention for rates which recognize the difference in services, but it suggests as a less desirable alternative that if New Jersey points are to be grouped with New York that the grouping should be the same in all directions together with the same accessorial services throughout the group. The State emphasizes the alleged effect of the rate adjustment in retarding the development of modern facilities for direct transfer of freight between cars and ships on the New Jersey shore, while the New Jersey Traffic Advisory Committee seems more interested in the effect of the rate adjustment on industries in New Jersey. Their evidence is directed mainly to the terminal facilities and operations at New York as compared with New Jersey points, data as to the cost of performing such terminal services, the rate structure under consideration, and the alleged unlawful effects of the rates assailed.

B–2. THE LESSER AND GREATER SERVICES

The lesser service to and from New Jersey points is described as ordinary or standard terminal service of three kinds, as follows: (1) Carload traffic is switched to and from public team tracks, industrial interchange tracks, or private side tracks for loading or unloading at the shipper's expense; (2) less-than-carload traffic is handled through the carrier's freight houses and loaded or unloaded at the carrier's expense; and (3) traffic interchanged with steamships at piers in New Jersey is switched to or from such piers and transferred across the pier between car and ship. Shippers who receive private side-track service generally have to bear the cost of constructing the track and the expense of maintaining the same.

The greater service includes what is referred to as accessorial services. This term is not defined by complainants, but is understood to mean services which are not ordinarily performed in connection with the transportation of traffic generally. These accessorial services at New York are lighterage, car floatage, and motor trucking, which will be described later. Complainants point out that switching service has to be performed on traffic which is car floated, lightered, or trucked, and they urge therefore that these services are additional to the usual rail services. As will be seen, however, complainants also contend that rail operations by the New York Central on Manhattan Island are attended by such unusual difficulty and expense as to warrant the same rates as where the terminal service is performed by lighter, car float, or motor truck.

B–3. NEW YORK HARBOR AND ADJACENT DISTRICTS

New York Harbor consists of the Lower Bay, whose shores are only partially protected from the open sea and, therefore, have practically no shipping facilities; the Narrows, which connect the Lower Bay with the Upper Bay; the Upper Bay, which lies between Manhattan Island on the north, Brooklyn on the east, Staten Island on the south, and the Bayonne Peninsula on the west; the Hudson River, East River, and Harlem River, which surround Manhattan Island; Newark Bay, which lies back of the Bayonne Peninsula and is connected with the Upper Bay through the Kill von Kull; the Arthur Kill or Staten Island Sound, which separates Staten Island from New Jersey; and the Passaic and Hackensack Rivers, which flow into the upper end of Newark Bay between Newark and Jersey City. The shore lines of the port aggregate 483 miles, of which 277 miles are in New York and 206 miles in New Jersey.

The free-lighterage limits are not coextensive with the harbor but include the eastern shore of Staten Island to a point just south of the Pouch Terminal; the northern shore of that island along the south side of the Kill von Kull and Newark Bay to a point just west of Port Ivory; the north side of the Kill von Kull as far west as Avenue C in Bayonne; both sides of the upper New York Bay to the Battery at the lower end of Manhattan Island; both sides of the Hudson River to One hundred and thirty-fifth Street in New York and the Fort Lee Ferry in Edgewater, N. J.; both sides of the East River to Hell Gate, which is the gateway to Long Island Sound; and both sides of the Harlem River to the Jerome Avenue Bridge, including the west side of Wards and Randall Islands. They also include the Gowanus and Wallabout Bays in Brooklyn and extend about 3 miles up Newtown Creek, which flows into the East River between Brooklyn and the borough of Queens. There are 60.81 miles of shore front within the lighterage limits, of which 70 per cent is on the New York or eastern side of the harbor and 30 per cent on the New Jersey or continental side.

The lighterage limits have been extended from time to time to take in new industries as they were established along the water front, the last change being in 1914.

The Port of New York Authority district as defined by statutes of New York and New Jersey is bounded by lines of latitude and longitude which do not generally coincide with political subdivisions. The northern boundary includes Piedmont on the west side of the Hudson River in Rockland County, N. Y., and White Plains on the east side of that river in Westchester County, N. Y.; the western boundary includes Westwood in Bergen County, N. J., Caldwell in Essex County, N. J., Plainfield in Somerset County, N. J., and New Brunswick in Middlesex County, N. J.; the southern boundary includes Matawan in Middlesex County and Atlantic Highlands in Monmouth County, N. J.; and the eastern boundary includes Jamaica and Port Washington in Nassau County, Long Island, also Port Chester in Westchester County, and extends along the State line between New York and Connecticut. This district takes in many points not located on New York Harbor but is considerably less extensive than the metropolitan district described below.

In the Eastern Class Rate case it was stated at page 434 that the boundaries of the port district probably were not primarily intended to define a rate group.

The New York metropolitan district, as defined by a committee organized by the Merchants Association of New York, includes the five boroughs of New York City, the counties of Rockland, Westchester and Nassau in New York; the townships of Huntington and Babylon in Suffolk County, Long Island; the towns of Greenwich, Stamford, Darien, New Canaan, and Norwalk in Fairfield County, Conn.; and the counties of Hudson, Bergen, Essex, Passaic, Union, Morris, Monmouth, Middlesex, and Somerset in New Jersey. Most of the counties named border on New York Harbor, and the district was so defined for census purposes.

New York City has a population of 5,924,500 within an area of 299 square miles, while the New Jersey section of the metropolitan district has a population of 2,672,000 in an area of 2,277 square miles. The New Jersey section is said to be the equivalent of the third largest city in the country, and it is one of the most important industrial sections of the United States.

Rate groups: None of the foregoing districts coincides with the New York rate groups hereinafter described. This point is urged by complainants, but it does not of itself necessarily prove that the rate groups are unlawful.

B–4. RAILROAD TERMINAL FACILITIES [6]

In general: New York Harbor is served principally by seven trunk lines which extend westward and two which extend into New England. The latter are the New York, New Haven & Hartford Railroad Co., hereinafter called the New Haven, which has its rail terminals at Harlem River and Oak Point in the Borough of the Bronx; and the New York Central Railroad Co., which serves New England as lessee of the Boston & Albany Railroad and also operates lines to the west. The New York Central has lines on the east side of the Hudson River with terminals on Manhattan, and also operates under lease the West Shore Railroad which has its terminal at Weehawken, N. J. The other six trunk lines have their principal freight terminals on the New Jersey side of the harbor, the Erie Railroad Co. and its subsidiaries at Jersey City, Weehawken, and Edgewater; the Delaware, Lackawanna & Western Railroad Co., hereinafter called the Lackawanna, in Jersey City and Hoboken; the Pennsylvania Railroad Co., Lehigh Valley Railroad Co., and Central Railroad Co. of New Jersey in Jersey City; and the Baltimore & Ohio Railroad Co. at St. George on

[6] The railroad terminal facilities and operations at New York Harbor were described in detail by complainants' witnesses. They included engineers and others long familiar with the terminal situation and who had made a special study of it for these cases. Their evidence was supplemented by that of operating officials of the trunk lines who were subpœnaed at complainants' request.

Staten Island.[7] In addition to the trunk lines, there is the Long Island Railroad, which serves Long Island and has its terminals at Brooklyn and Long Island City, N. Y.

Each of the trunk lines has one or more classification yards where inbound trains are broken up and outbound trains made up. Some of these yards are adjacent to the waterfront and others are several miles back from the water front. They also have lighterage piers where freight is transferred between the cars and lighters and car-float bridges for moving cars on and off the car floats. The New Haven maintains three pier stations on the east side of Manhattan, which are served by car float from its rail terminals in the Bronx. Its subsidiary steamship lines operating on Long Island Sound dock at two places on the west side of Manhattan.

New York Central: The New York Central's freight line on Manhattan crosses the Harlem River at Spuyten Duyvil and follows the eastern shore of the Hudson River to St. John's Park in the lower part of Manhattan. There is not much industrial development alone this line north of Seventy-second Street because of Riverside Park. Its principal yards are in the neighborhood of Sixtieth Street and Thirty-third Street. Freight stations are maintained in these yards, also at St. John's Park, at One hundred and thirty-fifth Street in Manhattan, and at several points in the Bronx. There are also team tracks at the same points and a few other places. There are some private sidings south of Sixtieth Street but very few. In addition, the New York Central maintains five pier stations served by car float from its Sixtieth Street and Thiry-third Street yards. Two of these pier stations are on the west side of Manhattan, two on the east side of Manhattan, and one at Wallabout Bay in Brooklyn. The New York Central's rails do not connect directly with any of the steamship piers on Manhattan, and the latter are not so constructed as to make it practical to extend the rails onto them. As a consequence steamship freight is generally lightered by the New York Central the same as the other lines.

New Jersey lines: The seven trunk lines whose rails terminate on the New Jersey side of the harbor also maintain freight facilities in New York, which are served by car float with the exception hereinafter noted. These car-float facilities are of two classes, pier stations where the freight is loaded or unloaded from the cars while standing on car floats beside the pier, and off-track stations and team-track yards where the cars are moved across float bridges between the car floats and tracks on the shore. The loading and unloading of the cars at pier stations is performed by the railroad, because it would be impractical for shippers to do so; but where the cars are switched to and from tracks on the shore carload freight is generally loaded and unloaded by the shippers the same as elsewhere. The West Shore has 6 pier stations, 3 on the west side of Manhattan, 2 on the east side of Manhattan, and 1 at the Harlem River.

In addition the Erie maintains 4 inland stations on Manhattan which are served by motor truck. The Lackawanna has 4 pier stations, 3 on the west side of Manhattan and 1 on the east side of Manhattan. It also has 3 off-track stations with team-track yards, 1 at the Harlem River and 2 in Brooklyn. The Pennsylvania has 7 pier stations, 3 on the west side of Manhattan, 1 on the east side of Manhattan, 1 at the Harlem River, and 2 in Brooklyn. It also has 2 team-track yards, 1 on the west side of Manhattan and 1 in Brooklyn. The Lehigh Valley has 7 pier stations, 3 on the west side of Manhattan, 2 on the east side of Manhattan, 1 on the Harlem River, and 1 at Wallabout Bay in Brooklyn. It also has a team-track yard on the west side of Manhattan and an off-track station and team-track yard at the Harlem River. The Central of New Jersey has 3 pier stations, all on the west side of Manhattan. It also has an off-track station and team-track yard adjacent to the Harlem River in the Bronx. The Baltimore & Ohio has 4 pier stations, 2 on the west side of Manhattan, 1 on the east side of Manhattan, and 1 at Wallabout Bay in Brooklyn. It also has an off-track station and team-track yard on the west side of Manhattan. Generally the pier stations are used for both carload and less-than-carload freight, the team-track yards for carload freight only, and the off-track stations for less-than-carload freight.

Contract terminals: In addition to the foregoing all of the trunk lines have stations for carload and less-than-carload freight at the so-called contract terminals. Some of these are common carriers but all are commonly referred to as contract terminals and will be so designated here for convenience. There are six of these terminals in Brooklyn and two in Long Island City, but one of the latter is not being operated at present. Most of them have public team tracks and private sidings for industries located at the terminals. They are served by car floats operated by the terminal companies between the float bridges of the trunk lines and float bridges at the terminals. The terminal companies also switch the cars to and from points reached by their rails and perform the station service. All of these services are performed for certain allowances under contracts with the trunk lines or for divisions of the joint rates where the terminal company is a common carrier and participates in the joint rates as in the case of the New York Dock Railway. Freight interchanged with steamships docked at the contract terminals is generally lightered by the trunk lines the same as at other steamship piers.

Summary: It will be noted that all of the trunk lines are more or less well supplied with freight stations and team tracks in various parts of New York City. The bulk of the local traffic having origin or destination in New York City is handled through these facilities. Those of the New Jersey lines are served by car float operated from the rail terminals, except the Erie's inland stations, which are served by motor truck from its New Jersey terminals. The car floats are equipped with rails holding 10 to 14 cars, which are moved across float bridges from and to tracks on the shore by switch engines. The car-float service is equivalent to an extension of the carrier's rails to the stations on the other side of the harbor.[8] See United States *v.* Baltimore & O. R. Co. (231 U. S. 274), from which the following is quoted at page 288:

"The mere fact that the physical rails stop at Jersey City does not mean that the railroad transportation there ends. It continues over to Brooklyn by means of car floats, upon which further rails are laid and on which empty and loaded freight cars stand and are transported, so that the rails upon the car floats are brought into contact with the rail ends at Jersey City and the continuation thereof at Brooklyn, and in this way the transportation by railroad is carried on without interruption from the western points directly to Brooklyn."

B–5. LIGHTERAGE SERVICE DESCRIBED[9]

Lighterage is performed by all of the trunk lines serving New York Harbor. The service was first established by the lines whose rails terminate on the New Jersey side of the harbor before the inauguration of car-float service and when they had no other way of reaching New York. The New York Central, however, soon found that lighterage gave the other lines such an advantage in reaching points about the harbor where its rails did not extend that it also adopted the practice to meet their competition. Lighterage is a service performed beyond railroad terminals, that is, to and from points not reached by the carriers' rails and which are not regular stations. In this respect it differs from the car-float service which is maintained to and from regular stations or team tracks, except the relatively small amount of car floatage in lieu of lighterage which is merely a substitute for lighterage. It also differs from the car-float service in that lighterage involves a breaking of bulk in transit, as the freight has to be transferred by the railroad between cars and lighters and again handled by it between the lighters and piers or ship's sling.[10]

Classes of service: The lighterage operations fall into two general classes: (1) Lighterage of through rail-water traffic to and from steamships or steamship piers, and (2) lighterage of local-harbor traffic to and from public or private docks. The operations are generally similar on the two classes of traffic, except differences resulting from the steamship-permit system, hereinafter explained in section B–13. About 72 per cent of the total lighterage tonnage is export and import traffic, about 8 per cent coastwise traffic, and about 20 per cent local-harbor traffic. During the year 1923 the New York Central, including the West Shore, had the largest total tonnage lightered, followed closely by the Pennsylvania, which had the largest tonnage of local harbor traffic, and the other lines followed somewhat in proportion to their total traffic to and from New York.

Important steps: The more important steps attending the lighterage of eastbound freight are as follows: (1) Classification yard service; (2) switching of the cars from the classification yards to the lighterage piers; (3) unloading the freight from the cars and transferring it to lighters; (4) towing the lighters to steamships, steamship piers, or public or private docks; and (5) removing the freight from the lighters to steamship piers, placing it within reach of the steamship's sling, or putting it on the public or private docks. The steamship company exercises the option of

[7] The New York, Ontario & Western Railway also seems to serve the harbor district through the facilities of the West Shore. The Reading Co. has a line to Port Reading, N. J., on the Arthur Kill in the lower part of the harbor district, but apparently it does not directly serve New York or points within the lighterage limits.

[8] There are expressions in some of the commission's reports to the effect that lighterage and trucking are also equivalent to an extension of the carriers' rails. However, it is apparent from the description of lighterage which follows that the rails are not projected across the harbor as in the case of the car-float service. Lighterage is more analogous to store-door delivery as hereinafter shown in section B–12.

[9] The lighterage service was described principally by an engineer who had been for several years on the staff of the Port of New York Authority and its predecessor, the New York-New Jersey Port & Harbor Development Commission, and by a witness who had been superintendent of the Erie's lighterage department for 15 years and chairman of the lighterage committee of the trunk lines serving New York Harbor for eight years.

[10] While complainants seek rates for New Jersey lower than New York on all traffic to and from points west of the Hudson River, some of New Jersey's leading witnesses indicated that their principal interest is in securing a plus charge for lighterage. These witnesses expressed the view that the rail rates should stop with the car, and an additional charge should be made where the carrier performs an additional service in delivering or receiving the freight. It is also pointed out that the economies which could be effected by direct interchange between car and ship apply to freight which is now lightered to and from steamships or their piers and not to the car-float service to and from regular stations or team tracks.

receiving the freight on its pier or taking it from the lighter on the offside of the vessel. The operations are reversed on westbound freight, except it must generally be unloaded from the ship to the pier on account of customs regulations.

Time required: Based on what the witness described as normal handling, the average time consumed in the various operations connected with lighterage is given as 4 hours in the classification yard, 1 hour in transit from the classification yard to the water front, 20 hours for unloading cars at the water front, 72 hours awaiting delivery orders from consignees, 24 hours for loading and towing freight in lighters, and 48 hours for unloading freight from lighters, making a total of 169 hours. The corresponding elapsed time in the case of carload freight handled by car float to and from pier stations or team tracks is given as 4 hours in the classification yard, 1 hour in transit to the water front, 2 hours loading and towing car floats to station, and 48 hours awaiting consignee's acceptance, making a total of 55 hours. The time given for lighterage freight may be too high, but clearly it must be much in excess of that on car-float freight to or from pier stations or team tracks.

Transfer service: Lighters are of various types to suit particular kinds of freight. Most of them are open or covered nonpropelled boats which are towed by tugs, but there are some self-propelled steam or Diesel lighters. The largest portion of the tonnage consists of merchandise or freight in boxes, barrels, crates, or other packages and some piece freight which is generally transported in box cars. Such freight is generally handled in covered lighters and transferred between cars and lighters at covered piers by means of man power supplemented by hand trucks or power trucks. It is also transferred in much the same way between the lighters and steamship piers or the public or private docks, but the railroad is not required to truck the freight more than 100 feet on the pier. Open lighters are used for iron and steel articles and other heavy freight which is generally transported in open cars. Such freight is transferred between cars and lighters at open piers by means of electric or steam cranes. It is transferred between the lighters and public or private docks with the aid of a derrick on the lighter and it is transferred between the lighters and ships by the ship's tackle, the railroad's duty ending when the freight is placed in or on the tackle. The transfer between cars and lighters can generally be accomplished in one handling of the freight, but two handlings may be required if temporary storage on the lighterage pier is necessary because of the consignee's inability to receive the freight or lack of readily available cars for loading. Some of the railroads use their own employees to effect the transfer on the New Jersey side, while others do it through contractors; but all of them employ contracting stevedores to perform the service on the New York side. Shippers or consignees can elect to do the loading or unloading of the lighters away from the railroad terminals, in which event they are accorded an allowance by the truck lines of 15 cents per ton, but this is not sufficient to cover the cost of the service and therefore is not attractive to shippers.

Distances: The rail distances from the classification yards to the lighterage piers on the New Jersey side vary on the different lines from 0.5 mile to 6.5 miles. The water distances from the lighterage piers to points within the lighterage limits range all the way up to approximately 17.5 miles. The aggregate rail and water distances between the classification yards and points within the lighterage limits range from 7.36 to 21.36 miles for the Baltimore & Ohio, 2.8 to 14.01 miles for the Central of New Jersey, 5.02 to 18.62 miles for the Lackawanna, 4.6 to 21.73 miles for the Erie, 7.75 to 20.2 miles for the Lehigh Valley, 1.28 to 16.47 miles for the Pennsylvania, and 1.43 to 18.09 miles for the West Shore. These distances are contrasted by complainants with the distances between the classification yards and freight houses, public delivery tracks, or private sidings of various industries on the New Jersey side. The latter distances range from 0.18 to 7.14 miles, or about the same as those between the classification yards and lighterage piers. The distances covered by the lighterage service, however, fall far short of reflecting the cost of the service compared with average rail transportation as hereinafter shown.

There has been no material change in the methods of conducting the lighterage operations during the past 25 years. Some of the equipment has been displaced by equipment of larger capacity, and modern locomotive cranes have been installed to handle heavy material.

B–6. SUBSTITUTES FOR LIGHTERAGE

Trucking and car floatage are performed in lieu of lighterage under certain conditions hereinafter noted.

Trucking: When carload freight is trucked in lieu of lighterage to or from steamship piers the car is generally switched to or from a yard containing public team tracks where New Jersey shippers load or unload and truck their own carload shipments. Freight trucked in lieu of lighterage is transferred by the railroad between the car and trucks, which haul it to the steamship pier, where it is again unloaded to the pier by the railroad. Trucking in lieu of lighterage differs from trucking to or from the Erie's inland stations in that the former is diffused throughout all of the steamship piers within the lighterage limits. This is a distinction of some importance, because the Erie's inland stations are on the west side of Manhattan, not far from the Holland tunnel, while trucking in lieu of lighterage includes trucking under the Hudson River, through the busy streets across lower Manhattan, over the East River, and as far as South Brooklyn. Trucking in lieu of lighterage is more akin to store-door delivery, which will be discussed later in section B–12.

Car floatage: Such car floatage as is performed in lieu of lighterage is principally of fresh meats and other perishables which it is desired to move to or from ship side in refrigerator cars. This necessitates carrying an empty flat car on the float beside the loaded car, and the freight has to be removed by the railroad from the loaded car to a platform between the two cars and thence to the flat car so that the ship's sling can reach it. The floating of two cars for one load distinguishes this service from car floatage to or from pier stations, team tracks, or the contract terminals. It is also distinguishable in that car floatage in lieu of lighterage is apparently subject to the steamship permit system described in section B–13, and its average cost is greater than for car floatage to and from pier stations or team tracks as developed in section B–15. Apparently the difficulties encountered in this method of transferring freight to or from steamships prevents its general use in place of lighterage.

In 1930 trucking in lieu of lighterage amounted to less than 6 per cent and car floatage in lieu of lighterage to less than 4 per cent of the total lighterage tonnage.

B–7. TERMINAL RULES AND REGULATIONS

Each of the trunk lines serving New York Harbor publishes tariff rules and regulations governing the performance of lighterage and other accessorial services. The term "lighterage free" [11] is defined in the tariffs as follows:

"The term 'lighterage free' should be understood to mean that carload shipments of articles entitled to free lighterage will be lightered or trucked free to or from any steamship pier or public landing within the free lighterage limits of New York Harbor. Lighterage or truckage of freight to or from private piers or landings can only be done when shippers or consignees arrange with the owners or occupants of such piers or landings for the use thereof."

Less than carloads: Generally speaking, free lighterage is performed only on carload traffic, and a separate charge is made when less-than-carload shipments are lightered. This charge is 3.5 cents per 100 pounds, minimum $7.56 for each export or import shipment and $11.50 for each domestic shipment. There are some exceptions, however, where less-than-carload shipments are lightered free. For example, less-than-carload shipments are lightered free when included in the same car with an eastbound carload of lighterage-free freight. There is also a provision for split deliveries of export carload freight to two lighterage points without charge. Additional deliveries of export freight and two or more deliveries of domestic carload freight may be made at a charge of 3.5 cents per 100 pounds, minimum $7.56 per delivery.

Carload traffic: There is a long list of articles not to be contracted for lighterage free even in carloads. This list includes articles of an inflammable or hazardous nature such as petroleum products and heavy or bulk articles such as coal and coke in bulk. Articles weighing in excess of 3 tons are assessed charges of 50 cents to $1.76 per ton in addition to the New York rates. Rates are also provided for lighterage of shipments afforded both rail and lighterage or car-float service when the two services are not covered by the published tariff rates. These rates range from 6 to 15 cents per 100 pounds, but the 6-cent rate is the one of general application.

Substitutes for lighterage: Provision is made for car-float service in lieu of lighterage without charge provided there are not less than six carloads to or from one point. Less than six carloads may be car floated in lieu of lighterage at a charge of $11.50 for each car less than six carloads. As previously indicated, this service is used to and from steamships on a small proportion of the traffic, principally commodities which move in refrigerator cars. Industries which have float-bridge connections with private sidetracks may also use this privilege, but there are only two or three private float bridges in the harbor. Trucking in lieu of lighterage was formerly authorized at the carrier's option, but this is now confined to trucking to and from connecting carriers and steamship piers within the lighterage limits.

The terminal rules and regulations cover many other matters relating to the terminal services at New York Harbor. They recognize a distinction between deliveries at regular stations which are served by car float and deliveries by lighter beyond the confines of carrier premises. New Jersey urges that these comprehensive tariffs, covering in some instances approximately 100 pages, show that lighterage is an accessorial service governed by special rules which can not be applied to ordinary or standard railroad terminal service. That is undoubtedly true but it is only one of many things which must be taken into consideration.

B–8. EXTRA TOWING CHARGES

The tariffs of the trunk lines serving New York Harbor provide separately established charges in addition to the rail rates for the performance of lighterage outside of the free lighterage limits. These charges, called extra-towing charges, are as follows on the New Jersey side of the harbor, the amounts stated being per lighter:

[11] The defense urges that lighterage is not free but is covered by the line-haul rates. Strictly speaking, that is true, but it is commonly referred to as "free lighterage" in accordance with the tariff definition, and for convenience that term will be used in this report.

Kill van Kull, Newark Bay, Passaic, and Hackensack Rivers

To or from—	
Points on New Jersey shore between Avenue C, Bayonne, to and including Neck at Bergen Point (except Safety Insulated Wire & Cable Co. dock)	$26.00
Points on east shore of Newark Bay beyond Neck at Bergen Point to and including Central Railroad of New Jersey main line (Newark Bay) bridge	40.00
Points beyond Central Railroad of New Jersey main line (Newark Bay) bridge to Newark and Kearny, N. J., inclusive, and points on the Hackensack River, to and including Newark-Jersey City turnpike bridge	60.00

Staten Island Sound

To or from—	
Points beyond Port Ivory to and including Elizabethport, N. J., and Bayway, N. J., including Bayway Terminal, N. J	27.00
Points beyond Bayway, N. J., to and including Grasselli, N. J., and the northern end of Pralls Island	35.00
Points beyond Grasselli, N. J., and northerly end of Pralls Island to and including Tremley, N. J., and Chelsea, Staten Island	40.00
Points beyond Tremley, N. J., and Chelsea, Staten Island, to and including Carteret, N. J., and Linoleumville, Staten Island	45.00
Points beyond Carteret, N. J., and Linoleumville, Staten Island, to and including Chrome, N. J., and mouth of Fresh Kills Creek, Staten Island	50.00
Points beyond Chrome, N. J., and mouth of Fresh Kills Creek, Staten Island, to and including Perth Amboy, N. J., on Staten Island Sound, and Tottenville, Staten Island, on Staten Island Sound	60.00

Based on an average lighter load of 60 tons, the above charges per lighter amount to from 43 cents to $1 per ton. They also apply to car floatage when performed in lieu of lighterage to or from points other than regular stations or team tracks.

B–9. LARGE PART OF PORT OUTSIDE LIGHTERAGE LIMITS

A large part of the New Jersey section of the port is outside the free lighterage limits. The navigable waters, where free lighterage is not performed, include a small portion of the Kill van Kull, almost all of Newark Bay, all of the Arthur Kill or Staten Island Sound, and the Raritan, Passaic, and Hackensack Rivers. There is a 30-foot channel through the Kill van Kull, also up Newark Bay to the Passaic and Hackensack Rivers, and throughout the length of the Arthur Kill.

Newark Bay is a well-protected body of water approximately 1 mile wide and 5 miles long. At present it is generally of rather shallow depth except where the Government has dredged for the ship channel, which is 400 feet wide. Its eastern shore includes the entire length of Bayonne and part of Jersey City, which has spent about $500,000 in developing a marine base here. Most of the Bayonne water front is occupied by a park system, but there are a number of industries near its southern end. Port Newark on the west side of Newark Bay is described elsewhere.

The Arthur Kill is a tidal strait similar to the East River and the Harlem River. It is wider than the Harlem River and Newtown Creek where free lighterage is performed. There are some bridges across it but not so many as across the Harlem River, and special equipment has to be used on Newtown Creek because of its low bridges, narrowness, tortuous turns, and shallow depth. The New Jersey side of the Arthur Kill is developed industrially for the greater part of its length from Elizabeth to Perth Amboy. The Bayway Terminal near its northern end in the city of Elizabeth covers 20 to 30 acres and has six warehouses, approximating 1,000,000 square feet of storage space, with direct rail and water connections.

The Raritan River extends inland from Perth Amboy at the south end of the Arthur Kill. It has a 20-foot channel to a point west of Perth Amboy and an 8-foot channel beyond to a point near New Brunswick. An appropriation has been made for further dredging of this river. About 3.7 miles of the water front at Perth Amboy is available for industrial use, but only 2.3 miles of it has been developed industrially. There is a 30-foot channel available for steamships direct from the lower New York Bay through Raritan Bay to the water front at Perth Amboy.

The Passaic and Hackensack Rivers pass through the industrial region between Jersey City and Newark, the Hackensack along the west side of Jersey City, and the Passaic along the east side of Newark. At the time of hearings the Passaic River was navigable for lighters as far as Newark, but the Federal Government had authorized and started deepening the channel so as to make it navigable for lighters as far as Passaic. That is the center of an important industrial district, and the Passaic River also passes through an industrial area between Newark and Passaic. The Hackensack River is apparently navigable for lighters past Jersey City and through the Jersey meadows to a point near Hackensack. However, the extra towing charges hereinbefore quoted only apply as far up the Hackensack and Passaic Rivers as certain points in Jersey City and Newark.

In general: The record contains the names of numerous industries located on all the above-mentioned bodies of water outside the lighterage limits, many of which have dock facilities. They are within the New York rate group but must pay extra for lighterage if that service is used. This naturally tends to discourage use of the lighterage service, but there is a substantial movement at the plus charges. In 1923 the trunk lines lightered to points on Newark Bay and connecting waters outside the lighterage limits 34,176 tons of freight, equivalent to over 1,700 carloads of 20 tons each. Of course, this is small in comparison with the total lighterage tonnage, but the movement would no doubt be much larger if it were on the same basis as within the lighterage limits. Moreover, the movement even at the plus charges to and from some sections appears to exceed that to and from many sections within the lighterage limits.

There is also abundant water-front land available for further industrial development, especially on Newark Bay and along the Passaic and Hackensack Rivers. While much of this appears to be marshland its reclamation is feasible, and more of it would probably be used industrially if lighterage were performed there on the same basis as within the lighterage limits. Much of the above-described water front is served by one or more rail lines, but a considerable portion of it is reached only by lighters, and none of it is served by all the trunk lines except through lighterage. When switching is performed to or from lines which do not reach an industry, additional charges generally apply, in many instances class rates.

The record does not contain a comparison of the distances from the lighterage piers of the trunk lines to points within and without the lighterage limits, but it does contain sufficient data to show that in many instances the distances to points without the lighterage limits are less than to points within those limits. However, it is clear from the record that a difference of a few miles has but little if any effect upon the lighterage costs. An exhibit introduced by the defense shows that the cost of lighterage by the trunk lines to and from points on the Passaic River is no greater than to and from many points within the lighterage limits. Moreover, several private lighterage companies do business at Port Newark, and it would be possible for the railroads reaching there to use it as a base for lighterage operations in that section of the port.

B–10. PORT NEWARK

Development: Port Newark is within the city limits of Newark on the west side of Newark Bay, approximately 4 miles from its junction with the Kill van Kull. It has been developed on part of a tract of appoximately 2,000 acres acquired by the city for a terminal where direct interchange could be made between railroad cars and ocean-going steamships. The city commenced the development of the port in 1914 and since then has spent over $15,000,000 in dredging channels, building docks, constructing railroad tracks and streets, and providing the facilities needed in such a terminal. In 1917 the United States Government purchased 133 acres of reclaimed land at Port Newark and constructed an Army supply base at a cost of $12,000,000. About the same time the United States Shipping Board leased 118 acres adjoining the Army supply base and spent $30,000,000 in constructing a shipyard. Since the war the city has leased approximately 100 acres of land to private interests, who have spent over $5,000,000 in the construction of buildings, shipping facilities, and warehouses. In addition, the Government has spent approximately $5,000,000 in deepening the channels in Newark Bay, and the Central of New Jersey has replaced its low-level bridge across the bay with a high-level bridge costing $12,000,000. All of these improvements connected directly or indirectly with the development of Port Newark have cost a total of about $79,000,000, or $65,000,000 if the Central of New Jersey's bridge is excluded. The city plans further development of the port as soon as the use of its facilities warrant, and such plans contemplate a total expenditure of $50,000,000 more.

Facilities: Port Newark is served by the Pennsylvania, Central of New Jersey, and the Lehigh Valley. The tracks of the first two connect directly with the tracks within the port area, but those of the Lehigh Valley do not, and its traffic is switched a short distance by the Pennsylvania. The city of Newark owns and controls about 5 miles of track at Port Newark, the United States Government owns 14 miles of track in the Army base, and the Atlantic Port Railway controls 26.5 miles of trackage, making a total of about 45 miles of track within the port area. There are about 12,000 feet of marginal dock, of which the city owns 7,685 feet and the United States Government owns about 4,000 feet. The municipally operated docks are especially suitable for lumber operations and for the loading and discharging of bulk cargo not requiring covered storage facilities. Switching to and from the municipal docks is performed by the trunk lines over the city-owned tracks without any compensation to the city. The transfer of freight between the cars and steamships is performed by stevedores under contract by the steamship companies or the city's tenants. It costs an average of 50 cents per ton to discharge the freight from the cars to the dock.

Army supply base: This part of the port is now leased to a private corporation which operates it as the Newark Seaboard Terminal. It has nine 1-story fireproof warehouses with approximately 1,800,000 square feet of covered storage. These warehouses will accommodate the contents of 7,500 average box cars at one time. At present it is used principally for the storage of raw sugar imported from Cuba and later delivered to the refineries in New York Harbor. It has a marginal dock 3,000 feet long and 14 miles of railroad track. Traffic is switched by the Pennsylvania and Central of New Jersey to and from an interchange track adjacent to the terminal, and a locomotive operated by the terminal com-

pany spots the cars at ship side. No allowance is made by the trunk lines for this service, and they bear no part of the expense of transferring the freight between car and ship.

Atlantic Port Railway: This is a subsidiary of the Submarine Boat Corporation. The latter is a tenant of the city and operated a fleet of thirty-two 5,000-ton steamships known as the Submarine Lines. In 1923 when they began operations there were 92 steamship terminations at these docks carrying 300,000 tons of cargo valued at $16,000,000. Since that time there have been over 1,600 steamship terminations, or about 3,200 arrivals and departures. The company was in receivership at the time of the hearing, and none of the 32 ships referred to was in operation. The Atlantic Port Railway controls about 26.5 miles of track, and traffic is switched by it between the interchange tracks of the trunk lines and ship side or the warehouse. It receives from the trunk lines a maximum allowance of 60 cents per ton for this service, and out of the allowance it absorbs the cost of loading or unloading the cars.

Use of port: The 30-foot channel to Port Newark will not accommodate the largest steamships, but it is sufficient for the majority of vessels in the foreign and coastwise movements. From 1919 to 1929, inclusive, 92,312 railroad cars loaded with 2,442,048 tons of freight were handled at Port Newark. Approximately 40,000 of these cars carrying about 1,077,340 tons moved via the Atlantic Port Railway and the balance over either the city-owned tracks or those at the Army base. The tonnage transported by vessel to or from Port Newark was 2,000,000 in 1919, after which it declined to 100,000 in 1922, and has since increased to a maximum of 1,997,032 in 1928. Most of the tonnage consists of lumber, about 300 out of 335 steamers docked in 1929 being lumber carriers. Lumber being a cheaper commodity holds down the rentals which the city can secure below a fair return on the investment. Port Newark is one of the largest lumber terminals on the Atlantic coast, but those interested are not satisfied to have it a mere lumber terminal. So far it has been able to attract very little other tonnage. Its facilities are used only to about 25 per cent of their present capacity.

Principal complaint: Complainants' principal complaint with respect to Port Newark is that the maintenance of the same rates as to and from New York coupled with free lighterage (1) deprives that port of any inducement for shippers to use its facilities for direct transfer, (2) prevents the city of Newark and others who have or may invest in such facilities of sharing in the savings resulting from their use, and (3) thereby impairs the investments made in such facilities. In this connection they compare the average stevedoring cost of 50 cents per ton for transferring freight between car and ship side at Port Newark with the average cost of $2.75 per ton for transferring freight between the rail ends and ship side in New York Harbor as found in Wharfage Charges at Atlantic and Gulf Ports (157 I. C. C. 663), hereinafter referred to as the Wharfage Charges case.

Other complaints: Complainants also point out that the carriers have refused to perform free lighterage at Port Newark, and it was testified without contradiction that the absence of free lighterage together with the rate adjustment prevented the location of many industries there. Trucking in lieu of lighterage will not be performed to or from Port Newark by the lines whose rails do not reach there, although they will truck under or over the Hudson River and the East River to steamship piers in Brooklyn. Efforts to have the coastwise steamship lines make Port Newark a port of call failed because of the absence of the same privileges as are accorded at New York.

Loading charges: In City of Newark *v.* Pennsylvania R. R. Co. (182 I. C. C. 51), it was found that the Pennsylvania's failure to absorb the loading charges on lumber from Port Newark while contemporaneously absorbing the cost of similar services at various other ports resulted in undue prejudice and preference. This was ordered removed effective May 31, 1932. This case supports a finding of undue prejudice and preference by reason of the denial of the same lighterage and trucking privileges at Port Newark as are accorded in other parts of New York Harbor.

B–11. ADVANTAGES OF FREE LIGHTERAGE

Shippers accorded free lighterage receive the services of all the trunk lines at the New York rates. This is a distinct advantage over shippers located on a single line who must often pay higher rates for joint-line hauls. Shippers who use the contract terminals have a similar advantage, but all of the other pier stations, off-track stations, and team tracks in New York are generally local to the individual lines. A further advantage is that the cost of loading or unloading the car, which is ordinarily borne by the shipper, is borne by the railroad when lighterage is performed. Shippers using the contract terminals, as well as all other shippers who receive team track or private siding delivery, generally load and unload their own carload freight. In Loading and Unloading Carload Freight (101 I. C. C. 394) separate charges of 30 to 50 cents per ton were prescribed for loading or unloading carload package freight at various points. The shipper who loads his own freight receives a "shipper's load and count" bill of lading, while a lighterage shipper receives an unconditional bill of lading. The latter is a material advantage in settling claims for shortage. In addition to these advantages, lighterage affords a free pick-up and delivery service analogous to a store-door delivery, as explained in the next section. The advantages of free lighterage to the steamship companies will be discussed in sections B–13 and D–19.

Witnesses for the defense, as well as complainants, testified to the superiority of the lighterage service.

Effect of denial: That part of the port outside of the free-lighterage limits in New Jersey is in keen competition with New York and points within the lighterage limits. This competiton is not only between industries already located but also for the location of new industries. There is similar competition for the berthing of steamships and for shipping facilities. In all of this competition the absence of the same lighterage privileges, as are accorded within the lighterage limits, is a decided handicap. The president of the Bush Terminal Co., who testified for the defense, acknowledged that Port Newark is handicapped in competing with the contract terminals, because it does not have the services of all the trunk lines at the New York rates. A vice president of the Munson Steamship Co., called by the defense, admitted that any section of the port that does not have free lighterage is bound to decline in competition with those sections of the port that do have free lighterage service. As will be seen later in section D–23, the Port of New York Authority, which tried to maintain a neutral attitude as between New Jersey and New York, states on brief that there is "obvious discrimination" against points outside the lighterage limits in New Jersey.

B–12. LIGHTERAGE ANALOGOUS TO STORE-DOOR DELIVERY

Free lighterage is analogous to store-door delivery in that a pick-up and delivery service is accorded at points not reached by the carrier's rails and which are not regular stations. In the case of store-door delivery the service is performed by trucks operating on the public highways, while in the case of lighterage the lighters are towed on public waterways. In both cases the carrier unloads inbound shipments from the car and loads the outbound shipments at its own expense, contrary to the general practice with respect to carload freight. Of course, shippers not located on the waterfront have to truck their freight to or from the waterfront, but there are many industries on the waterfront, especially along the East River and Kill van Kull, and apparently they are the principal users of the service to or from public and private docks. Such industries within the lighterage limits enjoy the practical equivalent of a store-door delivery and pick-up service, without charge in addition to the line-haul rates. They have this advantage not only over industries located on navigable waters outside the lighterage limits but also over industries in New Jersey which are not located directly on a carrier's rails and must therefore truck their freight to or from the railroad.

Store-door delivery: The record shows that New York has long been seeking a store-door delivery service by motor truck.[12] The commission was asked to require such a service in Constructive and Off-Track Freight Stations (156 I. C. C. 205) but held that it could not be required under existing law. The Merchants' Association of New York, which sought the service, did not ask that it be performed without charge in addition to the line-haul rates but suggested a division of the cartage expense between the carrier and shipper. In discussing the question of how the expense of the service should be borne, the commission said at page 215:

"A proper cartage charge or a proper share of cartage expense in any scheme of store-door delivery is properly to be borne by the consignee."

Modified store-door delivery: In the same case the commission also considered certain modified forms of store-door delivery known as the constructive-station and the constructive-lighterage practices. Under the constructive-station practice freight was trucked between the rail terminals and shippers' places of business on Manhattan Island through constructive stations on the Manhattan shore. The carriers paid the trucking company for the haul between their terminals and the constructive station, while the shippers paid for the trucking between that point and their places of business. With respect to this practice the commission said at page 225:

"At present the service is provided only on Manhattan Island. If Manhattan Island could be isolated from a rate and service standpoint the solution would be easy. But it is not so isolated. Its shippers are in active competition with those in the other boroughs of New York and with those in the metropolitan districts of northern New Jersey. The same freight rates apply to all, and when the constructive stations were established no change was made in that basis. It follows, therefore, that any saving or advantage which Manhattan shippers receive in the way of cartage expense operates to the relative disadvantage of their competitors who pay like rates and normal cartage. Already the Boroughs of Brooklyn and Queens and the northern New Jersey cities are on record demanding the service for themselves if it is to be continued on Manhattan."

The constructive lighterage service was inaugurated by the New York Central to meet the constructive station service of the other lines and was later adopted by the Baltimore & Ohio and the Central of New Jersey. It was similar in principle but differed in that every lighterage point within the lighterage limits became in effect a constructive station, and there was no minimum charge to be paid by the shipper for the trucking beyond the constructive stations. Apparently the practice was called constructive lighter-

[12] Since the hearings in these cases the carriers have filed schedules to establish a store-door delivery service by motor truck. These schedules provide additional charges for the store-door service, and the territory covered includes all points within a certain distance on both sides of New York Harbor.

age because it was in the nature of a substitute for lighterage, the carrier paying for the trucking to or from the point at which delivery would be made by lighter. It was also referred to as trucking in lieu of lighterage. The conclusion reached by the commission regarding both of these practices was stated as follows at page 229:

"The constructive stations, as now operated in New York, and the constructive lighterage practice operated in competition therewith must be condemned. They have resulted in according to shippers and receivers of freight on Manhattan a service which is denied to competing shippers and receivers in the same rate groups, which practice could not be defended on complaint under section 3 of the act."

The above-mentioned services were also found to be "not compatible with the provisions of section 15a of the act." Following that decision the carriers discontinued the constructive station practice and also constructive lighterage or trucking in lieu of lighterage except to and from steamship piers. There does not appear to be any material difference between trucking in lieu of lighterage to or from steamship piers and to or from other points.

Other store-door cases: The above-cited decision was in accord with the old Washington (D. C.) store-door delivery cases. Cassasa *v.* P. R. R. (24 I. C. C. 629); Anacostia Citizens Asso. *v.* B. & O. R. R. Co. (25 I. C. C. 411); Washington (D. C.) Store-Door Delivery (27 I. C. C. 347; Merchants & Manufacturers Asso. *v.* B. & O. R. R. Co. (30 I. C. C. 388) It was also in accord with the more recent Southwest Missouri Railroad Co. drayage absorption cases. Drayage Absorptions by S. W. M. R. R. Co. (113 I. C. C. 179); Absorption of Drayage Charges (128 I. C. C. 405, 140 I. C. C. 627). These latter decisions were successfully upheld in the courts. Wallover *v.* United States, 32 Fed. (2d) 524.

B–13. STEAMSHIP PERMIT SYSTEM

The steamship companies control the lightering of freight to their piers or ships through a permit system. This enables them to properly load the steamships without delay and facilitates unloading at the various ports. Heavyweight, or bottom cargo, is loaded first, and freight for different ports is loaded in separate hatches or otherwise separated. The permits are issued by the steamship companies and designate the time when particular shipments will be received. They are issued to the shippers or their agents, who deliver them with the lighterage orders to the railroads. Generally the railroads are allowed not more than 24 hours and in many instances less time after the orders are received to get the freight to ship side. This necessitates prompt switching and unloading of the freight at the lighterage piers. Freight which is not already at the lighterage piers is generally switched at night for orders received up to 5 p. m. of that day. It is frequently necessary to make special switching movements to get the cars to the lighterage piers quickly, and single lighters are often towed specially to get the freight to ship side within the permit time. The railroads do not contract to deliver the freight within the time specified, but they make every effort to do so in order to attract and retain business. If the freight is tendered after permit time or after the loading of the steamer is completed, the steamship company imposes what is called a "shut-out."

Delays and congestion: Shut-outs are also imposed occasionally when freight is tendered within permit time because of overbooking of cargo space on the ship or when a delay in its schedule necessitates a quick "turn around." Lighters are frequently held for two to four days under load at steamship piers awaiting acceptance of the freight due to late arrival of the steamer, delay in discharging the inward cargo, or other reasons. Each lighter is manned by a captain who generally stays on it and guards the freight until delivered. Some of the lighters are loaded with only single carloads, whereas their capacity is usually from four to eight carloads, and each of the railroads may have 2 or more lighters awaiting discharge at the same steamship pier, or a total of perhaps 15 lighters for freight which could easily be held on 5 lighters. Congestion in the ships adjoining the steamship piers sometimes requires trucking of the freight over two lighters to get to the pier. In some instances also tugs sent for certain lighters are unable to get to them and have to return later. These conditions are not all necessarily due to the permit system, but there is more delay to lighters at steamships or their piers than at the public or private docks.

Lighter loads: The capacity of lighters generally ranges from 200 to 750 tons, but their average loading of merchandise freight is only about 60 tons per loaded trip. The size of the loads is affected by the fact that eastbound freight for steamships is usually ordered for delivery within 24 hours, which makes it impossible to hold the lighters for further delivery orders for the same pier or ship without danger of having the original order shut out. Approximately 70 per cent of the total lighterage traffic is eastbound and 30 per cent westbound. This unequal balance causes many lighters to return to the terminal without loads, which tends to cause a low average tonnage per round trip. The low average loading of railroad lighters is also due in part to the fact that many of the larger lighter loads are handled by outside lighterage companies under allowances from the trunk lines. While free lighterage is generally confined to carload traffic, split deliveries have increased so much in the last 10 years that approximately 40 per cent of the carloads of export freight are now delivered to two or more steamships or piers. The railroads endeavor to handle small deliveries by truck in lieu of lighterage in order to reduce the costs.

Benefit to ships: As will be seen later, the defense stresses the necessity of lighterage in reducing the time of steamships in port. Undoubtedly the loading of the ships on both sides is of considerable advantage to the steamship companies. Complainants urge that lighterage is for the benefit of the steamship companies and that they should pay for it. Certainly it is as much for the benefit of the steamship companies as the railroads. Where they interchange freight directly across the dock each generally bears a portion of the handling expense. However, it is not for the commission to say whether a charge for lighterage shall be borne by the steamship company or the shippers. Except for the railroads holding themselves out to perform the service, it would devolve upon the shippers to transfer their freight between the railroad and steamship terminals where a direct rail connection is not feasible.

B–14. LIGHTERAGE AT OTHER PORTS

Atlantic ports: There is no free lighterage service by the railroads at Portland, Me. At Boston the railroads perform no free lighterage, but certain steamship lines lighter traffic between their piers and the railroad terminals. The railroads do perform some car-float service at Boston, but it is charged for in addition to the rail rates. At Philadelphia the tariffs authorize free lighterage but cars can generally be placed at ship side there, and almost all of the traffic is transferred direct between car and ship. At Baltimore there is some lighterage by the railroads to and from other railroad terminals, but the bulk of the water-borne traffic is transferred direct to and from ships docked at the railroad terminals, and there is no offshore loading or discharging of vessels by the use of lighters. At Norfolk the tariffs authorize free lighterage except to and from industries served by the Norfolk & Portsmouth Belt Line Railroad, but the great majority of industries and all of the ocean steamship piers are served directly by rail, and only a small proportion of the traffic is lightered. There is no free lighterage by the railroads at any of the south Atlantic ports of Wilmington, N. C., Charleston, S. C., Savannah and Brunswick, Ga., and Jacksonville, Fla. At Savannah ships are usually moved from one wharf to another unless the cargo is too small to warrant it. Lighterage is performed by private companies for themselves or others at Wilmington, Savannah, and Brunswick.

Gulf and Pacific ports: There is no free lighterage by the railroads at any of the Gulf ports of Pensacola, Fla., Mobile, Ala., New Orleans, La., and Port Arthur, Houston, and Galveston, Tex., At New Orleans a belt line owned by the city brings all of the railroads to ship side. Lighterage is performed by private companies for themselves or others at Pensacola, Mobile, and New Orleans. There is no free lighterage by the railroads at any of the Pacific coast ports of San Diego, Los Angeles, and San Francisco, Calif., Portland and Astoria, Oreg., and Tacoma, Seattle, Everett, Bellingham, and Vancouver, Wash. At San Francisco vessels are usually shifted from one wharf to another, but if lighterage is performed it is contracted for by the shipper or steamship company. Lighterage is performed by private companies for themselves or others at most of the Pacific ports.

Summarizing the foregoing, free lighterage is not performed by the railroads at any of the other Atlantic ports with the exception of a limited amount at Philadelphia, Baltimore, and Norfolk, and no free lighterage is performed at any of the Gulf ports nor at any of the Pacific coast ports. When lighterage is performed at such ports either the shipper or steamship company must bear the expense.

B–15. TERMINAL-COST DATA

Shore-to-shore costs: The trunk-line defendants in cooperation with the Port of New York Authority made an exhaustive study of the shore-to-shore costs of car-float and lighterage service in New York Harbor.[12] This study was based upon operations in the month of October, 1924, but the compilation of the data covered a period of three years by a staff which at times numbered 150 men, and the report was not submitted until June 15, 1926. Its results are regarded as unusually trustworthy, partly because the car-float and lighterage service are confined to freight traffic and there was no necessity of separating freight from passenger traffic as in most cost studies. Another reason for according more than usual weight to this cost study is that it was made by the carriers with a view to possible unification of their marine operations and not for the purpose of these cases.

The study was confined to shore-to-shore costs and, therefore, did not include the costs of transferring lighterage freight or any of the costs on the shore. The results of this study as to each line for the various classes of service are shown in four exhibits aggregating 298 pages. Briefly, the costs so determined for the car-float service to and from pier stations or team tracks and for lightering freight other than grain and coal are as follows per ton of 2,000 pounds:

[12] This cost study was conducted under the supervision of a committee of the principal executive officers of each line and a committee of the chief engineers of each line headed by Francis Lee Stuart, who appeared as a witness for complainants. For convenience, it is sometimes referred to as the Stuart study.

Shore-to-shore costs per ton

Carrier	Car float	Lighterage
Baltimore & Ohio	$0.64	$1.53
Central of New Jersey	.40	1.22
Lackawanna	.59	1.14
Erie	.59	1.56
Lehigh Valley	.50	1.37
New Haven	1.07	2.91
New York Central	.76	1.55
Pennsylvania	.62	1.64
Long Island	1.08	
Weighted average	.64	[1] 1.48

[1] If the New Haven's lighterage cost which is unusually high be eliminated, the weighted average of the lighterage costs for the other lines is reduced to only $1.44, because the New Haven's lighterage tonnage is comparatively small.

It will be noted that the average shore-to-shore cost for lighterage is more than double that for the car-float service to and from pier stations or team tracks, without taking into consideration the cost of the two or more handlings of lighterage freight. This is apparently due largely to the fact that the car-float service to and from pier stations or team tracks is more concentrated and affords heavier loading than the lighterage service to and from all the steamship piers and public or private docks in the harbor. Another reason is that there is much more delay awaiting the loading or unloading of lighters especially at steamships or their piers. The above shore-to-shore costs for lighterage include the relatively small amount of car floatage in lieu of lighterage, which is to a considerable extent affected by the same conditions above mentioned.

October is a heavy tonnage month, and the tonnage lightered in October, 1924, was much heavier than the monthly average for 1930. The heavier tonnage during the test month would have a tendency to produce lower costs per ton. The wages of employees in the marine department of the trunk lines in 1928 and 1929 were materially higher than those in 1924. For these reasons, among others, complainants' engineers expressed the opinion that present costs are at least as great as those in October, 1924.

The trunk-line defendants did not question the cost figures. The New York interveners accepted them as correct for the period for which they were determined; but they introduced evidence tending to show that certain items of cost are now lower than in 1924, which will be considered later.

Transfer costs: The costs of transferring lighterage freight between cars and lighters and between lighters and docks, piers, or ship's sling are derived from returns made by the trunk-line defendants to a questionnaire submitted by complainants. The transfer between cars and lighters is made by the Baltimore & Ohio, Lackawanna, Lehigh Valley, and Pennsylvania through contractors at stipulated rates of compensation per ton of freight. But the Central of New Jersey, Erie, and New York Central perform this transfer with their own employees and the cost thereof was not furnished. Accordingly complainants used for those lines the lowest contract rates for any of the other lines. These costs for the transfer at the rail terminals range from 13.5 to 16 cents per ton on open-car freight transferred by crane or hoist and from 35.9 to 51 cents per ton on box-car freight which is generally transferred by man power and trucks. The volume of box-car freight is much in excess of the open-car freight. Where two handlings are required in effecting the transfer between car and lighter the contractor receives the stipulated compensation for each handling. The transfer away from the rail terminals is made by all of the trunk lines through contractors. Their compensation per ton is the same whether the freight is transferred between the lighter and steamship pier, the ship's sling on the offside of vessel, or public or private docks. It ranges from 28.7 to 30.2 cents per ton on eastbound freight and from 37.6 to 43.3 cents per ton on westbound freight. The reason for the higher compensation on westbound than eastbound freight is apparently due to the fact that inbound cargo generally has to be unloaded from the ship to the pier and must be taken by the lighters from the pier rather than the ship's sling.

Combined costs for lighterage: Combining the transfer costs with the shore-to-shore costs for lighterage, the resulting costs for each trunk line and class of freight are shown in Appendix D hereto. The transfer costs are based upon one handling of the freight between car and lighter, although two or more handlings are sometimes necessary. The composite lighterage costs for the seven trunk lines other than the New Haven are based upon their weighted average shore-to-shore costs plus the lowest contract rates for the transfer service, as follows:

	Between car and lighter	Shore to shore	Between lighter and dock or steamship	Total
Eastbound:				
Freight transferred by crane	$0.135	$1.44	$0.287	$1.862
Freight transferred by hand and trucks	.36	1.44	.287	2.087
Westbound:				
Freight transferred by crane	.135	1.44	.425	2.000
Freight transferred by hand and trucks	.36	1.44	.425	2.225

The above costs do not include any of the expenses of maintaining the lighterage piers such as interest on investment, taxes, and repairs, nor the salaries and wages of agents and clerks employed on the lighterage piers or in the lighterage service. In the Wharfage Charges case, supra, where such items were included, the average cost of handling traffic between the rail ends and ship side in New York Harbor based upon data furnished by the carriers was found to be $2.75 per ton.[15] By eliminating the New Haven the weighted average cost for the other seven trunk lines is reduced to $2.72 per ton.

Other car-float costs: The shore-to-shore costs for the car-float service do not include the expense of loading or unloading the cars at pier stations. Complainants did not attempt to show the cost of this service but suggested that 50 cents per ton be allowed because a charge of that amount was found justified for loading or unloading carload freight at several other points in Loading and Unloading Carload Freight, supra. It does not appear, however, that the cost of this service at pier stations should exceed the cost of one of the two or more handlings necessary in the case of lighterage freight.

The only shore costs in connection with the car-float service which complainants undertook to prove were based upon an exhibit submitted by the Pennsylvania in Discontinuance of Inland Stations in New York City (173 I. C. C. 727). This exhibit which complainants introduced in these cases on rebuttal purported to show the total cost of the car-float service to and from the Pennsylvania's Desbrosses Street Station. The total cost shown was $2.30 per ton, of which 62.9 cents was for the car-float service and $1.10 for station and platform operating cost at Desbrosses Street. A substantial amount of the costs were for rental of facilities and improvements made at the pier station. Complainants point out that this car-float route is one of the shortest in the harbor, but there is no showing that the costs of maintaining the Desbrosses Street station are representative of the costs of maintaining the other pier stations in the harbor. Certainly they could not be representative of the costs at off-track stations or team tracks where the carload freight is loaded and unloaded by the shippers. There are always station costs anywhere, and while the pier-station costs appear to be unusually high, there is nothing upon which to base a comparison of the costs of maintaining such stations and other freight stations or the lighterage piers. Apparently the above-mentioned costs included a large proportion of less-than-carload freight which is not subject to free lighterage, and these costs are not fairly comparable with the lighterage costs which are based primarily on carload traffic. In the case cited the commission said regarding the above-mentioned costs for the Desbrosses Street Station, as compared with the costs of handling freight through the Pennsylvania's inland stations, that:

"The costs obviously are based on various assumptions and it is doubtful whether they can be relied upon as accurately reflecting the costs of the two operations."

B–16. ALLOWANCES

For lighterage: The tariffs of the trunk lines provide for the payment of allowances to outside lighterage companies for lightering freight entitled to free lighterage. These allowances on most traffic, including grain, are 60 cents per ton. The record indicates that the outside lighterage companies generally lighter the heavy or full loads, which can be handled at lower cost per ton. It also indicates that some of the trunk lines have contractual arrangements with outside lighterage companies for lightering certain traffic at rates higher than those published in their tariffs. Complainants urge that the actual costs of the lighterage service performed by the trunk lines are entitled to more weight than the allowances which are paid on a much smaller proportion of the traffic. In 1928, 1929, and 1930 the tonnage lightered by the trunk lines averaged more than three times that lightered for them by outside companies.

For trucking: The tariffs of the trunk lines also provide an allowance to shippers of 60 cents per ton for trucking in lieu of lighterage on certain commodities. In Constructive and Off-Track Freight Stations, supra, trucking in lieu of lighterage at New York was condemned as productive of undue prejudice and preference. The record affords no ground for distinguishing this allowance from the practice condemned in the case cited.

The Erie pays the United States Trucking Corporation for trucking to and from and services rendered at its inland stations 11 cents and 12 cents per 100 pounds on carload and less-than-carload freight, respectively. The Pennsylvania and Lehigh Valley formerly made similar allowances, but they discontinued their inland stations because the traffic could be handled more economically through car-float pier stations. Discontinuance of Inland Stations in New York City, supra.

[15] The defense argues that it is improper to designate this figure as the cost of lighterage. The report in the Wharfage Charges case shows clearly that it is the average cost for transferring freight between the rail ends and ship side, excluding switching. Apparently it includes freight which is interchanged directly with ships on the New Jersey shore, but that constitutes a small proportion of the total traffic, and its inclusion tends to reduce the average cost. For convenience, therefore, the above-mentioned figure will be referred to as the lighterage cost.

To contract terminals: The allowances or divisions given by the trunk lines to the contract terminals for the car floatage to and from those terminals and other services rendered thereat on most freight other than coal and coke are as follows, per ton of 2,000 pounds:

	Carloads	Less than carloads
Jay Street Terminal [1]	$1.20–$1.60	$1.20–$1.60
Brooklyn Eastern District Terminal [1]		
Bush Terminal Co.[1]		
New York Dock Ry.[2]	1.14– 1.68	1.60– 2.20
Bush Terminal R. R. Co.[2]	1.06– 1.36	1.56– 1.86

[1] Allowances. [2] Divisions.

The above allowances or divisions include station services as well as necessary switching at the contract terminals. It will be noted that those on carload traffic are considerably less than the combined transfer and shore-to-shore costs for lighterage and average about one-half of the lighterage cost of $2.72 per ton based upon the findings in the Wharfage Charges case.

New Jersey contends that the allowances to the contract terminals are unduly preferential of shippers using those terminals. The allowances do not accrue to the shippers, but they compensate the contract terminals for services similar to those performed by the trunk lines to and from their other off-track stations. Industries located at the contract terminals undoubtedly possess certain advantages, but there does not appear to be sufficient reason for treating those terminals differently from other off-track stations of the trunk lines.

B–17. DEDUCTIONS IN INTERLINE SETTLEMENTS

In interline settlements with connecting lines, the trunk lines serving New York Harbor receive a special allotment of the revenue on account of the lighterage and car-float service. The defense claims that similar arrangements also apply at some interior points in New Jersey where there are no marine services; but complainants' rebuttal evidence indicates to the contrary, and in any event it does not appear to be a general practice at interior points. The amount allowed for the terminal service before prorating is generally 4 cents per 100 pounds, but there are a number of exceptions where it is more or less than that amount. Complainants urge that the publication of separately established charges for the lighterage and car-float service would "merely change the form and thereby more accurately reflect existing substance." It might not make any difference as between the carriers, but of course it would make a difference so far as concerns shippers and communities.

B–18. RELATIVELY HIGH COST OF LIGHTERAGE

Compared with switching: The accounts and records of the carriers are not kept in such a way as to permit accurate compilation of the actual costs of switching service without resorting to much estimating. In the absence of such cost data, therefore, complainants compare the lighterage costs with switching charges and absorptions at numerous points throughout official territory, including New Jersey points in the metropolitan area. The lighterage costs are much in excess of the switching charges and absorptions shown. In this connection it should be remembered that switching is also performed on the lighterage traffic.

Percentages of rates: The average lighterage cost of $2.72 per ton based upon the commission's findings in the Wharfage Charges case is compared with numerous class and commodity rates in official territory. The comparisons with the fifth-class rates are the most important, because fifth class embraces 49 per cent of of the carload ratings and produces by far the greatest amount of class-rate tonnage and revenue. Illustrative of these comparisons based upon the fifth-class rates in effect at the time of the hearings are the following: The above-mentioned lighterage cost is 53.3 per cent of the fifth-class rate from New York Harbor lighterage points to Utica, N. Y., 249 miles; 42.5 per cent of that to Buffalo, N. Y., 437 miles; 35.7 per cent of that to Painesville, Ohio, 590 miles; and 23.9 per cent of that to Chicago, Ill., 959 miles. If the terminal service at the other end costs as much as the lighterage service, the two terminal services would represent 85 per cent of the rate to or from Buffalo and 106.6 per cent of that to or from Utica.

On packing-house products from Chicago to New York for export, a lighterage cost of $1.86 per ton is shown to be 45.6 per cent of the revenue received by the Lackawanna and Lehigh Valley for their respective hauls of 396 and 457 miles beyond Buffalo. On export flour from Minneapolis, Minn., the same lighterage cost is 74.8 to 81.6 per cent of the revenue received by the eastern trunk lines for their hauls of 396 to 508 miles beyond Buffalo. After deducting the lighterage cost the remaining revenue of these lines only amounts to 1.03 to 1.34 mills per ton-mile. These are examples of numerous similar comparisons.

Equivalent in miles: The combined transfer and shore-to-shore costs for lighterage are shown to equal the average cost of rail transportation on the respective lines for distances of 171 to 379 miles. This showing based upon the average freight operating expense per ton-mile of the various lines in 1928, excluding maintenance and operation of floating equipment, is as follows:

Lighterage costs equated into miles

Carrier	Lighterage costs per ton	Freight operating expenses per revenue ton-mile in 1928	Equivalent in miles
		Mills	
Baltimore & Ohio	$1.97–$2.47	6.52	317–379
Central of New Jersey	1.65– 1.96	9.68	171–202
Lackawanna	1.80– 1.95	8.84	203–221
Erie	2.00– 2.35	7.37	271–319
Lehigh Valley	1.81– 2.27	8.05	224–282
New York Central	1.99– 2.34	8.55	232–274
Pennsylvania	2.18– 2.52	7.41	294–340

The different lighterage costs shown for each line are due to the method of handling by hand power or crane and whether the freight moves eastbound or westbound. The equivalent miles for the various lines are affected by the average ton-mile expense for each line as well as the lighterage costs. For example, the Central of New Jersey, which has the highest ton-mile expense, has the lowest number of equivalent miles, and the Baltimore & Ohio, which has the lowest ton-mile expense, has the highest number of equivalent miles.

The only similar showing for the car-float service is that the shore-to-shore costs for car floatage to and from pier stations by the Lackawanna and the Pennsylvania are equivalent to 67 and 84 miles of rail transportation, respectively, or less than one-third of their equivalent miles for the lighterage service.

Average revenue for average haul: The combined transfer and shore-to-shore costs for lighterage are also compared with the average revenue per ton received by the various lines for their average hauls of revenue freight in 1929, as follows:

Lighterage costs compared with average revenue for average hauls

	Lighterage costs per ton	Average revenue per ton, year 1928	Average haul revenue freight miles
Baltimore & Ohio	$1.97–$2.47	$1.90	195.2
Central of New Jersey	1.65– 1.96	1.11	69
Lackawanna	1.80– 1.95	2.17	164.5
Erie	2.00– 2.35	2.11	214.2
Lehigh Valley	1.81– 2.27	2.02	174
New York Central	1.99– 2.34	2.11	199.2
Pennsylvania	2.18– 2.52	2.15	209.7

It will be noted that the lighterage costs generally about equaled or exceeded the average revenue per ton of the various lines for their average revenue hauls of 69 to 214 miles. The average revenue included low-grade commodities such as bulk coal, which is not subject to lighterage, but it also included less than carload as well as all the carload traffic. While the average revenue on all freight is not necessarily the average revenue on the lighterage freight, this showing nevertheless indicates the relative cost of lighterage as compared with the average revenue for all freight transportation.

B–19. NEW YORK CENTRAL TERMINAL COSTS

Difficulties of operation: The operation of the 12.39 miles of terminal line of the New York Central from Spuyten Duyvil south along Riverside Drive, Eleventh Avenue, Tenth Avenue, and West Street to St. Johns Park, is exceptionally slow, hazardous, difficult, and costly. That operation involves 81 grade crossings; flagmen stationed at 19 different points; use of flagmen on horseback preceding special boxed-in locomotives south of Thirtieth Street; and limitation on the number of cars in a train. The operation of this line has been a problem for many years because of its use of the streets and the hazard due to the ever-increasing vehicular and pedestrian traffic.

Values of land and improvements: The assessed value of the 93 acres in the Sixtieth Street yard averages $127,691 per acre, of the 48 acres in the Thirtieth Street yard $242,446 per acre, and of the 4 acres at St. Johns Park $489,716 per acre, or an average of $117,516 for the whole 145 acres. These values are compared with the assessed values of similar property of the lines on the New Jersey side which average $16,617 per acre. The New York Central has agreed with the city of New York and has been authorized by the commission to electrify this line and remove the tracks from the streets south of the Sixtieth Street yard by elevating a portion and depressing the remainder under the surface. The addititonal cost of these improvements will average $17,406,239 per mile for the 3.99 miles of line from the Sixtieth Street yard to St. Johns Park, and $6,654,632 per mile for the 12.39 miles of line south of Spuyten Duyvil. These costs per mile are compared with the average investment in road and equipment of the New Jersey lines which range from $166,171 to $330,840 per mile of road, also the corresponding figures for the eastern district which average $186,337 per mile, and with the average for the entire country which is $108,086 per mile.

New York Central traffic: The New York Central by not participating in joint rates virtually denies the use of its line on

Manhattan to freight routed over other lines. It also routes most of its export traffic and so far as possible other traffic which requires lighterage or car floatage via the West Shore. As previously stated, the New York Central has no direct connection with any of the steamship piers on Manhattan, and the proposed plan of elevating and depressing its tracks does not contemplate extending them onto the piers, which are not built to carry tracks.

Conclusions as to showing: While the New York Central's terminal operations on Manhattan are shown to be unusually difficult and expensive, and they no doubt cost more than similar operations on the New Jersey side, complainants have failed to prove that they are equal to the marine costs. They may be equal to the costs of car floatage to and from pier stations or team tracks, but they could hardly be equal to the lighterage costs. Even if it be assumed that the New York Central's rail switching is equivalent to the marine operations of the New Jersey lines, it would seem that when the New York Central performs marine service in addition to switching its charges should exceed those of the other lines. Such an adjustment would clearly be impractical.

B–20. THE GENERAL RATE ADJUSTMENT

The class-rate adjustment to and from New Jersey points as compared with New York at the time of the hearings was generally as follows:

Trunk-line territory: This territory was divided into short-haul and long-haul territories by a line which crossed the various trunk lines at stations from 71 to 200 miles from their terminals at New York Harbor. Within the short-haul territory the rates to and from New York were generally higher than those to and from the New Jersey rail terminals, except where the minimum class rates resulting from General Order No. 28 applied. To and from points beyond the 71–200 mile line the New York rates applied to and from the New Jersey rail terminals and were blanketed back on most of the lines to stations from 3 to 32 miles from the terminals. There was an exception, however, on traffic to and from points in northeastern New York. On traffic to and from that territory, the New York rates applied to and from points on the West Shore Railroad, but higher rates applied to and from points on the other lines in New Jersey.

Central and western territories: On traffic to and from central territory the New York rates generally applied to and from all points in New Jersey with the exception of Camden and Burlington, which were on the Philadelphia basis, and points in South Jersey taking arbitraries over either the New York or Philadelphia rates. The rates to and from Western trunk-line territory being made by combination on the Mississippi River crossings or Chicago, Ill., reflected the same adjustment as that to and from central territory. New Jersey points were and are also grouped with New York on traffic to and from transcontinental territory.

Southeast and Southwest: The all-rail rates prescribed between New York and the Southwest in the Consolidated Southwestern cases, supra, and those prescribed between New York and points in southern territory in the Southern Class Rate Investigation, 109 I. C. C. 300, also apply to and from most points in New Jersey. The rates via the rail-water-rail routes between New Jersey points and points in the South and Southwest, however, are generally higher than those via the water-rail routes between New York and the same points. As the coastwise steamship lines dock on Manhattan Island, traffic via those lines to and from New Jersey points must cross New York Harbor.

New England: To and from New England, New Jersey points took higher rates than New York, generally the Philadelphia basis. Of course, the traffic between New Jersey and New England generally crosses New York Harbor, but a large proportion of the traffic between New York and New England also moves by car float or lighter to and from the rail terminals at New York. Complainants emphasize the fact that where New Jersey's traffic crosses New York Harbor the rates are higher than the New York rates, but the rates are the same where New Jersey has the advantage of location.

The commodity rate adjustment to and from New Jersey points as compared with New York at the time of the hearings was generally somewhat similar to the class-rate adjustment as above described.

B–21. THE NEW CLASS-RATE ADJUSTMENT

Trunk-line territory: Under the Eastern Class Rate case the rates within trunk-line territory are based on a distance scale, known as the Appendix E or basic scale. There is a special rule, however, for the application of this scale to and from New York and points in New Jersey grouped therewith. This group on traffic to and from points beyond a line approximately 100 miles from the rail terminals at New York Harbor is as follows: All stations on the New York Central from Yonkers, Nepperhan, and Mount Vernon, N. Y., south; all car-float stations and points within the lighterage limits of New York Harbor; and all points in New Jersey on or east of a line from Perth Amboy through Rahway, Cranford Junction, Aldene, Newark Heights, Milburn, Essex Fells, Pompton Junction, and Englewood to Fort Lee, N. J. Rates are made to and from this group on the basis of the Appendix E scale for the actual distances to and from the rail terminals plus 10 constructive miles. This method of making rates to and from the New Jersey part of the group is one of New Jersey's principal complaints in these cases.

Short-haul territory: On the short-haul traffic within the 100-mile zone there is a different grouping. Points in New Jersey east of Newark Bay and the Hackensack River take rates for rail deliveries based on the distances to the rail terminals plus 10 miles. Rates for car-float or lighterage deliveries within the lighterage limits of New York Harbor are based on the distances to the rail terminals plus 30 miles, subject to the observation of the long-haul rates as maxima. It will be noted that the boundaries of the short-haul territory are changed from the former 71–200 mile line to a line approximately 100 miles from the terminals.

Central territory: On traffic to and from central territory rates were prescribed between certain key points, which included New York, Trenton, and Atlantic City, N. J. In establishing these rates the carriers grouped other points with the key points, most of northern New Jersey being grouped with New York. The Trenton rates are generally lower than the New York rates, but the Atlantic City rates are the same as the New York rates in most instances. To and from points in the northern part of central territory, however, the Atlantic City rates are higher than the New York rates, and the opposite is true at a few points in the southern part of the territory. The key rates to and from central territory are generally somewhat lower than the Appendix E or basic scale.

Western trunk-line territory: A similar adjustment of rates between key points, including those above mentioned, was prescribed for application to and from western trunk-line territory in Western Trunk-Line Class Rates, 164 I. C. C. 1.

New England: The rates to and from New England were also revised in the Eastern Class Rate case. The Appendix E scale was prescribed for application between trunk-line territory and New England, but a higher scale was prescribed for application between points in New England, and it was provided that the latter scale should be observed as minimum at border points between trunk-line territory and New England. Points in New Jersey east of Newark Bay and the Hackensack River are grouped with New York City and points within the lighterage limits. The rates to and from this group are based on the distances to the Harlem River terminal of the New Haven plus 40 miles or those to Spuyten Duyvil on the New York Central plus 10 miles. This readjustment satisfied the New Jersey Traffic Advisory Committee's complaint with respect to the rates to and from New England to some extent but not entirely. Points west of Newark Bay and the Hackensack River, such as Newark, continue to pay rates to and from New England higher than the New York rates without any corresponding advantage in the rates to and from points more than 100 miles to the west.

The revised rates under both of the above-cited cases were made effective December 3, 1931.

B–22. INFLATIONS IN CLASS RATES

Under the formula for making class rates to and from the New York rate group, the rates between New Jersey points in that group and points in trunk-line territory are inflated above the basic scale. The inflations are least at the terminals and are larger the farther away the points are from the terminals. For example, from Philadelphia the first-class rate to the New York group is 56 cents under the formula prescribed compared with 54 cents to Jersey City, 52 cents to Newark, and 49 cents to Rahway, N. J., under the basic scale for the actual distances. This is illustrative of the showing made with respect to the rates between points in the New York group and various points throughout trunk-line territory.

Complainants contend that the rates assailed to and from trunk-line territory are unreasonable to the extent that they exceed the basic scale prescribed for general application in that territory. In considering this contention, however, it must be remembered that the inflations complained of are due to the grouping plan. The question to be determined, therefore, is the propriety of that grouping.

B–23. RATES ON IRON AND STEEL ARTICLES

Much of the evidence offered by the New Jersey complainants related to the rates on iron and steel articles. The basis prescribed in the Iron and Steel case for making rates on these articles to and from the New York group is similar to that prescribed in the Eastern Class Rate case, except the boundaries of the group differ somewhat. Assuming that the addition of 10 miles to the actual distances to and from the rail terminals is intended to cover the marine service beyond, complainants point out that New Jersey inland points which can not receive marine service not only have to pay rates based on the greater distances to the terminals but also including the 10 miles allowed for marine service. The resulting mileage inflations range up to a maximum of 35 miles at Metuchen, N. J. Illustrative of the rate inflations, the rates from Pittsburgh, Pa., and Chicago and East St. Louis, Ill., are 20 cents per ton higher than the scale prescribed for the actual distances to several New Jersey points in the New York group. The inflations are more pronounced on traffic to and from New England, where an arbitrary of 2 cents per 100 pounds is apparently added for crossing New York Harbor.

Complainants contend that New Jersey points are entitled to rates based on their actual distances the same as most other points in official territory. Their evidence of competition included points west of the Delaware River as well as New York. The request findings of undue prejudice and preference, however, do not cover such points west of the Delaware River.

B–24. RATES TO AND FROM NEW ENGLAND

The rates to and from New England are assailed by the New Jersey traffic advisory committee. It supports the State's request for rates that reflect the natural advantages of location in all directions; but in the event that New Jersey points are continued in the New York group on traffic to and from the West, it asks that all of such prints be accorded the New York rates to and from New England.

Class rates: Under the present class-rate adjustment on traffic to and from New England, Harlem River, and other points in the Bronx have rates based on the New England scale for the actual distance; points within the lighterage limits and New Jersey points east of Newark Bay and the Hackensack River have rates based on the same scale for the distance to Harlem River plus 40 miles; and other points in the New York group on long-haul traffic to and from the West have rates based on the same scale for the distance to Harlem River plus 50 miles.

The basic scale was prescribed for general application between trunk-line territory and New England, allowing 30 miles for crossing New York Harbor where the distance is figured over the New Haven and 20 miles where it is figured over the New York Central, but it was provided that the higher New England scale should be observed as minimum at border points. The rates between New Jersey points in the metropolitan area and New England are, therefore, generally higher than they would be on the basis prescribed for general application to and from New England, but this is due principally to their location near the border between trunk-line territory and New England.

Newark and other important points west of Newark Bay and the Hackensack River which do not receive free lighterage have to pay the same rates as New York and points within the lighterage limits to and from points more than approximately 100 miles to the west or south, but they pay higher rates than New York and points within the lighterage limits to and from most points in New England. For example, the first-class rate from Newark to Worcester, Mass., 222 miles, is 82 cents compared with 80 cents from New York; while in the opposite direction the corresponding rate to Washington, D. C., also 222 miles, is 78 cents from both Newark and New York. Such an adjustment seems very unjust to New Jersey shippers who point out that there is no balancing of the advantages and disadvantages as in most group adjustments.

Commodity rates: The commodity rates between New Jersey points and New England are generally on the Philadelphia basis, as were the class rates previous to the recent revision. Thus New Jersey points in the metropolitan area generally take the same commodity rates as New York on long-haul traffic to and from the West but must pay the higher Philadelphia basis to and from New England. Philadelphia is from 70 to 90 miles farther distant than New Jersey points in the New York metropolitan area on traffic to and from New England.

Competition: There is competition between points in the various parts of the metropolitan area on traffic to and from New England, as well as on traffic to and from the West. A survey made by the New Jersey Traffic Advisory Committee of the industrial traffic moving into and out of New Jersey, exclusive of that between New Jersey and New York City, showed that approximately 87 per cent of it moved to and from points west of the Hudson River and the remaining 13 per cent to and from New England. It is because of the preponderance of the movement being to and from the West that New Jersey seeks rates reflecting the advantages of location in preference to uniform grouping in all directions.

Eastern Class Rate case: As previously indicated, the record in these cases is very much more comprehensive than that in the Eastern Class Rate case with respect to the issues here under consideration. In that case it was said at page 438:

"There are several reasons why it is not feasible to prescribe exactly the same method of making rates between the port district and New England as between that district and points west of the Hudson. First, the water movement of the New Haven, both on pier-station and on lighterage traffic is longer than that of the trunk lines. Second, the New Haven's water service is more expensive, apparently due in part to a much smaller volume of traffic. Third, on traffic between the New Jersey portion of the district and New England a rail haul averaging 14 miles in New Jersey is required, whereas on traffic between the New York portion and the West a rail haul in New York is involved only to a slight extent on Long Island. Fourth, the average line haul of traffic to and from New England is much shorter than that of traffic between New York and the West, so that the terminal costs are relatively much more important."

It is true that the New Haven's water movement to and from its rail terminals is longer than the average of the other lines, and it is also true that its lighterage and pier-station car-float costs are higher than those of the other lines, but the present record shows that the car-float interchange costs of the New Haven are the lowest of any of the trunk lines. Its shore-to-shore costs for car-float interchange with other lines averaged only 11 cents per ton compared with 35 cents for the New York Central and 17 cents for all the lines. This is probably due largely to the volume of traffic handled, the car-float interchange tonnage of the New Haven exceeding that of all the other lines combined. On the other hand, the New Haven's car floating to and from pier stations and lighterage tonnage is very small in comparison with the other lines. This record indicates that the length of the water haul has but little effect upon the costs, but they vary considerably according to the tonnage handled per trip.

Marine costs: The car-float interchange service performed on traffic between New Jersey points and New England is much less expensive than the car floatage to and from pier stations and the lighterage service at New York and points within the lighterage limits. This is due in part to the use of 3-track car floats in the interchange service as compared with 2-track car floats in the pier-station service, where it is necessary to have a platform between the tracks to facilitate loading and unloading. The interchange service is also more highly concentrated than the pier-station service, and the latter is much more concentrated than the lighterage service.

The shore-to-shore costs on traffic handled by the New Haven averaged 11 cents per ton for car-float interchange service compared with $1.07 for pier-station car-float service and $2.91 for lighterage service. The corresponding costs of the New York Central were 35 cents per ton for car-float interchange, 76 cents for car floatage to and from pier stations, and $1.55 for lighterage. The average costs of all the lines were 17 cents per ton for car-float interchange, 64 cents for car floatage to and from pier stations, and $1.48 for lighterage. These pier-station car-float costs do not include any of the expense of maintaining the pier stations, and the lighterage costs do not include the expense of transferring the freight between car and lighter or between lighter and pier.

The difference between the above-mentioned car-float interchange and pier-station car-float costs of the New Haven is 96 cents per ton or about 5 cents per 100 pounds, and the difference between its car-float interchange and lighterage costs is $2.80 per ton, or 14 cents per 100 pounds. It seems impossible that the cost of the average rail haul of 14 miles in New Jersey referred to in the foregoing quotation can be more than enough to offset the 5-cent difference between the car-float interchange and the pier-station car-float costs, to say nothing of the 14-cent difference between the car-float interchange and lighterage costs. Under the New England scale the first-class rate for 120 miles is only 4 cents higher than that for 100 miles, and the rate for 220 miles is only 3 cents higher than that for 200 miles. Of course, the differences are relatively less on the lower classes.

Length of haul: It is true that the average haul on traffic to and from New England is considerably less than that on traffic to and from the West, but New Jersey shippers are unable to see why traffic moving to and from New England should be treated differently than that moving to and from trunk-line territory. The distances to and from New England are generally comparable with those to and from trunk-line territory; in fact, longer hauls are possible to New England than to trunk-line territory. The New York interveners offered no objection to the establishment of the same grouping to and from New England as that to and from trunk-line territory. The Port of New York Authority favors the same grouping in all directions.

B–25. RATES VIA COASTWISE LINES

In general: The New Jersey traffic advisory committee attacks the rail-water and rail-water-rail rates via the coastwise steamship lines and their connections to and from points in the South and Southwest. These rail and water lines are operated "under a common control, management, or arrangement for a continuous carriage or shipment"; and their rates are on file with and subject to the jurisdiction of the commission. On all-rail traffic to and from the South and Southwest New Jersey points take the same rates as New York, which include marine service across the harbor; but on traffic moving via the coastwise lines and their connections New Jersey points generally take rates substantially higher than New York. Thus where the all-rail traffic crosses the harbor no addition is made to the rates for marine service, but where the traffic crosses the harbor in the other direction for movement via the coastwise lines the New Jersey rates are substantially higher than New York. New Jersey shippers are willing to pay higher rates than New York on the traffic moving via the coastwise lines where they are at a disadvantage, provided they are accorded the benefit of their location on all-rail traffic which does not receive marine service; but if New Jersey points are continued in the New York group on long-haul rail traffic, they ask for a similar grouping with respect to traffic moving via the coastwise lines and their connections.

Rate adjustment: All of the coastwise lines have their docks on Manhattan, but some of them maintain receiving stations in Brooklyn and Jersey City. The rates to and from Manhattan apply to and from the docks, and those to and from the receiving stations are sometimes the same as and sometimes higher than the dock rates. For example, the class rates shown from receiving stations in Brooklyn and Jersey City to Texas points are 7 cents higher than from Manhattan on carload traffic and 10 cents higher on less-than-carload traffic. Rates are also published by the coastwise lines in connection with the Newark Terminal & Transportation Co., which handles the traffic by lighter between Newark and the steamship docks. These rates are generally higher than the New York rates, but the difference is not uniform. In some instances they are higher than for similar service from Long Island City. The rail-and-water rates from New Jersey points are generally considerably higher than the all-water rates from New York. For example, the first-class rate from New Jersey rail points is 20.5 cents higher than from New York to Savannah and

30.5 cents higher to New Orleans and Galveston. In many instances the New Jersey rates are practically the same as the rail rates to New York plus the water rates beyond. In some instances the New Jersey points are included in a group extending as far as Buffalo, N. Y.

Coastwise traffic: The routes via the coastwise lines and their connections are of considerable importance because the rates are generally much lower than the all-rail rates and they serve important markets in the South and Southwest. They are used in considerable volume by New Jersey shippers who have competitors in Manhattan, Brooklyn, and Long Island City. Some New Jersey shippers truck or lighter their traffic to the steamship docks at New York in preference to paying the rates that would otherwise have to be paid. New York shippers also have to deliver or receive their shipments at the steamship docks, but they do not have to cross the Hudson River. Where lighterage is performed by the steamship line other than to or from its receiving stations, a charge of 5 cents per 100 pounds is sometimes made in addition to the dock rates.

Southwestern case: As previously indicated, rail-water and rail-water-rail rates were prescribed to and from the Southwest in the Southwestern case, but that case has been reopened as to those rates without their having gone into effect, and it is still pending on further hearing. The report does not indicate that there was any evidence in that case with regard to grouping New Jersey points in the metropolitan area with New York. The rates prescribed were for application to and from groups, Group A consisting of New York and Philadelphia and Group B of points within 75 miles of either of those ports. Under that plan such points as Jersey City and Newark, which are in the port area and take the New York rates on long-haul rail traffic, would apparently be grouped with interior points, such as Allentown and Reading, Pa. Thus there would be no consistent relationship with the all-rail rates, which the trunk-line defendants urge is necessary.

The coastwise traffic is long-haul traffic, the distances from New York ranging from 700 miles to Savannah to 1,887 miles to Galveston, and, of course, the distances are greater to interior points in the South and Southwest.

B–26. RATES TO AND FROM SOUTH JERSEY

South Jersey embraces points south of the Pennsylvania's line from Camden to South Amboy. At the time of the hearings the rates to and from this territory were generally based on arbitraries of either 5 cents over New York or 7 cents over Philadelphia. There were some exceptions, such as certain commodities on which the arbitrary was 2 cents. Under the new class-rate adjustment these arbitraries are eliminated, which removes the cause of complaint as to the class rates. Complainants request a corresponding revision of commodity rates not related to the class rates.

The evidence was directed principally to the rates to and from Keyport, Matawan, and Red Bank, which are in the area south of Raritan Bay. These points are generally nearer than New York to points west of the Delaware River, and they receive only standard rail service. Shippers at these points, therefore, can not understand why they should be charged higher rates than New York with its expensive marine service.

There was but little evidence regarding the reasonableness of the commodity rates to and from south Jersey aside from the comparison with New York rates and the service thereunder. About the only evidence of competition was with respect to one industry at Matawan having competitors in New York. The witness for this industry suggested that if the evidence should be found insufficient to warrant relief from the arbitraries the finding be made without prejudice to a specific complaint against them.

B–27. SWITCHING AT STATE INSTITUTIONS

At certain State institutions in New Jersey separate charges are assessed by the trunk lines in addition to the line-haul rates for placing cars on a private siding of the institution. These institutions are located at Morris Plains, on the Lackawanna, 33 miles west of Hoboken; Skillman, on the Reading, 45 miles west of Jersey City; and Vineland, on the Central of New Jersey, south of Philadelphia. Although the distances between these points and points west of the Delaware River are generally substantially less than those to and from New York, the rates at the time of the hearings were generally the same as or higher than the New York rates. The new class-rate adjustment changed this as to trunk-line territory, but apparently the rates between these points and central territory are still generally the same as the New York rates. Therefore the addition to such rates of the switching charges of $2.70 and $3.60 per car at Morris Plains, 19 cents per ton at Skillman, and 10 cents per ton at Vineland generally makes the total charges just that much higher than the New York rates.

Complainants contrast the exaction of these extra charges for private-siding deliveries with the expensive lighterage service which is accorded without charge in addition to the line-haul rates at New York. There is no competition between the State institutions and similar institutions in New York, but the comparison is offered as bearing upon the reasonableness of the free-lighterage practice. In this connection complainants refer to the decisions regarding a carrier's duty to make delivery on private sidetracks at the line-haul rates. Generally speaking, when the switching to or from such tracks is no more than the equivalent of switching to or from public team tracks the carrier may not make an additional charge; but where the service is materially greater than that for public team-track deliveries, the carrier not only may but should make an additional charge. (See Los Angeles Switching case, 234 U. S. 294; General Electric Co. *v.* N. Y. C. & H. R. R. R., 14 I. C. C. 237; The Lake Terminal case, 50 I. C. C. 489; United States *v.* Cast Iron P. & F. Co., 57 I. C. C. 677, 683; Pressed Steel Car Co. *v.* Director General, 93 I. C. C. 224, 109 I. C. C. 75; and Carnegie Steel Co. *v.* Director General, 96 I. C. C. 527, 132 I. C. C. 689.)

In Dept. of Institutions *v.* Central R. Co. of N. J. (181 I. C. C. 319), decided since the hearings in the present cases, division 3 considered the propriety of the above-mentioned switching charge at Skillman. It was found that the switching service of approximately 1.4 miles from the main line was not merely a substitute for team-track delivery but necessitated additional service beyond what such a delivery would ordinarily involve. Defendant introduced a cost study which purported to show that the out-of-pocket cost for handling traffic over the siding under consideration was 15 cents per ton, and it pointed out that it was entitled to some compensation over and above such cost. The charge of 19 cents per ton was found not unreasonable.

B–28. PROPRIETY OF GROUPING

Complainants point out that the present group adjustment in the New York metropolitan area is variable and inconsistent. The New York group is different on traffic to and from the various rate territories. New Jersey points are sometimes in the New York group and sometimes not in that group. Generally they are included where they have the advantage of location, but where New York has the advantage of location they are often excluded from the group. There is merit in complainants' contention that there is no balancing of advantages and disadvantages in the group adjustment. The commission has held that group adjustments are not unlawful, "provided they are well balanced and their advantages and disadvantages fairly distributed." (Inland Empire Shippers League *v.* Director General (59 I. C. C. 321, 341); Missouri Portland Cement Co. *v.* A. T. & S. F. Ry. Co. (101 I. C. C. 454, 463)).

Number of groups: Under the Eastern Class-Rate case and the Iron & Steel case, there are four different groups or rate bases in the New York metropolitan district on long-haul traffic to and from trunk-line territory and five such groups or rate bases on traffic to and from New England. Those on traffic to and from trunk-line territory are as follows: (1) Points within the New York group; (2) New Jersey points in the metropolitan district, but outside the New York group; (3) points on the New York side which are in the metropolitan district, but not the New York group; and (4) points outside the lighterage limits where the extra towing charges apply for lighterage. With respect to (2) and (3), it should be noted that complainants do not ask that these points be included in the New York group or that its boundaries should be the same as those of the metropolitan district. On traffic to and from New England there is an additional group due to excluding points west of Newark Bay and the Hackensack River, such as Newark, from the New York group. The propriety of this grouping on traffic to and from New England is discussed in section B–24.

Size of groups: It is also contended by complainants that the size of the New York groups is excessive when consideration is given to the cost of the lighterage service, which is equivalent to 171 to 379 miles of average rail transportation in addition to a substantial rail mileage in New Jersey. It is pointed out that these distances are much in excess of the maximum size of rate groups generally allowed by the commission in recent cases prescribing distance scales. There is some merit in this contention, especially in view of the fact that the grouping applies to hauls of only about 100 miles and upward. However, it must be remembered that the equivalent miles for the car-float service to and from regular stations or team tracks are much less than those for the lighterage service. Moreover, the actual distance separating New York from New Jersey must be considered as well as the costs equated into miles.

Lighterage group: The New Jersey Traffic Advisory Committee urges that the lighterage limits properly extended constitute a natural and logical rate group. It is pointed out that the grouping of New Jersey inland points with points within the lighterage limits is a grouping of the unlike, especially with respect to the terminal services, and that the New York group divides competitive points where like services are performed in northern New Jersey. These contentions appear to have considerable merit, but they must be considered along with the contentions and evidence of the defense.

New Jersey group: Complainants' principal rate witness suggested that on traffic to and from central territory practically all points in New Jersey should be included in one group on the basis of the key rates prescribed to and from Trenton. This suggestion is open to serious objections and can not be accepted for reasons advanced by the defense as hereinafter noted.

B–29. ALLEGED UNLAWFUL EFFECTS

Many of the alleged unlawful effects of the rate adjustment and free lighterage are considered elsewhere in this report and need not be repeated here. The evidence shows that there is competition between many industries in New York City and in the New Jersey section of the metropolitan district. These competing industries to a large extent receive their raw materials from the same sources and sell their manufactured products in the same markets. Such evidence given by complainants was uncontradicted and in fact is supported by the defense's evidence.

Paying for services not received: Numerous witnesses for New Jersey communities and industries complained that since they are compelled to pay the same rates as New York on traffic to and from the West, they are in effect paying for the expensive lighterage and other terminal services which they do not receive. They express a willingness to pay for such services when performed on the New Jersey side, but they vigorously object to paying for services not performed on their traffic. There would be more merit in their complaint if the rates were made with specific reference to the cost of the terminal services. But the record shows that so far as the class rates and the rates on iron and steel articles are concerned the only allowance made for the service beyond the rail terminals is the addition of 10 constructive miles. The report in the Eastern Class Rate case shows that this constructive mileage was intended to represent the average distance beyond the rail terminals and was never intended to represent the cost of the terminal services. As previously indicated, the cost data submitted in that case was regarded as insufficient to serve as a basis for even an approximate conclusion as to the costs. The present record, however, shows that the addition of 10 miles represents but a small fraction of the cost of the terminal services, especially the lighterage service.

Natural advantage of location: Much complaint was also registered by the New Jersey witnesses to the effect that they are deprived of their natural advantage of location by the rate adjustment. Clearly there is merit in this complaint in so far as New Jersey points are included in the New York group on traffic to and from the West, while they are required to pay higher rates than New York in many instances to and from New England and on traffic moving via the coastwise lines. Of course, in any group adjustment, some points may be more favorably located than others and therefore lose their advantage by the grouping, but there is always a limit beyond which advantages and disadvantages should not be disregarded. From a cost-of-service standpoint, New Jersey rail points have an advantage of from 171 to 379 miles, as compared with lighterage points, although their advantage is not so great with respect to the car-float service to and from regular stations or team tracks. This advantage with respect to lighterage represents more than 100 per cent of the rail hauls to and from many points in trunk-line territory and probably averages from 25 to 50 per cent to and from central territory. In Galveston Com. Asso. *v.* Galveston, H. & S. A. Co. (100 I. C. C. 110, 128 I. C. C. 349, 160 I. C. C. 345) differentials were prescribed between Galveston, Tex., and New Orleans, La., where the differences in distance were more than approximately 25 per cent.

B–30. SHIPPING ON NEW JERSEY SIDE RETARDED

Complainants contend that the New Jersey side of the port has not been receiving its share of the steamship business of the port, and this is attributed to the rate adjustment, and especially free lighterage. There is competition between New Jersey points and New York in seeking shipping facilities and the berthing of steamships. The larger part of the traffic handled by the steamships from and to the port of New York is through traffic interchanged with the railroads whose rails terminate on the New Jersey side, but only a comparatively small amount of this traffic is interchanged directly with ships docking on that side of the port. It is complainants' view that more of this through traffic should be interchanged directly across the dock at modern rail-water terminals on the New Jersey shore, which should be erected either by public authority or private capital, so that all the railroads may use them; but that the erection of such terminals is discouraged by the rate adjustment because the savings resulting from their use in place of lighterage would accrue solely to the railroads; and that there is no incentive for more ships to dock on the New Jersey side so long as the railroads continue free lighterage to and from Manhattan and Brooklyn.[16]

Piers: There are 688 piers within the lighterage limits, of which 144 are used by steamships, 160 by the railroads, and 384 for industrial, recreational, and other purposes. Of the total number of piers, 189, or approximately 27 per cent, are in New Jersey; and of the 160 piers used by railroads, 86, or approximately 54 per cent, are in New Jersey; but of the 144 piers used by steamships, only 14, or approximately 10 per cent, are in New Jersey. Of the 130 steamship piers in New York, 48 are on the Brooklyn shore of the upper bay, 42 on the Manhattan side of the Hudson River, 21 on Staten Island, and 19 along the East River. All of the piers used by the coastwise and intercoastal steamship lines are on the New York side.

Vessels: In the month of October, 1928, there were a total of 684 cargo vessels and 267 passenger vessels arriving and departing from the port of New York. Of the 684 cargo vessels, 297 docked on the Brooklyn shore of the Upper Bay, 122 on the Manhattan side of the Hudson River, 78 on the Manhattan side of the East River, 55 on the New Jersey side of the Hudson River, and 22 elsewhere in New Jersey. The number of cargo vessels docked in New York was approximately 86 per cent and in New Jersey 11 per cent of the total, the remaining 3 per cent being unassigned. Of the 267 passenger vessels, 177 docked on the Manhattan side of the Hudson River, 35 on the Brooklyn shore of the Upper Bay, 31 on the East River, and 24 in New Jersey. The number of passenger vessels docked in New York was approximately 91 per cent and in New Jersey 9 per cent of the total.

Hoboken: Most of the steamship piers on the New Jersey side are in the city of Hoboken. This is a city of about 56,000 population within an area of approximately 1 square mile. Before the United States entered the World War in 1917, Hoboken had a large part of the high-grade passenger and freight steamship business of the port. This included the North German Lloyd and Hamburg-American Lines which were taken over by the Government and their ships diverted to piers in Manhattan and Brooklyn. While several steamship lines still dock at Hoboken, its foreign commerce has declined from former years. Manufacturing and warehousing have also been curtailed, and there are a large number of vacant apartments and stores. The population declined about 5,000 in the five years previous to 1930 and 11,543 since the census of 1920.

Incidental effects: New Jersey's failure to receive a larger share of the steamship business of the port is alleged to result in subnormal business activity, employment, population, and value of property. There is no evidence that New Jersey has not shared in the general prosperity previous to the hearings except with respect to Hoboken and two or three other points. It is shown that New York City with 7.9 per cent of the total area of the metropolitan district has 62.5 per cent of the population, while New Jersey with 60.4 per cent of the area has only 28.2 per cent of the population. The record affords no indication of the extent to which the population is affected by the steamship business, but undoubtedly that is one factor of some importance. The most valuable use to which water-front property can be devoted is for the berthing of steamships. The assessed value of water-front property on the New York side is shown as averaging $152,418 per acre, compared with $28,341 per acre in New Jersey. A survey of the 14 miles of water front within the lighterage limits in New Jersey discloses that much more of it could be devoted to steamship purposes.

B–31. WASTEFUL OPERATING PRACTICE

New Jersey urges that free lighterage rewards, subsidizes, and encourages wasteful operating practice. It regards the general plan of interchanging freight between the railroads and steamships on the eastern side of New York Harbor as fundamentally unsound. The railroads not only have to lighter the carload traffic to and from the steamship or steamship piers, involving two or more handlings of the freight, but they also have to handle the less-than-carload freight by car float to and from their pier stations, and the shippers then have to truck such traffic between the pier stations and steamship piers through the congested streets of New York. Comparison is drawn between this roundabout and expensive method of interchange with direct interchange across the piers at modern rail-water terminals. Such direct transfer of freight between car and ship is comparable to the transfer between car and lighter, and it would eliminate the second handling as well as the lighterage.

Changed conditions: Free lighterage originated in the days of sailing vessels before steam displaced sails. In those early days the freight handled by ships to and from the port of New York was local commerce—that is, it was bought, sold, stored, and handled in New York. Subsequent increase of population and development of industry in the interior of the country have changed the commerce of the port so that now the major part of it is through commerce between the interior and foreign countries or points reached via the coastwise and intercoastal lines. It was estimated by a defense witness that 90 per cent of the steamship cargo handled at the port of New York at present is through traffic.

Port series: In support of their contention that through traffic should be interchanged between the railroads and steamships on the New Jersey shore, complainants rely not only on the opinions of their own engineers and experts but also quote from the Port Series No. 20, a report regarding the port of New York, issued jointly by the War Department and the Shipping Board, which states:

"A satisfactory solution of the port's problems involves, first, the general question of lighterage and the 'water belt'; second, the special question of maximum economic coordination of all activities. Speaking in general terms of any port of transshipment between rail and water, lighterage and car floatage are expensive methods of distributing freight. This is not to say that a certain amount of lighterage and car floatage is not actually economical. As a matter of fact, in so far as the ship itself is concerned, the rate of loading is in most cases expedited greatly by having a proportion of the cargo loaded on or from a lighter over the offside; that is, the side away from the wharf. But, generally speaking, freight handled over a lighterage pier or pier station is rehandled, and rehandling costs money in increasing amounts as wages advance. Even though, as at New York, the lighterage costs are absorbed in rates from most interior points, the principle is the same. Any uneconomical practice, in the long run, will affect, in the shape of increased costs, the ultimate consumer.

"Therefore if we were designing the port of New York anew, and designing it as a port of transshipment pure and simple, we would adopt the principle of bringing rails to ship side, either

[16] Witnesses who supported this view included the Governor of New Jersey, the president of the New Jersey State Chamber of Commerce, a member of the New Jersey Board of Commerce and Navigation, a former member of the New York-New Jersey Port and Harbor Development Commission and of the Port of New York Authority, a consulting engineer formerly on the staff of the last two mentioned commissions, another engineer employed by Jersey City who was formerly in charge of construction for the New York Department of Docks, the mayor of Newark, and others.

for direct handling between car and ship (for such classes of material as steel rails, lumber, etc.), or for loading via warehouses and transit sheds. This would imply the location of terminal and storage facilities for such movements on the Jersey side, at least in so far as the railroads from territory west of the Hudson are concerned."

Section 15a: Complainants refer to section 15a in support of their contention that a charge should be made for lighterage in order to correct the present wasteful practices. While the complaint does not specifically allege a violation of that section, it is believed that it should always be taken into consideration. As previously noted, the construction station practice and constructive lighterage or trucking in lieu of lighterage were found to be not compatible with the provisions of section 15a in Constructive and Off-Track Freight Stations, supra.

New Jersey admits that all lighterage service could not be dispensed with in the near future, because the present facilities for direct transfer on the New Jersey shore are insufficient to handle all of the railroad-steamship tonnage, but it urges that rates should be adjusted so as to encourage the more economical direct interchange. It does not appear, however, that the commission could change the rate adjustment merely to encourage more economical operating practices unless the evidence otherwise establishes a violation of the act.

B–32. SEPARATELY ESTABLISHED CHARGES

New Jersey contends that section 6 requires the publication of separate charges for accessorial services. That section provides in part as follows:

"The schedules printed as aforesaid by any such common carrier * * * shall also state separately all terminal charges, storage charges, icing charges, and all other charges which the commission may require * * *."

Accessorial services: This term is apparently used to designate those services which are performed on some but not all or even most traffic. Among such services are refrigeration, reconsignment, transit, storage, elevation, and the loading or unloading of carload freight. Separate charges are commonly published for these services, but there are many instances where no such charge is made, and in some instances this has been approved by the commission. Considering these facts, together with the wording of the statute, it seems to require the publication of separate charges only where such charges exist or may be required by the commission.

The question then arises whether a separate charge should be required by the commission. It is urged that the cost of accessorial services which are performed on some but not most traffic should be borne by the traffic which receives the service wherever practicable, especially if the cost is very great. Lighterage is undoubtedly an accessorial service, as it is confined to certain traffic even at New York, is not generally performed by the railroads elsewhere, and is a service beyond railroad terminals which is of special value to shippers but unusually expensive for the railroads. It is not so clear, however, that the delivery or receipt of freight at regular stations on team tracks can be regarded as an accessorial service because it is performed by car float or motor truck. Delivery or receipt of freight at regular stations or team tracks is always covered by the line-haul rates. The view that services to and from regular stations may not be regarded as accessorial is supported by United States *v.* Baltimore & O. R. Co. (231 U. S. 274).

Precedents: A separate charge for lighterage would be well supported by precedent. Separate charges have been required to be published for services rendered by the railroads in transferring ore and coal between cars and vessels. (Iron Ore Rate cases, 41 I. C. C. 181, 44 I. C. C. 368; Lake Cargo Coal Rates, 46 I. C. C. 159.) Such charges for similar services were also approved in New England Coal & Coke Co. *v.* N. & W. Ry Co. (22 I. C. C. 398); and Southern Trans. Co. *v.* Norfolk & W. Ry. Co. (101 I. C. C. 211, 147 I. C. C. 29). Separate charges averaging 70 cents per ton were approved for handling freight over the piers at New Orleans in handling charges at Louisiana Ports (61 I. C. C. 379). In Coastwise Lumber & Supply Co. *v.* B. & O. R. Co. (85 I. C. C. 441) defendants' charge of 3 cents per 100 pounds for lightering lumber at New York Harbor in addition to the line-haul rates from certain points in West Virginia and South Carolina was found not unreasonable or otherwise unlawful. In Import Fertilizer to Southern Points (147 I. C. C. 274, 281) failure of the carriers to publish separate charges for their terminal services at South Atlantic and Gulf ports in connection with proposed rates on imported fertilizer was found not justified and their schedules ordered canceled. In Ceramic Traffic Asso. *v.* P. R. R. Co. (123 I. C. C. 591, 595), Vanderbilt Co. *v.* Atlantic Coast Line R. R. Co. (167 I. C. C. 319, 347), and International Paper Co. *v.* Baltimore & O. R. Co. (177 I. C. C. 191, 199) rates were prescribed on imported clay from North Atlantic ports "plus a charge of 50 cents per net ton for handling said traffic from ship side to cars at the aforesaid ports." In Maritime Asso., Boston Chamber of Commerce *v.* A. A. R. Co. (126 I. C. C. 199), a unanimous expression on behalf of the commission contained the following regarding this question at page 213:

"It is quite impossible upon this record to compare with any accuracy the terminal services performed at the ports upon this ex-lake grain after the cars are spotted at the water-front elevator, or the respective costs and special charges for such services. In our opinion, however, the evidence upon this subject indicates the desirability of confining the line-haul rates strictly to the service ending with the spotting of the cars, and requiring all further terminal service to be covered by a special charge or charges. Such a plan would preserve to each port such advantages as inhere in facilities for the convenient and economical loading of vessels, and would also facilitate such comparison of special terminal services and charges therefor as may be deemed advisable in the future. The situation is not unlike that presented in Iron Ore Rate Cases (41 I. C. C. 181), where a similar separation of charges was required for somewhat analogous reasons."

Separately established charges are now provided for lighterage to and from points beyond the lighterage limits and for the lighterage of certain classes of traffic not entitled to free lighterage.

B–33. PROPOSED RATE DIFFERENCES

The State of New Jersey proposes that the rates between New Jersey points in the port district and long-haul points to the north, west, or south be made lower than the corresponding New York rates by not less than 6 cents per 100 pounds on all traffic except bulk grain, as to which a difference of 3 cents is suggested. The proposed 6-cent differential is the same as the proportional rate hereinbefore mentioned applicable for lighterage under certain circumstances. The suggested 3-cent differential on bulk grain is the same as the allowance given by the Erie to a subsidiary for lightering that commodity. New Jersey does not care whether the proposed rate differences are established through the medium of separate charges for the terminal services or by having two sets of rates. It asks for modification of the Eastern Class Rate case and the Iron and Steel case to the extent necessary to obtain the relief sought.

While the above represents what New Jersey asks in these cases, the commission is not bound to accord that relief or nothing, but may extend such relief within the issues as seems justified by the evidence.

C. Boston's contentions and evidence

C–1. IN GENERAL

The Boston complainants attack the relationship of the rates to and from Boston as compared with New York and the other North Atlantic ports. This complaint is confined to export, import, coastwise, and intercoastal traffic, and the domestic rates are involved only in so far as they apply on such water-borne traffic. The evidence is directed largely to lighterage and other accessorial services which are accorded without charge in addition to the line-haul rates at New York and the other North Atlantic ports, except Boston. Complainants contend that the costs of such services, especially at New York, much more than offset the somewhat greater distances to and from Boston. It is further contended that the failure to charge for such services or to reflect the costs thereof in the rates nullifies Boston's natural advantages and facilities for direct interchange between car and ship.

Railroads: Boston is served by the New York Central as lessee of the Boston & Albany Railroad, the New Haven, and the Boston & Maine Railroad. The New York Central and New Haven also serve New York, but the Boston & Maine serves only New England ports, although it participates in joint rates to and from New York. The Boston & Maine has sought to build up the port of Boston, and it offered no defense to the complaint. None of the carriers serving Boston directly serve either Philadelphia, Baltimore, or Norfolk, but most of the carriers participate in joint rates to and from all of the ports. The complaint invokes exercise of the minimum rate power if necessary.

C–2. BOSTON'S NATURAL ADVANTAGES

Harbor conditions: Boston has one of the best natural harbors on the Atlantic coast. Its steamship piers average about 6 miles from the open ocean, as compared with 17 miles at New York, 63 miles at Philadelphia, and 165 miles at Baltimore. The channel depths, tidal currents, and fog and ice conditions also compare favorably with the other ports. These conditions all tend to facilitate the docking of vessels and make the harbor attractive to shipping.

Distances to foreign ports: Boston has a marked advantage over the other North Atlantic ports with respect to the distances to most of the foreign ports. To the principal European ports, Boston has an average advantage over New York of 206 miles by the winter route and 185 miles by the summer route; its corresponding advantage over Philadelphia is 371 and 350 miles, respectively; and its advantage over Baltimore is 533 and 493 miles, respectively. Even to the principal ports on the east coast of South America the distances from Boston are less than from New York, Philadelphia, or Baltimore. Boston's advantage over New York to European ports is equivalent to about 12 hours' sailing time.

Rail-and-ocean distances: The through rail-and-ocean distances from points in the Middle West to foreign destinations are also generally less by way of Boston than the other North Atlantic ports. For example, the through distances from Chicago to the principal European ports by way of Boston average less than those through New York by 136.9 miles over the winter route and 116 miles over the summer route; they also average less than those via Philadelphia by 223.5 and 202.7 miles, respectively; and less than via Baltimore by 351.8 and 311.6 miles, respectively. A somewhat similar showing is made with respect to the distances from St. Louis and Kansas City, Mo., Omaha, Nebr., St. Paul, Minn., and Denver, Colo.

In view of the foregoing, Boston regards its port as a natural gateway for export and import traffic from and to points in the Middle West as well as New England.

C–3. DIRECT INTERCHANGE FACILITIES

All of the railroad terminals and almost all of the steamship terminals at Boston have rails on the piers so that freight can be interchanged directly between cars and ship. Box-car freight

is loaded or unloaded by the railroad on the pier, where the interchange is effected, and the steamship handles it between the pier and ship. Open-car freight can generally be transferred even more directly by the ship's tackle from or to the cars on rails along the stringpiece or side of the pier.

Railroad terminals: The Boston & Maine terminals at Hoosac Wharf and Mystic Docks in Charlestown, which are served from a modern "hump" yard, are regarded as unusually up to date and efficient. The Boston & Albany docks are at East Boston, across the harbor from Boston proper and the other terminals. The New Haven terminals are at South Boston, where it also serves the Commonwealth Pier and the Army supply base. These last two terminals are described below because they show not only the type of direct interchange facilities available at Boston, but also illustrate the modern rail-water terminals desired by New Jersey. Each of the railroad terminals is used by a number of steamship lines, mostly in the foreign trade. All of them are connected by rail.

Commonwealth Pier: This pier was built by the Commonwealth of Massachusetts at a cost of approximately $4,000,000. It is 1,200 feet long and 400 feet wide with a 40-foot channel on both sides. This makes it capable of berthing the largest ships, and it is used by nine steamship lines in the foreign trade. There is a 2-story steel shed 1,167 feet long and 360 feet wide, which is divided into three sections. Between these sections there are two pairs of railroad tracks depressed so that the car doors are even with the pier floor. Provision is made for trucks to cross the tracks by means of ramps which slope down from the pier floor to the tracks at intervals. There is also a single track along the stringpiece on both sides of the pier, making six tracks which extend almost its entire length. Open-car freight can thus be handled directly between the cars and ship, while other freight has to be trucked only a short distance. The pier is equipped with cargo masts, portable electric winches, platform trucks, freight elevators, and chutes. Freight can be handled between ships, and the second story of the pier shed by the cargo masts and winches. A viaduct from the street makes the second story as well as the first story accessible to motor trucks. This pier is recognized as one of the best and most efficient on the Atlantic coast.

Army supply base: This terminal was constructed by the Government in 1918 primarily for war purposes but is now leased to private interests for commercial purposes. It has a total berthing space for ships of 5,450 feet, and it is used by 15 steamship lines in the foreign trade. There are 4 concrete and steel buildings, 2 of which are 1,638 feet long and 2 924 feet long, from 100 to 128 feet wide, and from 2 to 8 stories high. Their total floor area is 2,524,430 square feet or approximately 58 acres. There are seven railroad tracks for the greater part of its length and five tracks for the rest of its length. Freight is handled between the cars and the storehouse or ship side in trailer trucks pulled by tractors. These trucks can be taken to any floor of the buildings in automatic elevators, of which the main storehouse has 24 controlled by one operator. Four electric traveling cranes are provided for handling freight between the ships and open cars on tracks along the stringpiece. Freight can also be handled between the ships and the second or third floors of three of the buildings which have projecting balconies. The buildings are accessible to motor trucks through a street 86 feet wide down the center of the terminal. Six bridges across this street connect the buildings on either side at the second or third floors. There is no waterfront terminal in the country where freight can be handled between ship and rail or truck with greater facility or economy than at this terminal.

Adjoining the Army supply base there is the largest dry dock in this country, capable of accommodating the largest ships afloat. Generally speaking, the rail-water terminals at Boston are capable of handling several times the volume of traffic which has passed through them during recent years.

C–4. SERVICES AT PORTS COMPARED

Switching: At Boston the distance from the Boston & Maine's classification yard to its Hoosac Wharf is 1.5 miles and to its Mystic Docks 2 miles. On the Boston & Albany the distance from its East Boston classification yard to the docks is 1.1 miles, the movement from the Beacon Park yard to East Boston being road haul. And on the New Haven the distance from its South Boston classification yard to the piers is only 0.6 mile. These switching movements are compared with those from the classification yards to the lighterage piers at New York Harbor, which range from 0.5 to 5.61 miles on the various lines. The average at Boston is 1.3 miles compared with 3.45 miles at New York.

Handling: The only service performed by the railroads in transferring carload freight between cars and ship at Boston is the loading or unloading of the cars on the piers. In many instances the railroads do not have to perform even this service where open-car freight is handled directly to or from the cars by the ship's tackle. About 21 per cent of the total water-borne freight was so handled in 1929.

Lighterage: No lighterage whatsoever is performed by the railroads at Boston. Some lighterage is performed between the Boston & Maine's terminals and the piers of certain coastwise steamship lines, but this is performed by and at the expense of the steamship companies. It would seem from this that lighterage is regarded as a service primarily for the benefit of the steamship companies at Boston.

Heavy lifts: Freight which is too heavy for the ship's derrick sometimes has to be handled by outside lighterage companies. At New York the railroads make an allowance of 60 cents per ton for this service, but no such allowance is made at Boston, and the service has to be paid for by the shipper or the steamship company. This has resulted in the diversion of heavy-lift freight from Boston to New York.

Split deliveries: Under the provision for two free deliveries of export carload freight at New York, a New England manufacturer who has orders for two large less-than-carload lots to be exported via different steamship lines can combine them so as to take the carload rate, and they will be delivered by lighter to the two steamship lines without additional charge. If these shipments were made to Boston for export via steamship lines docking at different piers, it would be necessary for them to be made as separate less-than-carload shipments, and in addition the shipper would have to bear the expense of trucking from the freight station to at least one of the piers. Of course, shipments to be exported by steamship lines docking at the same pier could be consolidated, but in many cases the steamship lines dock at different piers. Obviously Boston is at a decided disadvantage with respect to such shipments.

Shifting steamers: At New York the New York Central and other trunk lines, except the New Haven, make an allowance for shifting steamers to their terminals from other piers where they have docked, provided there is 150 tons or more of cargo. This allowance, which is the cost of the towing but not to exceed $75, relieves the carrier paying it from the expense of lighterage. No such allowance is made at Boston, although ships are often shifted from one terminal to another there, including the Boston & Albany docks. The expense of shifting steamers at Boston thus falls on the steamship companies or the shippers. This naturally tends to make that port less attractive to them than New York.

Storage in transit: Various commodities imported from abroad are held in storage at the port until orders are received for their distribution. Among such commodities are cocoa beans, burlap, beet pulp, and peat moss, which are imported through both New York and Boston. At New York the New York Central and other trunk lines, except the New Haven, publish a storage-in-transit provision. Under this provision the carriers will lighter carload freight or truck it in lieu of lighterage from the steamship piers to their own or other warehouses; and if it is shipped out within one year, the New York rates are applied without additional charge for the lighterage or trucking. There is no such general storage-in-transit provision at Boston, where the charge for switching or the expense of trucking from the pier to the warehouse must be borne by the shipper in addition to the rates from Boston to destination. For example, on 1,000 bags of cocoa beans received at the Boston & Albany docks the charges for switching a short distance from the pier to that carrier's East Boston warehouse at $15 per car would amount to $60; and if the shipment were trucked, the cost at 8 cents per 100 pounds would amount to $260. The storage charges are also much in excess of the New York Central's charges at New York, but complainants do not assail the difference in such charges. They do complain of according the transit provision at New York and not at Boston. This has resulted in the diversion of considerable business from Boston to New York.

Switching charges: When the line-haul movement to or from Boston is over a different railroad from that which serves the pier where the ship docks, the latter carrier assesses a switching charge of $10 per car and a charge of 60 cents per ton for loading or unloading the car. These charges are absorbed by the line-haul carrier on traffic from or to points west of the Hudson River, except in the case of grain. Aside from ex-lake grain, however, Boston does not now have much water-borne commerce from or to that territory. On traffic from or to points in New England, the line-haul carrier absorbs the loading or unloading charge and one-half of the switching charge. Thus New England shippers have to pay $5 per car in addition to the Boston rates for switching to or from a terminal other than that of the line-haul carrier. This additional charge applies on a considerable proportion of the water-borne commerce, especially that interchanged with ships at the terminals served by the New Haven. These terminals are used by many of the steamship lines in the foreign trade, while central and northern New England are served largely by the Boston & Albany and the Boston & Maine. In 1929 approximately 30 per cent of the water-borne traffic handled by the New Haven to or from its terminals at Boston was switched from or to other lines for the road haul. The corresponding percentage for the Boston & Albany was 18.5 and for the Boston & Maine 7.7 per cent. The bulk of this traffic was from or to points in New England.

Under the lighterage practice at New York carload traffic is delivered or received at any steamship pier within the lighterage limits without charge in addition to the New York rates. For example, export traffic from points on the Boston & Albany when received at the New York Central terminals will be lightered to any of the contract terminals in Brooklyn or any of the steamship piers in Hoboken at the flat New York rates. The record indicates that this practice has had considerable influence in attracting New England traffic to New York in preference to Boston.

C–5. SPECIAL TERMINAL COSTS

Complainants contrast the costs incurred by the railroads in transferring freight between their cars and steamships at Boston and New York, respectively. These costs are for services which are in addition to the terminal services generally performed on carload traffic throughout the country.

At Boston: The costs at Boston were furnished by the defendant lines serving that port in response to a questionnaire submitted by complainants. As previously indicated, the only

service performed by the railroads in transferring carload freight at Boston is the loading or unloading of the cars on the piers. This cost during the year 1929 an average of 40 cents per ton for the Boston & Albany and the Boston & Maine and 45 cents per ton for the New Haven. When open cars are loaded or unloaded by the ship's sling, the railroads sometimes pay the steamship company or its stevedores 30 to 38 cents per ton, but in other instances transfers so made are entirely without expense to the railroad.

At New York: Appendix D shows the combined shore-to-shore and transfer costs for lighterage at New York by all of the trunk lines except the New Haven. The shore-to-shore cost for that line derived from the Stuart study made by the trunk-line defendants in cooperation with the Port of New York Authority is $2.91 per ton. For the transfer by the New Haven between car and lighter complainants use an estimated cost of 40 cents per ton, which may be compared with its average cost of 45 cents per ton for loading or unloading at Boston. The New Haven's contract rates for the transfer between lighter and ship or pier are 29.2 and 42.1 cents per ton on westbound and eastbound freight, respectively. Combining these costs for the New Haven makes a cost of $3.60 per ton on westbound freight and $3.73 on eastbound freight. These costs are somewhat less than the average cost of $3.93 per ton found for the New Haven in the Wharfage Charges case, supra.[17]

Equivalent in miles: Based on the New Haven's average freight operating expense per ton-mile in 1928, its lighterage costs of $3.60 and $3.73 per ton on westbound and eastbound freight are equivalent to 263 and 272 miles of average rail transportation, respectively. Deducting from the freight operating expenses the approximate cost of handling less-than-carload freight, the equivalent miles are shown as 303 and 315 miles. These distances are considerably in excess of the longest possible haul of the New Haven from or to New York.

As previously indicated, the New York Central's lighterage costs were shown as equivalent to from 232 to 274 miles of average rail transportation. These equivalent miles are four or five times as great as the difference in distance of about 58 miles from Albany to Boston and New York, respectively.

Percentage of rates: The above-mentioned lighterage costs of the New Haven range from 41 to 64 per cent of its fourth-class rates, from 58 to 93 per cent of its fifth-class rates, and from 75 to 117 per cent of its sixth-class rates under the Eastern Class Rate case for distances of 50, 100, 150, 200, and 250 miles. These lighterage costs of $3.60 and $3.73 per ton, which are equivalent to 18 and 18.65 cents per 100 pounds, also exceed some of the commodity rates maintained by the New Haven from or to New York for distances of 131 to 165 miles and which include lighterage. In such cases, after deducting the average cost of lighterage, the carrier has less than nothing for the line haul.

C–6. GENERAL RATE ADJUSTMENT

Port differentials: The history of the port differentials is set out in Appendix B to Maritime Asso., Boston Chamber of Commerce *v.* A. A. R. R. Co., 95 I. C. C. 539, 583, hereinafter referred to as the Boston Maritime case. The differential adjustment on export and import traffic applies from and to most of central territory, but it also affects the rates on traffic moving through that territory which are largely on a combination basis. Under that adjustment Boston takes the same rates as New York, while Philadelphia and Baltimore have differentials under New York, and Norfolk generally takes the same rates as Baltimore. The differentials in the class rates are 2 cents to or from Philadelphia and 3 cents to or from Baltimore, except on import traffic the first two classes are 6 cents from Philadelphia and 8 cents from Baltimore. These differentials were formerly offset by differentials in the ocean rates to and from European ports so that the through rates on export traffic were substantially equalized via the various North Atlantic ports. During the World War the ocean differentials were discontinued, and the Shipping Board has since declined to restore them. The through rates via Boston are thus higher than those over the longer routes via Philadelphia and Baltimore. However, this commission's jurisdiction is confined to the rail rates, and the distances from representative points in differential territory to Boston average over 160 miles greater than to Philadelphia and over 225 miles greater than to Baltimore. Moreover, as hereinafter shown in section E–2, Boston has no advantage over Philadelphia and Baltimore similar to its advantage over New York with respect to terminal costs.

In the Boston Maritime case, where Boston sought elimination of the differentials in favor of Philadelphia and Baltimore, it was found that they were not unduly prejudicial to Boston. In that case New York interveners joined with Boston in seeking elimination of the differentials, and there was no issue regarding the relationship between Boston and New York. The differentials are generally much less than the rate differences in favor of Philadelphia and Baltimore on domestic traffic under the Eastern Class Rate case. They also appear to be considerably less than would result from the application of complainants' cost formula hereinafter explained.

[17] Complainants do not rely upon the costs as found in the Wharfage Charges case so much as the other costs shown in this record. They show that the costs found in that case for the port of Boston were based upon erroneous information furnished by the carriers, but no such showing was made regarding the costs found for New York.

Boston versus New York: While the complainant and some of the evidence assails the differentials in favor of Philadelphia and Baltimore, the attack was directed mainly to Boston's relationship with New York and especially to the free lighterage practice. The parity of rates as between Boston and New York on export and import traffic from and to differential territory and beyond also appears to apply from and to most points west of Albany, N. Y., but New York generally has lower rates than Boston from and to other points in trunk-line territory.

New York is Boston's principal competitor for export and import traffic, and the Boston witnesses testified that it must have lower rates than New York in order to compete. It is urged that the commission's decisions regarding the port relationships have proceeded on the theory they should be so adjusted as to permit all of the ports to compete for the traffic. While this is an important consideration, it does not appear that the commission ever has or could make rates with a view to equalizing the traffic moving through the various ports. Especially is this true where to do so would necessitate a disregard of transportation conditions and costs. As hereinafter shown, however, the complaint is based primarily upon the cost of service to and from Boston compared with New York, including lighterage at the latter port. To show that there is nothing radical about Boston seeking lower rates than New York, it is pointed out that Boston had lower rates than New York on import traffic from 1874 to 1912. The differentials in favor of Boston ranged from 5 to 10 cents on first class and from 1 to 3 cents on commodities during different periods. The rates were equalized in 1912 as a result of Chamber of Commerce of N. Y. *v.* N. Y. C. & H. R. R. Co., 24 I. C. C. 55, 27 I. C. C. 238. In that case it was said that the cost of the additional haul to and from Boston would "perhaps" equal or exceed the greater terminal cost at New York, but there was no attempt to show the costs as in these cases. This is the first case since then in which Boston has sought lower rates than New York, and the only case in which a showing has been made regarding the cost of service to and from the respective ports.

Cost of service:[18] Complainants urge that distance as a factor in rate making is merely a rough measure of the cost of service. They undertake to show that when consideration is given to the cost of lighterage at New York, the cost of transportation to and from that port is greater than that to and from Boston. This showing is based upon the average freight operating expense per ton-mile in the eastern district for the year 1928. The approximate extra cost of handling less-than-carload traffic was first deducted so as to get the average cost on carload traffic. The resulting factor of 7.7 mills per ton-mile was then applied to the distances over various routes from 14 representative points to Boston and New York, respectively. For example, the routes used from Buffalo to Boston were those of the New York Central in connection with the Boston & Albany and the Boston & Maine, respectively; and to New York those of the New York Central, the Lackawanna, the Erie, and the Lehigh Valley, which constitute the principal direct routes. The special terminal costs hereinbefore referred to for each individual line serving the respective ports were next added to give the total cost of service. The cost of lighterage on eastbound and westbound traffic are averaged, but the costs are shown separately according to the method of transfer by man power or crane. These total costs together with the ratios of New York to Boston are shown below:

Comparison of total cost of service

	Boston, cost per ton	New York, cost per ton		Ratio, New York to Boston	
		Crane	Man power	Crane	Man power
				Per cent	*Per cent*
Buffalo, N. Y	$4.16	$5.24	$5.45	125	131
Watertown, N. Y	3.26	4.72	4.87	145	150
Utica, N. Y	2.61	4.05	4.21	155	161
Erie, Pa	4.87	6.26	6.49	128	133
Detroit, Mich	6.00	7.47	7.74	125	129
Columbus, Ohio	7.16	7.63	7.89	107	110
Chicago, Ill	8.18	9.66	9.91	118	121
Indianapolis, Ind	8.17	8.67	8.93	106	109
Pittsburgh, Pa	6.10	5.88	6.16	96	101
St. Louis, Mo	9.31	10.48	10.76	112	115
Syracuse, N. Y	2.99	4.20	4.38	140	146
Cleveland, Ohio	5.56	6.84	7.04	123	127
Binghamton, N. Y	3.01	3.66	3.81	121	126
Burlington, Vt	2.18	4.44	4.66	204	214
Average transportation cost per ton	5.25	6.37	6.59		
Ratio, New York to Boston average transportation cost per ton				121.3	125.5

In order to meet the defense's criticism that the lighterage costs are included in the total freight operating expenses on which the

[18] The evidence regarding the cost of service to and from Boston as compared with New York was given by a witness who was former comptroller of the United States Railroad Administration and who has had considerable experience with cost accounting as a railroad official.

ton-mile cost is based, complainants revised the above figures so as to eliminate the estimated cost of the special terminal services from the line-haul factor. This reduced the line-haul factor to 7.23 mills per ton-mile, making the total average cost from the 14 points to Boston $4.96 per ton, and the corresponding averages to New York $6.12 for crane handling and $6.34 for handling by man power. These average costs to New York are respectively 123.4 and 127.8 per cent of the average cost to Boston. The differences between the average costs in favor of Boston are $1.26 and $1.38 per ton, or 6.3 and 6.9 cents per 100 pounds, respectively.

C–7. EX-LAKE GRAIN RATES

Importance of traffic: Boston is especially interested in the rates on ex-lake grain. This is a very important part of its commerce, because grain is about the only export commodity available to it for use as bottom cargo, and such cargo which will balance the lighter loading top cargo is very attractive for ships. During the 10 years from 1920 to 1929, inclusive, grain constituted 43.6 per cent of Boston's export tonnage. As will be shown in more detail later, the grain traffic through the port of Boston has suffered a marked decline in recent years. This is a matter of much concern to complainants, as grain is needed to attract more ships, and the service afforded by more ships would attract other traffic.[19]

Grain movement: Ex-lake grain originates principally in Canada. Buffalo is the lower lake port through which most of it moves when exported via North Atlantic ports in this country. It is expected, however, that the completion of the Welland Ship Canal, together with the lower rates applicable from Oswego, N. Y., will eventually result in much of the traffic being diverted to that port. Of the American North Atlantic ports, New York receives by far the largest portion of the ex-lake grain, followed by Baltimore, Philadelphia, and Boston in the order named. For example, in 1929 the total number of bushels of grain exported were approximately 60,000,000 via New York, 17,600,000 via Baltimore, 9,420,000 via Philadelphia, and 4,104,000 via Boston.

Methods of handling: At Boston the grain is transferred through water-front elevators directly to the ship's hold. This is also possible at New York when the ships come to the water-front elevators, but the bulk of the traffic there is passed through the water-front elevators to lighters or grain boats which take it to ship's side, and the grain is transferred to the ship by floating elevator. At Philadelphia most of the grain is transferred through water-front elevators direct to ships, but some of it is lightered or barged as at New York. At Baltimore the grain is transferred through water-front elevators direct to the ships, the same as at Boston. Grain moves to Boston over the Boston & Albany or the Boston & Maine. When it is exported by steamships docking at other terminals in the harbor, the ship is shifted at the expense of the steamship company or the shipper.

Boston versus New York: The rates on ex-lake grain from Buffalo to Boston and New York are the same, 15.17 cents. This includes a charge of 1 cent per bushel for handling through the lake elevators and a similar charge for handling through the water-front elevators at the ports. At New York the Erie makes an allowance to a subsidiary for lighterage of 3 cents per 100 pounds, or 60 cents per ton. Complainants regard this as a fair lighterage cost for grain, considering the much greater costs shown by New Jersey on other traffic. The floating elevator also receives 1 cent per bushel for transferring the grain from the lighters to the ship, but this charge is borne by the shipper and does not come out of the carrier's line-haul revenue. Deducting 1 cent per bushel for elevation at the lake elevators on traffic to both ports, and 3 cents for lighterage at New York, the net rates are 10.5 cents to New York and 13.5 cents to Boston.[20] These rates yield the New York Central 4.8 mills per ton-mile for its distance of 438 miles to New York, compared with 5.5 mills per ton-mile for 494 miles to Boston. The ton-mile yield to Boston is 115 per cent of that to New York, although it should normally be less for the longer haul. The car-mile earnings, based on 80,000 pounds per car, are 19.2 cents to New York and 22 cents to Boston. A somewhat similar showing is made with respect to traffic moving over other lines and respecting the rates from Oswego, which are 1.5 cents under Buffalo to both ports.

Port differentials: The rates on ex-lake grain from Buffalo to Philadelphia and Baltimore are 0.5 cent lower than to New York and Boston. The short-line distances are 479 miles to Boston, 411 miles to New York, 431 miles to Philadelphia, and 408 miles to Baltimore. In the Boston Maritime case, the original report found that there could be no undue prejudice to Boston with respect to these rates, because those to Boston are controlled by different lines from those to Baltimore and Philadelphia. It was stated that this situation might be corrected by exercise of the minimum rate power, but complainants had not invoked the exercise of that power. The view was expressed, however, "that no adequate reason exists for port differentials in favor of Philadelphia and Baltimore in the case of the ex-lake rates on grain in bulk from Buffalo for export." Upon further hearing, 126 I. C. C. 199, complainants did invoke exercise of the minimum rate power, but the evidence was found insufficient to warrant its exercise. The following conclusions were reached by the commission at page 215:

"The situation may be summed up, then, as follows:

"If we were to prescribe maximum or minimum reasonable export rates on ex-lake grain from Buffalo, we would in either case prescribe identical rates to New York, Philadelphia, and Baltimore, confining such rates to the service ending with the spotting of the car at the water-front elevator and requiring any further terminal service to be covered by a special charge or charges. We would further find that the same rate might lawfully be established and maintained to Boston. The record, in our opinion, amply justifies such conclusions. But it has not been shown that the present rates are higher than maximum reasonable rates or lower than minimum reasonable rates, nor does the record enable us to determine what the maximum and minimum limits of reasonableness would be. Nor does the record warrant a finding of undue preference and prejudice under section 3. The conclusion is inevitable that the present rates are not unlawful."

The present record does not warrant any different conclusions from those above quoted.

C–8. RATES FROM AND TO NEW ENGLAND

New England traffic: Aside from ex-lake grain and its products, Boston's water-borne commerce originates at or is destined to points mainly in New England. This is one of the leading manufacturing areas of the country and produces a large volume of exports. Even the export traffic from New England points moves much more via New York than Boston. A survey of New England's foreign trade by the United States Department of Commerce discloses that approximately 65 per cent of New England's exports of manufactured products in 1928 moved via New York and less than 14 per cent via Boston, the balance moving principally by rail to Canada. The great preponderance of the movement via New York is attributed largely to the more frequent sailings from that port, but lighterage is also an important factor in conjunction with the switching charges and expense of shifting vessels at Boston. New England shippers represented by complainants' witnesses who now ship most of their traffic via New York would prefer to ship more of it via Boston if they could do so on as favorable a basis.

Comparisons of net rates: Complainants compare the rates on carload traffic between New England points and Boston versus New York after deducting the special terminal costs hereinbefore mentioned; that is, the average cost of lighterage at New York and the cost of loading or unloading the cars at Boston. These comparisons are based on the rates in effect at the time of the bearings but would not be materially affected by substituting the new class rates. For example, on lard compound and substitutes from Pittsfield, Mass., a commodity rate of 15 cents applies over the Boston & Albany in connection with the New York Central to New York lighterage points, 163 miles, while the fifth-class rate of 23.5 cents is applicable over the Boston & Albany to Boston, 151 miles. After deducting the New York Central's cost of lighterage, the net rate to New York is only 3.3 cents compared with a net rate of 23.1 cents to Boston for a shorter distance. On cotton-piece goods from Chicopee, Mass., a commodity rate of 36.5 cents applies over the Boston & Maine in connection with the New Haven to New York lighterage points, 134 miles, while the third-class rate of 39 cents applies over the Boston & Maine to Boston, 118 miles. After deducting the New Haven's lighterage cost the net rate of 18.5 cents to New York is less than one-half of the net rate of 38.6 cents to Boston for a shorter distance. On dried beet pulp to Springfield, Mass., the New Haven maintains a commodity rate of 14.5 cents from New York lighterage points, 131 miles, compared with a rate of 16 cents applicable over the Boston & Albany from Boston, 98 miles. The routes are different here, but the rate from New York is only 80 per cent of the New Haven's lighterage cost. On hemp to Ludlow, Mass., there is a commodity rate of 17.5 cents from New York lighterage points over the West Shore and Boston & Albany, 248 miles, compared with the fifth-class rate of 16 cents applicable from Boston over the Boston & Albany, 93 miles. After deducting the lighterage cost the net rate of 6.5 cents from New York for 248 miles is less than one-half of the net rate of 15.6 cents from Boston for 93 miles. The foregoing are illustrative of numerous similar comparisons. They show that after deducting the average cost of lighterage the net rates to or from New York are out of all proportion to those to or from Boston.

Percentages of first class: Complainants also show that the commodity rates maintained by the New Haven to and from New York on export and import traffic are in numerous instances a lower percentage of the first-class rates than are the class rates applicable on the same commodities to and from Boston. These comparisons are based on the new class rates under the Eastern Class Rate case, and the distances used to or from New York are those to or from Harlem River plus 40 miles. For example, on cordage, rope, and twine from North Plymouth, Mass., there is a commodity rate of 21.5 cents to New York, 270 miles, which is 24.4 per cent of first class; while the fifth-class rate of 14 cents

[19] Complainants quote from the Port Series No. 2, issued jointly by the War Department and the Shipping Board, as follows:

"More vessels may be attracted to Boston through the restoration of the through export traffic, and particularly the rapidly dying grain trade. Grain and flour are important to Boston's success as a port, because they are the only heavy commodities normally available for shipment in large quantities to the European countries from which Boston's imports are largely received. The restoration of the grain trade, however, is apparently dependent upon a rate situation which will place this port upon a more favorable basis."

[20] An additional 1 cent per bushel should be deducted for passing the grain through the water-front elevators at both ports, but this was not done in complainant's computation. It would simply make the net rates that much lower to both ports.

applicable to Boston, 35 miles, is 51 per cent of first class. If the rate to Boston were the same percentage of first class as that to New York it would be 10 cents, or 4 cents less than the present rate. On the same articles from New Bedford, Mass., there is also a commodity rate of 21.5 cents to New York, 262 miles, which is 24.4 per cent of first class; while the fifth-class rate of 16 cents to Boston, 52 miles, is 34 per cent of first class. If the rate to Boston were the same percentage of first class as that to New York, it would be 11.5 cents, or 4.5 cents less than the present rate. On jute yarn to Thompsonville, Conn., there is a commodity rate of 25 cents from New York, 162 miles, which is 34.7 per cent of first class; while the fourth-class rate of 34 cents applicable from Boston, 134 miles, is 50.7 per cent of first class. If the rate from Boston were the same percentage of first class as that from New York it would be 23 cents, or 11 cents less than the present rate. The foregoing are illustrative of other comparisons of a similar nature. In each instance the rates to or from New York include lighterage. The average cost of that service ranging from 74 to 84 per cent of the above rates to or from New York has not been deducted in these comparisons.

Relief sought: In view of the competitive situation as between the ports, complainants urge that the rate relationships as between Boston and New York on traffic from and to New England should not be any more favorable to New York than under the first-class rates, plus a reasonable charge for lighterage where that service is performed. The rates on water-borne traffic to or from Boston include loading or unloading of the car on the pier, while the rates to or from pier stations served by car float at New York also include loading or unloading of the car. Complainants urge that lighterage is an entirely distinct service, which is of special value to shippers and steamship companies but unusually expensive for the railroads. The record affords strong support for these contentions.

Eastern Class Rate case: As previously indicated, the record in these cases with respect to the costs of lighterage and car-float service at New York is very much more comprehensive than that in the Eastern Class Rate case, which was decided without prejudice to the conclusions which might be reached in these cases. In that case the New England scale was prescribed for application to and from New York based on the distances to and from Harlem River plus 40 miles or the distances to and from Spuyten Duyvil plus 10 miles. This makes the New Haven's rates to and from its pier stations and for lighterage deliveries higher than those to and from its Harlem River terminal; but the New York Central's rates to and from its rail terminals on Manhattan also apply to and from its pier stations and for lighterage deliveries. The 40 miles allowed over Harlem River adds from 2 to 6 cents to the fourth-class rates, from 2 to 4 cents to the fifth-class rates, and from 1 to 3 cents to the sixth-class rates. These additions are not far out of line with the New Haven's shore-to-shore costs for the car-float service to and from its pier stations, which average $1.07 per ton, or about 5 cents per 100 pounds; but they are entirely inadequate to cover its corresponding cost for lighterage of $2.91 per ton, or about 14.5 cents per 100 pounds. When the expense of transferring the freight between car and lighter and between lighter and pier or ship is added to the shore-to-shore costs the New Haven's total lighterage costs are $3.60 per ton on westbound traffic and $3.73 on eastbound traffic, or 18 and 18.65 cents per 100 pounds, respectively. The difference between these costs for lighterage and car floatage to or from pier stations is too striking to be ignored. It may be compared with the difference of 7 cents between the fifth-class rates of 20 cents for 100 miles and 27 cents for 200 miles and with the difference of 12 cents between the fifth-class rates of 20 cents for 100 miles and 32 cents for 300 miles under the Eastern Class Rate case.

The present record shows that the cost of lighterage has become a matter of very great concern to the New Haven. It has instructed its agents to solicit the routing of lighterage freight by its Sound steamship lines. These lines dock on the west side of Manhattan and do not lighter local traffic. This also makes a more economical lighterage operation for export and import freight.

Unlike the class rates, commodity rates between New York and New England generally recognize a difference between deliveries at regular stations in Manhattan or Brooklyn and lighterage deliveries, the latter being from 1.5 to 5.5 cents higher than the former in most instances. A separate charge for lighterage in connection with both class and commodity rates would not only promote uniformity but it would tend to discourage use of the expensive lighterage service where delivery could be taken through the more economical car-float facilities.

C–9. SPECIAL RATE SITUATIONS

Bananas: The United Fruit Co.'s pier at Boston does not have any direct rail connection. Bananas are handled from this pier by car float to the Boston & Maine and New Haven terminals. Shipments for the Boston & Albany are handled in the same way through the New Haven. A separate charge of $6.50 per car is made by the railroads for the car-float service. This charge is absorbed on shipments to points west of the Hudson River or north of the Canadian border, but only about 6 per cent of the movement is to that territory. On the remaining 94 per cent of the movement to points in New England the car-float charge of $6.50 per car is assessed in addition to the rates from Boston. Complainants compare the carload rates on bananas from Boston and New York to New England points as follows:

Rates on bananas

To—	From Boston		From New York	
	Miles	Cents	Miles	Cents
Bangor, Me.	243	59.5	442	59.5
Rockland, Me.	191	56	390	59.5
Waterville, Me.	188	55	387	59.5
Rutland, Vt.	167	50	266	50
St. Albans, Vt.	260	59.5	370	59.5
Newport, Vt.	231	58.5	357	59.5

It will be noted that although the distances are considerably less from Boston, the rates are either the same or only a little higher from New York. The rates from New York include lighterage or car floatage in lieu of lighterage, while an additional charge of $6.50 per car applies for car floatage on shipments from Boston. This situation clearly operates to the disadvantage of the port of Boston.

Vegetable oils: At Boston vegetable oils are pumped from the ship direct to tank cars. At New York such oils are pumped from the ship to tank barges which proceed to the rail terminal and the oils are then pumped from the barges to tank cars. The railroads make an allowance to the shippers for this service of 6.5 cents per 100 pounds, but 2 cents of this amount is charged back for services performed by the railroads in transferring the oil between barge and cars, so the net amount paid by the railroads to the shippers is 4.5 cents. Formerly there was quite a movement of vegetable oils through the port of Boston to Toronto and Hamilton, Ontario, Canada. The rate from Boston was 30 cents as compared with 34.5 cents from New York, or a difference of 4.5 cents. It will be noted that this rate difference just offset the net allowance at New York. In April, 1931, the rate from New York was reduced to 30 cents, and the movement through Boston stopped.

Lumber: At Boston lumber arriving by water is loaded into the cars by the shippers without expense to the railroads. At Philadelphia and Baltimore the cost of loading lumber is absorbed by the railroads where they receive a revenue of not less than 9 cents per 100 pounds. The railroads serving the ports of Philadelphia and Baltimore are different from those serving Boston. Moreover, it is doubtful whether there is any competition between these ports with respect to the lumber traffic. It does not appear, therefore, that an order requiring the railroads to make a charge for loading lumber at Philadelphia and Baltimore would benefit the port of Boston.

C–10. DECLINE OF THE PORT OF BOSTON

Total tonnage: Notwithstanding Boston's natural advantages as a port and its facilities for direct and economical interchange between rail and ship, its commerce has not kept pace with the other North Atlantic ports and especially New York. While Boston's total water-borne commerce has shown some increase, it has not been as great as that of New York or the country as a whole. For example, from 1923 to 1929 the total water-borne commerce of the United States increased 28.3 per cent, while that of New York increased 35.8 per cent, and Boston increased only 16.1 per cent. Boston's rate of increase was also less than that of Philadelphia and Baltimore. The increase at Boston was due largely to petroleum and coal which are not general cargo and therefore do not attract general-cargo ships.

Division of tonnage: Boston has decreased while New York steadily increased its proportion of the total foreign commerce. For example, in 1922 the combined foreign commerce of the two ports amounted to 27,000,000 tons, of which New York had 22,762,000 tons, or 84 per cent, and Boston had 4,257,000 tons, or 16 per cent. Seven years later, in 1929, their combined foreign commerce was 29,903,000 tons, of which New York had 27,177,000 tons, or 91 per cent, and Boston had 2,725,000 tons, or 9 per cent. It will be noted that New York's proportion of the total tonnage increased 7 per cent while Boston had a corresponding decrease. From 1922 to 1929 New York also increased its proportion of the total foreign commerce of the five North Atlantic ports from 56 to 60 per cent. In 1922 New York handled 95 per cent and in 1929 its proportion was 97 per cent of the total exports through the ports of New York and Boston.

Entrances and clearances: The vessel entrances and clearances through the Massachusetts and New York customs districts also disclose that Boston has not kept pace with New York either in respect to the number of vessels or the tonnage carried. For example, in 1900 the number of vessels entered through the Massachusetts district was 52 per cent of those through the New York district, but in 1910 this ratio had declined to 43 per cent, and in 1928 to 32 per cent. Likewise, in 1900 the tonnage entered through the Massachusetts district was 27 per cent of that through the New York district, but in 1910 this ratio had declined to 21 per cent, and in 1928 to 19 per cent. With respect to vessel clearances, the ratio of Massachusetts to New York declined from 50 per cent in 1900 to 21 per cent in 1928, and the tonnage ratio also declined from 25 to 12 per cent during the same period.

Export tonnage: The decline of the port of Boston is especially noticeable with respect to its export commerce. From an average of 991,164 tons annually during the 10 years from 1905 to 1914,

inclusive, Boston's exports declined to an average of 412,917 tons annually during the 10 years from 1920 to 1929, inclusive. During these same periods New York's export commerce increased from an average of 7,596,237 to 11,641,792 tons per year. Using the average tonnage per annum during the 10 years from 1905 to 1914 as 100 per cent, Boston's export tonnage declined to 55.9 per cent in 1920 and 30.6 per cent in 1929, while New York's tonnage increased to 132.3 per cent in 1920 and 146.6 per cent in 1929. The corresponding figures for Philadelphia and Baltimore show that their tonnage increased in some years, but in 1929 was 72.7 per cent for Philadelphia and 75.1 per cent for Baltimore of the 10-year average.

Value of exports: The decline in Boston's exports and increase in those of New York is also shown by a comparison of the values of the domestic merchandise exported through the customs districts of Massachusetts and New York, as follows:

Values of exports of domestic merchandise through customs districts of New York and Massachusetts, years ended on dates shown

Year	Massachusetts	New York
June 30, 1891	$70,719,517	$337,806,277
June 30, 1900	110,952,069	507,930,476
June 30, 1910	68,246,499	634,288,230
Dec. 31, 1920	182,806,127	3,204,788,339
Dec. 31, 1924	46,269,119	1,618,008,798
Dec. 31, 1925	45,001,143	1,740,841,173
Dec. 31, 1926	36,185,328	1,631,154,936
Dec. 31, 1927	38,026,576	1,689,143,316
Dec. 31, 1928	43,038,296	1,731,488,298

It will be noted that the values of the exports through the Massachusetts customs district in the years since 1920 are considerably less than in the earlier years, while those through the New York customs district have been much greater in recent years than in the years prior to 1920. In the year ended June 30, 1900, the ratio of Massachusetts to New York was approximately 1 to 5, while in 1928 it was about 1 to 40.

Grain traffic: The decline of Boston's export commerce is most serious with respect to the grain traffic. This has declined from between 30,000,000 and 35,000,000 bushels annually from 1898 to 1901, inclusive, to approximately 3,000,000 bushels annually from 1925 to 1928, inclusive. During the 10 years from 1905 to 1914, inclusive, Boston's exports of grain averaged 16,345,165 bushels per year, and during the 10 years from 1920 to 1929, inclusive, this average dropped to 6,390,029 bushels. For the same 10-year periods, New York's exports of grain increased from an average of 44,339,375 bushels to 99,308,186 bushels. Philadelphia also increased from an average of 17,496,181 to 30,539,999 bushels, and Baltimore increased from 27,885,359 to 39,003,925 bushels. New York's increase amounted to 124 per cent, while those of Philadelphia and Baltimore amounted to 75 and 40 per cent, respectively, and Boston's decrease amounted to 61 per cent. There has been a falling off in the exports of grain through all the ports in the last few years, but the above-mentioned 10-year averages seem to afford a fair picture of the relative trend of the various ports over a period of years.

Boston a port of call: In recent years Boston has gradually become a mere port of call. Steamships arriving there can not obtain sufficient cargo for the return voyage and proceed to other ports for additional cargo. This adds between 10 and 12 days to the 12 to 14 days required for direct service. The tonnage now available at Boston justifies direct service to and from but few foreign ports. On the other hand, 90 per cent of New York's sailings are direct without calling at other ports. The fact that Boston is generally the first port of call may in part account for its import commerce not having suffered so much as its export commerce. In the representative month, November, 1929, vessels in the foreign trade loaded outbound from Boston only 8.5 per cent of their inbound tonnage for that port. If greater outbound tonnage were available at Boston, however, it would naturally be accorded direct service to more foreign ports.

Diversion of ships: Steamships scheduled to call at Boston are frequently ordered by radio to omit calling at that port and proceed direct to New York. In such cases the cargo consigned to Boston is unloaded at New York and forwarded to Boston either by rail or coastwise line. The consignee is allowed only 48 hours' free time where the freight arrives by rail, whereas he would be allowed six days' free time on the docks if the ship called at Boston. Each ship diverted from Boston would leave in the port at least $1,500 for stevedoring, checking, pilotage, towage, and various fees. Approximately 50 steamships of several lines were so diverted from Boston in 1929, and 114 steamships in the year ending June 30, 1930. If there had been a charge for lighterage at New York, many of these ships would probably have found it more economical to call at Boston.

Lighterage a factor: The decline of the port of Boston as compared with New York has been due to various factors, but undoubtedly free lighterage has been one of the most important factors in helping New York. If a charge were made for lighterage at New York, Boston's natural advantages and facilities for direct interchange would naturally attract more tonnage, and the ships always go where the tonnage is available.

C–11. SEPARATELY ESTABLISHED CHARGES

The Boston complaint is in harmony with the New Jersey complaints in seeking the establishment of separate charges for the terminal services at New York. The evidence, however, indicates that Boston is primarily interested in securing a separate charge for lighterage to and from steamships on their piers. It is also interested in securing separate charges for car floatage and trucking when those services are performed in lieu of lighterage to and from steamships on their piers. But its complaint does not apply to the local traffic having origin or destination in New York, which constitutes the bulk of the traffic handled through the pier stations and off-track stations. About the only traffic handled through those stations which is covered by the Boston complaint is less-than-carload traffic. Such traffic is now generally subject to separate charges if lightered, and when car floated to or from pier stations must be trucked by the shipper between the pier station and steamship pier unless covered by through billing. Boston, therefore, does not appear to have much, if any, interest in the establishment of separate charges for car floatage or trucking to and from regular stations or team tracks.

The Boston complainants do not advocate the discontinuance of lighterage at New York, but they urge that it is a distinctly different service, which should be charged for separately so that the charges will be borne by those who use the service. They point out that the failure to do so must burden other traffic, because the lighterage costs constitute such a large proportion of the rates, especially to and from New England. While complainants ask for a charge reflecting the cost of the service, they apparently recognize that it may not be practical to reflect the entire cost in all cases. It is pointed out that separately established charges now apply for switching to or from piers not reached by the line-haul carrier at Boston. A separate charge for lighterage and car floatage or trucking in lieu thereof would remove the alleged undue prejudice by reason of such switching charges, also that resulting from the split-delivery system, the storage-in-transit provision, the car floatage of bananas, and other situations hereinbefore mentioned.

While the Boston complaint asks the establishment of separate charges for lighterage at other North Atlantic ports, complainants' evidence regarding lighterage was confined almost entirely to New York, and they introduced no evidence regarding the cost of lighterage at any other port.

C–12. THE CONSTITUTIONAL QUESTION

Complainants contend that the "concessions" granted by the carriers at New York violate clause 6, section 9, Article I of the United States Constitution, which provides that:

"No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another."

A similar contention was made by Boston in the Boston Maritime case, with respect to the port defferentials. Regarding that contention the commission said at page 542 of the original report:

"The complaints are brought under the interstate commerce act and invoke exercises of powers thereby delegated to us by Congress under the commerce clause of the Constitution. Clause 3, section 8, Article I. As an agency of Congress we must assume that in laying statutory duties upon us it has not transcended its powers."

Complainants deny that they regard the interstate commerce act as unconstitutional, but they urge that it should be so administered as not to violate the Constitution. The view is also expressed that by reason of the above-quoted constitutional provision any preference whatsoever of the ports of one State over those of another must be held to be an undue preference under section 3 of the act. This apparently contemplates a different rule for applying section 3 where the ports of different States are involved than would otherwise apply. Such an application of section 3 would clearly be unsound.

In Sand, Gravel, Crushed Stone, and Shells (155 I. C. C. 247), a distance scale was prescribed for application on the commodities indicated by the title between points in the Southwest. A charge of 8 cents per ton in addition to the scale was allowed for crossing the Mississippi River at New Orleans and Baton Rouge, La. In Commission *v.* Texas & N. O. R. Co. (284 U. S. 125), it was contended that this charge for crossing the river gave a preference to ports in Texas over New Orleans and Baton Rouge in violation of clause 6, section 9, Article I of the Constitution. In rejecting this contention the Supreme Court said at page 131:

"Congress, acting under the commerce clause, causes many things to be done that greatly benefit particular ports and which incidentally result to the disadvantage of other ports in the same or neighboring States. The establishing of ports of entry, erection and operation of lighthouses, improvement of rivers and harbors, and the providing of structures for the convenient and economical handling of traffic are examples. Pennsylvania *v.* Wheeling & Belmont Bridge Co. (18 How. 421, 433–435). And see Armour Packing Co. *v.* United States (209 U. S. 56, 80). The construction for which appellants contend would strip Congress of much of the power that it long has been accustomed to exert and which always has been held to have been granted to it by the commerce clause. It is clear that the Constitution does not forbid the allowance for ferrying the Mississippi at Louisiana ports."

These cases must be decided under the provisions of the interstate commerce act, which the Supreme Court's decision shows is not affected by the constitutional provision invoked by complainants.

D. Defense's contentions and evidence

D–1. IN GENERAL

While the defense was presented jointly by the defendants serving New York Harbor and the New York interveners, most of the witnesses were called by the interveners. The evidence is directed principally to the New Jersey complaints, but much of it also applies to the Boston complaint, and some of it is directed primarily to that complaint. Among the matters urged in defense of the complaints are the so-called unity of the port of New York, railroad competition, the New York State canals, alleged reasonableness of the New York group, comparisons with other terminal and rate groups, the New York Harbor case (47 I. C. C. 643), investments claimed to have been made in reliance on that decision, disruption of the rate structure that would result from New Jersey's proposals, the port differentials, and various matters urged in defense of the free-lighterage practice. For convenience, rebuttal evidence relating to the subjects covered by the defense will be considered in connection therewith. Separate briefs were filed by the trunk-line defendants, the State of New York jointly with various other New York interveners, the Port of New York Authority in the Boston case only, the city of New York, certain of the contract terminals, and others.

D–2. PORT UNITY

One of the grounds most strongly urged by the defense is the so-called unity of the port of New York or the metropolitan district. This unity is not defined but various matters are referred to as showing its existence. On the other hand, New Jersey denies that there is any unity as to freight rates.

Commercial and social unity: Among the matters referred to are that the entire area is commonly referred to as the metropolitan district, that a large number of people who work in New York have their residences in New Jersey, that northern New Jersey is included in the same customs and immigration districts as New York, and that the banks of northern New Jersey do business with the Federal Reserve Bank of New York. The regional survey sponsored by the Russel Sage Foundation defined the metropolitan area as extending into New Jersey on a radius of 40 miles from the city hall in New York. In making this definition it considered the area within which the New York newspapers circulate, the sphere of service covered by New York's retail and wholesale establishments, the use afforded New York's hotels and theaters by outlying communities, and the rapid-transit facilities available for commuters and others. More important probably than any of the foregoing is testimony that throughout the metropolitan district there are industries engaged in the manufacture of the same articles, drawing their raw materials from the same sources, and disposing of their products in common markets. This evidence coincides with New Jersey's evidence regarding competition and is not disputed.

The interstate compact: In 1917 a joint commission known as the New York-New Jersey Port and Harbor Development Commission was established by the legislatures of the two States. This commission after an exhaustive investigation reported a comprehensive plan for improving and developing the port's terminal facilities. Its principal recommendations were that an automatic electric system be constructed to serve Manhattan, that standard belt lines be developed to serve all other parts of the port, that railroad and marine operations not eliminated should be consolidated, and that a port authority be created to carry out the plan.

In 1921 the legislatures of the two States with the consent of Congress authorized the commissioners to sign an agreement or compact. This pledged "faithful cooperation in the future planning and development of the port of New York," but it was expressly provided that nothing therein should impair the powers of any municipality to develop or improve port and terminal facilities. It further provided for the creation of the Port of New York Authority, with the powers therein enumerated. Any action of that body was required to be concurred in by at least two members from each State, and it was also provided that the governor of each State could exercise a veto power over the action of any commissioner therefrom. Either State had the right to withdraw from this agreement in the event that a comprehensive plan for the development of the port should not be adopted by both States on or before July 1, 1923. Such a comprehensive plan was adopted in 1922, and provided certain "principles to govern the development." Among these were unification of terminal operations, so far as possible; the construction of bridges, tunnels, and highways; an underground automatic electric system for Manhattan; and 16 belt lines for other parts of the port district. The port authority was authorized and directed to proceed with the development of the port in accordance with this plan.

Certain witnesses for the defense, including the acting Governor of New York State and the mayor of New York City, expressed the view that the State of New Jersey had violated the compact in filing and prosecuting its complaint. It is not claimed that there was any express agreement regarding the filing of complaints or the maintenance of the rate structure, but apparently the view expressed is based mainly on the pledge to cooperate in development of the port. This can not fairly be construed as binding either State to refrain from attacking the rate adjustment. Such a construction would seem to contemplate a perpetuation of the existing rates, including situations which the port authority itself regards as discriminatory against New Jersey. Even if it had been expressly so agreed, that could not restrict or limit in any way the jurisdiction of this commission.[21]

Bridges and tunnels: The work of the port authority has been most apparent in its construction and operation of bridges and tunnels. It has built two bridges over the Arthur Kill between New Jersey and Staten Island, and it has about completed another bridge across the Kill von Kull between Bayonne and Staten Island. The aggregate cost of these three bridges to the date of the hearing was $16,859,724.60. The Hudson River vehicular bridge from One Hundred Seventy-eighth Street in New York to Fort Lee, N. J., has recently been opened at a cost of $42,123,462.65 to the end of 1930. The Holland Tunnel under the Hudson River was also built by commissions created by the legislatures of New York and New Jersey. It cost $42,007,988, which was evenly divided between the two States. In connection with the plea for the continuance of free lighterage and car floatage on the ground of port unity, New Jersey points out that the port authority charges tolls for the use of the bridges and tunnels under its jurisdiction.

Police and fire protection: In 1834 a treaty was entered into between the States of New York and New Jersey for the settlement of a boundary dispute. Under this treaty New York was given jurisdiction over the waters of New York Bay, the Hudson River, and Kill von Kull. Pursuant thereto New York City has always afforded police and fire protection over all these waters, including those adjacent to the New Jersey shore. This protection is afforded through the marine divisions of its police and fire departments, whose total cost is over $1,500,000 per year. New York is simply complying with the terms of the treaty, which also conferred certain benefits upon it.

Steamship rates: The defense refers to the steamship rates being the same to and from both sides of the harbor, except some of the rates via the coastwise lines which are assailed by the New Jersey Traffic Advisory Committee. However, it should be noted that the steamship companies do not generally perform a pick-up and delivery service throughout the harbor, and where some of the coastwise and intercoastal lines perform lighterage, there is no charge in some cases, but in others there is an additional charge for that service.

Unity as to rates: The defense's contentions and arguments regarding port unity seem to assume that there is now a unity as to rates. This is far from correct as pointed out by the New Jersey complainants. For example, Newark takes the same rates as New York to and from points more than 100 miles distant in trunk-line territory, but it must pay higher rates than New York for similar distances to and from many points in New England. New Jersey points in the metropolitan district are generally not in the New York group but the Philadelphia group with respect to commodity rates to and from New England. New York and Jersey City are in the same group on all-rail traffic to and from the South and Southwest, but where the traffic to and from the same points crosses the harbor in the other direction for movement via the coastwise lines the Jersey City rates are often higher than New York. In some instances New Jersey points in the metropolitan district take the same rates as Buffalo and other points near the Canadian border on traffic moving via the coastwise lines. There is also considerable variation in the rates for deliveries by lighter in different parts of the port. For example, such deliveries will be made up on the Harlem River without charge in addition to the New York rates, but an additional charge of $60 per lighter is made to or from Port Newark. Free lighterage is performed to and from Port Ivory, Staten Island, but immediately across the Arthur Kill at Elizabethport, N. J., there is an additional charge of $27 per lighter. On like traffic from the same points of origin there are eight different rates for lighterage deliveries on the New Jersey side of the port, and there are even more on the New York side.

Unity as to rates would be promoted rather than destroyed by requiring the same grouping in all directions with a uniform charge for lighterage throughout the port.

D–3. RAILROAD COMPETITION

Another of the grounds strongly urged by the defense is competition between the various railroads serving the port of New York. It is contended that such competition necessitates a continuance of the group adjustment.

New York Central: The defense regards the New York Central with its rail line down the west side of Manhattan as the dominant factor in the situation. They refer to the proposed improvements on that line as further strengthening its position. The alleged dominance of the New York Central is denied by New Jersey, which points out that it is not the short or rate-making route except to and from points east of Utica, N. Y. Moreover, it does not participate in joint rates between New York City and a large part of official territory not served by its lines. Nevertheless, shippers located adjacent to the rails of the New York Central would probably use it in preference to trucking to or from the pier stations or team tracks of the other lines wherever possible. Whatever may be the importance of the New York Central with respect to local traffic to and from Manhattan, clearly it has no advantage over the other lines with respect to export, import, and coastwise traffic. Such traffic must be lightered or trucked to and from

[21] Incidentally, it should be remembered that none of the New York rate groups coincide with the boundaries of the port-authority district as described in the compact.

the steamships or their piers, and the New York Central handles as much of it as possible over the West Shore.

Manhattan team tracks: The New York Central has team tracks in its Thirty-third Street yard on the west side of Manhattan. Most of the New Jersey lines also maintain team tracks contiguous thereto. The New York Central can serve its team tracks by rail switching, while the New Jersey lines must use car floats. There is no other difference in the service. Apparently New Jersey recognizes that it would not be practical to require higher rates for the car-float service to and from these team tracks than those of the New York Central, as it asks for the same rate differences in favor of New Jersey with respect to both classes of service.

Bronx situation: The New York Central maintains four main freight stations, including team tracks, in the Bronx. This is that part of New York City north of the Harlem River. All of the New Jersey lines, except the West Shore, also maintain team track or pier stations on the Harlem River. The latter facilities, which are served by car float, compete with the New York Central. The car floats in moving to and from these stations through the East River pass several pier stations on the east side of Manhattan, the rail terminals at Wallabout Bay, and some of the contract terminals in Brooklyn. The defense urges, therefore, that higher rates could not be maintained to and from these East River stations than to and from the Harlem River stations, citing Lautz Marble Corporation *v.* E. R. R. Co. (115 I. C. C. 543, 136 I. C. C. 183). New Jersey suggests that the Bronx rates be made the same as Manhattan and Brooklyn, but there is no evidence that the New York Central's rail service to and from its Bronx stations is any more difficult or costly than similar service on the New Jersey side. The defense regards this situation as practically controlling of the issues, but it should be noted that it applies only to car floatage to and from regular stations.

Hoboken Shore Line: This is the short name for the Hoboken Manufacturers' Railroad, which operates 1.5 miles of line along the Hoboken water front. The Erie and the West Shore interchange with this short line by direct rail switching, but the other trunk lines interchange with it by car float. They could interchange with it by rail switching, but that requires intermediate switching over other lines, and apparently they prefer to do so by car float. There is some discussion as to whether an additional charge for car floatage should be applied on traffic to and from the Hoboken Shore Line, but New Jersey repeatedly expressed a willingness that any additional charge for marine service to and from New York be applied to similar service along the New Jersey shore. An additional charge for car floatage to and from the Hoboken Shore Line might necessitate discontinuance of that service, but the rail switching would still be available and could probably be improved. Apparently this car-float interchange service would not be affected by a charge for lighterage and its substitutes.

Lighterage: All of the trunk lines are on an equal footing with respect to lighterage to and from ships or piers on the eastern side of the harbor, and they would so continue if a separate charge were imposed. The defense, however, contends that such a charge would prevent competition for traffic to and from points on the New Jersey or Staten Island shore which are reached by the rails of only one carrier. As an example, they refer to a ship docked at the Erie's Pier 9 in Jersey City and urge that other lines could not compete for traffic to be interchanged with such a ship. The situation would be similar to that now prevailing at Port Newark, except it is served by three lines, additional charges applying for lighterage to or from the other five trunk lines. It would also be similar to the situation at Boston, where New England traffic must pay additional charges to reach a ship docked elsewhere than at the line-haul carrier's terminals. However, there are generally joint rates applicable via interior junctions to and from New York Harbor, and apparently shipments can generally be routed over any line for delivery at the Erie's Pier 9 at the joint rates. But sometimes it may be desired to divert a shipment to that pier after its arrival over another line, which could not be done without paying additional charges, because there is no reciprocal switching or absorption of switching charges in the New York Harbor district. Such an arrangement which is common in other large terminal districts would permit the utmost competition without the necessity of lighterage on the New Jersey side.[22]

Railroad competition undoubtedly has had an influence in bringing about the group adjustment, and it affords some justification for grouping the rail and car-float terminals on both sides of the harbor, but the absence of a charge for lighterage is not essential to the maintenance of such competition.

D–4. NEW YORK STATE CANALS

Erie Canal: The defense attributes great importance to the old Erie Canal between Buffalo and Albany in building up the port of New York. This canal was completed in 1825 before the construction of any of the railroads to New York Harbor. The fact is emphasized that its entire cost of $6,000,000 was borne by the State of New York, although New Jersey also benefited from the canal. On the other hand, New Jersey thinks that the Erie Canal was of no greater importance than the old Morris & Essex Canal and the Delaware & Raritan Canal across New Jersey, which brought coal from the mines of Pennsylvania to New York Harbor. The latter canals were apparently built without the help of New York, and their peak tonnage in 1866 was not much less than the Erie Canal. It is unnecessary to weigh the relative importance of the Erie Canal and the New Jersey canals, but there can be no doubt that in the early days the Erie Canal was an important influence contributing to the supremacy of the port of New York. The canal traffic reached its peak about 1872, however, after which it declined due to competition of the railroads and the antiquated canal boats which were towed by mules. The canal seemed to be gradually going out of business early in the present century, when agitation arose for deepening it to 12 feet and for self-propelled boats.

Barge canal: The improvement of the old canal to make the barge canal and the construction of several branches was begun in 1904 and completed in 1918. The total cost to the State of New York was about $175,000,000, but the State constitution forbids the collection of tolls. The substitution of self-propelled boats for towage by mules reduced the time in transit between New York and Buffalo from between 20 and 30 days to about 10 days. Since then the canal tonnage has gradually increased, but it has not yet equaled the tonnage of the old Erie Canal in its most prosperous days. Its total traffic of around 3,000,000 tons per year is small in comparison with that of any one of the trunk-line railroads, which in 1928 ranged from 27,575,131 to 214,887,139 tons. It is also small in comparison with water traffic moving on the Kill von Kull, Arthur Kill, Newark Bay, and Passaic and Hackensack Rivers, which in 1930 amounted to 57,544,266 tons. Grain constitutes the largest portion of the canal tonnage, and petroleum is the next most important commodity. There has been a marked increase in the canal tonnage of these commodities in recent years, and they now constitute over one-half of the total tonnage of the canal. In 1928 the canal barges brought approximately 40,000,000 bushels of grain to New York Harbor, or almost 40 per cent of the total receipts of grain at that port. The canal is closed to navigation during the winter months, or about one-third of the year. The record indicates that the barge canal is a factor of some importance, but it does not appear to be a very serious competitor of the railroads except with respect to the grain traffic and possibly a few other bulk commodities.

Effect on rates: The defense contends that the rates to and from the New York group are lower than they would have been but for the influence of the canal. There is general evidence with respect to the influence of the canal on the rail rates in the past, but there is not much evidence regarding specific rates having been depressed. The barge rates on grain are much lower than the rail rates, but it does not appear that there is any particular relationship between them. No doubt many of the rates were affected by canal competition in the past, but there is nothing to show that the present rates are generally so affected. The class rates and many of the important commodity rates are now based on uniform distance scales prescribed by the commission.

It is further contended that the canal has had an influence in bringing about the New York group. The barge terminals are on the New York side of the harbor, but the barges also handle traffic to and from points in New Jersey. This is especially true of petroleum, sugar, and copper, which are refined along the New Jersey shore. The barge rates are the same on both sides of the harbor, and while this probably does not necessitate a similar adjustment of all the rail rates, it may properly be considered in determining the propriety of the group adjustment.

Separate charges: It does not appear that the canal competition precludes a separate charge for lighterage. Such charges now apply to and from a large part of the harbor, including the copper and oil refining district along the Arthur Kill. Grain is by far the most important commodity handled by the canal barges. A separate charge for lighterage would create an inducement for ships to come to the water front elevators on either side of the harbor. The record shows that ships will always go wherever cargo is available. The railroads could then afford to make lower rates to meet the canal competition where they do not have to perform the expensive lighterage service.

D–5. REASONABLENESS OF GROUPING

In general: The defense asserts that grouping is the predominant characteristic of the country's rate structure. Numerous rate groups and decisions approving such groups are referred to in support of this assertion. On the other hand, New Jersey points out that the trend of the decisions in recent years has been toward placing rates on a distance basis, and in so doing, many groups have been broken up or reduced in size. Nevertheless, reasonable groupings are still permitted, especially of terminal districts and closely related areas. There is merit in the defense's contention that long-established groups should not be lightly disturbed, but long existence can not justify the inconsistencies, discriminations, and lack of balance in the present adjustment to and from the New York Harbor district.

Size of groups: The size of the New York groups on intraterritorial and interterritorial traffic, respectively, is compared with those of various other groups under the Eastern Class Rate case. On traffic to and from points more than 100 miles distant in trunk-line territory, the average distance between all outer-edge points in the New York group is 38.7 miles. This is compared

[22] All of the railroad terminals on the New Jersey side are connected by rail, principally through the so-called Belt Line No. 13. This was one of the belt lines proposed in the comprehensive plan, and the first one to materialize. Various parts of it are owned by different lines, but its operations have been co-ordinated under a unified control.

with the corresponding average of 41.84 miles between all outer-edge points in the Chicago intraterritorial group and 88.8 miles between all such points in the Pittsburgh intraterritorial group. On traffic to and from central territory the maximum distance across the New York group is 96 miles, compared with corresponding distances of 76 to 136 miles across various other interterritorial groups in trunk-line territory. The distances across the New York group are also shown to compare favorably with those across various northern groups on traffic to and from southern territory under the Southern Class Rate Investigation, 100 I. C. C. 513, 128 I. C. C. 567. It should be noted, however, that under both of those class-rate adjustments arbitraries above the group rates are sometimes allowed for exceptional services within the group, such as those of a short line with light traffic density or a narrow-gage line requiring transfer of the freight.

The size of the New York groups can not be regarded as excessive if consideration is not given to the costs of the marine services equated into miles of average rail transportation. Even when the equivalent miles for car floatage to and from regular stations are considered, the group would still be no larger than some other terminal districts or groups. But when the equivalent miles for lighterage are added to the rail distances, it makes in excess of 200 to 400 miles. That is larger than any other similar group which has been approved when attacked in recent years.

Proposed New Jersey group: The proposal of New Jersey's principal traffic witness that practically all points in New Jersey be grouped together on traffic to and from central territory would make a group considerably larger than the present New York group. It would include many points which, aside from being in the same State, are less closely related than those in the New York group. The mayor of Trenton testified that his city would object to being grouped with Jersey City. Of course, lighterage is entirely different from any service afforded at interior points in New Jersey. But if a separate charge were made for that service, the present New York group for deliveries from the car would appear to be more reasonable than the proposed New Jersey group on traffic to and from central territory.

Most of the evidence relating to the reasonableness of the grouping is considered under other headings, such as port unity, railroad competition, and other terminal and rate groups.

D-6. OTHER TERMINAL AND RATE GROUPS

An important part of the defense are comparisons with other terminal and rate groups throughout the country. It is contended that these comparisons show that the grouping at New York Harbor is not unreasonable. If the New York grouping should be condemned, it is urged that these other groups would also have to be condemned.

Class rate groups: As previously indicated, the New York class-rate groups are comparable in size with other such groups in official territory, but it is not shown that any car-floatage, lighterage, or trucking services are performed by the carriers in such other groups with the exceptions hereinafter considered.

Commodity rate groups: Among the comparisons are the groups applicable in connection with the rates on yellow-pine lumber, petroleum, newsprint paper, lime, brick, cement, and iron or steel articles. These are all groups of producing points or areas, most of which originated with the carriers, and the action of the commission has been mainly in the direction of reducing their size. They show that rate groups much larger than the New York groups have been approved, but the conditions affecting such groups are obviously different, and these comparisons are not so pertinent as those with other terminal districts or groups surrounding large cities.

Transcontinental rate groups: The extensive groups applicable in connection with the transcontinental rates are too well known to require description. Their establishment by the carriers has been the result of water competition and other conditions peculiar to this traffic. Notwithstanding the great size of the transcontinental groups, it is interesting to note that the exceptional terminal services at New York Harbor are given special consideration by the carriers in their divisions even with respect to these rates.

Other terminal districts: The defense offered detailed comparisons with the terminal districts or groups at Hampton Roads, Va., San Francisco, Calif., Chicago, St. Louis, and Kansas City, Mo., Cleveland and Cincinnati, Ohio, Louisville, Ky., Detroit, Mich., and Rochester, N. Y. The only ones, however, in which any car floatage, lighterage, or trucking services were shown are the first four above mentioned, which will therefore be given very careful and thorough consideration.

D-7. HAMPTON ROADS

Physical situation: The defense's comparison which most closely resembles the New York Harbor situation is with Norfolk, Portsmouth, and Newport News, Va., which together constitute the fort of Hampton Roads. Newport News is on the north side of Hampton Roads; while Norfolk and Portsmouth are on the south side, separated from each other by the Elizabeth River. The Chesapeake & Ohio Railway Co. alone serves Newport News, and it operates a car-float and barge service to and from Norfolk. The water distance to and from the Chesapeake & Ohio's terminal in Norfolk is 14 miles, but it is only 7 miles to and from its float-bridge connection with the belt line hereinafter mentioned. The Southern Railway Co., Atlantic Coast Line Railroad Co., and Seaboard Air Line Railway have their terminals in Portsmouth, and they operate car floats or barges across the Elizabeth River to and from water-front stations in Norfolk. The Pennsylvania reaches Norfolk by car float from Cape Charles, Va., 24 miles by water and 8 miles by rail to its terminal. The Norfolk & Western Railway Co., Virginian Railway Co., and Norfolk Southern Railroad also have their terminals in Norfolk. All of the lines on the Norfolk-Portsmouth side of the harbor, including the Chesapeake & Ohio's float bridge, are connected by the Norfolk & Portsmouth Belt Line Railroad Co., which is owned jointly by all of the above-mentioned trunk lines and is regarded as an extension of their rails.

Industry lighterage: A small amount of lighterage is performed by part of the lines within the lighterage limits at Norfolk and Portsmouth but not at Newport News. This service includes less-than-carload shipments of 10,000 pounds or more as well as carload traffic, except coal and certain other commodities. Unlike at New York, shippers are required to load or unload their carload shipments to or from the lighters, but the carriers will load outbound less-than-carload shipments of 20,000 pounds or more.[23] Lighterage is not performed to or from industries served by the belt line. Before the construction of that line there were a large number of industries on the water front of Norfolk and Portsmouth which were served by lighter, but since then most of them have moved back to locations on the belt line. At the present time there are nearly 500 industries at Norfolk and Portsmouth, of which only about 20 are located on the water front. There are only six small industries on the water front in Norfolk and none in Portsmouth which do not have rail service. It is estimated that 99 per cent of the carload traffic to and from local industries in Norfolk is handled by rail switching, the charges of connecting lines being absorbed by the line-haul carrier. The lighter service is demanded principally by a few shippers of less-than-carload traffic, who would otherwise have to dray their shipments to and from the freight stations.

Steamship lighterage: The piers where the steamships dock on both sides of Hampton Roads have rails for practically their entire length. Lighterage is not necessary, therefore, in transferring freight between cars and ships, but there is a small amount of lighterage to and from the offside of ships on the Norfolk-Portsmouth side. The Chesapeake & Ohio has an arrangement with the steamship companies for the ships to call at Newport News whenever there is 150 tons or more of cargo, and where there is not that amount the Chesapeake & Ohio will lighter it to or from ship side at Norfolk or Portsmouth. The record indicates that practically all of the ships call at Newport News, however, and the lighterage service appears to be negligible. Traffic moving over a line on the Norfolk-Portsmouth side to or from a ship docked at another carrier's terminal on that side can be switched to or from ship side, the line-haul carrier absorbing the switching charges, but sometimes it is lightered to or from the offside of vessel instead. This movement also appears to be negligible, however, as the ships will generally shift from one terminal to another where there is 125 tons or more of cargo. Moreover, most of the export, import, and intercoastal freight other than coal is handled through the Norfolk Tidewater Terminals, which are served by the belt line and are outside the lighterage limits.

Rate equalization: The rates to and from Norfolk and Portsmouth appear to be the same. The Pennsylvania's rates to and from Norfolk generally apply to and from Cape Charles and probably other intermediate points. The rates to and from Newport News are also generally the same as Norfolk for hauls of 150 miles or more to the North, West, or South. Following a dispute over divisions, the equalization of Newport News with Norfolk was discontinued on traffic to and from a large part of southern territory. This was found to result in unjust discrimination and undue prejudice against Newport News, which was found entitled to the same rates as Norfolk for hauls of 150 miles or more to the South. (Chamber of Commerce of Newport News *v.* S. Ry. Co., 23 I. C. C. 345.) The parity as between Norfolk and Newport News was again disturbed by the carriers in applying the distance scale prescribed in the Southern Class Rate Investigation, supra, which did not specifically deal with the Norfolk-Newport News situation. This resulted in another finding under section 3 again requiring restoration of the rate parity for hauls of 150 miles or more to the South. (City of Newport News *v.* Aberdeen & R. R. Co., 159 I. C. C. 159.) At the same time the Chesapeake & Ohio's rates on export, import, and coastwise traffic between Norfolk and certain points on its line 150 miles or more distant were found unduly prejudicial and preferential to the extent that they exceeded the Newport News rates. (Norfolk Port Commission *v.* Chesapeake & O. Ry. Co., 159 I. C. C. 169.) This completed the equalization of Norfolk and Newport News on most traffic moving 150 miles or more in all directions.[24] In the last-cited case, however, the commission declined to require the Chesapeake & Ohio to absorb the charges of the Norfolk Tidewater Terminals for handling the traffic to and from ship side at its terminal. Lighterage to and from ship side or local industries was not in issue in either of the above-cited cases.

Switching charges: In another case decided contemporaneously with the two last above-cited cases, it was found that where the Newport News rates are the same as Norfolk-Portsmouth on traffic to and from the South it was unduly prejudicial and preferential for the carriers to collect switching charges for deliveries on con-

[23] The carriers sought to discontinue this loading service on outbound less-than-carload shipments, but their schedules were found not justified in loading of less-than-carload freight. (91 I. C. C. 394.)

[24] An exception is anthracite coal from Pennsylvania, as to which Newport News was denied the same rates as Norfolk in City of Newport News *v.* B. & O. R. R. Co., 96 I. C. C. 425.

necting lines at Norfolk-Portsmouth while collecting no such charges at Newport News. (Norfolk-Portsmouth F. T. Comm. *v.* Aberdeen & R. R. Co., 159 I. C. C. 177.) It should be noted that Newport News is not in the same switching district as Norfolk and Portsmouth, which caused the difference in the practice regarding the collecting of switching charges. This case appears to support New Jersey's contention that the practice of collecting additional charges for lighterage deliveries in a large part of the New Jersey section of the port of New York while no such charges are made in other parts of the port where the line-haul rates are the same results in undue prejudice and preference.

Conclusions as to comparison: There is considerable similarity between the Hampton Roads and New York Harbor situations so far as concerns equalization of the rates to and from the rail terminals on both sides of the port. The principal difference between the two is that there is a better balancing of the advantages and disadvantages of equalization as between Norfolk and Newport News, and for this reason there was no objection by either to such equalization in the cases cited. The reports in those cases do not indicate that there was any evidence regarding the marine costs at Hampton Roads, but the Chesapeake & Ohio claimed that its car-float service was equal to its rail haul between Newport News and Richmond, Va., 75 miles. That would be comparable with the equivalent miles shown here for car floatage to and from regular stations at New York, but not with the equivalent miles shown for lighterage which average from 247 to 286 miles for all the trunk lines serving that port. The lighterage service at Norfolk-Portsmouth appears to have been established to meet conditions which existed before the construction of the belt line, and its present use there is inconsequential in comparison with New York Harbor where there are hundreds of industries along the water front and the bulk of the freight is interchanged between the railroads and steamships by lighter.

Everything considered, the above-cited cases afford considerable support for equalization of the rates to and from the rail and car-float terminals on both sides of New York Harbor for hauls above a reasonable minimum in all directions; but they have no bearing on the question of a separate charge for lighterage, except the last-cited case indicates that all parts of the port should be treated alike in this respect.

D–8. SAN FRANCISCO BAY

Points of similarity: The New York Harbor situation is similar in many respects to that of the communities bordering on San Francisco Bay, in California. San Francisco occupies the end of a hilly peninsula, separated by the bay from Oakland, Alameda, Berkeley, and Richmond, which are all in the same metropolitan area. The Southern Pacific Co. has the only rail line into San Francisco, and it also has lines on the east side of the bay. The line into San Francisco was unusually expensive to construct, the Dumbarton Bridge across the lower end of the bay costing about $1,500,000, and the bay-shore cut-off which has several tunnels cost between $8,000,000 and $9,000,000, or about $1,000,000 per mile. The Southern Pacific, Western Pacific Railroad Co., and Atchison, Topeka & Santa Fe Railway Co. operate car floats between their rail terminals on the east side of the bay and their terminals in San Francisco, the water distances being 5.6, 6.6, and 10 miles, respectively. This service is similar to the car-float service to and from off-line team tracks at New York but differs from that to and from the pier stations in that shippers load and unload their own carload freight at San Francisco. The cities on the east side of the bay have an advantage of location on traffic to and from most points, but they are on an equal basis with San Francisco to and from considerable territory on the north and south. Both sides of the bay must use car-float service on traffic to and from points served by the Northwestern Pacific Railroad Co. Car floatage is not necessary and the distances are approximately the same by the Southern Pacific which is the rate-making line from both sides of the bay to the important territory on the south, including Los Angeles, Calif.

Lighterage: The one outstanding difference between San Francisco and New York is that no lighterage is performed by the railroads on either side of San Francisco Bay. It seems significant that at this important port situated so similarly to New York the railroads have never found it necessary to perform any lighterage either to and from local industries or the steamship lines. That is because the piers where the ships dock in San Francisco are served by a belt line owned and operated by the State of California. This line has about 58 miles of track along the water front, serving team tracks and industries as well as the piers, which latter are also owned by the State. Traffic interchanged with this line is switched by it directly to and from ship side on the piers at a charge of $4.50 per car, which is absorbed by the trunk lines. The car floatage performed by each of the trunk lines between one point on each side of San Francisco Bay, without any breaking of bulk in transit, can not be compared with lighterage to and from the more than 600 piers throughout the lighterage limits of New York, with its double handling of the freight at the railroad's expense. When necessary the steamships will shift from one pier to another at San Francisco, provided the tonnage is sufficient to warrant the expense, but if lighterage is performed by private companies it is paid for by the shipper or steamship company.

Oakland case: The interstate class rates to and from San Francisco and Oakland are generally the same, even for short hauls, which are subject to the minimum class rates. In Oakland Chamber of Commerce *v.* P. Co. (100 I. C. C. 55), Oakland assailed these rates to and from various points to the east or northeast in California and Nevada. It sought lower rates from San Francisco in recognition of its advantage of location with respect to these points. This advantage was measured by the car-float cost, which was shown as averaging 69.2 cents per ton for the Southern Pacific, and by the difference in distance ranging from 57 to 88 miles on traffic moving over the Dumbarton Bridge from or to San Francisco. It should be noted that this car-float cost is comparable with the costs for car floatage to and from pier stations at New York, but not with the lighterage costs there which are shown as averaging around $2 per ton. Likewise, the above differences in distance are comparable with the equivalent miles for car floatage to and from pier stations at New York but not with those for the lighterage service. The rates assailed were shown to be affected by water competition on the Sacramento, San Joaquin, and other rivers. Upon consideration of the foregoing and other facts the rates assailed were found not unreasonable or unduly prejudicial to Oakland. This case also affords considerable support for grouping the rates to and from the rail and car-float terminals on both sides of New York Harbor; but as lighterage was not involved, it has no bearing upon the propriety of imposing a uniform charge for that service throughout the port.

South San Francisco case: South San Francisco is an industrial community on the Southern Pacific's bay-shore cut-off about 5 miles south of the San Francisco city limits and the former switching limits, but a part of the metropolitan district. In South San Francisco Chamber of Commerce *v.* S. P. Co. (53 I. C. C. 285), complainant attacked the Southern Pacific's proportional rate of 2.5 cents which was then added to the San Francisco rates on certain interstate traffic to and from South San Francisco. It was found that this rate was not unreasonable but was unduly prejudicial to the extent it exceeded the charges on traffic switched to and from points within the San Francisco and Oakland switching districts. This case is cited by the defense, but it also appears to support New Jersey's contention that it is unduly prejudicial and preferential to charge more for lighterage deliveries in a large part of the port of New York than is charged for similar service within the lighterage limits.

D–9. CHICAGO DISTRICT

Compared with New York: Next to the New York metropolitan district, the Chicago district is the most important terminal district in the country. This terminal district which is bounded by the Elgin, Joliet & Eastern Railway Company's line and Lake Michigan is approximately 45 miles long by 40 miles wide and covers about 1,750 square miles of territory. The Chicago switching district, which is within the terminal district, is approximately 40 miles long by 12.5 miles wide and covers an area of about 500 square miles. It is the largest switching district in the country and is served by 22 trunk lines and 15 terminal lines with a total of over 5,000 miles of track within the district. About 1,000 miles of this trackage is elevated, and there are about 40 miles of depressed track. The carriers serving Chicago have coordinated their terminal facilities to a large extent through the use of belt lines and other joint arrangements, which is in marked contrast to the situation at New York, especially with respect to lighterage. The maximum movement within the Chicago switching district is 67.6 miles, and the average is from 25 to 40 miles each way. The longest distances are comparable with the equivalent miles shown for car floatage to and from pier stations at New York but not with those for the lighterage service there.

Rates and switching charges: All points within the Chicago terminal district generally take the same rates in every direction, with certain exceptions. The rates to and from the switching district generally include switching to and from points on other lines without additional charge over the Chicago rates. In this respect the Chicago situation differs from that in the New York metropolitan district, where there is a separate switching district for each city, and additional charges generally apply for switching to and from points on other lines. There is also a difference with respect to local movements within the district, the single-line switching charges at Chicago being generally 2 cents per 100 pounds, or about $12 per car, while much higher class rates generally apply between different cities in the New York district. The above switching charge is less than the stevedoring cost of transferring freight to and from lighters at New York, the composite figures for two handlings by man power and trucks being 84.7 cents per ton on eastbound freight and 78.5 cents per ton on westbound freight.

Tunnel service: The Chicago Warehouse & Terminal Co. operates approximately 62 miles of freight railroad in tunnels under the downtown district of Chicago. The tunnel lines are electrified, and the tracks are 2 feet wide. The cars, which hold about as much as a truck, are raised and lowered in elevators at the stations and places of business served. The tunnel company is a common carrier subject to the act and interchanges freight with the trunk lines. Of course, the freight has to be transferred between the trunk-line cars and tunnel cars, and apparently it is principally less-than-carload package freight. During a test period the tunnel lines handled 11.8 per cent of the total less-than-carload freight compared with 25.2 per cent handled in trap cars and 61.5 per cent drayed by the consignors or consignees. The tunnel company receives from the trunk lines 9 cents per 100 pounds or $1.80 per ton on all freight handled for them. In addition, it receives from the shippers 5 cents per 100 pounds or $1 per ton on inbound freight delivered at its universal stations and 2.5 cents per 100 pounds or 50 cents per ton on all other freight, which amounts are paid over and above the Chicago rates. The fact that additional charges are made for this service, which in-

volves a transfer of the freight, indicates the propriety of similar charges for lighterage at New York.

Erie's car floatage: The Chicago & Erie Railroad Co. alone operates a car-float service on the Chicago River to and from two stations, where it has freight houses and team tracks. The car-float movement of 2.5 to 5 miles is in addition to a switching movement of 21 miles beyond the Chicago & Erie's yard at Hammond, Ind. There is used in this service 1 tugboat and 4 car floats of 8-car capacity each, which handled a total of 95,000 tons of freight in 1928. This equipment may be compared with the Erie's floating equipment at New York Harbor, where it has 12 tugboats, 35 car floats, and 248 other boats. The cost of repairs, maintenance, and operation of the floating equipment at Chicago in 1929 amounted to $42,133 compared with corresponding costs for the Erie's marine freight service at New York of $3,630,170. Aside from its volume the Erie car-float service at Chicago is comparable with the car floatage to and from pier stations at New York.

Lighterage: The Merchants Lighterage Co. operates a lighterage service on the Chicago River in connection with some but not all of the trunk lines. The Chicago & Erie is the only party to this arrangement whose system lines serve New York Harbor. Lighterage is performed on the main river and part of its north and south branches, but not along the lake front except at the municipal pier, and not on the Calumet River which penetrates an important industrial district in South Chicago. The Chicago rates are applied to and from a station maintained by the lighterage company and also industries along the river on carload traffic and less-than-carload shipments of not less than 10,000 pounds. The lighterage company acts as agent for the trunk lines, who pay it 6 cents and 9.5 cents per 100 pounds on carload and less-than-carload freight, respectively. It will be noted that the cost to the trunk lines of $1.20 per ton on carload traffic is considerably less than the average lighterage costs at New York. There are two lighters used in this service at Chicago, and they handled 55,000 tons of freight in 1928. That is equivalent to less than 10 carloads of 20 tons each per working day as compared with an average of 12,704 loaded cars handled into and out of the Chicago terminal district each day during a test period without counting through traffic. The above lighterage equipment and tonnage may also be compared with the 1,228 lighters operated by the trunk lines at New York Harbor, which in 1929 lightered 9,092,342 tons in their own equipment and 2,233,348 tons more in outside equipment. The relatively insignificant lighterage service performed at Chicago should not have much weight in considering the extensive and expensive service at New York Harbor, especially as there is no issue of undue prejudice and preference as between New Jersey and Chicago.

Tunnel and lighterage case: In 1915 some of the trunk lines proposed to cancel the application of the Chicago rates on traffic handled in connection with the tunnel company and the lighterage company. They failed, however, to present any evidence regarding the reasonableness of the increased charges that would result, and their schedules were found not justified. (Rates in Chicago Switching District, 34 I. C. C. 234.) There was no issue of discrimination on account of charging more for lighterage in some parts of the port than others as at New York Harbor. Since that case was decided the carriers have been permitted to establish additional charges for the tunnel service over and above the Chicago rates. Under all the circumstances the case cited can not be regarded as of much importance with respect to the issues presented in these cases.

Optional trucking case: The carriers serving Chicago have recently proposed to provide for the transfer of less-than-carload freight between the freight houses of the trunk lines and the so-called universal stations of the tunnel company and certain other lines by truck or dray in lieu of rail service at their option. This practice was found justified, although the carriers were required to amend their proposed schedules. (Trucking L. C. L. Freight in Lieu of Rail Service, 185 I. C. C. 7.) This case affords some support for the practice with respect to trucking to and from inland stations at New York, but it did not involve any question of store-door delivery.

D–10. ST. LOUIS—EAST ST. LOUIS

Separated by river: St. Louis, Mo., and East St. Louis, Ill., are separated from each other by the Mississippi River. There are, however, four railroad bridges across the river between these points. The cost or value of three of them are shown as $1,120,000, $3,345,000, and $8,000,000. These amounts are equivalent to a large number of miles of average railroad, but there is no evidence in regard to the cost of handling traffic over these bridges. That service is performed principally by the Terminal Railroad Association of St. Louis, which is owned by 15 of the trunk lines. The Missouri Pacific Railroad Co. also operates a car ferry across the river a short distance south of St. Louis. The rates for hauls of 100 miles or more are generally the same to and from St. Louis and East St. Louis, which are in the same switching district, and apparently the switching charges of connecting lines are generally absorbed.

Off-track stations: It has long been the practice of the railroads to truck less-than-carload freight between their rail stations and off-track stations in St. Louis and East St. Louis. This service is performed by a trucking company, which receives from the railroads various allowances for the trucking and other services at the off-track stations. These allowances are shown as ranging from $2.25 to $2.75 per ton, but those amounts have been reduced somewhat as a result of Transfer in St. Louis and East St. Louis by Dray and Truck, 155 I. C. C. 129, 177 I. C. C. 316. The present allowances of $1.64 to $2.70 per ton are comparable with the allowances of 11 and 12 cents per 100 pounds paid by the Erie for trucking and station services on traffic handled through its inland stations in New York.

Direct-delivery service: Trucking is also performed between the rail stations in East St. Louis and shippers' places of business in St. Louis, but unlike the off-track station service the railroads pay only a portion of the trucking expense and the balance is paid by the shippers. The division of the trucking expense between the railroads and shippers is supposed to represent the cost of trucking to and from a constructive station which is assumed to exist at the west end of the Eads Bridge. Apparently the allowances paid by the railroads for this service of 1 cent and 2 cents per 100 pounds on carload and less-than-carload shipments, respectively, represent the smaller portion of the total expense of trucking to and from the shippers' places of business.[25] This service is referred to as direct delivery or a modified form of store-door delivery in the above-cited case.

Trucking to storage: In the original report in that case at pages 136, 137, the commission also considered a practice of trucking certain carload freight to and from warehouses in the upper floors over some of the off-track stations at the expense of the railroads. This practice was referred to as virtually amounting to store-door delivery of carload traffic placed in storage and was condemned in the following language:

"As a matter of law, the carrier is obligated to deliver carload freight at a public team track or at a private industry track. The only other alternative at St. Louis is the delivery through the constructive station. Any practice of according service in addition to this, such as that entailed in the movement of carload freight from recognized team tracks in East St. Louis or St. Louis to warehouses located above off-track stations is gratuitous, has no warrant in fact or in law, is open to serious abuse by way of discriminations, is an unwarranted concession to those receivers who thus avoid an expense of drayage rightfully to be borne by them, and should be discontinued immediately.

Conclusions as to comparison: The grouping of St. Louis and East St. Louis together with the Missouri Pacific's car-ferry service in competition with the lines using the bridges affords some support for permitting a grouping of the rail and car-float terminals on both sides of New York Harbor for hauls over 100 miles. The trucking practices at St. Louis and East St. Louis which were approved in the above-cited case also afford considerable support for permitting such group to include the inland stations at New York, but they strongly indicate the propriety of requiring shippers to pay at least a portion of the expense of any form of store-door delivery in addition to the rail rates.

D–11. ANALYSIS OF MARINE COST DATA

Changes in costs: The defense showed that the coal and fuel oil used by the tugs and lighters cost most of the trunk lines less per ton in 1930 and 1931 than in October, 1924. The Baltimore & Ohio's reduction was from $5.08 to $4.63 per ton; that of the Central of New Jersey from $3.65 to $1.91 per ton; the Lackawanna showed no change; the Erie's costs were not on a comparable basis; the Lehigh Valley's reduction was from $1.95 to $1.75 per ton; that of the New York Central from $1.42 to $1.05 per barrel of oil; and that of the Pennsylvania from $2.10 to $1.72 per ton. The amounts of coal or fuel oil consumed were not available, however, and no attempt was made to show the effect of these price changes on the lighterage or car-floatage costs.

Evidence was also introduced to show that the expenses of maintaining floating equipment in 1928–1930 were considerably less than in 1921–1923, which period was used in the Stuart study. The reduction claimed is from a monthly average of $445,107 to $349,502, or 21.5 per cent, but corrections made by New Jersey bring it down to 15.3 per cent. This reduction appears to be due partly to much more traffic being trucked in 1928–1930 than in 1921–1923, and the 1928–1930 period included more than a year of the business depression, which resulted in a marked reduction in the tonnage handled as well as the expenses. For example, trucking in lieu of lighterage increased from 107,199 tons in 1923 to 1,414,056 tons in 1929, while the tonnage lightered by the trunk lines other than the New Haven declined from 11,021,118 in 1929 to 7,642,825 in 1930. It is doubtful, therefore, whether the reduction in maintenance expenses reflects any substantial reduction in the costs per ton of freight lightered or car floated.

Whatever effect the above-mentioned items have on the lighterage and car-floatage costs is probably offset by the higher wages of employees previously referred to, which is the largest item of cost in connection with lighterage. At any rate, it is unnecessary to determine the costs exactly, in view of the conclusions hereinafter reached. See Commission *v.* Texas & N. O. R. Co. (284 U. S. 125), where the Supreme Court recently said, at page 132:

"Neither the failure of the commission separately to ascertain and state nor the absence of evidence to show the cost to carriers of the ferry service requires annulment of the rates prescribed for transportation between the places on the east bank of the Mississippi and points west of the river."

[25] Drayage in St. Louis District (188 I. C. C. 153), decided September 27, 1932, the Southern Railway Co. and the Mobile & Ohio Railway Co. were permitted to increase their allowance for the direct-delivery service on less-than-carload traffic from 2 cents to 5 cents per 100 pounds upon a showing that the expense attributable to that part of the trucking between the rail stations and the constructive station amounted to over 6 cents per 100 pounds.

Possible economies: The New York Port Authority's annual report for 1916 reviewed a study which indicated that the tugboat costs could be reduced $174,000 per month through a system of central dispatching and pooling of tugboats. It is also pointed out that the idle-time cost of towing equipment amounted to $343,626.78 in one month. After referring to these figures, the New York interveners urge that "it would be inequitable to require a change in rates predicated upon costs which reflect wasteful operations which the carriers could eliminate." On the other hand, New Jersey urges that this is additional proof of the present wasteful practices, which it seeks to have corrected by the imposition of charges which would encourage direct interchange between rail and ship. The possibility of unifying the marine operations of the eight trunk lines serving New York Harbor has been discussed for years, but these cases must be decided upon the basis of the existing situation and not some contingency which may never happen.

Variation in costs: An analysis of the data underlying the Stuart study by New York's expert disclosed considerable variation in the costs for lighterage and car floatage in different parts of the harbor, in different classes of equipment, as to different commodities, and as between the different railroads. For example, the shore-to-shore costs per ton for lighterage in all classes of equipment are shown to average $1.56 for Brooklyn, $1.25 for lower Manhattan, and $1.37 for New Jersey. There is greater variation in the costs as between some of the smaller zones, where the range is all the way from 47 cents to $14.43 per ton. In both of these extreme cases, however, the tonnage was very light, and the expert who analyzed the figures did not regard such zones as representative. The average lighterage costs per ton for different classes of equipment are shown as $1.279 for covered barges and refrigerators, $1.627 for open lighters and hand hoists, $1,633 for power hoists, and $2,305 for steam lighters. The variation in shore-to-shore costs according to commodities ranges from an average of $1.028 per ton for products of agriculture to $1.662 per ton for manufactured products, which latter constitute the largest portion of the tonnage.

Apparently the purpose of this showing is to indicate the impracticability of making rates to suit the varying costs, but there is no proposal to vary the rates for similar services in different parts of the port, as to classes of lighterage equipment, or as to different commodities except grain. The distinction between lighterage and car floatage to and from pier stations rests not alone on the fact that the average shore-to-shore costs for the former are more than double those for the latter, but there is also a difference in the nature and value of the services as hereinbefore shown, and lighterage involves a breaking of bulk and double handling of the freight at carrier expense.

Controlling factors: The conclusion of the above-mentioned expert regarding the variations in marine costs is that the controlling factors are the tons handled per trip and the delays at terminals other than those of the railroads, while the towing distances are relatively of no importance. This accounts for the much greater average shore-to-shore costs for lighterage and car floatage in lieu thereof than for car floatage to and from pier stations, because the latter is more concentrated and permits heavier loading of the car floats, and the former involves more delays especially at steamships or their piers. The unimportance of towing distances also indicates the lack of justification for higher charges for lighterage to and from some parts of the port than others.

D-12. COMPARISON OF SERVICES AND COSTS

The defense stresses certain rail deliveries in northern New Jersey which it urges exceed the switching service to or from the car-float bridges and lighterage piers on the New Jersey shore and in some instances equal to the marine service to or from New York.

Erie's branch lines: The Erie has numerous branch or side lines in northern New Jersey. Through trains from the West are brought into its Croxton yard just west of Jersey City, and cars for these branches are distributed from there. Trains from Croxton to the branches average about 20 loaded cars, while inbound trains from the branches average only about 11 loaded cars. This service involves more or less back haul on over 40 per cent of the traffic to and from these branch lines. The distances from the Croxton yard range all the way up to 49.1 miles to Sterling Forest at the end of the Greenwood Lake branch. This maximum haul approaches the equivalent miles shown for car floatage to and from pier stations but not those for lighterage which range up to 319 miles for the Erie.

Other New Jersey deliveries: The Lackawanna's through trains from the west are brought into its Secaucus yard west of Jersey City, and cars for points on its line through Newark are hauled back west for distances ranging up to about 15 miles. The Central of New Jersey back hauls traffic for Bayonne from Jersey City, about 6 miles. The West Shore through trackage rights over the Lehigh Valley serves the Bayonne district, which is 14 miles beyond its Weehawken yard. Pennsylvania deliveries in Jersey City involve several classifications and somewhat complicated switching. The foregoing shows that many rail deliveries in northern New Jersey involve more service than that to and from the car-float bridges or lighterage piers on the New Jersey shore, especially when consideration is given to the concentrated movement to and from the latter points. The conclusions hereinafter reached make ample allowance for this situation.

Hoboken Shore Line: The most stress is laid by the defense on the service to and from piers or team tracks served by the Hoboken Shore Line. This 1.5-mile long road serves most of the steamship piers on the New Jersey shore, but its operations are cramped and difficult because of the physical location. Comparison is drawn between the cost to the trunk lines of handling a 20-ton carload to or from ship side at these piers by switching, car floatage, and lighterage. Only one or two of the trunk lines have direct rail connections with the Hoboken Shore Line, and the others reach it through intermediate switching or trackage rights. This showing indicates that the switching service costs five of the lines from $27 to $39.95 per car, while car floatage costs three lines from $33.36 to $37.01 per car, and lighterage costs from $31.30 to $44.12 per car. The amounts paid for switching, however, include all operating expenses, taxes, rentals, and return on investment, while the car-floatage and lighterage costs do not include any float-bridge or lighterage-pier expenses, any taxes on such shore property, or any return on investment in floating equipment or shore facilities. The report in the Wharfage Charges case discloses that interest on investment and taxes alone amounted to 47 cents per ton, or $9.40 for a 20-ton carload. The above costs for switching and lighterage or car floatage are not, therefore, on a comparable basis.

Both the above switching and car-float costs include $27 per car for switching and handling to or from the ship side by the Hoboken Shore Line. The tracks of that line extend out on only 1 or 2 of the 12 piers, and freight generally has to be trucked several hundred feet between cars on the shore and ship side on the piers. This no doubt accounts for the rates or allowances received by that line, which are generally 60 cents per ton where the shippers do the loading or unloading and $1.35 per ton where it performs the handling to or from ship side. The latter may be compared with the average cost of 50 cents per ton for unloading freight on the docks at Port Newark and with the Atlantic Port Railway's allowance of 60 cents per ton, which includes switching and loading or unloading at that port. It may also be compared with the costs of 40 to 45 cents per ton for loading or unloading cars on the piers at Boston. When interest on investment, taxes, and maintenance expenses on the pier facilities are taken into consideration, however, the record indicates that the total cost for direct transfer where the rail extend onto the piers amounts to about $1 per ton. See section E–2 of this report. The Hoboken Shore Line's charges can not, therefore, be regarded as typical of the costs for direct interchange at modern rail-water terminals, but even they are considerably less than the average lighterage costs.

The defense also compares the cost of switching a 20-ton carload to or from team tracks on the Hoboken Shore Line with the cost of car floating a similar car and switching it to or from team tracks on Manhattan. The first-mentioned costs range from $12 to $24.95 per car, including $12 to the Hoboken Shore Line for switching about 2,000 feet. The total costs shown for the movement to or from Manhattan team tracks range from $9.18 to $10.83 per car. It is admitted, however, that the latter do not include numerous items of cost assignable to the team-track switching, which it is estimated amount to between 10 and 15 per cent. Moreover, they do not include all of the taxes or any return on investment as do the switching charges on traffic to or from team tracks of the Hoboken Shore Line. Nevertheless, this showing seems sufficient to indicate that the costs of car floatage to or from Manhattan team tracks are probably no greater than the maximum cost of switching to or from team tracks on the Hoboken Shore Line.

Conclusions: Rail deliveries in northern New Jersey frequently involve more service than switching to and from the car-float bridges or lighterage piers, and in some instances such deliveries appear equal to car floatage to and from team tracks or pier stations, but they can in no case be regarded as equivalent to the lighterage service with its double handling of the freight at railroad expense.

D–13. CONTRACT TERMINALS

Interest in cases: The so-called contract terminals have a vital interest in these cases. Their interest concerns not only the possible effect on the amount of freight handled by them but also their ability to attract and hold industrial tenants and steamship companies which use their facilities. In 1929 the Bush Terminal Co. and Bush Terminal Railroad Co. handled a total of 1,025,290 tons of carload and less-than-carload freight; the Brooklyn Eastern District Terminal handled 1,062,788 tons, excluding coal and coke; the New York Dock Railway handled 527,458 tons, including coal and coke; and the Jay Street Terminal handled 509,548 tons, excluding coal and coke. This traffic is handled both for industries located within the terminals and for outside industries, the latter exceeding the former in some instances.

Compared with Hoboken Shore Line: The defense compared the cost to the trunk lines of handling traffic by car float to or from the contract terminals with the cost to them of switching to or from the Hoboken Shore Line. On carload traffic which the Hoboken Shore Line loads or unloads it generally receives $1.35 per ton. This exceeds the average allowances or divisions of certain contract terminals, which range from $1.14 to $1.32 per ton on carload traffic, but the latter do not include loading or unloading. A fairer comparison is of the costs for delivery at both the contract terminals and the Hoboken Shore Line for handling by the shippers. This shows that the costs to the various trunk lines on a 20-ton carload switched to the Hoboken Shore Line range from $12 to $24.95 per car, depending on the intermediate switching necessary. The last-mentioned amount exceeds the corresponding costs under the above average allowances or divisions for car floatage to or from the contract terminals. It is doubtful, therefore, whether the comparative costs warrant higher

rates for car floatage to or from the contract terminals than those applicable for switching to or from the Hoboken Shore Line.

Costs on less-than-carload traffic: The average allowances or divisions on less-than-carload traffic are $1.30 per ton for the Bush Terminal Co., $1.28 for the Brooklyn Eastern District Terminal, and $1.32 for the Jay Street Terminal. These amounts are substantially less than the $1.45 per ton which the trunk lines pay the Hoboken Shore Line on less-than-carload traffic. They are also considerably less than the average cost of 10 cents per 100 pounds for delivering or receiving less-than-carload shipments in large terminals as found in the Southern Class Rate Investigation (100 I. C. C. 513), at page 638. These figures indicate that there is no justification for higher rates on less-than-carload shipments car floated to or from the contract terminals than those on similar traffic switched to or from the Hoboken Shore Line and possibly other New Jersey points in the metropolitan area.

Effect of additional charges: It is predicated that an additional charge for car floatage to and from the contract terminals would result in the diversion of traffic both to the trucks and to other ports. Undoubtedly such a charge would have a serious effect on the business of the contract terminals, but it is not believed that a charge for lighterage would be quite so serious a matter to them. They perform no lighterage for the trunk lines, and there is an additional charge now for lighterage of less-than-carload traffic. Of course, its extension to carload traffic would have a tendency to draw steamships which now dock at the contract terminals to the New Jersey or Staten Island shore. But the Bush Terminal and the New York dock terminals which are principally interested in the steamship business could apparently handle at least part of the steamship traffic by car float and switch it to or from ship side. All of the Bush Terminal piers and some of those in the New York dock terminals are now equipped with railroad tracks. The Brooklyn Eastern District Terminal, which does not appear to be so much interested in the steamship business, might even benefit from a lighterage charge. It would tend to divert traffic from the expensive lighterage service with its double handling of the freight to the car-float service to and from the terminals. That would apparently benefit not only the terminal companies but also the trunk lines because of the much lower cost to them.

D–14. NEW YORK HARBOR CASE

The defense leans heavily upon the New York Harbor case (47 I. C. C. 643), decided December 17, 1917. That was a complaint by what was designated the "Committee on Ways and Means to prosecute the case of alleged rate and service discrimination at the port of New York" and others. It represented an attempt to secure for New Jersey lower rates than New York on traffic to and from the West because of the lighterage and car-float services. The complaint was dismissed, and the defense contends that such action should be followed here in the absence of evidence of changed conditions. The grounds for the dismissal were summarized in the following quotation from page 739:

"If we could overlook the fact that historically, geographically, and commercially New York and the industrial district in the northern part of the State of New Jersey constitute a single community; if we could disregard the fact that the freight rates in this country are not and never have been constructed solely with regard to the specific cost of operation; if it were not clear that the establishment of rate groups is in some instances beneficial alike to the carriers and to the public; if we could forget for the moment that both sides of the port of New York always have been and doubtless always will be accorded the same rates by the boat lines; were it not for the fact that to grant the relief asked would inevitably disrupt the whole structure of rates to and from the Atlantic seaboard, and this without any substantial showing by the complainants that the present adjustment operates to their actual injury; if we could disregard the fact, abundantly established by the evidence of record, that the communities of northern New Jersey have prospered under the present rate adjustment; and if we were not persuaded that cooperation and initiative must eventually bring about the improvements and benefits which the complainants hope to attain through a change in the rate adjustment—then we might conclude that the present rates result in undue prejudice to the people and the communities on whose behalf this complaint was filed. On the evidence now before us that conclusion can not be reached.

Differences in issues: While the New York Harbor case was similar to the present New Jersey cases in that complainants sought lower rates for New Jersey than New York on traffic to and from the West, the issues differed in many respects. One of the most important differences is that the complaint in that case contained no allegation of undue prejudice and preference because of charging higher rates for lighterage and car floatage in lieu of lighterage to and from some parts of the port than others. The report did not even show that such a situation existed, and apparently it was not brought to the commission's attention. Another important difference is that there was no issue of undue prejudice and preference as between Boston and New York in any of the respects dealt with in Boston's complaint and evidence. The rates via the coastwise routes to and from the South and Southwest were not in issue, and the report does not indicate that the commission was advised as to the situation with respect to those rates. With regard to the rates to and from New England it was stated at page 717:

"It is true that on shipments to New England the rate structure is not favorable to complainants, and that it gives New York an advantage, but the rates to and from New England are not in issue in this proceeding."

In the case cited complainants excluded the export and import rates leaving only the domestic rates in issue. Here the Boston complaint is confined to export, import, and coastwise traffic, and the New Jersey complainants appear to be at least as much interested in the export and import traffic as in the domestic traffic. There are several other issues which took up a substantial part of the report in that case which are not involved in the present case. On the other hand, there are several issues here in addition to those above mentioned which were not present in that case. Perhaps the most important difference is that complainants there did not ask for the establishment of separate charges for the terminal services, and the report therefore did not consider that question. Nevertheless, there were references on pages 734 and 735 to the possibility of imposing specific terminal charges, which indicated that this might eventually be the solution of the problem.

The above-cited case does afford strong support for permitting the grouping of both sides of New York Harbor, but obviously it can not be regarded as controlling with respect to issues which were not raised or decided in that case.

Philadelphia basis sought: Complainants in the New York Harbor case sought rates for New Jersey 2 cents under New York. That would have placed New Jersey on the Philadelphia basis, and it would have resulted in extending the Philadelphia group to the Hudson River, including Staten Island which is a part of New York City. This situation appears to have been very influential in the decision to dismiss the complaint.

A similar situation would result here so far as concerns the export rates and most of the import rates if those to and from New Jersey points should be reduced 2 cents.

New York Central: Another situation stressed in the New York Harbor case was that regarding the New York Central. Complainants there sought lower rates for New Jersey than New York solely because of the marine services. Thus the relief sought apparently did not apply to the New York Central's all-rail rates to and from Manhattan. It had long been the practice of that line to maintain the same rates to and from both sides of the harbor. If the New Jersey rates were reduced, it was not seen how the New York Central could be prevented from applying the same rates to and from New York, which would have made its New York rates lower than those of the other lines. The commission did not then possess the minimum-rate power.

As hereinbefore indicated, the New York Central situation would complicate the imposition of additional charges for car floatage to and from regular stations and team tracks, but it would not prevent a separate charge for lighterage by all the lines throughout the port.

Terminal costs: The evidence regarding terminal costs in the New York Harbor case differed greatly from such evidence in these cases. Referring to complainants' principal witness on that subject it was said at page 672:

"Before proceeding to an analysis of the cost figures introduced by him, it is proper to observe that his estimates are most general in character, that his figures were not scientifically compiled, and that they represent merely his best judgment as to the cost of the various operations. * * * Under these circumstances the estimates of this witness are not particularly helpful, but they are supported in a general way by other evidence of record and they will be briefly summarized."

The estimated cost shown there for lightering westbound carload freight of $1.07 per ton, including the handling costs, may be compared with the composite costs shown here of $2 per ton where the freight is transferred by crane and $2.225 per ton where it is transferred by hand power and truck. The shore-to-shore cost study introduced in these cases is probably as thorough and reliable as any ever presented to the commission, while the transfer costs are the actual contract rates paid for that service in most instances. If any further proof were needed, it is afforded by the finding in the Wharfage Charges case that the average cost is $2.75 per ton, which includes certain items not included in the above-mentioned composite costs.

Lighterage versus car floatage: It is somewhat surprising to find that the report in the New York Harbor case indicated that lighterage cost less than car floatage to and from pier stations. The estimated cost there shown for lighterage of westbound carload freight was $1.07 per ton as compared with $1.25 per ton for car floatage of eastbound carload freight to pier stations. The latter figure included 10 cents per ton for switching to the float-bridge classification yard, while no switching was included in the lighterage cost; but even if that 10 cents per ton be excluded from the car-float costs, they would still exceed those shown for lighterage. The present record shows that the shore-to-shore costs for lighterage average substantially more than double those for car floatage to and from pier stations, without considering the fact that lighterage involves at least two handlings of the freight as compared with only one on car-float freight to or from pier stations and no handling by the railroad of such freight to or from off-line team tracks.

The report in the New York Harbor case indicated that lighters as well as car floats are used to serve the pier stations and contract terminals. On the other hand, the present record shows that such facilities are almost entirely, if not altogether, served by car float, while lighters are employed to pick up and deliver freight elsewhere than at regular stations or team tracks. The report in

that case also failed to bring out various other reasons for distinguishing between lighterage and car floatage to and from regular stations or team tracks, which are developed here as shown by this report. These differences in the statement of facts together with the evidence which indicated that lighterage cost no more than car floatage to and from pier stations probably account for the failure to distinguish between those services in that case. Nevertheless, it was apparently recognized that they did stand on a somewhat different footing, for at page 738 it was said that but for the long existence of the practice "it would be difficult now to require the extension of the rail rates so as to include lighterage." The long existence of the practice as a defense of free lighterage will be considered in another place.

Other differences in evidence: The report in the New York Harbor case indicates that the record there differed in many other respects from the present record. For example, there was no equating of the lighterage costs into equivalent miles of average rail transportation. There was no reference to the steamship permit system nor the burdens it imposes on the railroads. The development of Port Newark had not been completed at that time, and the report contained only five lines with reference to the plans for its development. The evidence appears to be much different with respect to the injury suffered by New Jersey. It is unnecessary to extend this report by pointing out other differences in the evidence. That the present record is much more comprehensive than that in the case cited is shown by the fact that it contains 7,843 pages of testimony, 533 exhibits, and 2,552 pages of briefs as compared with 4,017 pages of testimony, 168 exhibits, and 907 pages of briefs in that case.

Changes in law: The transportation act, 1920, and the Hoch-Smith resolution have been passed since the decision in the New York Harbor case. The Hoch-Smith resolution does not appear to have any important bearing on the issues here despite the contention of the Boston complainants. The minimum-rate power and section 15a added by the transportation act seem more important. Section 15a particularly seems to warrant a most careful consideration of the question of imposing a separate charge for lighterage in view of the evidence regarding its relatively high cost, the unusual burdens it places on the railroads, and their need of additional revenue.

D–15. INVESTMENTS IN RELIANCE ON RATE ADJUSTMENT

It is contended that large investments have been made on the faith of the continued unity of the port, much of which has been made since the New York Harbor case.

New York City: Since 1870 the city of New York has been acquiring water-front property within the city. It now owns 73 per cent of the Manhattan water front, 33 per cent of the Bronx water front, 20 per cent of the Brooklyn water front, 12 per cent of the Queens water front, and 7 per cent of the Staten Island water front. It owns and controls 60.5 per cent of the piers within the city limits. The total assessed valuation of water-front land owned by the city is over $216,000,000, and the assessed value of the land and improvements is over $280,000,000. The record does not show how much of this investment has been made since the New York Harbor case, but the average annual expenditures from 1920 to 1929 are said to have been $6,400,000.

The city has embarked on a plan of reconstructing many of its piers, which seems to be required because the slips between the piers are too narrow to accommodate the larger ships now in use together with the lighters and tugs. It has also commenced the establishment of a rail-water terminal at Jamaica Bay, Long Island, which is outside the lighterage limits but is reached by the Long Island Railroad.

Contract terminals: The assessed value of the real estate and improvements of the Bush terminal is $58,943,500, of the New York Dock terminals, approximately $31,000,000, and of the Brooklyn Eastern District terminal, over $10,000,000. The last-mentioned company has spent $950,000 for real estate and $1,400,000 for fixed property and equipment since January 1, 1917. It was testified that this investment was made on the faith of continued unity of the port, and that it was doubtful whether it would have been made had there not been that unity and free floatage.

Effect on investments: The above-mentioned investments may properly be taken into consideration, but it is not to be inferred that they would be destroyed by the establishment of a separate charge for lighterage. Undoubtedly a very large portion of the steamship business of the port would continue to be transacted on the New York side. That is especially true of the steamships carrying a considerable number of passengers as well as freight, because passengers generally desire to land on Manhattan. The probable effect of a lighterage charge on the contract terminals has already been discussed in section D–13 of this report. The city of New York would certainly bear the largest loss, whatever it might be; but it is worth noting that the city owns piers on Staten Island, which do not appear to be used very much at present, and they would be among the first to benefit from ships seeking piers with direct rail connections. Of course, the capacity of the Staten Island piers is limited, and all of the present facilities for direct interchange on the New Jersey side would be insufficient to draw a very large proportion of the steamship business of the port. The change would therefore be gradual as additional facilities were developed for direct interchange.

New York Harbor case: The contention that investments were made in reliance on the decision in the New York Harbor case overlooks certain expressions in that case, which gave notice that the adjustment there approved was not necessarily to be regarded as permanent. The following quotations are from pages 734, 735, and 738, respectively:

"The unusual cost of the terminal service at the port of New York and the plans of the carriers serving the port to invest many millions of dollars in new terminals add peculiar interest to the question whether the railroads can continue indefinitely their policy of rendering valuable terminal services without imposing specific terminal charges therefor.

* * * * * * *

"Although it is probable that the time will soon come when the carriers will find it necessary to accord adequate recognition in the rate structure to the heavy and ever-increasing expense of terminal operation, it can not be said at the present time that their failure to do so leads necessarily to the conclusion that their rates are unduly prejudicial or otherwise unlawful.

* * * * * * *

"It may be observed, however, that the position taken by the complainants is in a measure justified from an economic viewpoint, and that while at the present time all parts of the metropolitan district may with propriety be grouped for rate-making purposes, there may come a time when the burden of handling the enormous tonnage in and out of the port will be so onerous that Manhattan itself may need such relief as lower rates to and from the New Jersey shore would in part afford."

Regardless of the foregoing expressions, however, it is well settled that investments made in reliance on the continuance of a rate adjustment can not prevent the removal of undue prejudice and preference. Otherwise shippers could insure the continuance of a preferential adjustment by making such investments. See Atlas Portland Cement Co. *v.* C., B. & Q. R. R. Co. (81 I. C. C. 1), where, in reversing three previous decisions regarding the application of the Chicago district rates on cement from Buffington, Ind., it was said, at page 15:

"The argument that the location of the cement mill at Buffington was based on the belief in the unbroken maintenance of the district rate is not persuasive. Rights to interstate rates are determined by and under the interstate commerce act."

D–16. DISRUPTION OF RATE STRUCTURE

The defense contends that New Jersey's proposal that a spread of 6 cents be established between New Jersey points and New York City on all long-haul traffic except bulk grain to and from points on the North, West, or South could not be put into effect without extensive disruption of the rate structure.

Eastern class rates: It would almost certainly require changes in the class rates prescribed to and from other groups which are not here in issue. For example, if the rates to and from Weehawken were placed on the Trenton basis to and from central territory, as proposed by New Jersey's principal rate witness, they would generally be lower than the rates to and from less distant and intermediate points in other groups such as Albany and Kingston, N. Y.

Northern New York: The application of rates between points in northern New York and Bayonne, for example, 6 cents or any amount less than New York City would in many instances result in higher rates for the shorter hauls to and from Manhattan and the Bronx. Such deliveries in the Bronx do not require any marine service or other unusually expensive operations.

Southern class rates: A reduction of 3 cents in the class rates between New Jersey points and southern territory would require reductions in many of the rates to and from the Philadelphia group, also those to and from the Harrisburg, Pa., and Hagerstown, Md., groups, and in some instances of those to and from the Baltimore group. The resulting blanket would extend down the eastern shore to and including Cape Charles, Va.

Lime rates: In Northwestern Ohio Lime Mfrs. *v.* Pennsylvania R. Co., 159 I. C. C. 9, rates were prescribed on lime from producing points in Ohio to destinations in trunk-line territory. If the rates prescribed to New York were reduced 2 cents for application to northern New Jersey, they would be the same as those prescribed to the Philadelphia group, which extends almost to Harrisburg and Elmira, N. Y. On the other hand, if the rates prescribed to New York were increased 2 cents, they would be the same as those prescribed to Boston and Rockland, Me. Obviously, no greater reduction or increase could be made without changing the rates prescribed to other groups.

Petroleum rates: In Petroleum and Its Products, 171 I. C. C. 286, rates were prescribed on petroleum products from the mid-continent field to destinations in official territory. If the rates prescribed to New York were reduced 2 cents for application to northern New Jersey, they would be the same as those prescribed to Philadelphia, Reading, and Scranton, Pa., and Binghamton, N. Y. On the other hand, if the New York rates were increased 3 cents, they would be the same as those prescribed to Boston and Portland. No reduction could be made in the New Jersey rates without making them lower than those prescribed to Albany, which are the same as New York.

Transcontinental rates: Any change in the transcontinental rates to create a spread between New Jersey and New York would necessitate revision of the rates to and from an extensive territory. For example, any reduction in the class rates to and from New Jersey would have to be blanketed back almost to Pittsburgh and Buffalo, about 400 miles. Any increase in the class rates to and from New York would probably have to be applied to and from all of New England. Many of the commodity rates to and from New Jersey could not be reduced without blanketing the rates back as far as Colorado, approximately 1,800 miles.

The foregoing is sufficient to show that a splitting of the New York group would so disrupt the rate structure as to require extensive revision not only of rates voluntarily established by the carriers but in many instances of those prescribed by this commission. However, a separate charge for lighterage and car floatage or trucking in lieu thereof throughout the port would have no such effect as hereinafter shown.

D–17. FOURTH-SECTION COMPLICATIONS

Many of the possible fourth-section complications have been considered in D–3 railroad competition and D–16 disruption of rate structure. There only remains to be considered the fourth-section allegation in the State of New Jersey's complaint, possible fourth-section departures in connection with the rates over differential water-rail routes, and the question of whether a charge for lighterage and car floatage or trucking in lieu thereof would result in fourth-section departures.

Fourth-section allegation: The State of New Jersey alleges that the allowances given by the trunk lines for lighterage, car floatage, and trucking result in violations of the long-and-short-haul rule of the fourth section. A similar contention was found to be without merit in Atlas Portland Cement Co. *v.* C. R. R. Co. of N. J. (85 I. C. C. 611). See also Interstate Commerce Commission *v.* Detroit, G. H. & M. Ry. Co. (167 U. S. 633), where the Supreme Court held that a fourth-section violation did not result from the performance of free cartage at a farther distant point which was not performed at an intermediate point taking the same rates.

Differential water-rail routes: Rates are maintained over the water-rail route via Hampton Roads to and from points in the Middle West which are made differentials under the all-rail rates. A similar differential basis applies over the water-rail route via New London, Conn., the Central Vermont Railway, and the Canadian National Railways system to and from western points. In both cases the ships dock on Manhattan, but the same rates are maintained to and from points in northern New Jersey. If the all-rail rates to and from the New Jersey points were made lower than those to and from New York, the water-rail routes would either have to depart from the differential basis or their rates would violate the fourth section.

Lighterage charge: In Lautz Marble Corp. *v.* E. R. R. Co. (115 I. C. C. 183, 136 I. C. C. 183) and several cases which have followed it all points within the lighterage limits of New York Harbor were held to be intermediate with respect to through traffic moving across the harbor. This finding was based upon the fact that the same rates applied to and from all points within the lighterage limits, and it was accordingly held that they should be treated as a unit. It does not follow, however, that a similar decision would be required if a separate charge should be made for lighterage and car floatage or trucking in lieu thereof. Under such circumstances lighterage deliveries could not be regarded as a unit with the rail terminals and car-float stations. As hereinbefore pointed out in section B–12, lighterage is a service beyond the railroad and car-float terminals which is analogous to store-door delivery.

Through carload traffic is moved across the harbor on car floats at comparatively low cost, while lighterage involves a transfer of the freight from cars to lighters and a second handling when it is removed from the lighters. Trucking in lieu of lighterage also involves two handlings by the railroad which are not necessary in the case of through carload freight. Such car floatage in lieu of lighterage as is performed is generally to and from steamships, and that involves one handling of the freight by the railroad which is not performed in moving through carload traffic across the harbor. There is also a difference in that the former involves the floating of two cars for one load, as explained in section B–6. The shore-to-shore costs alone are much higher for lighterage and car floatage in lieu thereof than for the car-load interchange movement, the respective averages for all the trunk lines being $1.48 and 17 cents per ton. If a separate charge for lighterage would violate the fourth section, there must be departures now by reason of the charges for lightering less-than-carload shipments and certain other freight hereinbefore mentioned. It seems more reasonable to conclude, however, that charges for such special services which differ from those performed on through traffic do not enter into the question of violating the fourth section.

Moreover, it does not appear that lighterage and car floatage or trucking in lieu thereof are performed between the same points as the car-float interchange movement. The New Haven's rail terminals at Harlem River are expressly excluded from the lighterage limits. In State Docks Commission *v.* Louisville & N. R. Co. (176 I. C. C. 473) it was held that a charge for switching at the Alabama State Docks in Mobile, Ala., did not result in a fourth-section violation, because that movement was not included in the movement to the farther distant point. Everything considered, it does not appear that a separate charge for lighterage and car floatage or trucking in lieu thereof would violate the fourth section.

D–18. EFFECT ON CARRIERS' REVENUES

The trunk-line defendants urge that complainants' proposals would result in great reductions in their revenues. They also refer to their need for additional revenue as shown by the application for increased rates and the temporary increases granted in the Fifteen Per Cent case, 1931 (178 I. C. C. 539). It is argued that this phase of the case alone should preclude the granting of the relief sought.

On the other hand, New Jersey shows that the lighterage, car floatage, and trucking performed by the trunk lines without additional charge costs in excess of $30,000,000 per year. That is based on almost 20,000,000 tons so handled at New York Harbor in 1923, exclusive of grain lightered and interchange traffic. It points out that if a separate charge of only 3 cents per 100 pounds or 60 cents per ton were applied to that tonnage it would increase the revenues of the trunk lines approximately $12,000,000 per year. If such a charge were confined to the more than 9,000,000 tons lightered and car floated or trucked in lieu of lighterage the increase in revenue would still be well over $5,000,000 per year. Of course, some revenue losses would result from other findings hereinafter proposed, but it is believed that the net result would be quite a substantial increase in the carriers' revenues.

D–19. DEFENSE OF FREE LIGHTERAGE AND FLOATAGE

The defense contends that free lighterage and car floatage are in the best interests of the port of New York as a whole, including New Jersey. It urges that an additional charge would tend to discourage lighterage and induce shippers to forward their shipments with instructions which would preclude handling them in lighterage service. That is not denied by any of the complainants and is undoubtedly correct in so far as the direct-interchange facilities and steamship docking thereat would permit. In fact, New Jersey's position is that this would be a desirable result, because it would tend to eliminate the expensive and unnecessary lighterage service, wherever direct interchange could be effected.

Flexibility and economy: The flexibility of lighterage is emphasized by the defense, and it is urged that lighterage requires no investment in roadbed or tracks. In both of these respects it is comparable with trucking as well as in other respects hereinbefore noted. The defense regards lighterage as superior to direct interchange, when consideration is given to the investment required in facilities and the congestion and delay claimed to be incident to direct interchange. This is denied by complainants, who point out that direct interchange is successfully and economically carried on at Boston, Philadelphia, Baltimore, New Orleans, San Francisco, and other ports. They also refer to the views of the United States Shipping Board and the War Department as expressed in the Port Series No. 20, an extract from which is quoted in section B–31 hereof. Complainants do not deny that lighterage has many advantages and is a valuable service, but their position is that lighterage is worthy of its hire and should pay its way. There is merit in this contention, especially as it is shown that the class rates and rates on iron and steel articles were not made with any reference to the unusual cost of that service.

Attractiveness to steamships: Lighterage enables a ship to dock anywhere in the harbor and interchange freight with all of the railroads. It is urged that it would be a great disadvantage to the steamship lines if a ship could only interchange with one railroad at whose pier it docked. Lighterage also enables a ship to load or unload on both sides at the same time. For instance, a ship can be unloading to the pier and loading from lighters on the other side, and thus reduce by about one-half its time in port. This is a matter of much importance, as the profitable operation of a steamship depends to a large extent on making a quick turn around. Offside loading from lighters also saves space on the steamship pier, and pier rentals are high in New York. There can be no doubt that lighterage is of considerable value to the steamship companies, and free lighterage makes the port more attractive to them. This is not denied by complainants, who suggest that the steamship companies should pay for the lighterage service. As previously indicated, it is unnecessary to decide that question, but there would be nothing to prevent the steamship companies from absorbing a charge for lighterage and thus bearing a portion of the expense of that service. Of course there would be an inducement for them to seek piers with direct rail connections, but other considerations would probably prevent most of them from doing so, at least for a long time to come.

Diversion of commerce: As there are only 21 piers on the continental side of the harbor with tracks on them, the defense urges that all of the steamship freight could not possibly be interchanged at these piers. They contend, therefore, that the effect of a lighterage charge would be to divert commerce to other ports, such as Philadelphia and Baltimore. Of course, Boston expects that a charge for lighterage would enable it to secure a larger share of the foreign commerce, especially that from and to New England. New Jersey, however, believes that the present supremacy of the port of New York would not be endangered, because of its many advantages, such as greatest population, largest harbor, most railroads, superior banking facilities, closeness to important manufacturing areas, shorter distances than Philadelphia or Baltimore to most foreign ports, and frequent steamship sailings to all ports of the world. As hereinafter shown in section E–3, the port differentials are generally more favorable to New York as compared with Philadelphia and Baltimore than the relative distances to the respective ports would warrant. Considering all of these advantages, together with the evidence regarding the proportion of export and import tonnage moving through the various ports referred to in section C–10, there is no reason to suppose that New York would lose its position as the leading port of the country because of a reasonable charge for lighterage. The position of the port as a whole might even be strengthened when more of the rail-water traffic is interchanged directly between car and ship.

Quoting prices abroad: Foreign buyers like to have prices quoted by American exporters on the basis of a delivered price including all transportation charges. If there were an additional

charge for lighterage, the total charges would depend upon where the ship might dock. Witnesses for New York fear that this might interfere with quoting prices to foreign customers. They also say that it would increase the clerical work of the freight forwarders. New Jersey has no apprehensions on that score and points out that New Jersey exporters have always paid different rates to ship side, depending on which side of the harbor the vessel docks. There is a somewhat similar situation at Boston where additional charges apply for switching New England traffic to piers not served by the line-haul carrier, and no complaint is made of difficulty in quoting prices on traffic moving through that port.

Cost of market produce: The primary food market for the entire metropolitan district is located on the lower west side of Manhattan. Large quantities of food sold there are car floated to pier stations in this district, and any additional charge for that service would be reflected in the market prices. It does not appear, however, that much of this traffic is lightered, and it would not be materially affected by a charge for that service. In any event, the effect would be no more than any similar change in the rates such as occurs from time to time.

Character of traffic: The city of New York argues that the present method of interchanging freight between the railroads and steamships at New York is justified because of differences in the character and value of the foreign commerce handled through that and other north Atlantic ports. It is shown that the average value of the imports and exports through the New York customs district is $141 per ton as compared with $63.10 for the Philadelphia customs district, $35.37 for the Maryland customs district, and $74.81 for the Virginia customs district. The corresponding average of $128.30 per ton for Boston, however, is not much below that for New York. It would seem that the relatively high value of the traffic moving through New York should make it all the more able to stand a charge for lighterage.

The difference in the character of the freight lightered from the total traffic of the various railroads is also referred to as impairing the weight to be given the equivalent miles for the lighterage service. As the lighterage costs were equated into equivalent miles upon the basis of the average cost of all rail transportation, they may not be the same as if the rail costs were confined to the lighterage traffic. Nevertheless, the comparison of the lighterage costs with the average cost of all rail transportation shows the relatively high cost of the lighterage service. This showing is also confirmed by evidence introduced by the defense regarding the cost of lightering particular commodities. For instance, it was shown that the shore-to-shore cost of lightering coffee was 90.1 cents per ton, and adding the Lackawanna's transfer costs of 78.4 cents per ton, makes a total cost of $1.685 per ton. After deducting this amount from the Lackawanna's revenue of $4.90 per ton under the joint rate on coffee from New York to La Crosse, Wis., it has left $3.215 for its rail haul of 396 miles. On the basis of the Lackawanna's net ton-mile revenue for its rail haul, the above lighterage cost is equivalent to 215 miles of rail transportation. Similar illustrations regarding various other commodities show equivalent miles for lighterage ranging from 258 to 379 miles.

Long existence of practice: The fact that free lighterage has been practiced for so many years is emphasized by some of the New York interveners. In the Five Per Cent case (31 I. C. C. 351), the commission suggested various means of increasing the carriers' revenues aside from a general increase in rates. Among the matters referred to were the free-ligherage practice and the free transportation of the private cars of other lines. Following that investigation the carriers proposed certain changes in their lighterage and storage regulations at New York. These changes included a new charge of 3 cents per 100 pounds for lightering westbound less-than-carload shipments received with a carload of lighterage-free freight, but they did not provide any charge for lightering carload shipments. The above-mentioned charge on less-than-carload shipments was found justified in Lighterage and Storage Regulations at New York (35 I. C. C. 47). The carriers never saw fit to make any further attempt to comply with the above-mentioned suggestions, but the free transportation of the private cars of other lines has recently been ordered discontinued in Use of Private Passenger Train Cars (155 I. C. C. 775). That order was sustained by the Supreme Court in Louisville & N. R. Co. *v.* United States (282 U. S. 740), and Kansas City Southern Ry. Co. *v.* United States (282 U. S. 760), which cases are authority for the proposition that the long existence of such a practice does not make it lawful. Of course, there is a difference between the two practices above referred to, but long existence is not a valid defense to a clearly established violation of the act.

D–20. LIGHTERAGE AND FLOATAGE LIKENED TO SWITCHING

The New York interveners, on brief, attempt to liken lighterage and car floatage to switching, and the waters of New York Harbor are referred to as the water belt. The Port of New York Authority especially urges that lighterage is the equivalent of reciprocal switching, which is practiced in many other large terminal districts throughout the country. Under a reciprocal switching arrangement, each line switches for all the others, and its charges are generally absorbed by the line-haul carriers. There is no such arrangement with respect to either switching or lighterage in the New York Harbor district. Where a ship brings in cargo destined to points on seven of the trunk lines, each of them sends its own lighters to the steamship pier. If one railroad should lighter for the others, additional charges would be assessed for that service.

The absorption of switching charges of connecting lines is generally limited to certain maximum amounts. For example, the maximum amounts per car that will be absorbed are $3.75 at Cleveland, $6.70 at San Francisco, $8 at Detroit, $9 at Louisville, and $11.10 at Kansas City. These amounts may be compared with the costs shown here for lightering average carload shipments of various commodities, ranging from $36.66 for a 21.23-ton carload of paints and varnish to $107.75 for a 51.63-ton carload of iron and steel articles. The lighterage costs are also several times as much as most of the switching charges shown of record, including some prescribed by this commission, and based on cost of the service. For example, see Boston Wool Trade Association *v.* Director General (69 I. C. C. 282), hereinafter referred to as the Boston switching case; Switching at Kansas City (96 I. C. C. 538); Switching at St. Louis and East St. Louis (120 I. C. C. 216); and Switching Rates in Chicago District (177 I. C. C. 669).

Switching generally involves no breaking of bulk at the carrier's expense, while both lighterage and trucking in lieu thereof involve at least two handlings of the freight at railroad expense. Car floatage in lieu of lighterage bears more resemblance to switching, but it also generally involves one handling of the freight at railroad expense. As previously explained, such car floatage as is performed in lieu of lighterage is principally of refrigerator-car traffic to or from steamships, and this involves the floating of two cars for one load. That distinguishes this service from the switching as well as from car floatage to and from pier stations, team tracks, or the contract terminals. Of course ordinary switching involves no marine service.

As previously indicated, the shore-to-shore costs for both lighterage and car floatage in lieu thereof average considerably in excess of those for car floatage to and from pier stations or team tracks. Apparently both lighterage and car floatage in lieu thereof to steamships are governed by the permit system, which has no counterpart in switching service so far as disclosed by this record. Another difference from switching practice is that each lighter is manned by a captain who generally stays on it to guard the freight until delivered, although railroad employees also guard freight on steam tracks. Of course, switching is performed only to and from points reached by the rails, whereas lighterage is a service beyond the rail ends and additional to switching.

Everything considered, there is no escape from the conclusion that lighterage and its substitutes are more than the equivalent of ordinary team-track or private-siding delivery such as is generally covered by the line-haul rates. See cases cited in section B–27 of this report.

D–21. WHARFAGE CHARGES CASE

In opposing separate charges for lighterage, car floatage, and trucking services the defense relies to a large extent on the Wharfage Charges Case (93 I. C. C. 609, 157 I. C. C. 663, and 174 I. C. C. 263). In the second report cited it was found at page 692:

"That the record does not warrant the prescription of a tariff rule requiring the accessorial or terminal charges to be stated separately from the line-haul rates on export, import, coastwise, and intercoastal traffic to and from Atlantic and Gulf ports."

The issues in that proceeding related largely to the adequacy of the separate charges generally maintained for wharfage, handling, storage, and dockage at South Atlantic and Gulf ports, and the imposition of such charges where not already in effect. While the second report also involved the question of imposing separate charges for lighterage and car floatage in lieu thereof at North Atlantic ports, only a few pages of the report were devoted to that service, and it was not considered in the other two reports at all. That was a general investigation instituted at the request of the Secretary of War, and there was no complaint by New Jersey or Boston, such as we have here. The report did not show that different rates apply for lighterage deliveries in various parts of New York Harbor, and apparently the record with respect to lighterage was meager as compared with that in these cases. There was not even any mention of trucking in lieu of lighterage, which is more important than car floatage in lieu of lighterage.

While the port costs at North Atlantic ports were said to have been based on a uniform formula, those at South Atlantic and Gulf ports were not on a comparable basis because of the inclusion of different items at the various ports. Thus there was no reliable basis upon which to prescribe separate charges for the terminal services at all the ports, especially the South Atlantic and Gulf ports which were the primary subject of the investigation. Another reason given for declining to require separate charges for the port services was that this might have an important effect on the line-haul rates, which were not there in issue. Probably the most important reason is contained in the following quotation from page 686:

"Interested parties were repeatedly invited upon the record to present evidence to show injury wrought by the long-existing practice of publishing single-factor rates to cover the entire transportation service from point of origin of the freight to ship side. No substantial evidence tending to establish such injury was produced. This record does not warrant the issue of an order requiring the separate publication of the constituent elements of rates to ship side."

In the present cases, however, the evidence is convincing that free lighterage has retarded the development of shipping facilities and business on the New Jersey shore, that higher rates for lighterage deliveries in some parts of New York harbor than others

operate to the disadvantage of the former, and that a uniform charge for such service is the most practical way of correcting the situation. See sections B-8 to B-12, inclusive, and B-30 of this report. Moreover, it is shown that free lighterage at New York affords that port an advantage over Boston, which has contributed to the latter's decline as a port in comparison with New York, and this advantage could best be removed by the imposition of a charge for that service. See sections C-8 to C-11, inclusive.

The differences in the issues and evidence above referred to warrant a different conclusion in these cases from that reached in the above-cited case so far as concerns lighterage and its substitutes at New York harbor.

D–22. INJURY TO NEW JERSEY

The defense contends that complainants must show injury to New Jersey from the rate adjustment and that they have failed to make such proof. The defense also introduced evidence intended to negative the existence of such injury to New Jersey.

Population: The New Jersey section of the metropolitan district showed a greater percentage gain in population from 1880 to 1930 than did New York City or the entire metropolitan district. This appears to have been due in large part to the residential population of Manhattan Island's having reached a saturation point, its population in 1930 having been less than in 1910 or 1920 and about the same as in 1900. Other boroughs of New York City, such as the Bronx and the Queens, have increased in population much more rapidly than the New Jersey section. Some New Jersey cities, particularly Hoboken which is more dependent upon the steamship business, have suffered a material decline in population.

Prosperity: The defense refers to evidence introduced by complainants regarding the industrial importance of New Jersey, which is centered in the six northeastern counties of the State, and it ranks very high in this respect. Upon cross-examination of complainants' witnesses, it was brought out that their industries have generally grown and expanded over a period of years. The increase in manufacturing activity, assessed valuations, and bank deposits in northern New Jersey are also compared with New York City. These comparisons indicate that the growth of northern New Jersey has more or less kept pace with New York City. For example, from 1880 to 1927 the value of products manufactured in Greater New York increased about 8.6 times, while those of Newark increased about 7 times, Jersey City about 3.4 times, and Paterson about 8 times. Jersey City's trend was upward until 1919, when it reached a peak which was not equaled in any subsequent year; whereas New York showed an increase every year after 1919, except the depression year of 1921. Similar comparisons for other years might show different results, but it is unnecessary to go into the matter further, as complainants admit that New Jersey has shared in the general prosperity previous to the hearings with some exceptions such as Hoboken. It is not essential to prove lack of prosperity in order to obtain relief from an improper rate adjustment.

Steamship business: The trunk-line defendants refer to various rail-water terminals already built or planned on the New Jersey shore. The principal one recently constructed is that of the Pennsylvania Dock & Warehouse Co. in Jersey City. This terminal which is served by the Pennsylvania R. R. has 3 piers with 2 tracks down the center of each and 3 large warehouses on the shore. It is said to be the most modern terminal in the harbor but does not have rails along the stringpiece so that open-car freight can be transferred direct by the ship's sling. The principal rail-water terminal planned for the future is the so-called Bayonne project, which has been discussed since previous to the New York Harbor case. It does not appear, however, that the facilities already constructed have brought a materially larger share of the steamship business to the New Jersey side of the port. As indicated in sections B–3, B–30, and B–31, New Jersey with over 40 per cent of the water-front of the port has only about 10 per cent of its steamship business, although most of the steamship traffic moves from or to that side of the port.

The defense suggests that New Jersey's failure to receive a larger share of the steamship business of the port is due to lack of a central administrative control, which would afford larger bonding power for the purpose of building steamship facilities. The record, however, indicates that the facilities now available for berthing steamships on the continental side of the harbor have not yet been used to their capacity. For example, Port Newark is only used to about 25 per cent of its capacity, and most of New York City's piers on Staten Island appear to be unused. Whether a central administrative control would help New Jersey acquire more shipping business is entirely speculative, but it is certain that a charge for lighterage would encourage greater use of that side of the port. This indicates that the absence of a charge for lighterage is a primary cause for the retarding of New Jersey's shipping business.

Benefits to New Jersey: Over 18 per cent of the export, import, and coastwise traffic handled in lighterage service is lightered between points on the New Jersey shore. The defense, therefore, urges that New Jersey benefits from the free-lighterage practice and would be injured by the imposition of a charge therefor. However, representatives of the State of New Jersey, the New Jersey traffic advisory committee, the New Jersey State Chamber of Commerce, the cities of Newark and Jersey City, the chambers of commerce of Hoboken and Bayonne, and numerous New Jersey industries who supported the complaints appeared to be unanimous in favor of a charge for lighterage. Many of them also expressed a willingness that the same charge be imposed when lighterage is performed between points on the New Jersey side of the port.

New Jersey opposition: There was some opposition to the complaints from industries with plants in New Jersey. The principal ones were the National Sugar Refining Co. and the General Foods Corporation. These concerns have plants on both sides of the harbor but professed to be interested mainly because of their New Jersey plants. These plants are served by both rail and lighter, but they regard the lighterage as superior to the rail service. The National Sugar Refining Co.'s preference for lighterage is apparently due to the fact that it affords service by all the trunk lines instead of only the one or two whose rails reach its plant, and this is said to avoid delays when shipments are made to points on other lines. The General Foods Corporation's private siding has such a limited capacity that all shipments can not be made by rail, and when shipments are made by lighter they are delivered to the stringpiece by conveyors and the railroad performs the loading, which affords considerable saving to the shipper. The greater value of the lighterage service to shippers is all the more justification for imposing an additional charge for the service.

Conclusions: It is doubtful whether New Jersey has been injured because of the grouping of the rail and car-float terminals on both sides of the harbor; but it is safe to conclude that free lighterage has operated to retard the development of shipping facilities and business on the New Jersey shore; and there can be no doubt that the charging of higher rates for lighterage deliveries in a large part of the New Jersey section of the port than for similar service in other parts of the port is a material handicap and injury to the former, as admitted by defense witnesses. See sections B–8 to B–12 of this report.

D–23. VIEWS OF NEW YORK PORT AUTHORITY

The Port of New York Authority intervened in opposition to the Boston complaint; but it did not intervene in the New Jersey cases, seemingly desiring to maintain a neutral attitude as between the States which created it.

Previous cases: Other New York interveners introduced in evidence extracts from the annual reports and minutes of the Port Authority, which showed the attitude taken by it in previous cases in opposition to any splitting of the port or the imposition of additional charges for lighterage, car floatage, or trucking. In the Eastern Class Rate case the original report at page 432 stated that the views of the Port Authority "are entitled to important weight, since it has been specifically authorized by the laws of the States of New York and New Jersey to participate in commerce cases involving the commerce of the port district." Whatever may have been the power of the Port Authority to speak for New Jersey in previous cases, clearly it has no authority to do so in the present New Jersey cases. One of them is a complaint filed by the State of New Jersey through its attorney general upon authority of its governor and legislature. Under the compact the governor is authorized to exercise a veto over the actions of the measure of the Port Authority from his State, and that body can not act without the concurrence of at least two members from each State.

Present cases: Nevertheless, the views expressed by the Port Authority in its brief in the Boston case regarding discrimination against New Jersey seems significant as coming from a neutral source. It not only favors the same grouping on traffic to and from New England as on that to and from the West, but it regards the present practice of charging higher rates for lighterage deliveries in some parts of the port than others as discriminatory against New Jersey. The following is quoted from its brief:

"The lighterage limits of New York Harbor are not logical. Very important parts of the New York port group have been excluded. This is particularly true of Port Newark. Under the principles of port grouping clearly established by the commission there is no possible justification for an arbitrary delimitation of the lighterage limits which excludes important parts of the harbor area from lighterage or equivalent switching service.

The reference to "equivalent switching service" apparently means a reciprocal switching arrangement under which New Jersey shippers would enjoy the services of all the trunk lines at the New York rates the same as lighterage shippers. That would correct the discrimination only in part, as there are many industries in New Jersey not located directly on any railroad, and lighterage includes loading of carload freight and other advantages not enjoyed by shippers from team tracks or private sidings. See sections B–11 and B–12 of this report. Moreover, reciprocal switching is not specifically brought in issue by the complaints.

The Port Authority, however, thinks that the lighterage limits can not be extended here, because the New Jersey complaints do not so request. The State's complaint specifically assails the practice of performing lighterage, car floatage, and trucking without additional charge while refusing to do so at points in New Jersey as unduly prejudicial and preferential. It asks the removal of such undue prejudice and preference, which is sufficient basis for an order to that effect.

D–24. DEFENSE OF BOSTON COMPLAINT

What follows relates primarily to defense of the Boston complaint, but it should be understood that this is not all of the defense to that complaint, as many of the matters previously considered are applicable to it as well as the New Jersey complaints.

Different carriers: The New York interveners urge that a valid order under section 3 of the act could not be issued to remove undue prejudice to Boston and preference of New York, because the carriers serving those ports are not the same except the New

York Central and the New Haven. It is doubtful whether other lines could be required to maintain a separate charge for lighterage in the Boston case, unless the minimum-rate power is exercised; but if such a charge is required in the New Jersey cases on traffic from and to points west of the Hudson River, the Boston complaint could practically be confined to New England traffic.

Competitive conditions: The Port of New York Authority contends that the Boston complaint must be dismissed because the export and import rates to and from New York are controlled by competitive conditions which do not exist at Boston. This is said to be "from a legal standpoint the heart of the case." The competitive conditions referred to are principally the larger number of railroads serving New York and which afford it a much greater drawing power for traffic as compared with Boston. The New York State Barge Canal is also referred to as distinguishing the competitive situation at New York and Boston. It will be noted that both of these conditions relate to traffic from or to points west of the Hudson River and do not affect traffic from or to New England. Complainants do not deny that there is greater competition at New York than at Boston on traffic from and to points outside of New England, but they urge that they are entitled to relief from discrimination brought about by that competition. The cases cited by the defense in support of its contention are mostly old decisions prior to Swift Lbr. Co. *v.* Fernwood & G. R. Co. (61 I. C. C. 485) and Pioneer Lbr. Co. *v.* Director General (64 I. C. C. 485) which were upheld in United States *v.* Illinois Central R. Co. (263 U. S. 515). In overruling a somewhat similar contention there, the Supreme Court said at page 525:

"The innocent character of the discrimination practiced by the Illinois Central was not established, as a matter of law, by showing that the preferential rate was given to others for the purpose of developing traffic on the carrier's own lines or of securing competitive traffic. These were factors to be considered by the commission; but they did not preclude a finding that the discrimination practiced is unjust. Such was the law even before transportation act, 1920. Texas & Pacific Ry. Co. *v.* Interstate Commerce Commission (162 U. S. 197, 218, 220) Interstate Commerce Commission *v.* Alabama Midland Ry. (168 U. S. 144, 167, 175). In view of the policy and provisions of that statute, the commission may properly have concluded that the carrier's desire to originate traffic on its own lines, or to take traffic from a competitor, should not be given as much weight in determining the justness of a discrimination against a locality as theretofore. For now, the interests of the individual carrier must yield in many respects to the public need, Railroad Commission of Wisconsin *v.* Chicago, Burlington & Quincy R. R. Co. (257 U. S. 563); New England Divisions case (261 U. S. 184); and the newly conferred power to grant relief against rates unreasonably low may afford protection against injurious rate-policies of a competitor, which were theretofore uncontrollable."

As shown in section D–3 of this report, railroad competition may interfere with the charging of higher rates to and from the rail and car float terminals on the eastern side of New York Harbor than those on the western side, but it does not prevent the imposition of a separate charge for lighterage throughout the port. Also as shown in section D–4, the barge canal may afford some justification for grouping the rail and car float terminals on both sides of the harbor, but it does not preclude a separate charge for lighterage, and in fact such a charge would help the railroads to meet the canal competition on the important grain traffic.

Difference in distances: The defense stresses the greater distances to New York than to Boston. Of course, this applies only to traffic from and to points west of the Hudson River, as Boston is closer than New York to most points in New England. The distance of 207 miles from the Harlem River to Boston is especially emphasized by the defense, but Boston shows that there is no movement of export, import, or coastwise traffic to or from that port via the New York gateway. An exhibit introduced by the defense shows that the rate-making distances to Boston from the 105 key points in central territory are via Rotterdam Junction, N. Y., in every instance except five points on or south of the Ohio River. The average rate-making distances from the 105 key points are 807 miles to New York and 923 miles to Boston, or a difference of 116 miles. Boston is undoubtedly at a disadvantage with respect to the distances from and to points outside of New England, but it must be remembered that distance is used simply as a convenient means of measuring service, and Boston shows that the cost of service from representative points to ship side at Boston is substantially less than to ship side at New York.

Fourth section: It is urged that lower rates between western points and Boston than New York would violate the fourth section of the act. There has been no substantial movement of waterborne traffic to or from Boston via New York for years, but routes are open that way, and it is an important gateway for other traffic. The fourth section would, therefore, probably prevent higher rates to and from New York than Boston, but that would not be true of a separate charge for lighterage as shown in section D–17 hereof.

Port differentials: The Port of New York Authority on brief reviews numerous cases involving the port differentials. In none of these cases does there appear to have been any showing of the cost of service to and from the respective ports such as we have here. The more important and most recent of the cases involving the rates to and from Boston have already been considered in sections C–6 and C–7 hereof. Baltimore Chamber of Commerce *v.* Ann Arbor R. Co. (159 I. C. C. 691), will be considered in connection with Philadelphia and Baltimore's evidence in section E–3 hereof. It should be noted that the differential adjustment does not apply on traffic from and to New England.

Switching at ports: The defense stresses the fact that at Boston switching is performed through a densely populated area, where there are numerous grade crossings, and in some instances the rails run along the streets. On the other hand complainants show that the density of population is even greater at New York, and similar operating difficulties exist there, notably on the New York Central's line down the west side of Manhattan. The record indicates that in some instances the conditions affecting switching at Boston may be more difficult than at New York, and in other instances the opposite is true, but on the whole there does not appear to be any material difference in that respect, except the distances which average slightly greater at New York than at Boston.

The suggestion of the New York interveners that the switching service at Boston is "very probably" equal to the switching plus lighterage at New York is therefore without merit. This is also shown by a comparison of the lighterage costs with the costs shown for switching at Boston in the Boston Switching case, supra. Such costs were based upon data furnished by the carriers in that case and introduced in evidence here without objection. As found by the commission at pages 297 and 298, the costs for all switching performed by the New Haven at Boston averaged $5.95 per loaded car and for the Boston & Maine $5.96 per car, including in each case 6 per cent return on investment. The operating expenses alone amounted to only $3.03 and $3.96 per car for the respective lines. Some allowance should be made for increased wages since the above costs were determined as of 1920, but even so they would not be comparable with the lighterage costs shown here, which range from $36.66 to $107.75 per average carload of various commodities.

D–25. COSTS TO BOSTON VIA NEW YORK

The defense attacks Boston's comparison of the cost of transporting traffic to and from ship side at Boston and New York, respectively, as entitled to no weight. As shown in section C–6 hereof, this cost data relates to traffic from and to 14 representative points, all but one of which are west of the Hudson River. The principal objections raised are as follows: (1) The line-haul factor is based on the average ton-mile cost of transporting all carload traffic and not the specific traffic under consideration; (2) the cost of switching at the ports was not segregated from the line-haul factor and shown separately; (3) routes to Boston via New York Harbor were not included from four or five points which might use such routes; and (4) consideration was not given to the higher costs of transportation in New England.

Line-haul factor: It is true that the average ton-mile expense of transporting all carload traffic may not be the same as the cost of transporting the water-borne traffic, but it is recognized that there is no other practical method of determining the line-haul costs. While costs so determined might not afford a satisfactory basis for prescribing maximum reasonable rates, it is believed that they afford a fair basis for judging the relative costs and rate relationships as between the ports.

Switching costs: As indicated in section D–24 hereof, the switching performed at Boston does not on the whole differ materially from that performed at New York. The inclusion of the switching costs in the line-haul factor was not therefore unfair to either port.

Routes via New York: As previously indicated, there is no movement of water-borne traffic to or from Boston via New York Harbor. However, the New Haven's average shore-to-shore cost for the car-float interchange service across New York Harbor is only 11 cents per ton, and the corresponding average of all the lines is only 17 cents. The inclusion of these costs in some of the routes from 4 or 5 of the 14 points would not have any material effect on the average costs.

Higher costs in New England: The line-haul factor used by Boston assumes that the ton-mile costs are the same throughout official territory. The defense introduced evidence to show that operating costs are higher in New England than in the remainder of official territory, but such evidence does not indicate the percentage difference between the average costs. Reference is also made to various cases in which it was recognized that operating costs are higher in New England, including New England Divisions (66 I. C. C. 196). On the other hand, Boston shows that the New England lines have gained more in operating efficiency than those in other territories during recent years. It also contends that most of the factors tending to show higher costs in New England relate to local traffic within that territory and not to interterritorial traffic. In the Eastern Class Rate case a scale was prescribed for central and southern New England about 10 per cent higher than the basic scale for the remainder of official territory, but the basic scale was applied on interterritorial traffic to and from New England. The record here does not afford any better basis for judging relative costs and rate levels in the respective territories. However, we have recomputed complainants' original cost figures upon the basis of allowing 30 per cent higher costs for that part of the haul in New England. This increases the average cost from the 14 representative points to ship side at Boston from $5.25 to $5.74 per ton. The latter amount is still 63 cents per ton less than the corresponding costs shown to ship side at New York when the transfer to and from lighters is performed by crane and 85 cents less when the transfer is performed by man power and trucks.

Cost analysis: An analysis of Boston's cost figures discloses that the line-haul factor does not take into consideration the fact

that the average ton-mile costs are for an average haul of only 148.2 miles, whereas the hauls from the 14 representative points average 561 miles to New York and 630 miles to Boston. Thus under complainant's method of computation the line-haul factor includes terminal expenses at New York which are three and seventy-eight one-hundredths times the average for all revenue traffic and at Boston four and twenty-five one-hundredths times such average. When suitable adjustments are made for the difference in length of hauls and allowing for 30 per cent higher costs in New England, the average costs originally shown from the 14 representative points to ship side at Boston are reduced to $4.11 per ton, and the corresponding costs to New York are reduced to $5.10 and $5.32 per ton, depending on whether the transfer is by crane or man power and trucks. These New York costs are, respectively, 124.09 and 129.44 per cent of the Boston cost. The differences in favor of Boston are 99 cents and $1.21 per ton, or approximately 5 and 6 cents per 100 pounds, respectively.

Special terminal costs: The special terminal costs shown in section C–5 hereof for transferring the freight between cars and vessel at Boston do not include any interest, taxes, or maintenance expenses on the pier facilities, but neither do the lighterage costs at New York include such expenses on the lighterage piers. While these expenses at the Army supply base and Commonwealth Pier in Boston probably exceed those at the lighterage piers in New York, it does not appear that the railroad bears all of such expenses at the first-mentioned piers. As they are owned by the United States and State Governments, there would apparently be no taxes. Much freight is trucked to and from these piers, and bears a portion of the interest and maintenance expenses through a wharfage charge of 25 cents or more per ton. The steamship companies also bear a portion through a dockage charge of 10 cents per ton at the Commonwealth Pier. A large part of the Army base is leased to business concerns for storage or other purposes, which should cover a large portion of the interest and maintenance expenses. When consideration is given to all of these factors, the record indicates that there is not much difference between the average amounts per ton attributable to interest on investment, taxes, and maintenance expenses on the pier facilities at Boston and New York, respectively.

Everything considered, therefore, it is believed that the average costs hereinbefore mentioned to Boston as compared with New York are on a fairly comparable basis.

D–26. RATES ON NEW ENGLAND TRAFFIC

In defense of Boston's showing in sections C–8 and C–9 hereof with respect to the rates between New England points and Boston versus New York, the defense points out that commodity rates to or from New York were compared with class rates to or from Boston, but they are generally rates on which traffic moves. The defense also refers to other instances where Boston has commodity rates lower than the class basis which applies to New York, and there are many more instances where class rates apply to both ports. Even with respect to the rates referred to by the defense, however, it is apparent that after deducting the average cost of lighterage, which is 18 to 18.65 cents per 100 pounds for the New Haven, most of the New York rates are relatively much lower than the Boston rates. It is claimed that rates which include lighterage and are not much if any in excess of the average cost of that service do not burden other traffic, but it is difficult to see how they could fail to have that effect.

Competition: The only justification offered for the maintenance of relatively lower rates on New England traffic to and from New York than Boston is competition. The form of competition emphasized most is motor trucking, but apparently this is just as great to and from Boston as New York. Holyoke, Mass., and other points referred to in this connection are as close or closer to Boston than to New York. Water transportation is also available between New York and some points on or near Long Island Sound, but some of the principal boat lines are subsidiaries of the New Haven, and apparently they maintain the same rates as the rail lines. Market competition is greater at New York than at Boston with respect to some commodities, but this competition relates primarily to domestic traffic not here in issue. The competition of the New Haven with the New York Central for traffic from or to the west side of Manhattan is mentioned, but this also relates only to local traffic, as export, import, and coastwise traffic has to be lightered by the New York Central the same as the New Haven. However, the record shows that the New Haven has instructed its agents to solicit the routing of lighterage freight by its boat lines which dock on the west side of Manhattan and do not lighter local traffic. Even if competition be somewhat greater at New York than at Boston, that does not necessarily require a dismissal of the complaint. See cases cited in section D–25 hereof.

New England opposition: There was some opposition to the Boston complaint from representatives of New England industries, principally the Associated Industries of Massachusetts. This organization is not interested in helping the port of New York as compared with Boston, and its witness indicated that its members would be glad to see an adjustment which would help build up the port of Boston, provided their industries are not hurt. It appears that the opposition is based mainly on the possible effect on domestic traffic to and from New York and points beyond involving a movement across New York Harbor. That traffic is not in issue under the Boston complaint, but it is feared that a charge for lighterage and car floatage on export and import traffic would lead to the application of similar charges on domestic traffic. The record indicates, however, that comparatively little domestic traffic from or to New England is lightered, and the separate charges hereinafter proposed could not affect the bulk of such traffic which is car floated to or from pier stations and the contract terminals nor any of the through traffic car floated across the harbor.

Port services: In defense of Boston's showing in sections C–4 and C–9 hereof with respect to such matters as split deliveries, allowance for shifting steamers, storage in transit, and the car floatage of bananas, the New York Central shows that its practices at New York are the same as those of the other trunk lines serving that port. This might constitute a defense if the other lines are permitted to continue such practices, but clearly it would be no defense if they are required to establish a charge for lighterage and its substitutes in the New Jersey cases.

D–27. INJURY TO PORT OF BOSTON

The defense contends that complainants have failed to prove that the rate adjustment has injured the port of Boston. They emphasize the fact that Boston's total foreign commerce has increased despite the decline in its exports. As shown in section C–10, however, Boston's increase has not kept pace with that of New York, and the latter has been steadily increasing its proportion of the combined commerce of the two ports. The marked decline in Boston's export traffic is claimed to have been due to causes other than the rate adjustment, as indicated below:

Ocean differentials: The first cause suggested is the elimination of the former ocean differentials, but it is not shown that there was ever any ocean differential in favor of Boston as compared with New York. The record shows that New York is Boston's principal competitor, and apparently Boston's losses have been mainly to New York. That is especially true of traffic from and to New England, which could hardly be expected to move via Philadelphia or Baltimore. Notwithstanding Boston's natural advantages as a port, its facilities for direct interchange between car and ship, and its advantage of location with respect to most points in New England, less than 14 per cent of New England's exports move via Boston, compared with 65 per cent via New York.

Grain traffic: Another cause suggested with respect to the grain traffic is the increased movement through Canadian and Gulf ports. The figures quoted in section C–10, however, show that the average annual tonnage of grain moving through New York increased 124 per cent from 1905–1914 to 1920–1929, while Boston suffered a decrease of 61 per cent. The movement via the barge canal showed a much greater percentage increase than the lake-and-rail movement to New York, but the latter increased over 100 per cent and averaged about three times the canal tonnage in 1920–1929. It is urged that if the rail rates to New York are increased, more grain would move via the canal; but as previously indicated, a separate charge for lighterage would place the railroads in a better position to meet the canal competition by operating to stop their service at the water-front elevators and thus save the lighterage expense.

Industrial importance: Reference is made by the defense to the fact that the Boston metropolitan district is the fourth largest in the country; that it has made gains in various ways, and holds a leading place in many industries. This indicates that there is no reason within Boston itself for the decline in its export commerce.

Terminal service: The Port of New York Authority suggests that "the rigidity of the terminal service at Boston and the lack of coordination between the several terminals is a serious handicap to the port and explains in part the failure of the port to attract a larger volume of commerce." This apparently has reference to the fact that no lighterage is performed by the railroads at Boston, and additional charges apply for switching New England traffic to or from piers not served by the line-haul carriers. That is one way in which complainants contend that New York is preferred over Boston, and they ask that this be corrected by the imposition of a charge for lighterage.

Conclusions: There can be no doubt that free lighterage gives New York a material advantage over Boston, and it has been one of the principal reasons for New York drawing commerce from Boston. This is proved by New York's own evidence that a charge for lighterage would tend to divert commerce to other ports. While this evidence refers to Philadelphia and Baltimore particularly, it is apparent that Boston would receive the benefit as to New England traffic. Of course, New York has many natural and other advantages which also help it, but that is no reason for adding the further advantage of free lighterage.

E. Philadelphia and Baltimore's evidence

E–1. PHILADELPHIA

Statement of position: Counsel for the Philadelphia interveners stated their position as follows:

"First. We are against any action by the commission to change or unbalance the rate relationships now in effect to the existing potential rail ends, based upon the long-standing port differentials, at the instance of any of the complainants.

"Second. We join in the application of the State of New Jersey and its allied complainants, and the city of Boston, that your honorable commission make an order directing the filing of schedules separating the line haul from the terminal charges, rendered after the existing potential rail end.

"Our position is that the port of Philadelphia is subjected to undue prejudice within the meaning of the transportation act by the absorption of accessorial costs, such as lighterage, truck haulage in lieu of lighterage, free warehousing, and car floatage after the actual or potential rail end, which are not required to be furnished in the port of Philadelphia.

"We do not, however, join with the complainants in any application to separate from the line-haul charges, services involved in bringing the consignment to the actual or potential rail ends."

The term "potential rail end" is explained as meaning "that point in the line-haul transportation of freight where the ability to furnish actual physical rail transportation ceases and some other form of transportation is substituted." It is further pointed out that in the case of car floatage the rails may be regarded as continuing across the harbor on the floats, which carry the cars and bring them into contact with the rails on the other side. It is understood from the foregoing and other expressions in the brief of the Philadelphia interveners that they do not advocate additional charges where cars are merely floated across the harbor to or from other railroads or regular terminal facilities; but they do favor such charges for lighterage and its substitutes, which involve a greater and more expensive service. See sections B–4 to B–6, inclusive, and B–15.

Terminal facilities: Philadelphia has 68 projecting piers capable of accommodating ocean vessels, and 60 of them are equipped with railroad tracks. Cars are generally switched to or from ship side, and the traffic is almost exclusively handled direct between car and ship. The Philadelphia Army base, which is now operated as the Tidewater Terminal, has two main piers, one 1,300 feet and the other 1,500 feet long, with two tracks down the center of each pier and two apron tracks, and is capable of berthing about 15 ships. The city of Philadelphia has spent over $16,000,000 in constructing 11 modern piers, equipped with depressed tracks extending down the center and an apron track on each side, and it has spent about $40,000,000 more for real estate and harbor improvements. The largest portion of the Philadelphia water front is privately owned, and the private investment therein exceeds $160,000,000. The present facilities can accommodate at one time about 250 ships, but additional facilities could be developed to take care of about 90 more ships.

Prejudice and preference: While the New Jersey Traffic Advisory Committee's complaint alleges undue preference of Philadelphia and Baltimore, its principal rate witness stated that New Jersey has no objection to its present relationships with those ports on traffic from and to the west. The Philadelphia interveners oppose the Boston complainants' allegation of undue preference of Philadelphia and Baltimore, but as that allegation has clearly not been sustained for reasons previously indicated in sections C–6 and C–7 and which will also be dealt with in sections E–2 and E–3, it is unnecessary to discuss that issue here. On the other hand, Philadelphia contends that it is unduly prejudiced and New York unduly preferred "by the absorption of the excessive costs for marine service in New York Harbor." In support of this contention, it is urged that application of the Boston complainants' cost formula would produce substantially greater rate differences in favor of Philadelphia as compared with New York. As this contention goes beyond the issues under the complaints, however, no finding will be made with respect to it here, but it may be noted that the findings hereinafter proposed will incidentally remove the undue prejudice claimed by Philadelphia.

Apparently Philadelphia would be willing to have a separate charge established for lighterage at that port if such a charge is required at New York.

E–2. BALTIMORE

Position on issues: The Baltimore interveners oppose the complaints in Nos. 23040 and 23327 in so far as they allege undue preference of that port. Inasmuch as the complaints do not raise direct issues as between Baltimore and New York, these interveners took no position one way or the other with respect to the imposition of additional charges for lighterage and other terminal services at New York Harbor. They do not, however, recede from the position taken in previous proceedings "that the present Atlantic port differentials are inadequate and deprive Baltimore of the benefits of its advantage of location as compared with other Atlantic ports."

Advantage of location: Baltimore is located farther inland than any other Atlantic port and hence nearer to the important cargo districts in the Middle West. It urges that it is entitled to the benefit of this natural advantage, and cases are cited to show that such an advantage may not be neutralized or destroyed by a rate adjustment. The Baltimore interveners show that New Jersey's proposal that Jersey City take the Trenton basis of rates from and to central territory would deprive Baltimore of much of its advantage of location as compared with Jersey City. They also show that application of the Boston complainants' cost formula would generally result in much large rate differences in favor of Baltimore as compared with Boston than the present port differentials. The record indicates that those differentials were established in partial recognition of the shorter average distances from differential territory to Philadelphia and Baltimore as compared with New York and not with any regard to differences in the terminal costs. In the Boston Maritime case, supra, the commission at page 597 of the original report referred to the port differentials as follows:

"They do not accurately reflect transportation conditions, first, because they are uniform, and second, because the lesser distances from differential territory to Philadelphia and Baltimore as compared with New York and Boston are reflected only in part."

Terminal operations: The bulk of Baltimore's water-borne commerce is handled through the marine terminals of the railroads. These terminals are equipped with rails on the piers so that cars can be switched to or from ship side, and the freight is generally interchanged direct between car and ship. All of the terminals are connected by rail so that marine service is not necessary, but where traffic arrives over one line for a ship docked at another line's terminal, much of such traffic is interchanged between the railroad terminals by car float or lighter. The water movement is short and only takes from 15 to 35 minutes. There is no offshore loading or discharging of vessels by the use of lighters at this port.

Municipal development: The city of Baltimore through its port development commission has entered upon a comprehensive program contemplating the eventual expenditure of $50,000,000 for the construction and improvement of piers, wharves, and other water facilities. So far the only major project completed by this commission is the McComas Street ocean terminal used by the Western Maryland Railway. This terminal which cost approximately $8,400,000 is one of the most modern and efficient rail-water terminals on the Atlantic seaboard.

Port costs: The Baltimore interveners without objection introduced in evidence the port costs at the various north Atlantic ports as found in the Wharfage Charges case. The average costs there found for transferring freight between car and ship were $1.05 per ton at Hampton Roads, $1.06 at Baltimore, $1.03 at Philadelphia, $2.75 at New York, and $1.85 at Boston. These average costs include certain items such as interest on investment, taxes, and maintenance expenses on the pier facilities, which are not included in the special terminal costs at Boston and New York referred to in sections C–5 and D–25. On rebuttal Boston showed that the carriers made certain errors in reporting the costs for that port in reply to the questionnaire in the case cited. After correcting these errors the Boston costs average 99 cents per ton, or approximately the same as the other ports except New York.

The foregoing does not indicate that the failure to publish separate charges for the port services places Boston at any disadvantage compared with Philadelphia, Baltimore, or Hampton Roads. On the other hand, it shows that separate charges at New York would not be unfair to that port even though none are required at the other ports, provided the charges at New York do not exceed the difference between the average costs there and at the other ports.

E–3. BALTIMORE PORT CASE

In Baltimore Chamber of Commerce *v.* Ann Arbor R. Co. (159 I. C. C. 691), herein referred to as the Baltimore Port case, Baltimore sought increases in its differentials under New York on export and import traffic from and to differential territory. Philadelphia also intervened and sought corresponding increases in its differentials under New York. Their contention that the existing differentials were inadequate was based mainly on the costs of transferring freight to and from ship side at the various ports. While there was an alternative request that separate charges be imposed for the water transfer, the case was tried primarily with a view to increasing the differentials so that the terminal costs would be reflected in the line-haul rates. That would have required the New Jersey side of New York Harbor to pay rates based on the cost of lighterage even when that service is not performed. It might also have had the indirect effect of making Boston pay rates based on the cost of lighterage which is not performed at that port.

The complaint was dismissed and among the reasons advanced therefor were the following: (1) That the total costs of the service to and from the respective ports were not shown; (2) that the rates had not been tested by the application of a strict distance scale; and (3) that complainant was principally interested in the rates on ex-lake grain, as to which Philadelphia and Baltimore have a 0.5-cent differential under New York, although the short-line distances are approximately the same.

Line-haul costs: The present cases differ from the Baltimore Port case in that the line-haul service between points west of the Hudson River and northern New Jersey is generally the same as that to and from New York, except for the somewhat greater distances to and from the latter. The Boston complainants have supplied the deficiency of the evidence in the Baltimore Port case by showing the total average cost of service to and from ship side at Boston as compared with New York.

Distance scale: Since the Baltimore Port case was decided, the commission has prescribed a distance scale of class rates in the Eastern Class Rate case. That scale and the key rates made with relation thereto apply on domestic traffic from and to the ports and superseded the port differentials as to such traffic. Under the rates prescribed in that case the differences to and from Philadelphia or Baltimore under New York are generally greater than the port differentials. For example, from 18 representative points in all parts of differential territory the average difference on all of the classes in favor of Baltimore under New York is 7.8 cents as compared with the differential of 3 cents in all of the export and most of the import class rates. It should be noted that the above-mentioned average rate difference is based on the distances to the ports, without taking into consideration differences in the terminal costs.[25]

Ex-lake grain: While complainant in the Baltimore Port case was principally interested in the rates on ex-lake grain, the New Jersey complainants' evidence here does not indicate that they have any more interest in that traffic than the rest. As shown in section C–7, the distances from Buffalo to the ports do not warrant the 0.5-cent differential to Philadelphia and Baltimore under New York on ex-lake grain. However, this differential equivalent to $1 per ton is considerably less than the differences in the average port costs hereinbefore referred to, which are $1.69 per ton at

[25] The rates prescribed in the Eastern Class Rate case to and from Philadelphia and Baltimore are based on actual distances plus 10 constructive miles as at New York.

Baltimore and $1.72 at Philadelphia less than at New York. The charge hereinafter proposed for lightering bulk grain at New York is also substantially less than such differences in the average port costs after deducting therefrom the differential on ex-lake grain. In other words, New York's relationship to Philadelphia and Baltimore will still be more favorable to New York than would be warranted by the differences in average costs for the transfer between car and ship at the respective ports.

Separate charges: Only one short paragraph of the report in the Baltimore Port case was devoted to the question of establishing separate charges for transferring freight between car and ship. It referred to the long existence of the practice of publishing 1-factor rates to ship side at North Atlantic ports, but that is offset here by the numerous cases cited in section B–32 hereof which support a separate charge for the transfer between car and ship. It also pointed out that there was no proof of injury by reason of the publication of 1-factor rates to ship side. In that respect the proof there apparently differed from the evidence here both of New Jersey as shown in sections B–9 and B–12 and B–30 and of Boston as shown in sections C–4 to C–10, inclusive.

The report in the Baltimore Port case indicates that the issues and evidence there differed widely from those here under both the New Jersey and Boston complaints. In that case the controversy was not so much over the establishment of separate charges as with respect to increasing the port differentials. Moreover, it is not certain whether the same conclusions would have been reached after the decision in the Eastern Class Rate case. Everything considered, therefore, the Baltimore Port case should not be regarded as controlling with respect to the issues here upon a much more comprehensive record.

F. Summary and conclusions

F–1. GROUPING

Indefensible grouping: The present grouping of points surrounding New York Harbor must be condemned for the reasons indicated in sections B–20 to B–25, inclusive. As shown in section B–28, the groups are variable and inconsistent, New Jersey points being included where they have the advantage of location but often excluded where New York has the advantage. This is especially true with respect to the rates to and from New England which are dealt with in section B–24 and the rates via the coastwise lines which are dealt with in section B–25. There is thus no balancing of advantages and disadvantages in the group adjustment. See cases cited in section B–28.

The defense made but little attempt to justify the difference in grouping where New Jersey has the advantage of location and where New York has the advantage. The New York interveners offered no defense in that respect, and as shown in section D–23, the Port of New York Authority acknowledged that the grouping should be the same in all directions. The question therefore arises whether the discrimination which is practically admitted should be removed by separating the New Jersey points from the New York group as sought by New Jersey or by making the grouping the same in all directions as advocated by the port authority.

Group justification: More or less justification for the grouping of New Jersey points with New York is found in the defense's evidence regarding port unity considered in section D–1, railroad competition considered in section D–2, the New York State canals considered in section D–3, the situations at Hampton Roads, San Francisco, Chicago, and St. Louis dealt with in sections D–3 to D–10, inclusive, disruption of the rate structure considered in section D–16, and fourth-section complications considered in section D–17. The last two seem especially important. All of these and other matters urged by the defense together afford much justification for including New Jersey points in the New York group.

Previous cases: As shown in section D–14, the New York Harbor case affords strong support for grouping both sides of New York Harbor, although it is not controlling on the question of imposing a separate charge for lighterage because of differences in the issues, the evidence, and the law. The Hampton Roads cases referred to in section D–7, the San Francisco cases referred to in section D–8, and the St. Louis cases referred to in section D–10 also afford considerable support for grouping the rail and car-float or motor-truck terminals on both sides of the harbor, but none of these cases involved lighterage. The grouping of New Jersey points with New York was approved in the Eastern Class Rate case and the Iron and Steel case, although as shown in section A–2, such action was taken on meager records with respect to that question and without prejudice to our conclusions here.

Conclusions: The weight of the evidence and previous cases support a grouping of the rail and car-float or motor-truck terminals on both sides of New York Harbor, including all regular stations and team tracks on the New York side, provided the grouping is made no less favorable to New Jersey points where their traffic crosses the harbor for movement to or from New England and via the coastwise lines. In the case of the coastwise movement, it should be noted that the service from and to New Jersey points in all instances involves lighterage or its equivalent.

The Long Island Railroad is only about 100 miles long, and New Jersey offered very little evidence regarding the rates to and from points on that line. The class rates to and from points in northeastern New York were revised in the Eastern Class Rate case to the same basis as prescribed to and from the remainder of trunk-line territory. The record does not warrant any revision of the rates to and from points in northeastern New York and on the Long Island Railroad, except such as may result from the findings hereinafter proposed regarding lighterage and its substitutes.

F–2. LIGHTERAGE

Service distinguished: Lighterage is distinguishable from rail switching and car floatage to and from regular stations or team tracks, because lighterage is a service beyond railroad terminals analogous to store-door delivery, as shown in section B–12; it involves at least two handlings of carload freight by the railroad, as shown in section B–5; it is a much more expensive service, as shown in sections B–15, B–18, and D–20; it has superior advantages for shippers, as shown in sections B–11 and B–12; and it is subject to the steamship permit system and is largely for the benefit of the steamship companies, as shown in sections B–13 and B–19.

The relatively small amounts of trucking and car floatage in lieu of lighterage are also distinguishable from rail switching and the service to and from regular stations or team tracks for the same or other reasons indicated in sections B–6, B–11 to B–13, B–15, B–18, and D–20.

Discriminatory situation: As shown in sections B–8 to B–11, inclusive, the charging of higher rates for lighterage deliveries in a large part of the New Jersey section of the port than for similar deliveries within the lighterage limits is a clear discrimination. Practically no evidence was offered in defense of this situation and it is without justification in the record. As shown in section B–11, important witnesses for the defense admitted that it constitutes a handicap to that section of the port, including Port Newark. The Port of New York Authority also freely acknowledged the discrimination, as shown in section D–23.

Prejudice cases: That the above-mentioned situation requires a finding of undue prejudice and preference is clearly shown by the decision in Constructive and Off-Track Freight Stations, which is quoted in section B–12, and by other cases cited in the same section. It is also shown by the Port Newark Lumber Loading case referred to in section B–10, the Hampton Roads switching case referred to in section D–7, and the South San Francisco switching case referred to in section D–8. Many other cases could be cited in support of such a finding, but it is unnecessary to do so.

Method of removal: The next question to be determined is how the above-mentioned discrimination shall be removed. In that connection consideration should be given to the unusual character of the lighterage service with its double handling of carload freight by the railroads, as described in section B–5; its relatively high cost and the probability that it burdens other traffic, as shown in sections B–15, B–18, C–5, and C–8; its special value to shippers and steamship companies, as shown in sections B–11 to B–13, inclusive, and D–19; that it is a service not generally performed by the railroads and which the shippers or steamship companies must themselves provide at most other ports, as shown in section B–14; that the class rates and rates on iron and steel articles were not made with any reference to the unusual cost of the lighterage service, as shown in section B–29; that lighterage and its substitutes are more than the equivalent of ordinary team-track delivery such as is generally covered by the line-haul rates, as shown in section D–20; and that an additional charge for the service would afford the railroads a much-needed increase in their revenues, as shown in section D–18.

The foregoing considerations all point to the propriety of requiring that the discrimination be removed by the imposition of uniform charges for lighterage and its substitutes in addition to the line-haul rates. Such a charge would be well supported by the numerous cases cited in section B–32.

Other discrimination: The discrimination against New Jersey by reason of free lighterage is not confined to points on navigable waters outside the lighterage limits. While the expensive lighterage service is performed without additional charge to and from points beyond the carrier's rails, additional charges generally apply for switching to or from points not reached by the line-haul carrier in New Jersey. As shown in section B–29, all New Jersey rail points are deprived of their natural advantage of location by reason of the grouping with lighterage points. Even New Jersey rail points within the lighterage limits appear to have suffered in that respect. As shown in sections B–30 and B–31, shipping on the New Jersey side has been retarded and the direct interchange of freight betwen car and ship discouraged by free lighterage. A finding of undue prejudice and preference would be in accord with the Galveston-New Orleans case cited in section B–29.

The only practical method of removing all of the discrimination above referred to is by requiring that an additional charge be made for lighterage.

Boston complaint: As separate charges for lighterage are required in the New Jersey cases on traffic from and to points west of the Hudson River, the Boston complaint in that respect can be confined to New England traffic. There is even more reason for a lighterage charge on traffic from and to that territory, because the lighterage costs are generally a larger proportion of the rates, the absence of such a charge almost certainly burdens other traffic, and it is a clear discrimination against Boston, as shown in sections C–4, C–5, and C–8 to C–10, inclusive.

Upon the facts stated in the sections above referred to, there can be no doubt that on traffic from and to New England free lighterage at New York is unduly preferential of that port and unduly prejudicial to Boston.

Amount of charges: The separate charges herein proposed for lighterage and its substitutes take into consideration the difference between the average shore-to-shore costs for the lighterage service and for car floatage to and from pier stations or team tracks, as shown in section B–15; the difference between the average costs shown for the line haul and delivery to ship side at Boston and New York, respectively, as shown in sections C–6 and D–25; the difference between the average costs for transferring freight between car and ship at New York, on the one hand, and at Philadelphia, Baltimore, and Hampton Roads, on the other, as shown in section E–2; the fact that a substantial part of the lighterage tonnage is handled by outside lighterage companies at a cost to the trunk lines of 60 cents per ton, as shown in section B–16; and the advisability of keeping the charges to a minimum so as to avoid undue disturbance of the existing economic situation. Consideration has also been given to all the other facts referred to in this report.

In the case of bulk grain there are several reasons why the lighterage charge should be less than on other traffic. The rates on ex-lake grain, which constitutes the bulk of the grain tonnage, are relatively low; the transfer to and from lighters is less expensive to the railroads; and the lighters are probably loaded more heavily than the average on all traffic, which would make for lower costs. It is also noted that New Jersey suggests a charge for lightering bulk grain which is one-half of the charge suggested on other traffic.

It is impossible to fix the charges upon an exact mathematical basis; but, everything considered, it is believed that 3 cents per 100 pounds or 60 cents per ton on all carload traffic except bulk grain and 1.5 cents per 100 pounds or 30 cents per ton on bulk grain would be fair and reasonable minimum charges.

F–3. FINDINGS

No. 22824: In this case the commission should find as follows:

(1) That the grouping of New Jersey points with New York City, including all regular stations and team tracks, at the same rates on traffic from and to points west of the Hudson River is not unreasonable, unduly prejudicial, or otherwise unlawful, except as hereinafter found;

(2) That the performance at defendants' expense of lighterage, and car floatage or trucking in lieu thereof, to and from points other than regular stations or team tracks within the lighterage limits of New York Harbor, without charge in addition to the line-haul rates on traffic from and to points west of the Hudson River, while contemporaneously failing to perform or exacting additional charges for similar services on like traffic to and from New Jersey points on navigable waters outside such lighterage limits where the extra-towing charges apply, is and for the future will be unduly preferential of such points within the lighterage limits and unduly prejudicial to such New Jersey points;

(3) That the undue prejudice and preference found in the last preceding paragraph should be removed and prevented by the establishment and maintenance of separate charges for lighterage, and car floatage or trucking in lieu thereof, on the traffic described to and from points other than regular stations or team tracks within said lighterage limits and on such navigable waters in New Jersey where the extra-towing charges apply, which charges shall be uniformly 3 cents per 100 pounds or 60 cents per ton on all carload traffic except bulk grain and 1.5 cents per 100 pounds or 30 cents per ton on bulk grain in addition to the line-haul rates;

(4) That the rates assailed between points in the New York Harbor district and points west of the Hudson River are, and for the future will be, unduly prejudicial to New Jersey points in that district and unduly preferential of New York City to the extent that the rates for lighterage, and car floatage or trucking in lieu thereof, to and from points other than regular stations or team tracks, fail to exceed those for rail origin or delivery at such New Jersey points by the amounts specified in the last preceding paragraph; and

(5) That the commission has no jurisdiction to pass upon the alleged violation of the Constitution; and the other alleged violations of the interstate commerce act have not been sustained.

No. 23040: In this case the commission should find as follows:

(1) That the rates assailed between New Jersey points which take the New York rates to and from points more than 100 miles distant in trunk-line territory, on the one hand, and points in New England more than 100 miles from Harlem River on the New Haven or Spuyten Duyvil on the New York Central, on the other hand, are and for the future will be unduly prejudicial to such New Jersey points and unduly preferential of New York City to the extent that they exceed or may exceed the corresponding rates from and to regular stations in Manhattan and Brooklyn, plus the charges proposed in No. 22824 for lighterage and its substitutes wherever that service is performed to or from points other than regular stations or team tracks;

(2) That the rates assailed via the rail-water and rail-water-rail routes to and from points in the South and Southwest are, and for the future will be, unduly prejudicial to New Jersey rail points which take the New York rates on all-rail traffic to and from the same points, and unduly preferential of New York City to the extent that such New Jersey rates exceed or may exceed the corresponding New York dock rates, which are filed with and subject to the jurisdiction of this commission, by more than 3 cents per 100 pounds or 60 cents per ton; and

(3) That the other allegations of this complaint have not been sustained, except such as may be covered by the findings in No. 22824.

No. 23327: In this case the commission should find as follows:

(1) That the alleged undue prejudice to Boston and undue preference of New York with respect to traffic from and to points west of the Hudson River will be removed under the findings in No. 22824, making it unnecessary to pass upon that issue here;

(2) That on export, import, coastwise, and intercoastal traffic from and to points in New England, the performance at defendants' expense of lighterage, and car floatage or trucking in lieu thereof, to and from steamships or steamship piers at the port of New York, without charge in addition to the line-haul rates to and from regular stations in Manhattan and Brooklyn, while contemporaneously performing no lighterage and making additional charges for car floatage and for switching to and from steamships or steamship piers not reached by the line-haul carrier's rails at the port of Boston is, and for the future will be, unduly preferential of New York and unduly prejudicial to Boston;

(3) That the undue prejudice and preference found in the last preceding paragraph should be removed and prevented by the establishment and maintenance of separate charges on the traffic described for lighterage, and car floatage or trucking in lieu thereof, to and from steamships or steamship piers at the port of New York, as provided in section 6 of the act, which charges shall be the same as those hereinbefore proposed in No. 22824 and in addition to the line-haul rates to and from regular stations in Manhattan and Brooklyn;

(4) That the rates assailed on export, import, coastwise, and intercoastal traffic from and to points in New England are, and for the future will be, unduly prejudicial to Boston and unduly preferential of New York to the extent that the relationship of the rates as between those ports is more favorable to New York than under the basis prescribed in the Eastern Class Rate case on domestic traffic to and from Boston as compared with regular stations in Manhattan and Brooklyn, plus the charges hereinbefore proposed for lighterage and its substitutes wherever that service is performed to and from steamships or steamship piers at the port of New York;

(5) That the rates assailed from and to Boston as compared with Philadelphia, Baltimore, and Hampton Roads are not unreasonable or unduly prejudicial to Boston; and the failure to publish separate charges for lighterage at the other ports named is not unreasonable or unduly prejudicial to Boston; and

(6) That the commission has no jurisdiction to pass upon the alleged violation of the Constitution; and the other alleged violations of the interstate commerce act will either be removed under the previous findings or have not been sustained.

Nothing herein is to be construed as requiring increased rates over any route embracing a water line, which is not railroad controlled and subject to the provisions of section 5 (11) of the act. Previous decisions in other cases should be modified to the extent necessary to carry into effect the foregoing findings.

Appropriate orders should be entered.

APPENDIX A

Table of contents of proposed report omitted.

APPENDIX B

Allegations of complaint in No. 22824, as amended.

I

Authority for filing complaint.

II

(a) Status of defendants as common carriers.

(b) Defendants engaged in transportation of carload and less-than-carload freight in domestic and foreign commerce, including that handled through the port of New York, from and to the following points:

(1) From various points in New York City and within the free-lighterage limits of New York Harbor to various other points in the United States, Dominion of Canada, and Mexico.

(2) From various points in said three countries to various points in New York City and said free-lighterage limits.

(3) From various points in New Jersey to various points in said three countries, including New York City.

(4) From various points in said three countries, including New York City, to various points in New Jersey.

(c) That the averments herein apply to the New York Central Railroad Co. as lessee and operator of the West Shore Railroad; as operator of the lines east of the Hudson River between Albany and the Borough of Manhattan; and as operator of all other lines which it operated on the date of filing this complaint.

III

(a) That defendants have established and exact certain class and commodity rates for the transportation described in subparagraph (b) of Part II above.

IV

(a) Competition between various localities in New Jersey and New York City.

(b) That in the transportation described in Part II above, various localities in New Jersey have a natural advantage of location in comparison with New York City, which should be recognized in substantially lower rates to and from those localities than to and from New York.

V

This part of the complaint is set out in full below:

"(a) That, in connection with the transportation of property as described in Part II above, and the application and exaction of their established rates, each of the defendants (1) assumes and bears the cost and expense of lightering certain shipments of property and hauling certain shipments by means of car floats and motor trucks at the port of New York and at said city of New York and gives certain allowances out of said rates as compensation for said lighterage, car-float, and trucking services and various services incidental thereto; (2) refrains from assuming and bearing the cost and expense of car floating, lightering, and trucking other shipments transported at said rates to and/or from various points in the State of New Jersey and refuses to perform lighterage, car floatage, or trucking services and to assume or bear such cost and expense in connection with the transportation of the shipments last mentioned; and (3) thereby gives undue and unreasonable preference and advantage to said city of New York, to various shippers who obtain transportation of property by the defendants to and from said city of New York and to that freight traffic and subjects the State of New Jersey, various localities in New Jersey, various shippers who obtain transportation of property to and from points in New Jersey and their freight traffic to undue and unreasonable prejudice and disadvantage, in violation of section 3 of said act.

"(b) That by assuming and bearing the cost and expense of car floatage, lightering, loading, unloading, and transferring certain shipments of property and by giving allowances as compensation for car floatage, lightering, and transferring shipments at said New York Harbor, and by giving allowances, out of said rates, as compensation for trucking certain shipments of property by means of motor trucks on the public streets and highways to and/or from so-called inland stations, universal stations, off-track stations, constructive stations, and private premises of shippers and so-called trucking in lieu of lighterage and by giving various other allowances, at said city of New York, said defendants charge, demand, and receive a less compensation from various persons for certain interstate transportation of property to and/or from said city of New York rendered by said defendants than they charge, demand, and receive from other persons for doing for them a like and contemporaneous service in the interstate transportation of a like kind of freight traffic to and/or from points in New Jersey under substantially similar circumstances and conditions, in violation of section 2 of said act.

"(c) That through giving allowances, as described in subparagraph (b) next preceding, each of said defendants reduces its compensation for longer-haul transportation of property to and/or from said city of New York, below the amount of compensation which it exacts for shorter-haul transportation of similar property to and/or from various points in New Jersey, and thereby violates section 4 of said act.

"(d) That certain of said rates described in Part III above are applicable to transportation of freight westward from New York Harbor to various points in New Jersey located east of the Delaware River and to various points in the United States located west of said river, and to transportation of property eastward from those points to New York Harbor; that said rates applicable for that transportation to or from points east of said river include a factor of 4 cents per hundred pounds, and other amounts per hundred pounds, as compensation for said car floatage and lighterage service; that said rates applicable for said transportation of property to or from the points west of said river do not include similar separate factors of compensation for said car-floatage and lighterage service, and therefore through exaction of said rates the defendants give undue and unreasonable preference to said city of New York and various localities located west of said river and to various shippers in said city and said localities and to their freight traffic and subject the State of New Jersey, various localities in New Jersey, various shippers in New Jersey and their freight traffic to undue and unreasonable prejudice, in violation of section 3 of said act.

"(e) That said rates, described in Part III above, include, (1) rates that apply to all-rail transportation of property to and/or from said New York City; (2) rates that apply to all-rail transportation of property to and/or from said points in New Jersey; and (3) rates that apply to transportation of property to and/or from said New York City and points within the free-lighterage limits of New York Harbor, by railroad in conjunction with car float, lighterage, and/or trucking service; that said rates are unjust and unreasonable, in violation of section 1 of said act, and by establishment and exaction of said rates said defendants subject the complainants, various shippers, and rate payers located at points in New Jersey and their freight traffic to undue and unreasonable prejudice and disadvantage and unduly prefer and advantage said New York City, various shippers and rate payers located at said New York City, and at points within said free-lighterage limits and their freight traffic, in violation of section 3 of said act.

"(f) That said defendants have not stated 'separately' in their published and filed tariffs and schedules their charges for said lighterage service and trucking service and said defendants have thereby disregarded and violated the provisions of section 6 (1) of said act.

"(g) That the said defendants, by means of the unreasonable rates, preferences, and prejudices, and the unjust discrimination described in Part V hereof, unjustly deprive localities in New Jersey of their natural advantages in geographical location and unjustly retard the growth and development of industry and commerce therein, and unjustly retard the development of water-front and other property therein available for development and deprive said localities of the benefit of taxes attendant upon such development, and unjustly stimulate and develop industry, commerce, and property values in competing territory in the city and State of New York, and thereby unjustly prevent the natural development of population, business opportunities, and property values in said localities, and unjustly and unlawfully create a preference of the ports of the State of New York over the ports of the State of New Jersey in violation of Article I, section 9, clause 9 of the Constitution of the United States.

"(h) That certain of said rates, described in Part III above, apply to railroad, car-float, lighterage, and/or motor-truck transportation service between various points and New York City and certain of those rates apply to railroad transportation service but not to car-float, lighterage, or motor-truck service between those points and various points in New Jersey, and each of those two classes of rates are of the same level or measure, and, further, the defendants have not established lower rates for application to the service last mentioned, and by their refusal to establish and apply such lower rates and by exaction of the higher rates for the transportation service last mentioned the defendants give undue and unreasonable advantage to said city of New York and the traffic mentioned first and subject the State of New Jersey and the last-mentioned traffic to undue and unreasonable prejudice and disadvantage in violation of section 3 of said act.

"(i) That said defendants, through affording 'free lighterage service' at New York Harbor, which is an unlawful practice, violate sections 2 and 3 of said act."

VI

Prayer for an order requiring defendants to cease and desist from the alleged violations of the act, to establish in lieu thereof just and reasonable rates to and from said points in New Jersey and New York City, and to publish separate charges for lighterage, car-float, and motor-truck services at New York Harbor.

MOTIONS TO DISMISS

The New York Central lines in answering the original complaint in No. 22824, also that in No. 23040 and in No. 23327, moved to dismiss each complaint as to them on the ground that it failed to state the issues with the particularity required by the commission's Rules of Practice. They also moved to dismiss the issues raised by paragraph (g) of Part V in No. 22824 and a similar paragraph in No. 23327 on the ground that such issues are beyond the commission's jurisdiction. These motions were general in character, not joined in by any of the other defendants, and did not appear to warrant dismissal as to these lines. Accordingly they were denied by the commission without prejudice to consideration of the jurisdictional question in the final decision. The motions did not apply to the amended complaint in No. 22824.

DISCUSSION OF ISSUES

At the opening of the hearings counsel for New Jersey was interrogated by defense counsel in regard to the complaints. It was then stated that where reference is made in No. 22824 to "various" points or localities in New Jersey all points in the State are included, except the allegations regarding denial of free lighterage and car floatage, which include all points on navigable waters outside the lighterage limits. In reply to an inquiry regarding paragraph (a) of Part V, it was stated that complainant's position would be that if free lighterage, car floatage, and trucking are to be continued on the east side of New York Harbor such services must be afforded on the west side of the harbor. The word "allowances" used in paragraphs (a), (b), and (c) of Part V was said to include allowances both to shippers and others, such as outside lighterage companies, truck operators, and the contract terminals. It was stated that the allegation of unreasonableness in paragraph (e) of Part V includes the rates to and from New York and that this was intended as an appeal to the minimum-rate power if the facts should warrant its exercise. It was agreed that the transcontinental rates might be excluded from the complaint in No. 23040, but they are included under the complaint in No. 22824. All questions propounded to counsel for complainants regarding the allegations of the complaints were fully answered at this time.

During the hearings statements were made to the effect that defense counsel did not understand the issues. When the examiner asked what was not understood, counsel for the trunk-line defendants did not refer to any particular part of the complaints, but to complainants' Exhibit No. 1. This is a volume of 240 pages, divided into 76 parts, and containing thousands of rates assailed and shown for comparison. It was claimed that defense counsel could not tell which rates are assailed and which shown merely for comparison. Counsel for New Jersey pointed out which of the 76 parts contain only rates assailed, which contain only rates not assailed, and which contain both rates assailed and not assailed. Examination of the exhibit discloses no reason why anyone familiar with the complaints could not readily distinguish the rates assailed from those not assailed. This exhibit was not offered for the purpose of pointing out any infirmities in particular rates, but merely to present a comprehensive showing of the rate structure under consideration.

Upon brief counsel for New Jersey states that the complaint in No. 22824 does not include the rates to and from New England nor those via the coastwise steamship lines. These rates are not

expressly excepted from the complaint, but the New England carriers and the coastwise lines are not named as defendants, so such rates may be deemed excluded from this complaint.

Upon brief counsel for the trunk-line defendants states that "the complaints in this case are rather vague as to whether the all-rail rates of the New York Central to Manhattan are attacked," but they are treated as in issue because evidence was received directed against such rates. Paragraph (c) of Part II in No. 22824 alleges that the averments of the complaint apply to the New York Central as operator of its lines east of the Hudson River between Albany and Manhattan as well as its other lines; and paragraph (e) of Part V, hereinbefore quoted, specifically assails the all-rail rates to and from New York City as unreasonable and unduly prejudicial and preferential in comparison with those to and from New Jersey points. The complaints in the other two cases do not specifically refer to the all-rail rates to and from New York, but they do bring in issue the freight rates to and from that point generally without excepting the all-rail rates. The evidence of the defense in the three cases applied to the all-rail rates as well as other rates to and from New York, and the record does not indicate that there was any misunderstanding in this respect. Defendants' briefs do not express any other doubt or criticism concerning either of the complaints in these cases.

Defendants were not required to present their evidence until more than six months after the close of the evidence for the New Jersey complainants and about 90 days after that of the Boston complainants. All parties were permitted to file reply briefs 30 days after the opening briefs in these cases. The defense, therefore, was accorded a better opportunity of meeting the complainants' evidence and arguments than is usual in most cases.

APPENDIX C

EXAMINER'S RULINGS ON EVIDENCE

Commission practice: The procedure in cases before the commission follows that of the Federal courts, but the technical rules of evidence are not enforced as strictly as in court. The propriety of this greater liberality in the application of the rules of evidence has been repeatedly recognized by the Supreme Court. In Interstate Commerce Commission *v.* Baird (194 U. S. 25), the court said at page 44:

"The inquiry of a board of the character of the Interstate Commerce Commission should not be too narrowly constrained by technical rules as to the admissibility of proof. Its function is largely one of investigation and it should not be hampered in making inquiry pertaining to interstate commerce by those narrow rules which prevail in trials at common law where a strict correspondence is required between allegation and proof."

In Interstate Commerce Commission *v.* Louisville & N. R. Co. (227 U. S. 88), the court said at page 93:

"The commission is an administrative body and, even where it acts in a quasi-judicial capacity, is not limited by the strict rules, as to the admissibility of evidence, which prevail in suits between private parties. (Int. Comm. Com. *v.* Baird 194 U. S. 25.)"

In United States *v.* Abilene & S. Ry. Co. (265 U. S. 274), the court said at page 288:

"The mere admission by an administrative tribunal of matter which under the rules of evidence applicable to judicial proceedings would be deemed incompetent does not invalidate its order. Interstate Commerce Commission *v.* Berro, 194 U. S. 25, 44; Spiller *v.* Atchison, Topeka & Santa Fe Ry. Co., 253 U. S. 117, 131. (Compare Bilokumsky *v.* Tod, 263 U. S. 149, 157.)"

And in Western Paper Makers' Chemical Co. *v.* United States, 271 U. S. 268, the court said at page 271:

"* * * In making its determinations the commission is not hampered by mechanical rules governing the weight or effect of evidence. The mere admission of matter which under the rules of evidence applicable to judicial proceedings would be deemed incompetent does not invalidate its order. (United States *v.* Abilene & Southern Ry., 265 U. S. 274, 288.)"

It is well settled, however, that only matters which have been introduced in evidence may be considered, and that rule has been followed in these cases.

Witnesses' qualifications: Numerous objections were made to the qualifications of witnesses, especially those who gave opinion evidence. For example, it was urged that witnesses should not be permitted to testify regarding the economic effect of a rate adjustment on the community. Generally, such witnesses had some special means of knowledge with regard to the subject matter because of their occupation or investigations. Such evidence offered by both sides was received with the understanding that it would be given only such weight as it seemed entitled to in the light of the objections and all other facts of record. It is believed that this was proper, although such evidence has not been given as much weight as other facts of record. In some instances it has been entirely disregarded, as where a nonexpert witness quoted from a civil engineer as expressing his own views at pages 1933–1936 of the record. In Wigmore on Evidence (2d ed.) it is stated in section 560:

"Secondly, and emphatically, the trial court must be left to determine, absolutely and without review, the fact of possession of the required qualification by a particular witness. In most jurisdictions it is repeatedly declared that the decision upon the experimental qualifications of witnesses should be left to the determination of the trial court."

Hearsay: Evidence not within the personal knowledge of the witness was excluded when objected to as hearsay. A review of the record discloses exceptions at pages 718 and 859, which evidence may be deemed excluded. Letters contained in New Jersey's Exhibits Nos. 39 and 40 and Boston's Exhibit No. 473 have also been disregarded and may be deemed excluded.

Admissions: Certain evidence offered as admissions or declarations against interest was received under the exception to the hearsay rule permitting such evidence. In some instances, however, a review of the record discloses that the declaration was not against the declarant's interest when made, and such evidence has been disregarded. Thus the extracts from the Boston & Maine's off-line agency reports offered at pages 3502–3503 and the extracts from briefs in docket No. 13010 offered at pages 3762–3766 may be deemed excluded. Declarations against interest by a single defendant have been considered as binding on only that defendant, as in the case of information furnished by the New Haven which is referred to at pages 3620–3621 of the record.

Counsel for the Brooklyn Eastern District Terminal strenuously objected to receipt of the Stuart marine cost study. It was argued that while this evidence might be binding on the trunk-line defendants which participated in the study, it was not binding on the contract terminals which took no part in it. This question need not be decided, since the evidence was clearly admissible against the trunk lines, and the findings and order herein will be directed against those defendants. Moreover, Mr. Stuart who supervised the investigation, appeared as a witness and was cross-examined, which took it out of the hearsay rule. The report of the investigation also appears to have been a public document of the Port of New York Authority.

Public documents: A well-established exception to the hearsay rule permits the receipt in evidence of matter contained in public documents, without the necessity of calling the authors of such documents. Under this exception, there was received in evidence extracts from the Port Series, issued jointly by the War Department and Shipping Board. Although the defense strenuously objected to such extracts, they also offered evidence derived from the same and similar sources. Extracts from the Port Series were not only received in evidence but quoted in the report in the Boston Maritime case (95 I. C. C. 539, at p. 547).

Lorenz formula: The Boston complainants offered in evidence computations based on the so-called Lorenz formula for the purpose of proving that operating costs are no higher in New England than in the remainder of official territory. This evidence was excluded upon objection that Doctor Lorenz was not present so that he could be cross-examined upon the formula. The commission is asked upon brief to review this ruling. It was in accord with the commission's action upon an appeal from the examiner's ruling in another case. Even if error was committed in excluding this evidence, however, it was without prejudice in view of all the facts stated and conclusions recommended in this report.

Relevancy: While numerous objections were made to evidence as irrelevant, not much evidence was offered by either side which could be regarded as wholly irrelevant. Where any irrelevant evidence crept in it has simply been disregarded in the preparation of the report. Every effort was made to keep down the size of the record, without curtailing the rights of the parties.

Divisions: Both sides offered evidence regarding the divisions received by different carriers. While the carriers' divisions are sometimes said to be a matter of no interest to shippers, they seem to be relevant in these cases, because the absence of a charge for lighterage is claimed to burden other traffic, and the divisions throw light on that question. The objections were based only on relevancy.

APPENDIX D

Combined costs for lighterage

	Shore to shore	Labor between car and lighter	Labor at steamships	Total
Baltimore & Ohio R. R. Co.:				
Eastbound freight—				
Hoisted by crane	$1.53	$0.15	$0.287	$1.967
Handled by man power and trucks	1.53	.51	.287	2.327
Westbound freight—				
Hoisted by crane	1.53	.15	.433	2.113
Handled by man power and trucks	1.53	.51	.433	2.473
Central R. R. Co. of New Jersey:				
Eastbound freight—				
Hoisted by crane	1.22	.135	.298	1.653
Handled by man power and trucks	1.22	.36	.298	1.878
Westbound freight—				
Hoisted by crane	1.22	.135	.376	1.731
Handled by man power and trucks	1.22	.36	.376	1.956
Delaware, Lackawanna & Western R. R. Co.:				
Eastbound freight—				
Handled at covered piers	1.14	.359	.2975	1.7965
Handled at open piers	1.14	.386	.2975	1.8235
Westbound freight—				
Handled at covered piers	1.14	.359	.425	1.924
Handled at open piers	1.14	.386	.425	1.951

Combined costs for lighterage—Continued

	Shore to shore	Labor between car and lighter	Labor at steamships	Total
Erie R. R. Co.:				
Eastbound freight—				
Hoisted by crane	$1.56	$0.135	$0.302	$1.997
Handled by man power and trucks	1.56	.36	.302	2.222
Westbound freight—				
Hoisted by crane	1.56	.135	.433	2.128
Handled by man power and trucks	1.56	.36	.433	2.353
Lehigh Valley R. R. Co.:				
Handled at Communipaw—				
Eastbound, all freight	1.37	.36	.302	2.032
Westbound, all freight	1.37	.36	.433	2.163
Handled at National Docks:				
Eastbound, box-car freight	1.37	.465	.302	2.137
Westbound, box-car freight	1.37	.465	.433	2.268
Eastbound, open-car freight	1.37	.16	.302	1.832
Westbound, open-car freight	1.37	.16	.433	1.963
Handled at Claremont Terminal—				
Eastbound, box-car freight	1.37	.365	.302	2.037
Westbound, box-car freight	1.37	.365	.433	2.168
Eastbound, open-car freight by hoisters	1.37	.16	.302	1.832
Eastbound, open-car freight by gantry cranes	1.37	.135	.302	1.807
Westbound, open-car freight by hoisters	1.37	.16	.433	1.963
Westbound, open-car freight by gantry cranes	1.37	.135	.433	1.938
New York Central R. R. Co.:				
Eastbound freight—				
Hoisted by cranes	1.55	.135	.302	1.987
Handled by man power and trucks	1.55	.36	.302	2.212
Westbound freight—				
Hoisted by cranes	1.55	.135	.433	2.118
Handled by man power and trucks	1.55	.36	.433	2.343
Pennsylvania R. R. Co.:				
Handled at Manhattan closed piers—				
Eastbound miscellaneous freight	1.64	.4445	.302	2.3865
Westbound miscellaneous freight	1.64	.4445	.433	2.5175
Handled at Greenville closed piers—				
Eastbound miscellaneous freight	1.64	.4445	.302	2.3865
Westbound miscellaneous freight	1.64	.4445	.433	2.5175
Handled at Greenville open docks—				
Eastbound freight	1.64	.2380	.302	2.180
Westbound freight	1.64	.2380	.433	2.311
Composite:				
Eastbound freight—				
Hoisted by crane	1.44	.135	.287	1.862
Handled by man power and trucks	1.44	.36	.287	2.087
Westbound freight—				
Hoisted by crane	1.44	.135	.425	2.000
Handled by man power and trucks	1.44	.36	.425	2.225

CURRENCY REFLATION

Mr. BORAH. Mr. President, I desire to place in the RECORD certain printed material bearing upon the question of reflation. I do not wish to retard the consideration of this bill, therefore I shall not at this time stop to comment. I hope to do so later.

In the Washington Post of this morning I find the following statement:

By Lawrence Sullivan

Describing depreciated currencies and arbitrary control of foreign exchanges as the principal obstacles to the recovery of American farm prices, the United States Department of Agriculture forecasts another year of depressed commodity values and burdensome surpluses during the crop year 1933–34. The official annual "outlook report," compiled by the department in cooperation with extension economists representing 32 States, emphasizes the prevailing "disorganized currency systems" throughout the world as a factor bearing more heavily, perhaps, upon the American farmer than upon any other economic group.

"There is little prospect at present," it concludes, "for an early improvement in the foreign demand for our agricultural products" until the restoration of normal exchange machinery paves the way for an appreciable revival of international trade.

CALLED RECOVERY AID

"Effective international action this year directed toward facilitating international payments, the stabilization of currencies, and the moderation of trade barriers would give a strong impetus toward economic recovery throughout the world," the report adds. But until effective action in this direction is realized, prevailing extraordinary surpluses of wheat and cotton will continue to bear down American farm prices to distress levels.

I also offer certain statements by Mr. Farrell, until recently president of the United States Steel Corporation, appearing in this morning's Herald. I agree with his statement of facts. I do not agree with his remedy.

"It is the most important thing before Congress.

"Not only our business in the United States, but our business throughout the world, is seriously affected by the chaotic state in which many world currencies flounder to-day, and so long as they do flounder it is the course of wisdom for our country to take such cautionary measures as this type of legislation proposes.

"These countries are having the time of their lives in flooding this country with goods on a depreciated-currency basis.

"The whole business structure is inoculated in such a way as to be completely demoralized.

"I believe we are going to evaporate in some lines (of business) unless we act against depreciated currencies.

"Nothing," said he, "is quite so destructive to sound efforts as the presence in our American market of foreign competitive merchandise priced at levels so low that American competition is not possible unless we bring down our whole economic structure to the low strata of some of our chief competitors."

On January 27, at the annual meeting of the Midland Bank of London, Reginald McKenna, former Chancellor of the Exchequer, had this to say, as it appears in the New York Times:

"We have had now," he continued, "the experience of sterling divorced from gold for 16 months, and nothing catastrophic has happened. The clear evidence of improvement in a number of countries off the gold standard has no counterpart in those still on gold, whose position, generally speaking, has become worse."

DEMANDS PRICE RISE FIRST

He said that raising the price level in Great Britain, regardless of what happens elsewhere, was of first importance.

"But is it possible to raise our internal price level?" he went on. "Particularly, can we do so by monetary management? If we can and do, will it not be evidence of that abhorrent thing, inflation? In actual circumstances we have so much ground to recover that I confess the thought of inflation, so long as it is controlled, does not alarm me. In these days the word no longer is a term of reproach, though some tender consciences find ease in using the innocent substitute, reflation.

"It is, I believe, possible to achieve a rise in the internal price level by monetary management, and I have not been shaken in this opinion by the frequent charge that reflation has already been tried and found wanting, both in Great Britain and the United States. If we examine the course of affairs in these two countries, we shall find that deliberate monetary management, specifically designed to raise the price level, has not been tested in either.

"In our own country, it is true, expansion of credit has been effected, but only under conditions which could give it but partial success in raising the price level. And partially successful it has been, for our price level has not been accompanied by a downward movement in gold prices. In the United States, notwithstanding the current talk of vast new credit having been pumped effectively into the banking system, the experiment has not been tried at all. Reflation means the expansion of bank deposits, and therefore of potential purchasing power, to such an extent as will restore the price level to the point at which it stood before the present great slump began."

The MacMillan committee was composed of a group of men recognized for their ability the world over in economic and financial affairs. I quote a single paragraph from their report:

We are emphatically of the opinion that, even if a further fall of wholesale prices be avoided, their stabilization at approximately the present level would be a serious disaster for all countries of the world alike, and that the avoidance of such an event should be a prime object of international statesmanship. * * * Consequently, even the continuance of the present price level * * * must prolong business losses and * * * unemployment. * * * Governments and central banks will be blamed * * * social unrest will tend to make moderate and rational remedies more difficult the longer they are delayed. * * * Our objective should be, in so far as it lies within the power of this country to influence the international price level, first of all to raise prices a long way above the present level, and then to maintain them at the level thus reached with as much stability as can be managed. We recommend that this objective be accepted as the guiding aim of the monetary policy of this country.

Prof. Robert W. Thompson, of the Columbia School of Political Science, in a pamphlet which has come to my desk, makes the following statement, among others:

We are face to face with a grave situation at the moment and currency reform has become imperative. The crushing weight of the depression has fallen upon debtors and producers without working capital and they should not be left to the tender mercy of the relentless creditor and the sheriff. If, during an era of expansion and excessive credit, debts were contracted which can not be liquidated, distress sales of commodities and foreclosure of real estate bring despair to the man who can not quickly mobilize his assets to meet the demands of his banker.

Manipulations of greedy bankers and money lenders and the reluctance of capitalists and conservative statesmen to depart from past practice, and the letter of the law which has brought on in large measure such deplorable conditions may well urge us on to the verge of desperation. No matter that live credits are being translated into bad debts, defaulted mortgages and uncol-

lected judgments, the banker who cashed in on an inflated market, will not hear to a devaluation of the dollar, he wants to increase its potency and purchasing power.

ANNA POKORNY

The PRESIDING OFFICER (Mr. BRATTON in the chair) laid before the Senate the amendments of the House of Representatives to the bill (S. 3147) for the relief of Anna Pokorny, which were, on page 1, line 6, after "of," to strike out all down to and including "months," in line 7, and insert "$5,000," and on page 1, line 11, after "Jersey," to insert ": *Provided*, That no part of the amount appropriated in this act in excess of 10 per cent thereof shall be paid or delivered to or received by any agent or agents, attorney or attorneys, on account of services rendered in connection with said claim. It shall be unlawful for any agent or agents, attorney or attorneys, to exact, collect, withhold, or receive any sum of the amount appropriated in this act in excess of 10 per cent thereof on account of services rendered in connection with said claim, any contract to the contrary notwithstanding. Any person violating the provisions of this act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

Mr. WAGNER. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS AND JOINT RESOLUTION

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries, who also announced that the President had approved and signed the following acts and joint resolution:

On January 24, 1933:

S. 5059. An act to extend the time for completing the construction of a bridge across Lake Champlain, at or near Rouses Point, N. Y., and a point at or near Alburgh, Vt.;

S. 5260. An act granting the consent of Congress to the Board of Supervisors of Marion County, Miss., to construct, maintain, and operate a free highway bridge across Pearl River at or near Columbia, Miss.; and

S. 5261. An act granting the consent of Congress to the Board of Supervisors of Monroe County, Miss., to construct, maintain, and operate a free highway bridge across Tombigbee River at or near Old Cotton Gin Port, Miss.

On January 26, 1933:

S. 3675. An act relating to the deferment and adjustment of construction charges for the years 1931 and 1932 on Indian irrigation projects; and

S. 4597. An act to restore to their former retired status in the Regular Army of the United States persons who resigned such status to accept the benefits of the act of May 24, 1928 (45 Stat. 735), and for other purposes.

On January 27, 1933:

S. 5131. An act to extend the times for commencing and completing the construction of a bridge across the Ohio River at or near Cannelton, Ind.; and

S. 5232. An act to extend the time for completing the construction of a bridge across the Missouri River at or near St. Charles, Mo.

On January 30, 1933:

S. J. Res. 240. Joint resolution to provide for the quartering, in certain public buildings in the District of Columbia, of troops participating in the inaugural ceremonies.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Haltigan, one of its clerks, announced that the House had passed, without amendment, the bill (S. 5484) to extend the time during which certain provisions of the act of February 27, 1932, relating to improving the facilities of the Federal reserve system to meet the needs of member banks in exceptional circumstances, shall be effective.

DISTRIBUTION OF GOVERNMENT-OWNED COTTON

Mr. WALSH of Massachusetts. Mr. President, if I may have the attention of the senior Senator from Connecticut [Mr. BINGHAM] while the clerk reads the telegram which I send to the desk, I will then ask the Senator a question in regard to the matter presented for consideration in this telegram.

The PRESIDING OFFICER. The clerk will read.

The legislative clerk read as follows:

BOSTON, MASS., *January 30, 1933.*

Hon. DAVID I. WALSH,
United States Senate:

Can not something be done to effect immediate passage of bill appropriating stabilization corporation's cotton holdings to use of Red Cross. Apparently everyone agrees this legislation should be passed and the only question is when this will occur. This matter has now dragged on about eight weeks. In the meantime employment at mills that might fill resulting orders from Red Cross is adversely affected and the needy to whom the articles might be distributed are suffering. Can not measure be taken to end this seemingly absolutely unnecessary situation.

WHITTENTON MANUFACTURING CO.

Mr. WALSH of Massachusetts. Mr. President, several similar telegrams and letters have reached me within the past week. I inquire of the Senator from Connecticut, who has been interested in getting action upon the bill referred to in the telegram, when we can expect to get action on this measure? Must we wait until the winter is over and this particular kind of relief is unnecessary?

Mr. BINGHAM. Mr. President, the Senator knows that I have repeatedly tried to call the matter up. The junior Senator from Utah [Mr. KING] has agreed from day to day that his motion to reconsider the vote whereby we adopted the conference report on the bill to give cotton to the Red Cross should be taken up. I see that the Senator from Utah is on the floor and that the Senator from Tennessee [Mr. MCKELLAR] is also on the floor. The Senator from Tennessee was interested in an amendment which was not retained in the bill by the conferees.

I hope very much that the Senator from Massachusetts will urge upon his colleagues on the other side of the aisle that we may get action on the conference report. As it is a privileged matter, and would not displace the appropriation bill, I wish that the Senator from Utah would move now to take up his motion for reconsideration, which, being privileged, would not displace anything, and let us get it out of the way.

I agree entirely with the Senator from Massachusetts that this is a matter of necessity; that the granting of this cotton would bring relief during the remaining days of the winter to a very great number of families, and would also give employment to those who are engaged in the making of bedding and in the making of the clothing contemplated. I hope very much that that might be done.

Mr. MCKELLAR obtained the floor.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Massachusetts?

Mr. MCKELLAR. I yield.

Mr. WALSH of Massachusetts. Mr. President, I ask unanimous consent——

Mr. MCKELLAR. Mr. President, before that is done, I will ask the Senator to let me make a statement.

Mr. WALSH of Massachusetts. I ask unanimous consent that at 4 o'clock we lay aside the pending measure——

The PRESIDING OFFICER. The Senator from Tennessee has the floor. Does he yield?

Mr. MCKELLAR. Mr. President, I prefer that the Senator postpone his request just a moment, in view of what I am going to say to the Senator from Connecticut.

The Senate passed the Red Cross cotton bill, and put into it a provision that the Farm Board should not profit by the gift of cotton for charitable purposes. I thought that was a wise provision, the Senate thought so, and we put it in the bill.

Mr. BINGHAM. I offered no objection to it.

Mr. MCKELLAR. The conferees struck it out; and, under the conference report, in addition to appropriating money for the redemption of the cotton and turning the cotton over to the Red Cross, as should be done, and should be

done speedily, it would also be provided that a certain portion of the money would go to the Farm Board.

There is probably a majority of the Members of the Senate who are opposed to appropriating any more money for the Farm Board. I am one of those Senators myself. I do not think it ought to be done; and before the Senator asks unanimous consent to take up this matter for reconsideration, I am going to prefer a unanimous-consent request myself. My request is this, that the bill be sent back to conference and the Senate conferees be instructed by the Senate to insist upon the Senate amendment cutting out any sum to the Farm Board.

Every one of us on this side realizes, I think, that this bill should be passed speedily. I myself would like to see it passed instantly. But I do not like to be bludgeoned into making an appropriation for the Farm Board in the name of charity, which, in my judgment, would do no good to the country. That is the whole question. I ask unanimous consent that the bill be sent back to conference with instructions, and I believe much time will be saved.

Mr. BINGHAM. Mr. President, I hope the Senator will permit us to vote on this question. If the Senate chooses to vote in the way the Senator has suggested, I have no objection. I do not want to take any time on it.

Mr. McKELLAR. I thought the Senator was very much in favor of getting this bill passed.

Mr. BINGHAM. I am.

Mr. McKELLAR. If the Senator is, he will accept my proposal. If he is not, he will fight for the appropriation which would go to the Farm Board. I, for one, am opposed to any further appropriations to the Farm Board, and I believe a great majority of the Senate is opposed to it. That is the only question in this case.

Mr. McNARY. Mr. President, will the Senator yield?

Mr. McKELLAR. In just a moment. This is an indirect method of bludgeoning the Senate into voting an additional appropriation to the Farm Board, which does not need and should not have any additional appropriation.

I yield to the Senator from Oregon.

Mr. McNARY. Mr. President, I do not know what attitude the senior Senator from Connecticut [Mr. BINGHAM] may take, but for myself I object to the proposed unanimous-consent agreement. I do that, not because of any particular views I may have, but, in the absence of the senior Senator from South Carolina [Mr. SMITH], who had this matter in charge, and who is home to-day detained by illness, I would not feel that I should consent to a unanimous-consent agreement in his absence.

Mr. McKELLAR. Mr. President, I can understand the Senator's position exactly, and I do not disapprove of it in the slightest. I just wanted to show the good faith of those of us who have felt that this indirect appropriation ought not to be made for the Farm Board in any such way as that proposed. If we want to appropriate money for the Farm Board, let us appropriate it directly, and not indirectly, under the name of charity.

Mr. KING obtained the floor.

Mr. BINGHAM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Connecticut?

Mr. KING. I yield.

Mr. BINGHAM. The Senator from Tennessee has stated that a majority of the Senate agree with him. Why will he not let us vote on the matter, and get it out of the way without any further debate? The Senator accuses me of holding this matter up. I have done nothing but try to get action. I have taken no time on the matter at all. It has been postponed from day to day and from week to week, and all I am asking is that the Senate vote on it and let us see whether the Senate wants to accept the conference report or defeat it. If it is defeated, the matter will go back to conference.

Mr. McKELLAR. Mr. President, if the Senator had not been insistent upon the position——

The PRESIDING OFFICER. The Senator from Utah has the floor. Does he yield?

Mr. KING. I yield.

Mr. McKELLAR. If the Senator and those associated with him had not been insisting that, in violation of the expressed will and vote of the Senate, we must indirectly under the name of charity appropriate for the Farm Board, this matter would have been settled two weeks ago; and it ought to have been settled two weeks ago, and an agreement by the conferees of the kind that was made, in my judgment, was not justified.

Mr. KING. Mr. President, I would like to say to my friend from Massachusetts that the controversy which has delayed the passage of the measure grows out of this fact: The bill as it came from the House called for an appropriation direct out of the Treasury of the United States to pay liens and charges against the cotton amounting to about $10,000,000 or $12,000,000. There was no appropriation to the Farm Board to help liquidate the indebtedness which it had incurred. We have already appropriated $500,000,000 for the Farm Board. The bill, as it came from the House, provided an additional appropriation of approximately $10,000,000 or $12,000,000. The Farm Board let the stabilization corporation have money for the purpose of purchasing the cotton, taking, of course, the obligations of the stabilization corporation.

The stabilization corporation, after the purchase of the cotton, borrowed money upon the cotton which comprehends probably 80 to 90 per cent of the present market value of the cotton. So the Farm Board has an equity, after all these liens are discharged, of from 10 to 20 per cent. The Farm Board and the friends of the Farm Board are very anxious to get another appropriation out of the Treasury to relieve it of paying the charges and liens against the cotton. I was unwilling and the Senate was unwilling to make another appropriation to the Farm Board. We were perfectly willing—I speak for myself and the Senator from Tennessee——

Mr. WALSH of Massachusetts. And I am with the Senator on that matter.

Mr. KING. We were willing that the cotton should be used for the purpose indicated, but we insisted that the Farm Board should itself pay the charges and not tax the taxpayers of the United States an additional $10,000,000 or $12,000,000. When that matter was brought to the attention of the Senate, the Senate accepted an amendment offered by the Senator from Tennessee, with a slight modification which I had the honor of submitting, and it was unanimously adopted. The able Senator from Connecticut [Mr. BINGHAM] accepted the amendment. It went to conference and the conferees—and I make no criticism at all—reported back promptly disagreeing to the Senate amendment. I do not believe the Senate conferees quite comprehended the significance of the action of the Senate or the amendment which had been incorporated in the bill by the vote of the Senate.

Mr. WALSH of Massachusetts. Mr. President, will the Senator yield?

Mr. KING. Certainly.

Mr. WALSH of Massachusetts. The Senator has made a very fair statement of his position. Will not the Senator agree that at 4 o'clock we shall lay aside the appropriation bill temporarily and take up this matter and have a roll call upon his motion and dispose of it one way or the other?

Mr. KING. I have no objection.

Mr. WALSH of Massachusetts. Let us do that and show the country that we can function occasionally; that a few Senators can not hold up indefinitely a relief measure.

Mr. KING. I do not quite like the Senator's suggestion, if he will pardon me, that a few men can hold up indefinitely relief measures. In the first place, I showed from the record that out of the 500,000 bales of cotton which we had heretofore appropriated, the cost of which was $40,000,000, only about 64,000 bales have been requisitioned, and the residue of the 500,000 bales of cotton are still under the

control of the Red Cross. They have not requisitioned them. It is true they have made commitments for the larger part, but the demands have not been so great as to compel the requisitioning of the entire 500,000 bales of cotton.

Mr. BINGHAM. Mr. President, will the Senator yield?

Mr. KING. In just a moment. After having given $40,000,000 to the Farm Board, after they had obtained $500,000,000 and squandered more than $300,000,000, the proposition is to give them $10,000,000 or $12,000,000 more in order to pay debts which they should pay themselves. I am perfectly willing to pass the bill with the amendment. The Senate adopted a provision allowing the Farm Board to deliver the cotton to the Red Cross, but let the Farm Board pay the charges and liens which it has incurred on the cotton.

I yield now to the Senator from Connecticut.

Mr. BINGHAM. One of the things which the bill does, which the previous bill did not do and which is greatly needed at the present time, is to permit the cotton to be used for bedding, for making blankets and comfortables which are needed this winter. The previous bill, in the opinion of the Red Cross and their attorneys, did not permit the cotton to be used for that purpose. That is one reason why there is haste in the matter.

While the Senator has been so courteous as to yield to me, may I say that I have no interest in the Farm Board or its machinations or dealings one way or the other. My only interest from the beginning has been to try to get the cotton where it could be had by people who are suffering. I hope very much the Senator will yield for the agreement suggested by the Senator from Massachusetts.

Mr. KING. Let me ask the Senator a question. The amendment to which the Senator just referred and which provided that the cotton might be utilized for making bedding was eliminated in conference, was it not?

Mr. BINGHAM. The language "bedding" is in the House bill. It was not believed that the language which the Senate put in, consisting of the words "comfortables and blankets," was necessary since those articles are included in the term "bedding."

Mr. WALSH of Massachusetts. Mr. President, I think the Senator from Utah has made a very fair statement and I think that an opportunity ought to be given him to move that the bill be recommitted. He has made a forceful argument in favor of that position, but I would like now to ask unanimous consent that the pending measure be temporarily laid aside at 4.30 o'clock this afternoon and that the measure to distribute Government cotton to the Red Cross be taken up and disposed of before we conclude business to-day. I ask unanimous consent to that end.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Massachusetts?

Mr. GORE. Mr. President, I have no desire to delay the consideration of the bill appropriating additional cotton for the Red Cross. I think one of the dangers implied in it is clearly revealed by the statement just made by the Senator from Connecticut. In addition to clothing heretofore authorized, the bill includes bedding. No one can foretell what additional articles will be included in future legislation. When we start this movement there is no stopping place. I shall have some further observations to make on this point when the bill comes up for passage. I object to its consideration at this time, and I object to the unanimous-consent request of the Senator from Massachusetts.

Mr. WALSH of Massachusetts. That closes the matter. I call for the regular order.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Massachusetts?

Mr. GORE. I have already objected. I do not think the Senate ought to be coerced into extending charity to the Farm Board as a condition precedent to extending charity on behalf of the suffering women and children of the country.

The PRESIDING OFFICER. Objection is made.

DEBTS, PUBLIC AND PRIVATE

Mr. GEORGE. Mr. President, I ask unanimous consent to have inserted in the RECORD an article appearing in the New York Times of January 29, 1933, by Mr. Charles Merz on Debts, Public and Private.

In connection with that article I wish to read for the RECORD a brief extract from a statement submitted by Mr. Charles G. Moses, one of the officers of the West End Association of New York City, a well-known New York realty man, dealing in a very practical way with the mortgage indebtedness, in this instance upon city property. Mr. Moses enumerates several methods which he considers worthy of adoption, among which was this one:

A scaling down in the amount of the principal sum of the mortgage to a point where the owner can finally save at least some of his equity.

"The last named," he explains, "may seem a bit drastic, but it is in line with a general tendency to reduce overcapitalized funded debt, and will, in my opinion, help to make secure the interests of stock and bond holders, policyholders, and depositors far better than attempting to force liquidation of hundreds of millions of dollars of property in a market that does not exist."

The entire article is illuminating, but I shall not ask to have it inserted in the RECORD beyond the brief excerpt which I have read.

Mr. McKELLAR. Mr. President, may I ask the Senator whether or not he has asked to have printed in the RECORD the charts and formulas in connection with Mr. Merz's article?

Mr. GEORGE. No; I did not ask that that be done.

Mr. McKELLAR. I think that would be very illuminating if it could be done. The charts are the principal part of the article, as I inferred when I read it yesterday in the New York Times.

Mr. GEORGE. The charts are the basis of the article but the facts are stated in the article. I would ask, if it is consistent with the rules of the Senate, that so much of the charts be included in the RECORD as may be necessary.

The PRESIDING OFFICER. The view of the present occupant of the Chair is that under the rule that would have to be submitted to the Joint Committee on Printing.

Mr. GEORGE. I do not care to do that. I shall not ask that that be done.

The PRESIDING OFFICER. The article will be printed in the RECORD as requested.

The article is as follows:

DEBTS, PUBLIC AND PRIVATE: A VAST PROBLEM—A NEW ESTIMATE OF THE AMOUNT OF INDEBTEDNESS IN THE UNITED STATES, AND A SURVEY OF THE PROPOSALS ADVANCED FOR LIGHTENING THE GREAT BURDEN BROUGHT ABOUT BY THREE YEARS OF DEFLATION

By Charles Merz

One of the dominant questions before Congress is the problem of public and private debts contracted on a vanished scale of prices.

Undermined by three years of depression and deflation, values of every kind of property—farm land, city real estate, common stocks, plant equipment, wheat crops, stores of unused cotton—have fallen far below their levels of 1929. Meantime, interest must be paid by many borrowers on debts incurred at pre-depression prices.

These circumstances explain why both branches of Congress now have before them measures planned to ease the burden of the debtor. It is for this purpose that bills have been drafted to refinance farm mortgages, to liberalize existing bankruptcy laws, to facilitate reorganization of railways threatened with receiverships. Dissatisfied with such steps as these, and convinced that only a sudden rise in prices can relieve the debtor, a considerable bloc in Congress clamors for currency inflation.

The problem of public and private debt raises questions of deep importance to every group of creditors and debtors. Yet, while theories of how to proceed in the present situation can be plucked off every bush, singularly little information has been made available concerning the amount of indebtedness which must now be carried on the basis of deflated values.

The purpose of this article is to present an estimate of the total amount of this indebtedness and to outline the proposals made for dealing with different phases of the problem it involves.

THE DEBT STRUCTURE

The table at the top of the page is based on hitherto unpublished figures prepared specifically for this purpose by the National Industrial Conference Board. Statisticians of the board do not regard their present estimate as final. It may be revised as a result of later studies. Any attempt to estimate the amount

of debt outstanding encounters many difficulties, since the information available is widely scattered and must be pieced out by more or less arbitrary allowances for items to which existing records furnish no clue. In order to ascertain the principal of the debt and the annual interest charge in any year, it is sometimes necessary to infer the interest from the principal and sometimes the principal from the interest.

Two sets of figures are given in the table. The first shows the estimated domestic debt of the United States in 1922, the first year of our golden era of postwar prosperity. The second shows the estimated debt in 1929, the year which witnessed both the peak of this prosperity and the beginning of depression.

For 1922 the figure, in round numbers, is $115,000,000,000. For 1929 it is $155,000,000,000. The latter figure is much smaller than other estimates, published recently, of the amount of predepression debt which the American people have attempted to carry through a period of severe deflation. Most of these estimates are in the neighborhood of two hundred billion, and one, which has received much prominence, is as high as two hundred and thirty-four billion.

VARIATION IN ESTIMATES EXPLAINED

The discrepancy is not accidental. It is due to the fact that in these larger estimates assets or liabilities arising from the same transaction have frequently been counted twice. For example, most of these estimates include figures for urban real estate mortgages held by banks, insurance companies, and other lenders. But they also include bank loans, which are made in part on these same urban mortgages. This plainly results in double counting of some of the indebtedness outstanding. Similar duplications appear in other places.

The important point, in a compilation of this sort, is to select figures which consistently represent either the assets of the lender or the obligations of the borrower. Unless this precaution is observed—and estimates which place the domestic debt of the United States in 1929, as high as $200,000,000,000, appear to disregard it—the same debt counted both as an asset and as a liability will inevitably pad the total figures.

The estimates presented in this article are based consistently on the obligations of the borrower. The figures arrived at by this method show a net increase of $40,000,000,000 in the domestic debt of the American people during the prosperous years from 1922 to 1929. This was equivalent to a compounded increase of 4.4 per cent a year. During the same period population increased at the rate of 1.4 per cent a year and industrial production, computed on the basis of the annual index numbers of the Federal Reserve Board, increased by 4.8 per cent a year.

Debt, therefore, was increasing more rapidly than population during the golden era of prosperity before 1930, but less rapidly than industrial production. However, the rate of change in indebtedness varied widely among different groups of debtors. This will be seen if we now consider each of the five main classes of borrowers among whom the total burden of domestic indebtedness is distributed—noting in each case the changes that occurred during the period from 1922 to 1929, the amount of indebtedness now outstanding, after three years of depression, in so far as estimates are available, and the various plans for relief of each group of debtors now pending before Congress.

I. Farm debt

Estimates of farm debt are based on figures of the Department of Agriculture. They show a relatively small increase (amounting to $141,000,000) in farm mortgages between 1922 and 1929, accompanied by a larger decrease ($1,300,000,000) in other forms of farm debt.

No authoritative figures for 1933 are now available. But officials of the Department of Agriculture have estimated that the mortgage debt may have declined from $9,241,000,000 in 1929 to about $8,500,000,000 at the present time, owing largely to foreclosures. In this case the total amount of farm indebtedness now outstanding would be between eleven and twelve billion dollars.

It is clear that the farmer's present problems are not due to a large volume of debt contracted in the years immediately preceding the depression. While domestic debt as a whole was increasing by $40,000,000,000 between 1922 and 1929, farm debt actually declined by about one billion. The farmer's difficulties are due primarily to two factors—first, to a burden of debt contracted as early as 1915–1920—a 6-year period during which farm mortgages practically doubled, on land then selling at inflated values; second, to the sharp decline in the value of farm commodities since 1929, accompanied by a crippling loss of foreign markets.

THE DECLINE OF INCOME

Gross income from farm production in the United States in 1932 is estimated by the Department of Agriculture at $5,240,000,000, compared with $11,911,000,000 in 1929. In the last three years the farmer has lost nearly 60 per cent of the dollars which paid his bills in 1929, while the amount of his mortgage debt has been reduced only nominally, perhaps by as much as 7 or 8 per cent, and principally through the harsh method of foreclosure.

This is the nub of the problem of farm indebtedness. But the burden of a disproportionate decline in income and in mortgage debt is by no means evenly distributed among all farmers. More than half of the farms in the United States are wholly free of mortgage, and more than two-thirds of the remainder are mortgaged at less than half their value. This brings the farm-mortgage problem within narrower limits than the bare figures themselves suggest.

* * * * * * *

II. Railroad debt

The second great group of borrowers is composed of the railroad companies. Figures showing their funded debt are readily available in reports of the Interstate Commerce Commission. Between 1922 and 1929 this debt increased from $11,502,000,000 to $12,459,000,000. During the same period it is estimated that unfunded indebtedness decreased from five hundred and twelve millions to two hundred and fifty-one millions. Total indebtedness of the railroads was increasing during the prosperous years before 1930, but at a slower rate than the average gain either in population or in industrial production.

At the end of 1931, after two years of depression, the funded debt of the railroads amounted to $12,739,000,000—an increase of $280,000,000 since the end of 1929. No figures for the end of 1932 are now available, but it is certain that the debt has not been reduced. Meantime earnings of the railroads have been drastically curtailed. Net operating income dropped from $1,274,000,000 in 1929 to $324,000,000 in 1932—a loss of 74.6 per cent.

Of the 138 legally solvent Class I roads only 38 finished the first 10 months of 1932 without a deficit. Of the 100 which showed a deficit, 45 did not earn their operating expenses. The remaining 55 covered costs of operation, but did not earn enough to meet fixed charges. Since receivership may legally follow any failure to pay fixed charges it is a contingency which must be faced by many roads, unless earnings improve, costs are reduced, or new loans are received from public or private lenders.

THE VITAL HANDICAP

The problem is unquestionably a difficult one, but the core of it is the amount of fixed charges which must be met in the immediate future. Less than 3 per cent of the funded debt of the railroads matures in 1933 and less than 4 per cent in 1934. Nearly 80 per cent of the entire bonded indebtedness is not due for redemption until after 1941. No one can possibly foresee at the present time what the railroads will earn eight years from now, or what value the dollar will command in terms of the commodities it can purchase.

For the transportation companies therefore the problem is not one of liquidating their entire debt at present prices, but of meeting charges which fall due at a time when their earnings have been greatly depleted by loss of traffic. Two ways of dealing with this problem have been proposed to Congress.

The first is to extend additional Government credit to roads in need of it. The desirability of averting railway receiverships was one of the chief motives of Congress in establishing the Reconstruction Finance Corporation in January of last year, and during 1932 loans to the carriers amounting to $359,000,000 were authorized by this agency, with the approval of the Interstate Commerce Commission.

There are still roads that possess collateral which they can pledge with the Reconstruction Finance Corporation when they need to borrow. But there are many other roads which have largely exhausted such collateral. For their benefit it is now proposed that the reconstruction finance act be amended to permit loans to railways without collateral, upon certificate from the Interstate Commerce Commission that in its judgment the ability of the borrower is reasonably assured by its past record of earnings and its prospects for the future.

FACILITATION OF REORGANIZATIONS

The second proposal is to amend existing bankruptcy laws in order to facilitate the reorganization of railroads threatened with receiverships. As the Interstate Commerce Commission pointed out in its last report, "Much of the delay, expense, and difficulty involved in a receivership and reorganization is due to the opportunity afforded under our present laws for a minority, no matter how small, to make trouble without regard to the interests of the property as a whole." The proposed amendment would authorize reorganizations which have received the approval of the Interstate Commerce Commission, of two-thirds of the stockholders, and of holders of two-thirds of each class of claims against the road.

This proposal is consistent with the first point in the program of railway legislation advocated by Mr. Roosevelt during the presidential campaign. He then recommended "that the Government announce its intention to stand back of the railroads for a specified period, its help being definitely conditioned upon acceptance by the railroads of such requirements as may in individual cases be found necessary to readjust top-heavy financial structures through appropriate scaling down of fixed charges."

III. Public debt

The third great group of borrowers in the United States consists of public agencies—Federal, State, and local.

The indebtedness of these public authorities has followed no consistent course. Between 1922 and 1929 State and local debt increased from $7,154,000,000 to $13,452,000,000, a swift advance amounting on the average to 9.4 per cent a year. But during this same period a succession of large surpluses enabled the Federal Government to reduce its own indebtedness from twenty-two thousand nine hundred and ninety-six million to sixteen thousand seven hundred and forty-three million. Debt retirement in Washington almost offset debt expansion in the States, counties, and municipalities, with the result that the aggregate amount of public indebtedness increased only nominally—from $30,150,000,000 in 1922 to $30,195,000,000 in 1929.

Since 1929, however, the figure has mounted rapidly. It is estimated that State and local debt now stands at about $15,472,000,000, an increase of approximately 15 per cent in the last three years. Meantime the series of surpluses in Washington has ended,

and the Federal Government has been forced to borrow heavily in order to meet successive deficits and to provide funds for the Reconstruction Finance Corporation. Its debt now stands at about $20,375,000,000, an increase of 22 per cent since the end of the fiscal year 1929. The total of all public debt in the United States at the present time may thus be estimated at $35,847,000,000. This is about one-third larger than the total of both farm debt and the funded debt of the railways.

TWO COURSES OPEN

Short of default or redemption by the Federal Government of some of its obligations by the device (now proposed in Washington) of issuing new currency, there are only two ways in which public agencies can reduce the burden of their indebtedness. The first is through economies which will enable them to apply toward amortization part of the funds now used to cover current expenditures. The second is to refinance existing obligations at lower interest rates as the opportunity occurs.

There is much discussion at the present time of the possibility of such refinancing by the Federal Government. First Liberty loan bonds amounting to $536,000,000 and bearing interest at 4¼ per cent are now "callable"—that is, the Government may redeem them on three months' notice at any time it chooses. On October 15 the great fourth Liberty loan series, amounting to $6,268,000,000 and also bearing interest at 4¼ per cent, becomes callable. About 35 per cent of the entire Federal debt can thus be redeemed during the next 12 months if the Government decides to substitute new securities for old ones. In a recent message to Congress President Hoover described as "essential" the refunding of "outstanding high-interest-bearing Liberty bonds into bonds bearing a lower rate of interest."

Such action would be similar to the recent conversion by England of nearly £2,000,000,000 of her war debt, previously bearing interest at 5 per cent, into new bonds bearing only 3½ per cent—with a consequent saving to the British Treasury of £30,000,000 a year.

IV. Corporate debt

Up to the present point we have considered debts of farmers, of railways, and of public agencies amounting in the aggregate to about $55,000,000,000 at the peak of prosperity in 1929 and to about $60,000,000,000 at the present time. We now come to a fourth class of indebtedness, exceeding (at least in 1929) the total obligations of all three of these groups. This is the indebtedness of corporations.

Figures showing the bonded debts and mortgage liabilities of all corporations are given in the annual reports of the Treasury Department, Statistics of Income. But figures concerning unfunded indebtedness are not so readily obtained. The method used by the National Industrial Conference Board in preparing its estimate has been to compute the principal of the unfunded debt from the interest—the latter figure being available in the Treasury Department's publications.

By this method the total debt of corporations (other than railways) is estimated at $42,386,000,000 in 1922 and at $74,661,000,000 in 1929. During this period the average rate of increase in corporate debt amounted to 8.4 per cent a year—a more rapid rate than that shown for any other class of indebtedness we have thus far considered, except the indebtedness of State and local governments. Factors contributing to this increase included a great expansion of loans to corporations on urban real estate, loans for the extension of plant equipment and loans to investment trusts and other financial institutions which expanded so rapidly during this period.

LIQUIDATION HEAVY

No estimate can now be made of the amount of corporate indebtedness outstanding at the end of 1932. Income-tax returns for that year will not even be filed until March 15 and the Treasury Department's analysis of the debts and interest charges shown in these returns will not be published until 1934. Nevertheless, it is certain that a large amount of the indebtedness outstanding in 1929 has been written off the books, and that at many points the process of liquidation, whether voluntary or compulsory, has been carried far.

Figures compiled by R. G. Dun & Co. for the years 1930–1932 show no less than 86,590 business failures during these three years, with aggregate liabilities of more than $2,322,000,000. Loans on securities, which reached the spectacular total of $17,000,000,000 in 1929, have now been scaled down to less than $6,000,000,000. In New York City alone more than 18,000 foreclosure actions during the last three years have liquidated indebtedness on urban real estate assessed at over $1,100,000,000, and the same process of liquidation has been in progress in all parts of the country. Obligations incurred by manufacturers for such purposes as the extension of plant equipment have in some cases been readjusted through cooperative action on the part of creditors.

THE PROSPECT AHEAD

Liquidation is still under way. The financial reorganization of corporations which are not properly capitalized for a period of lower prices and smaller profits requires the reduction of fixed charges, the funding of floating debts, the conversion of maturing obligations into new types of securities, and in some cases mergers and sales of assets.

It is proposed that Congress facilitate such steps, where they are necessary, by amending the legal code which now governs corporate reorganizations. The plan is similar to that proposed in the case of the railways. Its chief purpose is to prevent a small minority of creditors from blocking reorganization in the hope of obtaining favored treatment for their claims.

Such action, favored by leaders of both political parties, was recommended by Attorney General Mitchell in his last report to Congress. He then pointed out that in many cases "the cumbersome process of corporate reorganization through equity receiverships and mortgage foreclosures affords no hopeful opportunity for speedy reorganization of going concerns, embarrassed by debt, even through agreement of large majorities of their creditors."

V. Individual debt

We come now to the last of the five main groups of borrowers. It includes individuals (other than farmers) and partnerships. With this group we complete the list. For there is no way in which people can borrow, single-handedly or collectively, except in the capacity of public agencies, corporations, partnerships, and individuals.

An approximate figure for the amount of indebtedness outstanding, in the case of individuals with incomes of more than $5,000, can be obtained from reports of the Treasury Department by capitalizing the amount of interest paid. In its compilation of the total debt the National Industrial Conference Board has added to this figure an arbitrary but reasonable estimate of the indebtedness of partnerships and of individuals with incomes below $5,000. The conclusions reached by this method show an estimated debt of $16,933,000,000 in 1922 and of $24,971,000,000 in 1929. Of the latter figure about one-half represents loans on mortgages.

METHODS OF REDUCTION

For obvious reasons it is even more difficult to guess at the present amount of indebtedness owed by individuals and partnerships, after three years of deflation, than to guess at a corresponding figure for the indebtedness of corporations. But it is clear that the same processes which have reduced one type of debt have reduced the other. Many of the casualties on Dun's list of failures have been individuals and partnerships. A large part of the reduction of loans on securities has scaled down personal as well as corporate obligations. Foreclosure of mortgages has accomplished the same end, though the process has meant for many small owners the wiping out of equities which represented years of labor.

In July of last year Congress enacted the home loan bank law, intended to relieve the mortgage situation. Bills now pending in the House of Representatives, designed to facilitate corporate reorganizations, also include provisions amending the existing bankruptcy laws in their application to individuals. The purpose of these provisions is not to release solvent debtors from payment of their obligations at the expense of the general public, but to encourage a reasonable adjustment between creditor and debtor, according to the circumstances of each case.

ALTERNATIVE POLICIES

From this summary of the debts of different groups of borrowers in the United States several conclusions may be drawn:

First. During the prosperous years before the depression the most rapid increase of indebtedness occurred in the case of corporations. Debts of railways, of partnerships, and of individuals (other than farmers) increased at a slower pace. The net debt of all public agencies practically stood still. Farm indebtedness fell slightly.

Second. Since 1929 the debt of public agencies has increased substantially. There has been some increase in the obligations of railways. Farm debt has continued to decrease slightly. Larger reductions appear to have been made in the case of partnerships and individuals and much larger reductions in the case of corporations.

Third. Within each field of indebtedness, except that of public agencies, adjustments are constantly in progress which bring fixed charges into line with a lower price level and thereby strengthen the influences making for recovery. Some of these adjustments are reached by voluntary agreement. When the creditor is less willing to compromise, they take the form of bankruptcies and foreclosures.

Fourth. Measures are now pending before Congress which would facilitate adjustments of the first sort—that is, by voluntary agreement. These measures are not planned on the theory that every private debt in the United States, no matter when and how contracted, is precisely like every other private debt. They distinguish between different groups of borrowers and, within different groups, between the merits of individual debts and claims.

REFINANCING OF FARM MORTGAGES

Mr. GEORGE. Mr. President, before I take my seat let me say that the Banking and Currency Committee this morning had hearings upon one or more of the measures dealing with the refinancing of farm mortgages. I wish to take occasion to say that in this time of stress if the conservative element of our population is not anchored to something, the public men of this day may have occasion hereafter to regret it. There is nothing to which they can be anchored with half the assurance of the ultimate perpetuity and stability and progress of our civilization than the land of the country.

I wish to take occasion to say that I have not now the slightest sympathy for and I shall oppose to the last ounce of my power any proposal to refinance farm mortgages or home mortgages in the interest of the creditor class alone. The hour has certainly come when some one must insist that the refinancing of homes and farms must be on the basis of readjusted valuations and in the interest of the debtor as well as of the creditor. Particularly, Mr. President, would I feel it my duty to resist to the last any effort to refinance farm mortgages through direct further bounties to the Federal land banks or to the joint-stock land banks. Those institutions I would of course treat justly, but if refinancing farm mortgages is to be for the benefit strictly of the creditors and of some of the agencies in this emergency that have failed in their service, then I think it would be equally the patriotic duty of any man in public life at this hour to oppose the refinancing, as I believe it would be his duty to favor any sound scheme of refinancing if the interest of the debtor is also to be taken into account.

I want to take occasion to thank the Banking and Currency Committee for the very patient and, I hope, very helpful hearing this morning upon a bill which I had the honor to introduce in this body, as well as a bill introduced by the Senator from North Dakota [Mr. FRAZIER].

TREASURY AND POST OFFICE APPROPRIATIONS

The Senate resumed the consideration of the bill (H. R. 13520) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes.

Mr. KING. Mr. President, I send to the desk a notice in writing of a motion to suspend the rule. Under the rules the notice must be read, and I ask that the notice now be read.

The PRESIDING OFFICER. The clerk will read the notice.

The legislative clerk read as follows:

NOTICE OF MOTION TO SUSPEND RULE

Pursuant to the provisions of Rule XL of the Standing Rules of the Senate, I hereby give notice in writing that I shall hereafter move to suspend paragraph 4 of Rule XVI for the purpose of proposing to the bill (H. R. 13520) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes, the following amendment, viz, on page 16, line 16, after the word "each," to insert the following: ": *Provided further*, That no refund in excess of $20,000 shall be paid until the determination by the Commissioner of Internal Revenue of the overpayment has been transmitted to and approved by the United States Board of Tax Appeals, under such rules as it may prescribe, and the commissioner shall disallow the part thereof not so approved."

Mr. BINGHAM. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. BINGHAM. What motion is now pending before the Senate?

The VICE PRESIDENT. The Senator from Nevada [Mr. ODDIE] has sent an amendment to the desk, which is pending.

Mr. ODDIE. Mr. President, I will ask that that amendment lie on the table and that the amendment of the Senator from Tennessee [Mr. MCKELLAR] may be first considered.

Mr. MCKELLAR. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The Senator from Nevada withdraws his amendment temporarily.

Mr. MCKELLAR. I ask that the amendment which is pending before the Senate may be stated.

The VICE PRESIDENT. The amendment proposed by the Senator from Tennessee will be stated.

The LEGISLATIVE CLERK. On page 58, line 2, after the numerals "$19,000,000," it is proposed to insert the following: ": *Provided*, That no part of the money herein appropriated shall be paid to any company for carrying air mail under a contract with the Government in an aggregate sum exceeding 50 per cent of the amount paid by the Government to it at the present time."

INFLATION OF THE CURRENCY

Mr. THOMAS of Oklahoma. Mr. President, I desire at this point to call the attention of the Senate to a news item that appears in to-day's Washington Herald under the following heading:

Roosevelt tells advisers he'll O. K. reflation—Reported prepared to accept some kind of change in currency.

This is an article by Fraser Edwards. I ask that the entire article, which is rather short, may be printed in the RECORD at this point in connection with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROOSEVELT TELLS ADVISERS HE'LL O. K. REFLATION—REPORTED PREPARED TO ACCEPT SOME KIND OF CHANGE IN CURRENCY

By Fraser Edwards

President-elect Roosevelt has assured advisers he will sign a measure for controlled currency reflation, it was learned yesterday by Universal Service.

While the President elect was represented as being open-minded on the proper plan to adopt, he was said to be prepared to accept some form of currency inflation in order to raise commodity prices and ease the financial stringency of the Nation. He still is studying the question.

MAKES GLASS HESITATE

As a consequence of this commitment, Senator CARTER GLASS (D.), of Virginia, according to his friends, is hesitating about accepting the post of Secretary of the Treasury, which they say has been offered to him by Roosevelt.

Currency inflation will be one of the paramount issues before the special session of Congress, all leaders concede. What form it will take no one is prepared to say at this time.

This issue has been dinned into the ears of Roosevelt by both Democratic and Progressive partisans. They say they have his promise to accept some plan worked out by the new Democratic Congress.

PLANS NUMEROUS

A number of plans have been proposed. They range from the reduction of the gold content of the dollar to the old Bryan proposal of silver at 16 to 1 and a flood of greenbacks.

The President elect has indorsed none of these plans. He is said to prefer the mildest form of inflation, a plan that can be adopted by statute and changed without difficulty if it fails to accomplish the desired results or when the desired results are achieved.

One of the men closest to Roosevelt, after discussing the currency question with him, said:

"Mr. Roosevelt said he was prepared to experiment with the currency situation. He wants a sound currency, as we all do, but he will sign a bill that will enable people to pay their debts."

PRAISED, DENOUNCED

The inflation issue was aired thoroughly during the recent debate on the Glass banking reform bill. It was advocated in different forms by a dozen Democratic and Progressive Senators. It was denounced vehemently by GLASS and others.

Because of GLASS's violent opposition to inflation, which he said would make American currency "as worthless as wall paper," his friends say he would not become Secretary of the Treasury if Roosevelt embraced the inflation policy.

Mr. THOMAS of Oklahoma. Mr. President, as I read the news item, I get the impression that the President elect, when he becomes President, will approve and sign any bill that shall provide for a reasonable expansion or reflation or addition to the amount of currency in circulation.

In this connection, Mr. President, I call the attention of the Senate to a few news stories and editorials appearing in the public press of yesterday and to-day. I first call attention to the editorial page of the New York Times of Sunday, January 29. The leading editorial is headed as follows:

Defying "Control."

I read the first paragraph, as follows:

We are hearing a great deal in this country about "regulated inflation." Nobody favors an unlimited issue of fiat money. Not even Senator BORAH would have the depreciation of the currency go beyond a certain point. The calamitous experience of Germany in printing marks until a billion or two of them were worth only a dime stands as a continuing reminder and warning before the eyes of even our extreme inflationists. But they keep on talking about the need of a large expansion of our circulating medium, though always strictly under "control" of some unspecified kind. The only assurance they give us is that somehow or other we shall "pull up" in time to prevent such complete devaluation of money as drove Germany almost to ruin and despair 10 years ago. The trouble with this theory is that when you once begin to go down the steep decline of a depreciated currency there is no stopping until you make the final crash.

On the same page I find this editorial under the following heavy heading:

Revolution undefined.

And on the same page I find another editorial under the heavy heading:

Debts and prices.

I cite these editorials, Mr. President, as evidence that the largest newspaper in America, if not in the world, is now seriously considering the question of relief and is giving particular attention to the suggestion of a reasonable inflation of the currency as a relief measure.

In support of the news story just introduced in the RECORD that the President elect is in favor of some form of reasonable inflation or reflation of the currency, I call attention to a news item in yesterday's New York Times under the heading:

Would put barter on national basis—

And the subheading:

P. P. Gourrich suggests plan to use due bill as medium for exchange of goods. Trade groups included. Economist proposes Reconstruction Finance Corporation to start scheme. Little effect on retail business seen.

I call attention next to an article in the New York Times of January 28, under the date line Princeton, N. J., and a headline reading as follows:

Barter plan wins widening interest. Princeton group, sponsor of plan, reports more than 200 units active in Nation. Movement gains daily.

Mr. President, the stories recite that in many places throughout the country, for the want of money and credit, the people are forced to resort to some form of barter plan.

I next call the attention of the Senate to an Associated Press dispatch from Bismarck, N. Dak., the headlines of which are as follows:

North Dakota may adopt scrip plan. Legislature considering two systems as emergency measure.

The Associated Press dispatch is very short, so I ask that the entire item may be printed in the RECORD at this point in connection with my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

The dispatch referred to is as follows:

NORTH DAKOTA MAY ADOPT SCRIP PLAN—LEGISLATURE CONSIDERING TWO SYSTEMS AS EMERGENCY MEASURE

BISMARCK, N. DAK., January 28.—North Dakota's legislators are considering two plans to adopt scrip on a state-wide scale.

Both proposals call for issuance of scrip by the state-owned bank of North Dakota as an emergency measure to make money "easier" and aid the State's farmers in paying their debts.

A "bond currency" bill, introduced by Representative H. T. Peterson, is now before the house banking committee.

The other plan, suggested by North Dakota's State treasurer, Alfred S. Dale, is for negotiable scrip issued by the Bank of North Dakota, the State treasurer, or the treasurer of any political subdivision of the State.

Revenue stamps of 3 cents for each $1 would be affixed to the scrip with each transaction, making the scrip redeem itself in 35 transactions.

On presentation to the State treasurer or treasurer of other governing units, the certificate with stamps attached would be redeemed at the face value of the certificate in United States legal tender.

Peterson's proposal calls for issuance of noninterest-bearing bonds by the Bank of North Dakota in exchange for certificates of indebtedness of the State or any of its political subdivisions.

The bond currency would be issued by the bank on application for loans by the State or other governmental units, including counties and towns. They would remit to the bank warrants or certificates of indebtedness and be paid face value in "bond currency."

Mr. THOMAS of Oklahoma. The next news item I desire to call to the attention of the Senate is one of this date or perhaps of yesterday under the headline:

World's jobless total 30,000,000.

Loss in wages alone is put by International Labor Office at $21,000,000,000. Huge sums spent for aid. Universal reduction of hours of work to provide more employment is urged.

I call attention to another news story in one of the large newspapers under a headline as follows:

Commodity prices reach new lows.

This article is under a New York date line of January 26.

I next call the attention of the Senate to another news story in one of the late newspapers, the headings of which read as follows:

Car loadings lower in week.

I call attention to another news item with headlines as follows:

Commodity average declines for week. Has been lowered each week since year-end. London slightly lower.

Under that heading is a dispatch to the New York Times, under the date line New Haven, January 29, the first paragraph which I will read, as follows:

Prof. Irving Fisher's index number of commodity prices, based on 100 as the average for 1926, is 55.5, which compares with 56.4 a week ago, 57.3 two weeks ago, 57.4 three weeks ago, and 57.6 four weeks ago.

I submit these items of news as evidence that times are getting worse instead of getting better, and I base such conclusion upon the proposition that the dollar is going higher and higher and commodity prices are going lower and lower.

I next call the attention of the Senate to a headline in the Washington Post of Sunday, January 29. It is the leading editorial in that publication and the heading of the editorial is:

New York wants a dole.

I read the first paragraph.

No sooner had Governor Roosevelt left Albany than New York came knocking at the door of the Federal Government for emergency aid. So long as Mr. Roosevelt was in charge of New York's affairs he upheld the principle that each State should look after its own destitute people. But the new governor, Herbert H. Lehman, took one look at the $140,000,000 deficit which Governor Roosevelt had left him, and directed a plea for $45,000,000 to Washington.

On the same editorial page, Mr. President, which contains the aforementioned editorial, I find the second leading editorial with the following headline:

What they barter.

That editorial catalogues the class of barter that is now going on throughout the United States.

I next call the attention of the Senate to a news item in to-day's New York Times, the item being under a heading, as follows:

Briton urges rise in value of silver.

The subheadings are as follows:

Sir Robert Horne, in a broadcast from London, says low price perpetuates trade slump. Hopes for action here. Ex-Chancellor of Exchequer believes Britain and United States can aid recovery.

I now read from one paragraph of the story, as follows:

The man who lives on the soil can no longer buy from the manufacturer. He in his turn finds his trade so constricted that he can not meet his establishment charges, and he shuts down. Unemployment stalks like a malevolent specter alike through country lanes and city streets, and it is lasting so long that the world is almost numbed with despair.

The British Government has declared its intention to employ all reasonable measures to raise wholesale commodity prices. I shall not elaborate this matter further, because, so far as I can judge, the policy of the Government of the United States is directed to the same object.

Mr. President, inasmuch as apparently the responsible leader of the United States soon to be is now convinced that something must be done to cheapen the dollar, I desire to make plain, if I may, my position upon this question.

Mr. President, I am in favor of cheapening the buying power of the American dollar. If this can be done, to the extent that the dollar is cheapened to the same extent will commodity prices be increased.

I am not in favor of going off the gold standard; neither am I in favor of reducing the gold content of the dollar, our unit of exchange. I do not think it necessary at this time even to consider going off the gold standard; neither do I think it necessary to consider the proposition of reducing the gold content of the dollar. It occurs to me, however, that those who will stop to think must be of the conviction that no relief is possible save by raising commodity prices; and that, in my judgment, could be done only by cheapening the dollar.

I think economists and those who will stop to think for a moment are agreed that the dollar, in buying power, can be cheapened; and I now suggest three methods for bringing this about.

I suggest, first, the the Federal Reserve Board, acting through the Federal reserve banks, again begin buying Government bonds, paying for such bonds Federal reserve notes. It is true that last year the Federal reserve system did enter upon this policy. It is true that the Federal reserve system did buy some eleven hundred millions of Government bonds, paying for such bonds $1,100,000,000 in Federal reserve notes. But, Mr. President, as soon as the Congress adjourned the Federal reserve system ceased this policy, and stopped buying Government bonds; and because this policy was discontinued the circulation diminished rather than increased, and to-day we have even less money in circulation than when the Federal Reserve Board started buying Government bonds. I suggest a renewal of this policy as one plan for increasing circulation and making money more plentiful, and to the extent that money becomes more plentiful, money will become cheaper, and as money becomes cheaper commodity prices will rise.

Secondly, I suggest as an additional policy for placing more money in circulation, the encouragement of the national banks of the Nation to avail themselves of the law known as the Borah-Glass amendment, enacted as a part of the home loan banking act. If the national banks will avail themselves of this opportunity, they can practically double the amount of their circulation; and to the extent that the national banks take advantage of this opportunity, to that extent will the circulation be increased.

Then as a third proposal, Mr. President, I ask unanimous consent, out of order, to introduce a bill, and ask that it be read.

The VICE PRESIDENT. Without objection, the bill will be introduced. Is there objection to the reading of the bill? The Chair hears none, and the bill will be read.

The bill (S. 5561) to provide funds for meeting the existing and the increasing deficit of the Federal Treasury, and for other purposes, was read twice by its title and referred to the Committee on Banking and Currency, as follows:

Be it enacted, etc., That for the purpose of meeting the existing and the increasing deficit of the Federal Treasury the Secretary of the Treasury is authorized and directed to provide for the issuance from time to time of bonds of the United States as provided by law. Such bonds shall be payable 30 years from their respective dates of issue, except that the Secretary of the Treasury may, in his discretion, provide for a later period of payment of any issue of such bonds if, in his opinion, it is necessary in the public interest. Such bonds shall be in such denominations as the Secretary of the Treasury may prescribe, shall bear interest, payable quarterly, at the rate of 2 per cent per annum, and shall have all the rights and privileges accorded by law to other 2 per cent bonds of the United States: *Provided*, That the rate of interest paid upon said bonds if/or while on deposit with the several Federal reserve banks shall be an amount fixed and agreed upon by and between the Secretary of the Treasury and the Federal Reserve Board, and in no event shall such rate be more than the rate specified herein. The total amount of such bonds herein authorized and directed to be issued shall from time to time be fixed by the Secretary of the Treasury.

SEC. 2. The Secretary of the Treasury is authorized and directed to prorate any issue of such bonds among the several Federal reserve banks as per agreement with and order of the Federal Reserve Board. Each bank receiving any such bonds is hereby authorized to issue Federal reserve bank notes in an amount equal to the face value of the bonds received by it, and such bonds shall be held as collateral security for such bank notes as provided by the Federal reserve act, as amended by Public, No. 2, Seventy-second Congress, being an act to provide emergency financing facilities for financial institutions, to aid in financing agriculture, commerce, and industry, and for other purposes, approved January 22, 1932, and as further amended by Public, No. 44, Seventy-second Congress, being an act to improve the facilities of the Federal reserve system for the service of commerce, industry, and agriculture, to provide means for meeting the needs of member banks in exceptional circumstances, and for other purposes, approved February 27, 1932. Such notes shall be of such denominations (including denominations of $1 and $2) as may be authorized by the Federal Reserve Board and, except as provided in this act, shall be subject to all the provisions of law relating to the Federal reserve notes.

SEC. 3. Such bank notes shall be legal tender in payment of all debts, public and private, except where otherwise expressly stipulated by contract, and shall be receivable for customs, taxes, and all public dues. When issued by the several Federal reserve banks as provided herein, such notes shall be placed to the credit of the Secretary of the Treasury and shall be by the said Secretary of the Treasury paid out in meeting Federal salaries, public pay rolls, estimates for public works, and other special and general expenses of the Government.

SEC. 4. Upon the recommendation of the Secretary of the Treasury, the Federal Reserve Board may require the several Federal reserve banks to sell Government bonds held by such banks in order to withdraw from circulation currency herein authorized to be placed in circulation.

SEC. 5. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such amounts as may be necessary to carry out the provisions of this act.

SEC. 6. This act may be cited as the "dollar stabilization act."

Mr. THOMAS of Oklahoma. Mr. President, in support of the bill just introduced and read, I ask permission to have printed, in connection with my remarks, an article by the junior Senator from Montana [Mr. WHEELER], entitled "Democrats Must Act Swiftly or Lose Public Confidence, Warns Senator WHEELER."

The VICE PRESIDENT. Without objection, it is so ordered.

The article referred to is as follows:

DEMOCRATS MUST ACT SWIFTLY OR LOSE PUBLIC CONFIDENCE, WARNS SENATOR WHEELER

By BURTON K. WHEELER, United States Senator from Montana

Unless the Democrat Party speedily develops a leadership capable of grasping the issues involved in the recent campaign, and of giving effect to the demands of the American voters who put the party in power, the Democracy will, before another 12 months have passed, be as bankrupt and discredited as is the Republican Party and its leadership.

We were intrusted with the Government by 20,000,000 voters. They voted Democratic last November not because, in millions of cases, they were Democrats by conviction, but for a number of other reasons.

Chief among those reasons was an absolute determination to repudiate the Republican leadership which they rightly held as largely responsible for the emergency in which we are struggling.

It has been the traditional policy of the Republican Party to confer special privileges, to create privileged economic groups.

This was the real purpose of the tariff, which favors the manufacturing interest as a whole. In this great interest the special pets have been the textile manufacturers, the steel producers, and, since the war, the chemical industry.

It is significant that these special favorites of a favored group have been among the bitterest and most uncompromising enemies of the wage earners. When they could mulct the consumer by exacting exorbitant prices they have done so without conscience.

Other favored groups have been the railroads, whose land grabbing, financial chicanery, and favoritism to special groups of shippers directly caused two of the great panics of the last century. With the benediction of the Republican Party they looted the public domain.

A third carefully fostered special interest has been that of the bankers. Amenable as the Republican Party was to special privilege, the bankers for many years successfully resisted all proposals to make the banks safer for the people and more responsible to investors.

One of the direct causes of the present crisis was the iniquitous Hawley-Smoot Tariff Act, the full bloom of Republican tariff policy.

FAVORED—BUT DENOUNCING THOSE WHO SOUGHT AID

As for the railroads, in spite of all the favors extended them, or, perhaps, because of those favors, many of them are bankrupt today, many others are near it, and hundreds of thousands of investors are in danger of losing their savings.

I need not amplify the astounding story of reckless greed, crime, and irresponsibility exhibited by the banking fraternity during and since the war.

They financed the insane speculative mania that crashed into ruin in 1929.

Since then they have busied themselves in cutting wages and salaries, throwing millions of helpless workers out of employment.

While they were getting special favors at the hands of the United States they were constantly denouncing any other group that sought legislative assistance.

But immediately after the stock break of 1929 we find them coming to the United States on bended knees, begging for the Reconstruction Finance Corporation to save the banks, insurance companies, and railroads from bankruptcy.

This, the bankers pretended, would likewise bring back the price of farm commodities in this country.

Such are a few of the choicer fruits of Republican Party policy. These fruits, that policy, were repudiated with overwhelming emphasis last November by 20,000,000 American voters. The repudiation took the form of hurling the Republican Party from power and placing the reins in the hands of the Democratic Party.

But the reins were given us with the expectation, or at least with the hope, that we would justify the change made by the voters and the confidence they placed in us.

Are we justifying that hope? Are we strengthening the confidence?

We are doing neither one nor the other.

Members of the party spent the first few weeks following the election in devising schemes to avoid a special session of Congress.

We were put in power to grapple with this crisis and most emphatically to mitigate its rigors. It was expected we would proceed with this task at the earliest possible moment.

There should have been no question in the mind of any Democrat in or out of Congress that a special session is imperative.

The leadership which fails to understand this has already failed and merely awaits the inevitable sentence by the people.

While there was a plank in the Democratic platform which talked about "sound money" there was no one on the committee or in the convention who could tell you what sound money meant.

By reason of the depreciated currencies in other countries the first step that should be taken by the newly elected Democratic Government is to grapple with the money situation so as to make it possible for us to carry on trade in the world markets.

Are we as Democrats simply going to offer some bauble to try to fool the people? Or are we going to find the courage to face the facts as they exist and rearrange our money system so that we can deal with other nations that are off the gold standard? Or are we going to allow England and France to regulate our money system?

France did not consult us when it depreciated the franc. England did not consult us when it went off the gold standard. Yet many Democrats are saying we dare not regulate our own system until we have consulted the bankers of England and France.

The Republicans have been making a great clamor at the insistence of their banker friends about balancing the Budget. What does our leadership do about it? Absolutely nothing beyond carrying on the foolish and impossible policies of the Republicans.

We have not heard a single original contribution from Democratic leadership about Budget balancing. We seem quite willing to join the Republicans in another and more disastrous attack upon wage and salary scales, which the Republican-banker conspiracy insists must be slashed in the interest of what they advertise as "economy" and is, in reality, economic and social suicide.

We are committed to a "beer bill." Some such measure should undoubtedly be enacted this session because our party pledged it. But the sort of measure pending will not restore the beer the people demand and for that reason it will not provide a substantial contribution toward the national revenue.

We are committed to "farm relief." On this it is too early to speak finally.

UNEMPLOYED VICTIMS HAVE RECEIVED NO COMFORT

But nothing yet offered by the Democratic leadership in Congress will add a penny to the farmers' incomes or do a single thing toward stopping the ruinous deflation that overwhelms agriculture.

And what of the 12,000,000 unemployed wage earners? What of the hundreds of thousands of home owners who are faced with the loss of their homes? What of the millions of destitute, cold, and hungry men, women, and children in the land? What of our idle factories, mills, and mines?

Has our Democratic leadership said anything helpful about these? Not a word. Have these victims of a cruel emergency received any comfort from us? Not a crumb.

It is my considered opinion that unless the Democratic Party recognizes its responsibility as its opportunity, unless it grasps that opportunity swiftly, firmly, and courageously, it is doomed and will be destroyed by an angry and outraged America.

TREASURY AND POST-OFFICE APPROPRIATIONS

The Senate resumed the consideration of the bill (H. R. 13520) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes.

The VICE PRESIDENT. The question is on the amendment of the Senator from Tennessee [Mr. McKELLAR].

Mr. JOHNSON. Mr. President, I have asked the Senator from Tennessee if he would permit me to proceed with an amendment to which I hope there will be no particular objection.

The VICE PRESIDENT. Does the Senator from Tennessee withdraw his amendment?

Mr. McKELLAR. Temporarily, until the amendment of the Senator from California can be disposed of.

Mr. JOHNSON. Mr. President, on the 11th day of January last I gave regular notice in writing, according to the rules, that I should move for a suspension of the rules to permit the particular amendment to which I advert to be introduced and to be heard by the Senate. That amendment I desire to perfect; but first, I think, if it be considered to be new legislation, not germane to the subject matter of the bill, that it will be essential for me to obtain the consent of two-thirds of the body to present the amendment.

I desire to say, by way of parenthesis, that in my opinion the legislation presented is germane to the bill, and does not require any such procedure; but in order to be on the safe side the notice has been regularly given. It is printed in the RECORD of January 11 at page 1642, and I am ready to proceed with it.

Mr. McKELLAR. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Tennessee?

Mr. JOHNSON. I yield to the Senator from Tennessee.

Mr. McKELLAR. Will the Senator state what the proposed amendment is? I have not been able to get a copy of it and have not read it.

Mr. JOHNSON. The amendment is to require the purchase of domestic supplies for public use and the use of domestic material in public buildings and works.

Mr. WALSH of Massachusetts. The so-called "Buy American" bill.

Mr. ROBINSON of Arkansas. Mr. President, may I ask the Senator a question?

Mr. JOHNSON. Yes, sir.

Mr. ROBINSON of Arkansas. Is the Senator proposing the amendment that was presented by himself on January 10 (calenday day of January 11), 1933, or is he proposing to substitute something for that amendment?

Mr. JOHNSON. I desire to substitute for it what is termed the Wilson bill, that has passed the House of Representatives.

Mr. ROBINSON of Arkansas. I have sent for a copy of that bill. I have not been able to get it yet.

Mr. JOHNSON. If it would suit the convenience of the Senate, it might be that we could proceed by permitting the presentation of the amendment and its perfection, and then it could lie over until to-morrow if it were desired.

Mr. ROBINSON of Arkansas. I think that would be well.

Mr. McKELLAR. I hope the Senator will take that course. I believe it would be better, as I have not looked at the amendment, and other Senators around me say that they have not.

Mr. JOHNSON. Very well.

Mr. MOSES. Mr. President, if the Senator will yield, may I suggest that in any event it probably would be better to have a vote upon the motion which the Senator has filed for the suspension of the rules in order that the way may be perfectly clear for whatever course is taken.

Mr. JOHNSON. I am perfectly willing to proceed in that fashion, then perfect my amendment, and let it lie on the table, so that any Senators who may desire to study it may have ample opportunity.

Mr. McKELLAR. So that it could be printed to-night and be on the desks to-morrow morning for the use of Senators.

Mr. JOHNSON. I have no objection at all to that course, sir.

Mr. BINGHAM. Mr. President, will the Senator yield to me?

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Connecticut?

Mr. JOHNSON. I yield.

Mr. BINGHAM. Is the amendment, in its perfected form, to be the equivalent of the bill which was recently reported out of the Committee on Commerce with amendments?

Mr. JOHNSON. Yes, sir; that is exactly the amendment which I desire to present.

Mr. BINGHAM. That bill is now on the calendar.

Mr. JOHNSON. It is on the calendar; but the danger of never reaching it upon the calendar has led me to pursue this course.

Now I ask that the motion to suspend the rules may be put.

The VICE PRESIDENT. The Senator from California moves to suspend the rules for the purpose of offering the amendment which will be stated—or does the Senator desire to have it stated?

Mr. JOHNSON. No; I will state it subsequently.

Mr. KING. Mr. President, what is the motion?

The VICE PRESIDENT. It is a motion to suspend the rules so as to make the amendment in order.

Mr. JOHNSON. So that the amendment may be in order without question.

Mr. KING. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. KING. If the motion just submitted by the Senator from California shall prevail, will that obviate the necessity of obtaining a two-thirds vote?

The VICE PRESIDENT. It will take a two-thirds vote to adopt it.

Mr. McKELLAR. It takes two-thirds now. A parliamentary inquiry, Mr. President.

The VICE PRESIDENT. The Senator will state it.

Mr. McKELLAR. Does it take a yea-and-nay vote to determine the two-thirds?

The VICE PRESIDENT. It is not necessary, but any Senator may demand the yeas and nays.

Mr. McKELLAR. I understand that.

The VICE PRESIDENT. The Chair might want it. The Chair does not know at present.

Mr. JOHNSON. I ask that the motion be put.

Mr. ROBINSON of Arkansas. Mr. President, I do not know the provisions of the amendment. I am not familiar with it. I wonder if the Senator would suggest the absence of a quorum, in order that all Senators who are interested in it may have an opportunity of being here.

Mr. JOHNSON. I should be very glad to do that, Mr. President; but I thought the other course would answer the purpose of permitting us to perfect the amendment, let it lie upon the table then until to-morrow, and then it would be printed, and all would have the opportunity to see it. Will the Senator permit that course, please?

Mr. ROBINSON of Arkansas. I shall not object to it.

Mr. GORE. Mr. President, I am not quite sure that I understand what is proposed. I do not wish to obstruct the consideration of this "buy-American" scheme, and I should be perfectly willing if it could be arranged by the Senator from California to perfect his amendment; but I should not be willing to have the rules suspended by a mere viva voce vote.

Mr. President, I may want to offer some amendments to this proposition myself. I may wish to offer amendments providing that no State shall buy anything that is not produced within the State, and that no county shall buy anything that is produced outside the county, and that no farmer shall be allowed to buy anything at all or sell anything that he grows on his farm, and also to offer a motion that the American eagle shall be displaced as the emblem of the Republic and a terrapin be substituted in its stead—a terrapin closed up in its shell and hermetically sealed. If trade is a curse let us stop it.

Mr. JOHNSON. Mr. President, ample opportunity for those very intelligent amendments will be afforded the Senator from Oklahoma, of course; but the only thing that is asked now is that permission be given for the presentation of the amendment. We will argue it out subsequently, and be very glad to argue it out subsequently. I thought there was nothing unusual in the request that the two-thirds consent may be accorded for the presentation of the amendment. The amendment will be presented, it will lie upon the table, and to-morrow, if it can then be reached, will be reached with full opportunity accorded every Member to present his views respecting it and any amendments that he may desire.

Mr. KING. A parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. KING. Does it require suspension of the rules, which would require a two-thirds vote, in order merely to present the amendment which the Senator from California has in mind?

The VICE PRESIDENT. The amendment may be presented at any time.

Mr. KING. I have no objection to the Senator from California presenting it and speaking upon it at length; indeed, I shall welcome the opportunity being afforded the Senator in order to explain his views. I do not wish, however, to consent to an abrogation of the rule.

Mr. GORE. Mr. President, I wish to express the same sentiment. I am anxious to facilitate the presentation of the amendment. I am sure the Senator from California has every facility for doing that. The only point is, I do not wish the rules of the Senate to be suspended. They could be suspended by a two-thirds majority, but possibly there would be a third who would prevent that. If so, I should not wish the matter to be passed over without an expression of the views of the Senate.

Mr. ODDIE. Mr. President, will the Senator from California yield to me?

Mr. JOHNSON. I yield.

Mr. ODDIE. The Committee on Appropriations considered an amendment quite similar to the one suggested, which was to have been offered on the floor by the Senator from South Carolina [Mr. BYRNES]. The Senator from South Carolina, however, and the Senator from California, have discussed the amendment, and I believe the differences between the two bills have been ironed out, and the understanding is that the amendment of the Senator from California will be the one the committee will approve. I hope the motion of the Senator from California will be carried. I think it is a very necessary thing.

Mr. ROBINSON of Arkansas. Mr. President, I suggest to the Senator from California that he offer his amendment perfected, that it be then discussed, and perhaps an agreement can afterwards be reached. I suggest that the question of the suspension of the rules be taken up afterwards.

Mr. JOHNSON. I think it is absolutely essential that we have at this time permission for its presentation by a suspension of the rules, if that be necessary.

Mr. ROBINSON of Arkansas. My idea is that the Senate can suspend the rules if it chooses to do so after it understands just what the proposition is. I should prefer to have the Senator pursue the course I have suggested.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. JOHNSON. I yield.

Mr. TYDINGS. I do not want to do anything to delay the Senator's request, but I do know that four or five Senators who are in line with the general philosophy of his amendment are absent, and I was wondering whether the Senator would yield for the suggestion of the absence of a quorum, so that an amendment might be offered if any one wishes to offer one.

Mr. JOHNSON. It will not be necessary, because I will adopt the suggestion of the Senator from Arkansas. I will perfect the amendment, with the consent of everybody, the amendment may be printed, and to-morrow, if it be necessary, we will take up the question of the consent of two-thirds to the presentation of the amendment, if that be required. With that understanding I present a modification of the amendment that is found printed at page 1572 of the CONGRESSIONAL RECORD of the session dated January 11, 1933, and I ask that it be printed, and to-morrow, if opportunity presents, I will make the motion for the suspension of the rules if it be essential, and then proceed with the amendment, if we can do it, upon the bill.

Mr. WALSH of Massachusetts. Mr. President, for the sake of the RECORD, may I inquire whether the amended bill the Senator is now presenting contains the amendments which I offered for certain interests and certain producers?

Mr. JOHNSON. Yes; two of them.

Mr. BLAINE. Mr. President, does the Senator's proposed amendment textually follow House bill 10743, reported by the Committee on Commerce?

Mr. JOHNSON. Yes. There are, however, a few brief amendments, which have been presented in conjunction with the Senator from Massachusetts, the Senator from Connecticut, and various others.

Mr. JOHNSON's amendment, intended to be proposed by him to House bill 13520, the Treasury and Post Office Departments appropriation bill, was ordered to lie on the table and to be printed, as follows:

On page 87, after line 15, insert:

"TITLE V

"That when used in this title—

"(a) The term 'United States,' when used in a geographical sense, includes the United States and any place subject to the jurisdiction thereof;

"(b) The terms 'public use,' 'public building,' and 'public work' shall mean use by, public building of, and public work of, the United States, the District of Columbia, Hawaii, Alaska, Puerto Rico, the Philippine Islands, American Samoa, the Canal Zone, and the Virgin Islands.

"SEC. 2. Notwithstanding any other provision of law, and unless the head of the department or independent establishment concerned shall determine it to be inconsistent with the public interest, or the cost to be unreasonable, only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States, shall be acquired for public use. This section shall not apply with respect to articles, materials, or supplies for use outside the United States, or to be used for experimental or scientific purposes, or if articles, materials, or supplies of the class or kind to be used, or the articles, materials, or supplies from which they are manufactured are not mined, produced, or manufactured, as the case may be, in the United States in commercial quantities and of a satisfactory quality.

"SEC. 3. (a) Every contract for the construction, alteration, or repair of any public building or public work in the United States shall contain a provision that in the performance of the work the contractor, subcontractors, material men, or suppliers, shall use only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States, except as provided in section 2: *Provided, however,* That if the head of the department or independent establishment making the contract shall find that in respect to some particular articles, materials, or supplies it is impracticable to make such requirement or that it would unreasonably increase the cost, an exception shall be noted in the specifications as to that particular article, material, or supply, and a public record made of the findings which justified the exception.

"(b) If the head of a department, bureau, agency, or independent establishment which has made any contract containing the provision required by subsection (a) finds that in the performance of such contract there has been a failure to comply with such provisions, he shall make public his finding, including therein the name of the contractor obligated under such contract, and no other contract for the construction, alteration, or repair of any public building or public work in the United States or elsewhere shall be awarded to such contractor, subcontractors, material men, or suppliers with which such contractor is associated or affiliated, within a period of three years after such finding is made public.

"SEC. 4. This act shall take effect on the date of its enactment, but shall not apply to any contract entered into prior to such effective date."

Mr. BRATTON. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. BRATTON. Has disposition been made of all committee amendments?

The VICE PRESIDENT. All except the economy amendment, and that is to go over until all individual amendments have been disposed of. All the committee amendments have been disposed of with that exception.

Mr. McKELLAR obtained the floor.

Mr. BYRNES. Mr. President, will the Senator from Tennessee permit me to offer an amendment, as to which I know there will be no controversy, simply to perfect language?

Mr. McKELLAR. I yield.

The VICE PRESIDENT. The Senator from Tennessee yields to the Senator from South Carolina so that he can present an amendment, which will be read.

The LEGISLATIVE CLERK. On page 65, line 15, after the word "the," the Senator from South Carolina moves to insert the words "President or of the," so as to read:

(b) For the maintenance, operation, and repair of any Government-owned motor-propelled passenger-carrying vehicle not used exclusively for official purposes; and "official purposes" shall not include the transportation of officers and employees between their domiciles and places of employment, except in cases of medical officers on out-patient medical services and except in cases of officers and employees engaged in field work the character of whose duties makes such transportation necessary and then only as to such latter cases when the same is approved by the head of the department or establishment concerned. The limitations of this subsection (b) shall not apply to any motor vehicles for official use of the President or of the heads of the executive departments.

The VICE PRESIDENT. The question is on agreeing to the amendment.

Mr. BINGHAM. Just a moment.

Mr. BYRNES. Mr. President, the amendment would simply place the automobiles of the President in the same class with automobiles of the Members of the Cabinet, exempting them from the provisions limiting the amount to be spent for maintenance and operation of official cars.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. McKELLAR. Mr. President, I now offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The LEGISLATIVE CLERK. On page 58, line 2, after the numerals "$19,000,000," the Senator from Tennessee proposes to insert the following proviso:

Provided, That no part of the money herein appropriated shall be paid to any company for carrying air mail under a contract with the Government in an aggregate sum exceeding 50 per cent of the amount paid by the Government to it at the present time.

Mr. McKELLAR. Mr. President, on page 58 of the bill will be found an item for the inland transportation of mail by aircraft, amounting to $19,000,000. The effect of my amendment, if it is adopted, will be to reduce that amount to $9,500,000, or to cut it in two.

Mr. President, much has been said about violating contracts. This reduction can be made without the violation of any contract. The Postmaster General has complete au-

thority in all of the contracts to reduce the route, to reduce the service, to reduce the number of ships, or to make any other change he desires to make.

I turn to page 301 of the hearings on the air mail contracts and read as follows from one of the contracts:

7. It is hereby further stipulated and agreed that this contract may be terminated whenever, in the judgment of the Postmaster General, the interest of the Postal Service shall so require, upon serving notice upon the contractor at least 45 days prior to such termination, provided that in case of such discontinuance of service, as a full indemnity to the contractor, one month's extra pay, based on the average pay for the preceding 6-month period or the full period of service, if less than six months, shall be allowed.

In the testimony of Postmaster General Brown before our committee he said that these services could be reduced. Many of the contracts provide for night flying and also for day flying. On one of the routes as many as eight services across the continent are now provided. There would be no trouble about reducing under this amendment.

Mr. President, as to the advisability of it, a Senator told me to-day, in speaking of one of these domestic air mail contracts, that the contractor, or some member of the firm, stated that really the Government subsidy was so large in his particular case that it was embarrassing.

It seems to me that with conditions as they are, and with the conditions which confront this country, we ought not to give these enormous subsidies to the aircraft companies. They certainly might be cut in two. There is no reason why they can not be cut in two.

I am not going into the subject of carrying mail by air. I have always been very much in favor of air mail. I know the Senator from Utah [Mr. KING] will recall that in 1917 or 1918, not long after I came to the Senate, I introduced and had passed a bill providing for an air mail route from here to New York, and the next year one from New York to San Francisco. The Government ran those services and afterwards transferred them to private enterprises, and they are now in the hands of private enterprises.

I remember there was very much objection to the expenditure of $100,000 for a trial air mail route between here and New York. Afterwards there was great objection to the expenditure of a million dollars. But now we are asked to pay in subsidies to air mail companies $19,000,000, and that does not include the subsidies we are paying for lighting the air routes and arranging the routes. My recollection is that it is something like $15,000,000 additional.

We are doing too much for these companies, especially in these hard times. Our Government is so badly behind in its running expenses that it seems to me to be indefensible for the Congress to appropriate these vast sums for air mail companies.

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. McKELLAR. In just one moment. I want to call the attention of the Senate to just one illustration of what we are doing. There are four big lines, but the Ludington Line is not one of the four. The Ludington Line, as Senators know, runs a service from Washington to New York. That line has never been given a subsidy. Just the other day it established a new line from Nashville, Tenn., to Knoxville, and to Bristol, to Lynchburg, and to Washington, and they are getting along without subsidies. They are doing the business without Government subsidy. If a line like the Ludington Line can get along in this day of depression without a Government subsidy, it seems to me that subsidies ought to be done away with. We should not contribute, out of an empty Treasury, these vast sums of money, when many of our own people are starving, and many millions of them, some eleven million, I believe, are without employment at all. I offer this amendment for the purpose of asking the Senate at least to cut down the subsidy 50 per cent.

Now I yield to the Senator from Michigan.

Mr. VANDENBERG. I should like to ask the Senator two or three questions.

Mr. McKELLAR. I will be delighted. If I can, I shall answer them.

Mr. VANDENBERG. The first question relates to whether we have an unqualified right to change the contract.

Mr. McKELLAR. Will the Senator yield to me just a moment?

Mr. VANDENBERG. I heard what the Senator read. I simply want to ask the Senator if there is any controversy over the question whether we have it within our power to change these contracts. Is that controverted?

Mr. McKELLAR. So far as I am able to ascertain, it is not controverted in the slightest. We took the testimony of the Postmaster General on this subject, which is to be found on pages 35 and following of the Senate hearings on this very bill. He did not controvert it. He said that it could be done. They have ample authority in the contract for cutting down the services, so to speak. They have ample authority in the contract for cutting down the service, so as to make it accord with the 50 per cent reduction, and it is so admitted. I am quite sure, from reading the contract, that there is not the slightest question about the right to reduce the appropriation as provided for in the amendment.

Mr. VANDENBERG. Very well; that settles that question. I might say to my friend from Maryland that it is a question which differentiates this problem and the one upon which we were voting earlier in the day.

Let me ask another question: Would it be more practical simply to reduce the total and permit the Postmaster General to allocate the reduced total in whatever aspect he considers to be the best for the service?

Mr. McKELLAR. I am very happy that the Senator asked that question. My purpose is, if the amendment is adopted, then to offer a further amendment striking out $19,000,000 and inserting $9,500,000 in accordance therewith.

Mr. VANDENBERG. Then, another question: Would it be practical in any degree to increase air mail postage rates to a point where the service would be self-sustaining?

Mr. McKELLAR. I can not answer that question. I am inclined to think that those who desire air mail service should pay for it. But whether or not it would be feasible I do not know. In other words, the Senator knows that in all transportation the cost of the transportation can be fixed higher than the traffic will bear. We would not want to do that, because we do not want to exclude air mail.

Mr. VANDENBERG. If it were practical?

Mr. McKELLAR. If it were practical, it ought to be done, by all means, or substantially done, at all events.

Mr. VANDENBERG. If it could be done, there certainly would be no objection to the maintenance of air mail service to any extent?

Mr. McKELLAR. Indeed, not only is there no objection to it, but I think every thinking man would be delighted to have it. But it ought to stand on its own bottom, certainly to the very largest extent possible.

Mr. VANDENBERG. Then, would the Senator have any objection to adding a further clause to his amendment which would permit the contracts to continue so long as they are self-liquidating?

Mr. McKELLAR. I think that would be legislation, and I am afraid it would make the amendment out of order. I should not like to have it tacked on this amendment, but later I shall be glad to confer with the Senator about it.

Mr. VANDENBERG. That would be a fair proposition, would it not?

Mr. McKELLAR. Offhand, it would appear so.

Mr. TYDINGS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Tennessee yield to the Senator from Maryland?

Mr. McKELLAR. Certainly.

Mr. TYDINGS. The amount of the appropriation is $1,900,000. May I ask the Senator from Tennessee what is the amount of money required to meet the contracts now made by the Government?

Mr. McKELLAR. As explained by Postmaster General Brown and as the contracts themselves explain, the service could be reduced on each one of the routes.

Mr. TYDINGS. How much?

Mr. McKELLAR. Whatever the Congress would desire to fix. It is a matter under the contract entirely in the discretion of the Congress as to how much shall be paid.

Mr. TYDINGS. Suppose we wipe out the whole $19,000,000, would it be a violation of the Government contracts?

Mr. McKELLAR. I do not think so.

Mr. TYDINGS. Is there any question about it?

Mr. McKELLAR. The Senator is a lawyer, just as I am, and I will let him read the contract. This is the provision in the contract. I read from page 301 of the air mail contracts:

It is hereby further stipulated and agreed that this contract may be terminated whenever in the judgment of the Postmaster General the interests of the Postal Service shall so require, upon serving notice upon the contractor at least 45 days prior to such termination: *Provided*, That in the case of such discontinuance of service, as a full indemnity to the contractor, one month's extra pay based on the average for a six months' period or the full period of service if less than six months, shall be allowed.

Mr. TYDINGS. Under that contract I think anyone would say the Government had the right on 45 days' notice to wipe out the entire contract. I think the Senator has cleared that up. The first part of his amendment reads:

That no part of the money herein appropriated shall be paid to any company for carrying air mail under a contract with the Government that has not been declared valid by a court of competent jurisdiction.

Mr. McKELLAR. Those last words have been stricken out of the amendment as prepared and sent to the desk.

Mr. TYDINGS. What words have been stricken out?

Mr. McKELLAR. It now reads this way:

No part of the money herein appropriated shall be paid to any company for carrying air mail under a contract with the Government in an aggregate sum exceeding 50 per cent of the amount paid by the Government at the present time.

Mr. TYDINGS. In other words, the Senator is going to cut the subsidy in half?

Mr. McKELLAR. Yes.

Mr. TYDINGS. But the Senator has eliminated that portion of the amendment which would compel the airplane company to go into court and have its contract declared valid before it could get any of the money?

Mr. McKELLAR. That is true.

Mr. TYDINGS. What the Senator really does is to strike out $1,900,000 and insert in lieu thereof, in effect, $9,500,000?

Mr. McKELLAR. Yes; if the amendment is agreed to, that is what will be done.

Mr. COPELAND. Mr. President, will the Senator yield?

The PRESIDENT pro tempore. Does the Senator from Tennessee yield to the Senator from New York?

Mr. McKELLAR. I yield.

Mr. COPELAND. I am not as well informed as I might be regarding air mail contracts. I know more about the ocean mail contracts. I take it from what the Senator said that in these air mail contracts there are liberal provisions for cancellation. Is that true?

Mr. McKELLAR. Not only liberal, but it gives express authority to the Postmaster General to do it. In other portions of the contract it is also provided that he may reduce the number of services on the lines or routes. For instance, as Mr. Brown stated, he could do away with night flying entirely or day flying entirely. There is this difference between night and day flying. In the daytime the planes usually carry passengers, but that is not true of night flying to the extent that it is of flying in the daytime. People fly more in the daytime than they do at night.

Mr. COPELAND. I am really astonished to find that the contracts are written on a different basis than those relating to ocean mail.

Mr. McKELLAR. There is a difference, as the Senator well knows from the testimony. The air mail contracts and the ocean mail contracts are very different.

Mr. COPELAND. Of course, we could not do with ocean mail contracts what the Senator mentions, but I am anxious to have his views about air mail contracts.

Mr. McKELLAR. If the Senator will look at page 301, at the top of the page, under paragraph 7 of the air mail contracts, he will find it.

Mr. TYDINGS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Tennessee yield further to the Senator from Maryland?

Mr. McKELLAR. Certainly.

Mr. TYDINGS. As I understand, the mail rate for airplane mail is fixed by law.

Mr. McKELLAR. No; it is fixed by the Postmaster General.

Mr. TYDINGS. In that event would it not be well to give the Postmaster General, along the lines of the proposition advanced by the Senator from Michigan [Mr. VANDENBERG], some authority to raise or lower the rates, as the case may be, with the idea of increasing the revenue? If the service is self-sustaining, we would not want to cut it down; but what we are trying to do is not to have money taken out of the Public Treasury for this particular service. If the Postmaster General could raise the rate a cent or two per letter and after experimenting a month or two increase the revenue, I would be glad to increase the appropriation to the extent of the increased revenue.

Mr. McKELLAR. As I said to the Senator from Michigan when he first presented the suggestion a few moments ago, I think it is an exceedingly wise suggestion, and the only reason why I am not willing to accept it on this amendment is that I am afraid it would be legislation and not in order.

Mr. VANDENBERG. Can the Senator tell me the total postal receipts from air mail last year?

Mr. McKELLAR. I have a very general recollection about it. It was about $6,000,000.

Mr. VANDENBERG. In other words, it is about one-third of the cost?

Mr. McKELLAR. Yes; just about that. I am not positive as to the figures.

Mr. ODDIE. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Tennessee yield to the Senator from Nevada?

Mr. McKELLAR. I have finished what I wanted to say if anyone else wishes to take the floor.

Mr. ODDIE obtained the floor.

Mr. COPELAND. Mr. President, will the Senator yield to me for a moment to ask the Senator from Tennessee a question?

Mr. ODDIE. I yield for that purpose.

Mr. COPELAND. I want to ask the Senator from Tennessee if there is any dispute as to the right of the Postmaster General to change the contract?

Mr. McKELLAR. I think not. Does the Senator mean to modify or annul it?

Mr. COPELAND. To modify it.

Mr. McKELLAR. I am certain there is no question about it.

Mr. COPELAND. I should like to have it clearly understood on the floor of the Senate that the contention is made by the Senator from Tennessee that under the air mail contracts the Postmaster General has the right to make certain modifications. I am not advised about it. I know that is not the case as regards ocean mail contracts.

Mr. McKELLAR. It is a very different kind of contract that is made with the ship companies.

Mr. COPELAND. I am anxious that those here who are interested in the air mail may be fully advised as to the situation. I myself have had a great interest in the subject because I thought it had to do with the development of aviation and I felt kindly disposed toward it; but I am in no position to defend the proposal of whether the contract shall or shall not be modified. I think the Senator from Tennessee has raised a very important point.

Mr. McKELLAR. The Senator has the contract before him. That condition prevails in the contract.

Mr. VANDENBERG. Mr. President, will the Senator from Nevada yield?

Mr. ODDIE. Certainly.

Mr. VANDENBERG. I would like to pursue the suggestion which the Senator from Maryland [Mr. TYDINGS] and I previously brought to the attention of the Senator from Tennessee. Would it be feasible and has an appropriation

ever been made in such form as to make the appropriation read something like this:

Nine million five hundred thousand dollars, and any sum in excess thereof which may be produced by revenues of the air mail.

Mr. McKELLAR. I doubt if that would be in order on this bill, and I hope the Senator will not undertake to offer it that way on the pending bill.

Mr. VANDENBERG. The thing I am trying to do, as the Senator will observe, is to permit the service to make itself self-sustaining, if it wants to expand itself on a self-sustaining basis.

Mr. McKELLAR. But remember that even if we cut it in half we are giving it probably one-third more than the revenues now produced.

Mr. VANDENBERG. I understand, and I am not quarreling with the Senator's purpose in that aspect. I am asking if we could not find a way to make it sufficiently elastic to meet a subsequent situation in which it might be made self-sustaining.

Mr. McKELLAR. I doubt if that would be good legislation under any circumstances. I understand the point the Senator makes, and I would like to pass some measure that would reach the conclusion the Senator suggests. However, I hope he will not offer it as an amendment to this particular amendment.

Mr. GLASS. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Nevada yield to the Senator from Virginia?

Mr. ODDIE. I yield.

Mr. GLASS. I find myself in agreement with the suggestion just made by the Senator from Michigan [Mr. VANDENBERG]. No one would object to the air mail if people who want air mail are willing to pay for it. But the last suggestion made would seem to me to involve a subsidy of $9,000,000 to begin with.

Mr. McKELLAR. Twice the amount that the air mail produces.

Mr. GLASS. Yes.

Mr. McKELLAR. Which would be, I think, too much in any event.

Mr. GLASS. I think it is a complete fad, and I have said so in the committee over and over again. It is nothing but a fad. It is not a necessity. We have the best railway mail service in the world, and if anybody finds that the best railway mail service in the world is inadequate for his particular purposes and fancy, he can resort to the day letter or the night letter of the telegraph companies, without any taxation on the people of the country, and, if he finds that that is not adequate for his purposes, he has the long-distance telephone service available to him. It is nothing but a fad, and, in my judgment, it is a wicked expenditure of the taxpayers' money in these times of dreadful necessity.

Mr. McKELLAR. Mr. President, may I say to the Senator from Virginia, in order to show what the air mail is doing to the railroads' mail business, that in 1931 we paid the railroads $111,634,000 for carrying the mails; in 1932 that amount was reduced to $103,000,000, and the bill now pending provides for the next fiscal year an appropriation of only $97,000,000. It will thus be seen that the air mail service is very much in competition with the railroads, and, of course, it costs the Government a great deal more, and I doubt if the public is benefited to any very great extent. As the Senator knows, he and I have taken the same position about it in the Committee on Appropriations for a long time, and I agree with everything he has said about the subject.

Mr. GLASS. In other words, the Government is pursuing practices that are undermining the railroads of the country and then we are appropriating hundreds of millions of dollars to save the railroads.

Mr. McKELLAR. That is right.

Mr. LONG. Mr. President——

The PRESIDENT pro tempore. The Senator from Nevada has the floor. Does he yield to the Senator from Louisiana?

Mr. ODDIE. I will yield in just a moment. I wish to give some figures which I think will be helpful. In the last two and a half years the Post Office Department has made four reductions in the rates for carrying the mail. For instance, first from $1.26 a mile to 85 cents a mile, then to 72 cents, then to 62 cents, and in November, 1932, the rate was further reduced to 45 cents a mile.

To further reduce the appropriation which the House has provided in this bill would seriously cripple the air mail service. This question has been fought on the floor of the Senate for some time past, and it has been demonstrated that the American people desire the service to be continued and improved. It has been increased to a large extent, and the Department of Commerce has done wonderful work in providing ground facilities, making flying safe, and night flying has been added. The American people are receiving a great service, which they do not want to lose.

I have many figures here which I would like to present, but I will not do so at this time. I will, however, ask to have placed in the RECORD a statement on the aircraft industry in general by the Aeronautical Chamber of Commerce of America contained in the Senate committee hearings on the Treasury and Post Office appropriation bill from page 82 to page 92, not including the illustrations. This statement gives a very good résumé of the aircraft industry generally.

The PRESIDENT pro tempore. Without objection, the statement will be printed in the RECORD.

The statement referred to is as follows:

AERONAUTICAL CHAMBER OF COMMERCE OF AMERICA (INC.),
New York City, December 9, 1932.

Hon. TASKER L. ODDIE,
United States Senate, Washington, D. C.

DEAR SENATOR: I have the honor to transmit to you herewith a memorandum on "The aircraft industry and appropriations for the fiscal year 1934." I am sending this memorandum to you in the hope that the facts stated therein may be of use to you in consideration of such aviation matters as may come before Congress.

If there is any additional information which you would like to have, please consider our organization at your service.

Yours very truly,

CHARLES L. LAWRENCE, *President.*

[Memorandum]

THE AIRCRAFT INDUSTRY AND APPROPRIATIONS FOR THE FISCAL YEAR 1934

THE FEDERAL GOVERNMENT AND THE NATIONAL AVIATION PROGRAM

(A survey of the scope, significance, and present and future mission of the national aviation structure, with particular reference to its function in the present economic situation)

NOTE.—All figures for the calendar year 1932 are of necessity estimates, based on careful study of data from what we believe to be reliable sources.

INTRODUCTION

As the time arrives for consideration of the 1933–34 National Budget a great deal of thought is being given to what amounts, in various categories, should most fittingly be allotted by the Nation through Congress to the country's aviation structure. The aspects of the Budget affecting aviation naturally are of vital concern to the aviation industry, which has developed itself and its resources in tune with the requirements of commerce and of an effective but economical national defense program.

In expressing its views of the conditions affecting the allotments for aeronautical purposes, the aviation industry recognizes fully the economic situation facing Government and business. Consideration of the economic exigencies serve only to strengthen the industry's confidence that the aeronautical establishment never was more vital to national welfare than at the present time, that its peculiar attributes are especially valuable in seeking business revival and expansion.

* * * * * * *

The aviation industry frankly hopes that the cooperation of the Government will be continued along the lines indicated:

1. Provision of air-mail compensation sufficient to assure operation of the present services, which include the highly organized passenger and express system, at their highest possible scope and efficiency, and to make necessary adjustments to increase their effectiveness where most needed. This involves the full administration of the Watres bill, approved by Congress for the development of an adequate national mail and passenger system in the service of business.

2. Assurance of the continuation of the vital services to all phases of aviation—commercial and military—as rendered by the Department of Commerce in accordance with policies initiated by Congress through the air commerce act of 1926.

3. Assurance of logical and economical procurement programs for the Army and Navy in line with the time-honored policies of

national defense, and similar to the recent 5-year procurement programs.

* * * * * * *

We feel that there are only four legitimate reasons in favor of any appropriation from the next Congress. An appropriation must—

1. Help sustain or increase employment.
2. Contribute to the recovery of general business.
3. Contribute to the economic structure of the next decade; anticipate the future economic needs of the country.
4. Assure an element essential to national defense.

* * * * * * *

How closely do allotments for aeronautical purposes meet the requirements outlined? How are aviation's requests for continued Government cooperation justified?

I. Aviation allotments and employment

We believe that the general employment situation will be influenced substantially by the provisions for the national aviation program made by the next Congress. Appropriations for the year ending June, 1932, for (1) military procurement, (2) the air mail, (3) Federal airways and allied administration totaled $79,153,531.

Outside the Government services—which include the employees of the Aeronautics Branch of the Department of Commerce, employees of the Post Office Department concerned with air mail, and the military aviation branches—there are approximately 30,000 persons making up what is designated as the aviation industry. About 6,500 are engaged in air transportation, about 9,200 in commercial and military aircraft production, about 2,300 in commercial and military aircraft engine production, and about 12,000 in miscellaneous flying services, airport operations, servicing stations, and the like. The first three categories are notably affected by the amount of Government participation in aviation. The latter category is scarcely less so. And, as will be shown, the influence of the Federal aviation program does not stop with the aviation industry itself. It reaches out into many fields.

Though numerically these groups may not compare impressively with larger industries, their importance soars in the light of their highly specialized and expert nature. The average person engaged in aviation must be specially trained, must acquire expensive experience, and must be competent to an unusual degree. Few other industries depend so much upon the capacity of the average individual.

This is due largely to the fact that the aeronautical industry still is, for the most part, in an engineering stage. The history of the automotive industries and others is being repeated in aviation. Thus, a vast amount of experimental and engineering work requiring highly trained specialists must precede anything approximating quantity production or large-scale operation with the benefit of low labor costs. Meeting high labor costs is one of aviation's problems to-day.

INFLUENCE FAR-REACHING

The extent to which the Government may influence the general employment problem is indicated by the distribution of the 1932 appropriations. Of the $41,796,231 made available for military procurement, for instance, almost half was devoted directly to labor. This was, of course, the largest single item. The same proportion applies also to the disposition of the $27,000,000 for foreign and domestic air mail. These two appropriations affect directly about 18,000 persons.

Indirectly many more are affected. The manufacturing and airline organizations spend about one-fourth of the appropriations outside their fields. The manufacturers, for instance, acquire a great deal of fabricated and raw materials from a wide variety of sources. Much of the factory's work consists of assembling parts fabricated elsewhere, another evidence of the engineering characteristic of aircraft manufacturing. The acquisition of fabricated and raw materials causes a much wider spread of Government money than appears on the surface. The same is true of the money applied to air mail. About one-fourth finds its way to the manufacturing departments of the industry in payment for new aircraft and engines, thus stimulating those branches. The balance finds its way into the gasoline and oil industries, telephone and telegraph services, and miscellaneous allied activities. Infiltration of the appropriations through many ramifications is obvious.

AVIATION PERSONNEL A NATIONAL ASSET

The basic elements of aeronautical manufacturing and air transportation are capital, mechanical equipment and engineering, and trained operating personnel. Experienced and skilled personnel are the most important and the most difficult to replace. The present staffs throughout the country represent years of intimate association with the development of commercial and military aviation. Many personnel adjustments have been made already on account of economic pressure, but many others have been made from time to time by the industry itself in the interest of greater service to commerce and to national defense. We believe it to be to the best interests of the Nation to guard against further unfavorable personnel adjustments. Conservation of personnel in aviation is conservation of a definite national asset.

II. Air transportation essential to business recovery

We believe that air transportation, which has come to be the capstone of the civil aviation industry, is indispensable to the recovery of business and to business expansion in the next decade. It is recognized as the most recent refinement in transportation. It has taken its place in the series of transportation improvements, which have included the clipper ship, the steamship, the railroad, electric car, and the bus. Not an experiment or a luxury, it already is an integral part of our economic system and any qualification of its effectiveness is as unthinkable as turning back a decade in other transportation and communication services.

Because air transportation provides speed and mobility supplied by no other medium, its development in the economic structure becomes a matter of national concern. The stringencies of the economic period merely make the investment more potent.

AIR TRANSPORTATION SUPPLEMENTS OTHER TRANSPORTATION MEDIA

Enough emphasis can not be placed, we believe, on the fact that air transportation is a supplement to other transportation media. It replaces none of them. It supplies a service which no others can supply and therefore is not a rival to any existing form of transportation. Its relations to others is similar to that between the telephone and the telegraph. The former has supplemented the latter and, as is usually the case, has stimulated its business in certain directions. Air transportation becomes another element in the transportation structure and our economic system to-day would be unpardonably backward without it. The harmonious functioning of all methods in a complete transportation service is needed to cope best with business conditions, present and future.

AIR MAIL ESSENTIAL TO AIR TRANSPORT SYSTEM

The Government participates in this new transportation function through appropriations for the air mail and for the airways system. The air mail service is and has been the heart of air transportation. Without it the air transport system could not be anywhere near as well developed as it is to-day and, consequently, any retractions from the present contracts would be reflected seriously throughout the entire aeronautical industry and by general business.

AIRWAYS ALSO ESSENTIAL TO AIR TRANSPORT

Fundamental to the maintenance of a satisfactory standard in air transport, in business and private flying, and in national defense operations is the Federal airways system, developed on the necessary interstate basis by the Department of Commerce. This national project was provided for by Congress in the air commerce act of 1926, and the reasons for it are just as sound to-day as then. The air transport system would have to suspend operations were the Federal aids to air navigation eliminated. Even a partial curtailment would threaten its effectiveness and, far more important, seriously jeopardize the safety of its operation.

In other words, commerce needs the service of air transportation and to make this possible the Federal airways, obviously, must be maintained at their fullest capacity. Failure to do so, we are convinced, would be the falsest kind of economy.

AIRWAYS A FEDERAL RESPONSIBILITY

The airways system is primarily a Federal responsibility because of the fact that State boundaries must give way to a national system if the full effectiveness of air transportation is to be achieved. The airways are the modern counterpart of the lighthouse service and other aids to shipping, traditional functions of the Government.

They constitute as real avenues of commerce up and down and across the country as the highways and the railroads. The radio communications and radio range beacons, the weather service, the beacon lights, the intermediate landing fields, and other component parts form the new channel of commerce.

SPEED, THE ALLY OF BUSINESS

The value of a developed transportation medium varies directly with the speed with which it is able to operate satisfactorily. Speed has been the main characteristic of modern business, and it was but logical that air transportation would arrive in answer to the constant demand for more and more speed. It is significant, too, that faster aircraft and more efficient operating methods have aided in increasing the speed of air transportation as use of the service grew.

Trade follows speed. Improved transportation media have played fundamental rôles in each broad period of economic development. Thus, the clipper ships, because of their ability to get about the globe faster than their rivals, enabled this country to achieve a leading position in foreign commerce early in the nineteenth century. Steamships later arrived on the scene with their superior speed, and the constant refinement in their performance has been particularly noticeable in recent years in the commissioning of record-breaking liners.

The pony express will be identified forever with the development of the West. Then came the faster railroads with which the opening up of the West was immeasurably quickened. Communication by mail was supplemented by the telegraph and that in turn was supplemented by the telephone and radio. Supplementing all other forms of transportation and communication we have to-day the air transport service.

The virtue of speed is seen in a number of basic business operations. Financial houses are among the greatest users of the air mail because it cuts down the interest charges and other losses on commercial paper by lessening time taken in transit. Quick turnover in capital is of obvious benefit to the credit market. Fast transportation also aids in quick turnover in merchandise stocks. Smaller stocks can be carried safely with the assurance that needed additions can be secured in a hurry and that fast delivery can be made to the consumer. Speed also has an important bearing in taking advantage of prices and in the intense competition imposed by changing styles. Furthermore, the economy of time means economy of money, or it can mean greater results for the outlay

invested. For instance, fast communication and transportation permit considerably extended executive control over a business territory.

The amount of additional speed which air transportation actually provides is indicated by the fact that mail, passengers, and express may be transferred from New York to San Francisco by air to-day in 27 hours eastbound, 31 hours westbound, as compared to 3 days and 12 hours by railroad, and between New York and Los Angeles in less than 23 hours eastbound, 26 hours westbound, as compared to 3 days and 11 hours by rail. Corresponding savings are made by the air lines linking Montreal and Miami, Winnipeg and New Orleans, Victoria and San Diego, Atlanta and Los Angeles. And these times are being reduced within a few months by the introduction of faster equipment.

RECORD JUSTIFIES FEDERAL SUPPORT

Though aviation, particularly air transport, is a comparative youngster in our national organization, it is able to present a formidable record in justification of the cooperation it has received from the Government and in justification of the place in the economic scale claimed for it. Furthermore, it is able to point to this record with the additional satisfaction that its services have been supplied with decreasing unit costs to the Government and to the public. This is a particularly important point in these days of economic stress.

The cost to the Post Office Department of having the air mail carried by the domestic contractors has decreased from an average of $1.09 per mile in 1929 to 80 cents per mile in 1931 and 57 cents per mile this year. The miles scheduled for air mail planes per day stood at 101,089 on September 1. This means that the air transport companies are attempting to perform their original assignments without the benefit of the compensation originally arranged.

One of the most remarkable air transport developments anywhere in the world is the foreign air mail system which has been built up under the sponsorship of the Post Office Department. This system calls for 11,000 miles of flying daily with mail, passengers, and express into Canada and south throughout Latin America. The nominal advantages of transportation by air are vastly increased in sparsely settled areas which are for the most part poorly served by ground transportation media. These services have placed an extremely effective tool in the hands of our interests engaged in foreign trade.

During the first eight months of 1932 the United States air mail planes in domestic and foreign operations flew 32,459,482 miles, carried 5,369,575 pounds of mail, 903,322 pounds of express, and 336,409 passengers.

Passenger fares have been steadily reduced. In 1929 the fares averaged about 15 cents per mile, considerably above the average rate charged by other ground transportation media. Quite naturally, time and experience were required to determine the proper rate. Scaling downward began and with the adjustments came increased patronage and expanded operations. The rate now averages throughout the country slightly more than 6½ cents per mile.

Both air mail and passengers have benefited by the constant stepping up of speed on the air lines. Though cooperation has existed between operators and the Government and between the operators themselves, there still remains a healthy competition typical of American business methods. The rates are more or less standardized; the great factor of speed with safety is the object of most intense refinement.

Furthermore, the routes have been pushed out in many directions to tap every area, so that there are more than 25,000 miles of mail airways, providing air mail service in all sections of the country. Mail planes actually land at 164 points; close coordination of operations of ground and air transport media provide the necessary connections with the air mail so that a letter dispatched in a community off the air lines will be transferred in a few hours to an air mail stop and be flown on to its destination.

Improvements have been made also in the number of times per day mail is flown over certain important routes, thus again reducing transit time by frequent pick-ups and increasing the value of the air mail service and enhancing its economic contribution.

Appropriations for the Federal airways system has enriched the country by the installation of 19,000 miles of airways lights for night navigation. More than 400 intermediate fields have been built. More than 90 radio range and radio marker beacons have been provided to guide pilots along the true airways when visual references are lacking, and 59 radio communication stations are in operation to broadcast the all-important weather information and other important data. The communication system is augmented by a far-flung system of teletypewriter machines which serve 13,000 miles of the airways. Two hundred and thirty-four meteorological stations have been established on the airways for the specific purpose of collecting and interpreting at frequent intervals the type of data useful for aeronautical purposes. There are more than 500 other weather stations providing aerological data.

CHART SHOWS GAIN

Exhibit A shows the growth of some of the main factors in air transportation. The appropriations for air mail have grown, but they have not increased as much, relatively, as have the services which they directly and indirectly account for. Air mail appropriations for 1932 were six times the amount of 1927, and air mail poundage is six times the 1927 figures. Passenger traffic has multiplied forty-one times in the same period, express ninety-six times, and miles flown annually in scheduled air transport almost ten times. In other words, for every dollar spent by Congress in furnishing air transportation many times as much return is being realized to-day as compared with 1927.

High standards in air transportation have been established under Federal supervision. Standards have been fixed also in the construction and operation of civil aircraft. Miscellaneous aviation operations, both commercial and private but outside the scheduled transport system, have ripened into effective servants of the business man under Federal supervision and leadership. The caliber of the work and personnel made possible through appropriations has a direct bearing upon the safety, business stability, and general progress in civil aviation affairs.

By-products of the Federal aviation program have reacted notably to the benefit of other activities. For instance, the exceedingly close relation between satisfactory air transport operations and the state of the weather has been responsible for the development of meteorology to a degree inspired by no other activity. Again, radio direction instruments have been perfected for operating in what used to be impossible weather.

COST TO GOVERNMENT LOW

The investment made in the Federal airways system is little enough. The actual cost of airways construction is approximately $500 per mile. Operation and maintenance averages $200 per mile per year. These facilities are available, in all their capacity for flexibility and expansion, to all phases of civil and military aviation. These figures are impressively low in comparison with the known cost of $9,000 per mile for a first-class highway.

It is especially important to note that a substantial proportion of the appropriation for domestic air mail is offset by the revenue from stamps for air mail matter.

The economic return from this investment in the airways is tremendous. Their traffic capacity is unlimited and they can be adjusted with comparative ease to accommodate changing conditions. Furthermore, what air transportation alone is able to offer the public to-day is unrivaled service of speed and mobility (that is, freedom from the limitations imposed by fixed nature and traffic characteristics of tracks and highways) right now far exceeds the return which any older form of transportation was able to offer at a comparable period in its history. This high return should be even more striking in the next decade.

Consideration should again be given in this connection to the economic significance of air transport's function as a supplement of other forms of transportation. Air transportation rounds out the transportation system. The close relationship is indicated by interchange of passengers and coordination of schedules between air lines and bus and railroad services.

III. Aviation in the economic trend

The economic trend inevitably is in the direction of increased speed. The demand for speed accounts for the automobile, the express highways, the express trains, subways, crack liners, the telephone, the airplane, and the airship. While all forms of transportation have their place, the service now being performed by air transport clearly indicates that in the next decade of business and industry the airplane and airship will prove particularly adaptable to the tempo and spirit of the times.

We can not escape the fact that economy of time is economy of money. For this reason it has long been a precept that mail shall travel by the fastest means of transport, as governed by conditions and necessity. This may be all air, all rail, all boat, or all dog sled, or a combination of these forms. Is it not logical to expect that air mail must occupy an increasingly important place in business of the future, and that by the same token all other forms of air transportation will likewise grow in value?

What is being built to-day, necessary and effective as it is, is at the same time an invaluable investment for the coming years. The economic life of the country in the next decade or two will derive incalculable benefit from the equipment already serving us through progressive government and private enterprise. Air transportation is an instrument by which we aid contemporary economics and coincidentally prepare wisely and solidly for the business and industrial future.

IV. Aviation industry essential for national defense

A strong civil aviation structure is a national defense asset. Civil aeronautics occupies a particularly important position in any national defense consideration because of its unique ability to supply immediately for national defense purposes both a key transportation service and a key manufacturing organiaztion.

At the same time the permanent national defense organization continues to make essential contributions to the welfare of commercial aviation. The military services have been responsible for refinements and developments in equipment, operating, and manufacturing technique, and miscellaneous branches of aviation, which have formed the basis of a great deal of the success of commercial operations. In fact, there have been a number of periods when military aviation has provided the vital stimulation to sustained commercial progress.

No other transportation system could be adapted as quickly and effectively to the requirements of national defense as the air transport organization and the associated Federal airways system. The air lines' maintenance bases, distributed strategically throughout the country, alone constitute a military asset of extremely impressive proportions. (See Exhibit B.) These are supplemented by more than 90 repair stations approved by the Department of Commerce and operated by commercial concerns. The indispensable nature of the hundreds of commercial and municipal airports throughout the country, part of the civil aviation structure, was demonstrated strikingly in the Air Corps maneuvers of 1931.

Capacity and skill in aircraft production are matters for deep concern in both military and commercial aeronautics. Since all but one aircraft manufacturing plant in this country are commercial, the civil aviation industry must be in tune with the requirements of normal times, and must be prepared to bear the brunt of tremendous and sudden expansion to meet national defense needs. The basis for capacity and skill in military production lies in the military procurement programs. Again the program of the Government works two ways at once—while equipping the military forces with essentials it is providing the civil plants with desirable business and improving their ability to supply the commercial market.

For their own sake, as well, the services need to be assured of adequate procurement programs. They keep fresh blood, so to speak, flowing into the national defense structure in the form of up-to-date equipment. They assure constant progress in types, design, and operating technique. Such planning obviously is superior to the alternative of periodic spurts of heavy buying with inevitable penalties in cost to the Government. Continuation of the methods embodied in the recently completed 5-year program is highly to be desired.

In recent years the proportion of military to commercial aircraft construction has grown, as indicated by Exhibits C and D. This is not because military procurement has increased. It is due rather to the fact that military procurement has remained fairly constant while commercial production has felt the pressure of the times. The dependence of the commercial plants on military production at the present time is obvious. The protection of these plants is essential for the sake of both their availability for national defense purposes and their ability to serve the commercial markets.

The following charts (Exhibits C and D) indicate the degree to which the commercial manufacturing industry has had to depend upon military aircraft and engine production programs in recent years. It will be noted that commercial production has dropped off while military procurement has remained fairly constant, accounting for the greatly increased proportion of the military over commercial work. Note also the steady drop in airplane and engine plants and plant employees.

V. In summary

Thus the air transport and Federal airways system and the civil manufacturing and servicing facilities constitute an indispensable element in our economic organization. They are of vital importance for their commercial services alone. But they take on additional importance in the light of the fact that while serving the needs of commerce and without extra burden they fit impressively into our national defense needs; and still more importance must be ascribed to civil aviation when its inevitable rôle in the next decade is realized. Already the modern tool for speeding up and otherwise aiding our economic life, it is certain to serve forthcoming business and industrial life even more effectively.

Therefore, we believe the Federal Government fully justified in continuing its participation along the lines already established and proven productive of high returns in the fields of commerce and national defense.

Scheduled air transport operations of American air lines

	1926	1927	1928	1929

Mr. KING. Mr. President, will the Senator yield?

Mr. ODDIE. I yield first to the Senator from Louisiana who asked me to yield a few moments ago.

Mr. LONG. What I want to find out is this: I understand that this amendment proposes to reduce the appropriation from $19,000,000 to $9,000,000, or about 50 per cent. Is $19,000,000 what the service cost last year?

Mr. ODDIE. It cost a little more than that last year. The appropriation provided in the pending bill is a reduction from last year's appropriation.

Mr. LONG. I should like to have the attention of the Senator from Tennessee, if I may. As I understand, the Senator does not intend to cut out the air mail service altogether, but only desires to reduce the amount appropriated for that service?

Mr. McKELLAR. I merely propose to reduce it one-half.

Mr. LONG. Does any department of the Government contend that such a reduction can be made without seriously impairing the air mail service?

Mr. McKELLAR. The Postmaster General does not desire the service to be reduced at all. Instead of that, he wanted the appropriation increased from $19,000,000 to $20,000,000, but he said that there was no doubt in the world about Congress having the right to reduce it if it saw fit.

Mr. ODDIE. But he also said that the reduction suggested by the Senator from Tennessee would ruin the air mail service.

Mr. McKELLAR. Oh, no.

Mr. ODDIE. The Senator will find that, in answer to a question by the Senator from New Hampshire [Mr. MOSES], the Postmaster General made that statement in so many words.

Mr. McKELLAR. A man may be beguiled into saying almost anything when the very lovable Senator from New Hampshire is seeking to beguile him.

Mr. LONG. What did the Postmaster General say?

Mr. McKELLAR. He gave as the reason why it should not be done that he was reducing the cost per mile and enlarging the service. The Postmaster General is a very enthusiastic advocate of subsidies to mail carriers, but at

the same time he admitted that there was no question about the right of the Congress to reduce it.

Mr. LONG. The point I am making is this: I voted to cut out——

The PRESIDENT pro tempore. The Chair will inquire if the Senator from Nevada has yielded the floor.

Mr. ODDIE. I yield the floor.

The VICE PRESIDENT. Then, the Chair would like to get the question of recognition determined. The Chair recognized the Senator from Connecticut [Mr. BINGHAM] when he thought the Senator from Nevada had yielded the floor on a prior occasion. The Senator from Nevada had not yielded the floor at that time. Therefore, recognition now goes to the Senator from Connecticut.

Mr. BINGHAM. Mr. President, the amendment offered by the Senator from Tennessee will wreck commercial aviation in America; there can be no question about that. Any one who has studied the facts and figures as to commercial aviation knows that if the sum now paid by the Government to the lines carrying the mails shall be cut down arbitrarily by 50 per cent, at least 90 per cent of them will go out of business; there can be no question about that.

Mr. McKELLAR. Mr. President, will the Senator yield?

Mr. BINGHAM. I did not interrupt the Senator when he was speaking, and I want to say just a few words about this subject. I happen to have spent a good many years studying it, and I feel very keenly about it.

We have gradually increased our air service to cover the United States in a very remarkable manner. Some people think we have gone too fast; but, as was pointed out by the Senator from Nevada [Mr. ODDIE] a few moments ago, the amount that we pay per mile for carrying the mail has been very greatly reduced, and as fast as the Postmaster General—and he has entire access to the books of the companies—is able to find out that they are getting, in his opinion, more than they ought to get for carrying the mail, he makes a new agreement with them, and the amount per mile is reduced. He then takes the money which he saves by not paying them so much per mile as they previously received to open up other lines. As a result, Mr. President, notwithstanding the depression, the number of passengers carried in the air and the number of miles flown during the past three years have steadily increased. If we want simply to knock this industry on the head, if we want to put the companies out of business, we will adopt this amendment on the mistaken idea that it is going to save us money.

I know the Senator from Virginia [Mr. GLASS] does not believe in the air mail. He thinks that is a foolish expenditure of money and that our citizens ought to be satisfied with the ordinary mail, and, if one is in a hurry, that he should use the telegraph service. He has an entire right to that opinion, of course, and he will vote to reduce the amount; but I submit, Mr. President, if we believe $19,000,000 is more than we think we can afford to spend at this time in promoting aviation in America, while we may reduce the amount down, do not let us reduce it to such an extent as to put out of business the companies that are now carrying the mail.

Mr. GLASS. Mr. President——

The PRESIDING OFFICER (Mr. FESS in the chair). Does the Senator from Connecticut yield to the Senator from Virginia?

Mr. BINGHAM. I yield.

Mr. GLASS. The Senator knows perfectly well that $19,000,000 is not all that we spend for promoting aviation.

Mr. BINGHAM. Oh, no.

Mr. GLASS. The amount is approximately $40,000,000.

Mr. BINGHAM. We spent a great many million dollars in keeping airways lighted, in keeping airways open, and in establishing and maintaining them, through the Department of Commerce, and we do it chiefly for the benefit of the mail service. We do not give the air mail companies contracts except where airways have been opened. We have encouraged the people of this country to spend large amounts of money on airports. Many of the larger cities of the country are building very extensive and first-class airports. I see the Senator from Louisiana on his feet. I know that in his State there is now being constructed one of the best airports in the world. If we blindly slash the amount of money paid to these companies, we will put them out of business and there will be nobody to use the airports. It is the most unintelligent way of doing business.

The present Postmaster General has, and after the 4th of March the new Postmaster General, who will belong to the party of the Senator from Tennessee, will have the right to reduce the contracts as far as can be done and still keep the lines going and it will naturally be to their interest to do so; but blindly to say that no company shall receive more than 50 per cent of what it is being paid at the present time is an absolutely wrong way of proceeding unless we want to destroy the air mail and commercial aviation.

Mr. LONG. Mr. President——

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from Louisiana?

Mr. BINGHAM. I yield.

Mr. LONG. Various localities and communities, regarding this aircraft travel as a growing business, have established airports and lights and facilities in the expectation of an increase in the air mail business. I have been led to believe that $40,000,000 was a drop in the bucket as compared to the amount we spend for the Navy. We spend for the Navy several hundred million dollars a year. It looks to me as if we are cutting off the least expensive and most desirable and probably the best service from the standpoint of national defense. I think $10,000,000 is too little to talk about for this service when we are spending hundreds of millions on the Navy.

Mr. BINGHAM. Mr. President, in the first place, to promote air commerce by the carriage of the mail and by the granting of subsidies such as are granted to-day by the very flexible contracts under which the Postmaster General operates does not mean giving large amounts of money to any one company. None of those companies is paying any dividends to-day. None of those companies is able to pay any income tax. They are running on a very narrow margin, barely able to get along. In the case of a few companies carrying mail from New York to San Francisco by way of Chicago the amount received for the mail carried pays the entire cost—a subsidy, if one chooses to call it so, but actually it is not a subsidy; it is an amount paid for services rendered.

Mr. President, it may not be generally known that, under these contracts, if there is only one service, the rate is so much per mile; if there are two services per day, the rate is cut down by perhaps 25 per cent of the original rate. The Senator from Tennessee spoke about one company having eight services. I do not happen to know of any company that has eight services, but if any company has three services or more, the rate is then cut down 50 per cent of the original contract.

Mr. President, these contracts are not of a kind to permit the companies to make money. As I have said, they are barely able to meet expenses to-day. Furthermore, by keeping these companies going we are furnishing a certain amount of experience for pilots, and that is a very valuable part of the national defense. We are, furthermore, giving the industry a certain amount of business, not a great deal for there are not a great many planes involved, but it does furnish something that keeps the industry going in addition to contracts, which are constantly being reduced, for the aviation service of the Army and of the Navy.

To reduce this amount in this arbitrary fashion, blindly, is simply to put these companies out of business. They are not obliged to carry the mail. They have not that kind of a contract. They can not tell the Postmaster General a year from now, "You must pay the same amount that you are paying to-day." Within the next three months, after the new Postmaster General comes in, he can get these companies together, and he can say to them, "I do not want to pay you more than half what I am paying now." If they show him that they can not possibly run on that, he can make the amount whatever he thinks is wise and

just to keep those companies going. If he will not give them enough to operate on, then they are not obliged to operate, and they will have to go out of business; and that is what will happen to more than three-quarters of the companies.

Mr. President, the Senator from Tennessee [Mr. McKELLAR] has spoken about the experience of the Ludington Line, running from Washington to New York. It happens that that line has been able to operate fairly well, without paying any dividends, without any contract for carrying the mail. There is a line running from New York to Washington which has a contract to carry the mail. The difference between the two companies is this: The line carrying the mail has to have two pilots per plane, and has to have radio on the plane. It has to have a kind of service that seems safer to the Postmaster General. The Ludington Line has operated extremely well, and has built up a very large clientele; and in operating between the cities of Washington and New York by way of Baltimore and Philadelphia it goes over a territory where there are many millions of people living. By operating about one plane for every train operated on the Pennsylvania Railroad they succeed in getting enough passengers to keep going; but except for the line from New York to Chicago and the lines from Chicago to the Pacific coast, there is probably no other place in the country where a line can hope to run merely on the business it can secure, without aid from the United States Government.

Mr. President, I hope most sincerely that everyone interested in aviation will realize that the Postmaster General can cut the rates by agreement as fast as he learns that they are too high, and that he is doing so, and that unless we want to put commercial aviation in America out of business this amendment ought to be defeated.

Mr. ODDIE. Mr. President, a few minutes ago I referred to a question asked the Postmaster General by the Senator from New Hampshire [Mr. MOSES]. I find it on page 134 of the hearings. He said to the Postmaster General:

> Before you leave, I should like to get into the record your opinion as to the effect upon the air mail service if the appropriation is cut as proposed by the amendment offered by the Senator from Tennessee.

The Postmaster General replied:

> It would ruin it.

Mr. NORRIS. Mr. President, I do not want to be put in the attitude that one might infer I was in if he takes the position of the Senator from Connecticut when he says, "If you are a friend of aviation, you ought to vote against the amendment of the Senator from Tennessee."

I am wondering all the time, when I listen to this debate, what has become of our economy program—what has become of the desire to try to make our Budget balance. I believe, Mr. President, that I am a friend of aviation. I know that I want to be a friend of aviation. I would not want to put anything in the way of the success of the aviation business.

I have voted, and I expect to vote, against a good many appropriations where I am voting against what would be my judgment under any ordinary circumstances. If we are going to follow out the plan of economizing, that every one of us in general wants to follow out, we must vote against many appropriations that we would like to see passed and utilized in the various activities of the Government. Unless we do this, we are absolutely going to fail in bringing about the economies that all of us undoubtedly desire, and that most of us have promised to the people of the United States. We must give up some of our favorite appropriations because of the terrible financial condition in which the Government now finds itself.

I repeat, unless we are willing to do that, we might just as well throw to the winds our ideas of economy and trying to balance the Budget without issuing bonds to do so.

Maybe that would be right. Maybe we ought not to cut down any of these appropriations where any reasonable excuse can be given for their existence; but that has not been our attitude. That has not been in accordance with the promises we have been making to the people. After all, nobody believes that aviation and the carrying of the mail through the air are necessary for the upkeep of the Government. After all, when we take the clothing off this appropriation, it is a subsidy.

I am not complaining against the man who believes in that kind of a subsidy under any ordinary circumstances. Under normal conditions I would be willing to go a reasonable distance, because I should like to develop and help the aviation business, but I do not want to do it on a theory that I do not believe to be true.

We do not need the flying machine in the carrying of mails. We have facilities that we are keeping up for the carrying of mails that under any reasonable conditions are sufficient to meet the needs of the people.

The man who writes a letter in New York, and wants it delivered in San Francisco or Chicago, has, without the flying machine, a very expeditious, reasonable, and—compared to aviation—economical method of having his message carried to its destination. After all, when we clear this subject of all its disguises, it is only an indirect method of subsidizing a business. Under ordinary conditions I should feel that to a limited extent we ought to subsidize it; but that time does not exist now, Mr. President. Now we have to cut out all unnecessary appropriations if we would meet the program of economy that everybody wants to see carried out, and this is one of them.

It seems to me, no matter how much we may like it, no matter how much we may be in favor of developing the airplane and the doing of all kinds of business through the instrumentality of the flying machine, that we have reached a time here now when we can not afford to use public money to carry it on. At least, that is the way I look at it; and unless we are going to economize all along the line, I for one, am not in favor of compromising part of the way. I want every activity of the Government to bear its share of the economy that we must put into force.

Here is a place where, as far as the Government is concerned, we can economize without any injury to anyone. Admitting for the sake of argument that it will injure the airplane business, that is true almost universally. Every time we economize anywhere we will either directly or indirectly, and usually both directly and indirectly, injure to some extent, some activity of some corporation or some individual. We can not economize without doing that. If we are not going to do that, let us throw overboard the idea of economy and not try to economize and see where we come out. At least we ought not to be professing that we are going to cut these appropriations to the bone when we are talking in glittering generalities, and then, when we come to real action, forget the promises that we have made and the desire that I think all of us have to try to cut down the appropriations.

Mr. LONG. Mr. President, probably my viewpoint is actuated by a little selfishness. Down in several of our cities we have tried to extend our airport facilities. We have spent millions and millions of dollars building airport facilities in New Orleans. We have spent a large amount of money building airport facilities in Baton Rouge. We have the third attack wing of the United States Army located in Shreveport, La. A large amount of money is being spent in building airports in other places. In our State we have expended all this money in the hope and in the belief that transportation by air was a coming, and not a going, proposition.

Now we are debating over $10,000,000. I can well see that all that the Senator from Nebraska says is very logical. We ought to economize wherever we can; but we are not economizing here, Mr. President. Forty millions of dollars is all that is charged to have been spent in air work for the Army and for the Navy and for the air contracts. Suppose we cut $10,000,000 of it off: We have cut it down to $30,000,000, and we have crippled the domestic air industry of America. If we ever promote and build up and improve our air service, it is going to be done by contributing to and by expanding it domestically.

I think that our chief agency of national defense is going to be the aircraft, Mr. President; and if we are to-day spending from three to four hundred million dollars a year on the Navy, and I do not know how many millions on the Army, and planning to spend several hundred millions more on the Navy—and we are going to have to spend some of that money—I think it is the weakest kind of a thing for us to do now, with all the commercial bureaus, and the cities and the towns and the boards and the States having spent millions and millions and hundreds of millions of dollars depending upon air mail service and air transportation and the improvement of this service, to be niggardly about the thing, and to take a chance on giving this kind of service a black eye at this particular time.

Mr. ODDIE. Mr. President——

Mr. LONG. I yield to the Senator from Nevada.

Mr. ODDIE. I should like to ask the Senator if he receives many air mail letters from his home State?

Mr. LONG. Plenty.

Mr. ODDIE. And is it not a fact that these letters that come by air mail facilitate the public business, in the Senator's opinion?

Mr. LONG. I want to say, Mr. President, that I know that probably the mail I receive and the mail I send is unimportant. My constituents and other friends might be better off if they did not write me at all or if I wrote them less; but I do say that I have the feeling that the air mail which I receive constitutes part of a very valuable service.

As an example, a charge was made here in a newspaper yesterday morning requiring voluminous documents and date in order to enable me to answer it here to-day; and I was able to telephone to New Orleans, and the letter was sent by air mail in the darkness, and I had it on the floor of the Senate this morning.

I want to economize as much as anybody does; but all the leading journals and periodicals that I read—and I do not read too many—tell us that if we ever defend ourselves in another war, it is going to be a war in the air. We know that in the World War we spent millions and hundreds of millions of dollars trying to build up an air service for this country, and that after having spent all of the hundreds of millions of dollars we were a third-rate proposition in the war when it came to the air. We never were able in the great World War to cope with the aircraft of our enemies.

We have in my home State—I say this because it probably will explain my selfishness in the matter—several large concerns, none of which have air mail contracts, some of which hope maybe some day they will get some, I guess; but we have any number of persons who have interested themselves in the air service.

I hope that we will not cripple this service for the little stake of $10,000,000. It does not mean that that $10,000,000 would be thrown away. The Democratic administration is coming in, and everybody knows the Democratic Party can be depended upon not to spend too much. If the Postmaster General, or the President of the United States, who appoints him, feels that these contracts ought to be reformed, he can reform them. He is not required to carry them out if he does not want to. This provision would not require him to spend any such sum of money as is stated. But certainly to say that every contract is to be cut down 50 per cent is unwise. What kind of business would that be? Either we have sat here in this Chamber and allowed things to go on which should not have gone on or we would be making a mistake to say that every contract that has been made should be cut 50 per cent. If these contracts have been within the bounds of reason, we know that they could not be cut down 50 per cent of the amount they have been carrying without injury to the service. The Postmaster General might find in one case that the contractor has been receiving three-fourths too much, perhaps in another case would find that the contract ought to be cut out altogether; I do not know about that. But for every one of the contracts to be cut down 50 cents on the dollar would mean that if they have been anywhere within the bounds of reason—and nobody is contending that they have not been—we could not continue our air service in this country to-day.

Mr. BINGHAM. Mr. President, does not the Senator know that the Postmaster General can cut down the rates on any line?

Mr. LONG. Yes.

Mr. BINGHAM. They do not have to have the same rates on every line.

Mr. LONG. The Postmaster General can regulate these rates just as he sees fit. He can make the rate for carrying the mail by airplane from Florida to Washington one thing, and the rate for carrying the mail by airplane from New York to Washington another. He can regulate that. But I say that for us to try to regulate that matter in a haphazard way, to say that every contract is to be just 50 per cent of what it has been, is not scientific.

Mr. TYDINGS. Mr. President, granting that what the Senator from Louisiana says is so, he must bear in mind that when the Army and Navy appropriations come before the Senate an effort will be made to reduce the appropriations for those services, which are the real defense factors of the country, in my humble judgment; and if we are going to appropriate money for national defense, we should not cut down the Army and the Navy. We would better cut down the civil service or cut it out than to cut down the Army and the Navy, assuming we are making this appropriation upon the grounds of national defense.

If the Senator will yield just a moment further——

Mr. LONG. I yield further.

Mr. TYDINGS. Undoubtedly every dollar we cut off the Army and the Navy, the airplane sections of the Army and the Navy must take their proportionate amount, and certainly, from the standpoint of defense, it would be better to cut out the civil fliers than to cut down the Army and Navy fliers, who have had training in combat work, in pursuit work, in locating ships at sea, in Army maneuvers, in Navy maneuvers, in sending messages from the air to artillery, in sending messages from the air to battleships and destroyers, in scouting over the ocean. Certainly, if we must choose between cutting out one or the other, from the standpoint of national defense, it is best to cut out somewhat on the civil side than to cut our defense forces.

Mr. LONG. I am glad the Senator mentioned that, because I can show him just how wrong he is, and I am sure he will admit it.

If we had had to depend upon men who had been trained to shoot a gun in the Army, when we started out to organize the Army for the World War, we would have had a difficult task. We can depend on the American soldiers because in their private, domestic pursuits they learn how to shoot a gun. If we want to develop an air service, we are going to have to train men so they will know something about the air service. If we have, in order to train a man to run an airplane, to put him in the Army, and not build up a civilian air service, we will wind up with nobody knowing anything about a plane but a few thousand men in the Army or the Navy. We are trying to provide that the men of this Nation shall know just as much about the air as those of any other nation. We are getting some little good out of training the men in the Army, but we will get a far greater amount of good out of the expenditure of the small amount of money called for in this bill. We are asked to appropriate $19,000,000 to extend the air service, to teach people how to build airplanes, and that will result in building up our country. They are lighting the rights of way, and things of that sort.

Mr. TYDINGS. Mr. President, will the Senator yield again?

Mr. LONG. Just a moment. We are getting thousands and thousands of people to-day trained in the airplane servive who never would have been in it if they had had to depend upon getting their training in the Army or the Navy. We will get soldiers to operate our airplanes out of civilian life, when the time of emergency comes. We are

not going to build up the Army in time of emergency from what we have in the regular personnel of the Army and the Navy.

I am against maintaining big armies, which we do not need if we can get a reserve organization. We are only spending $10,000,000, and we are actually accommodating the States, and accommodating the cities. They have depended upon it, and we are getting the air mail service. That is worth something, at least.

Let me make a comparison: $500,000,000 is being spent on the Navy. Now it is proposed to cut off $10,000,000 in the air service. We are spending $111,000,000 on mail contracts on the railroads. $10,000,000, when compared with $111,000,000, is not a lot of money. I do not know exactly how much is being spent on the Army, but it is many millions of dollars, and it is proposed to cripple what every writer on earth says is the one service we will have to depend upon for national defense.

Mr. TYDINGS. Mr. President, will the Senator yield again?

Mr. LONG. I yield.

Mr. TYDINGS. I would like to point out to the Senator from Louisiana that at the last session of Congress an effort was made to cut down every supply bill 10 per cent. That generally was accepted until it came to the Army and Navy appropriation bills. It was found then, as I recall, that the effort to cut down those supply bills was lost because many Senators took the position that it was not safe to cut the Army and Navy appropriation bills any farther than they were projected in the estimates sent down by the Budget and revised by the Senate and House committees.

I want to say to the Senator from Louisiana that there is a lot in what he says. I do not deny that these airplanes have certain defense value, and I, like the Senator from Nebraska, feel that in normal times I would not for one instant make the contention I have been making. But I do want to call the Senator's attention to the fact that when we get to the Army and the Navy appropriations, he will find it very difficult to effect economies in those appropriations. Unless we can make economy in services such as that under consideration, there will be no economy.

I may finally say this, that, in my humble judgment, the time is coming, even with the President performing miracles, when the new administration comes in, when every dollar this Government may possibly spare is going to be needed in a welfare program for next winter. It is not going to be easy to change the barriers and the conditions to economic recovery in a month, or six months, or a year, and if we are prudent and wise, we will look ahead and cut down on all normal activities we can, to the end that we will have money for the extremely necessary program of welfare and unemployment relief when the snows of next winter fly. Heaven knows, it has been difficult enough to get employment campaigns under way now, and when next winter comes, unless there is a business pick-up, which I hope will come, it will be much more difficult for the communities to raise their community funds.

There are airplane factories in my State, and they have begged me to vote against these cuts, and those interested in some of them are the best friends I have in the world, some of them contributed to my campaign, and many of them have worked for me. So it is very embarrassing for me to advocate these cuts. But may I say to those people back in Baltimore that, in the end, a cut now will save their business, because if we do not straighten this Government out and cut off the waste, and bring it down to a sound basis, and have some money for the unemployed and for rehabilitation, they will not have their airplane factories in the long run anyway.

Mr. BINGHAM. Mr. President, will the Senator from Louisiana yield to me?

Mr. LONG. I yield.

Mr. BINGHAM. In reply to what the Senator from Maryland just said, if the Senator wants merely to save money, let him cut the appropriation down to whatever he thinks it ought to be, but let us not adopt an amendment which simply would put all the companies out of business, which is what the pending amendment would do.

Mr. TYDINGS. What does the Senator mean by that?

Mr. BINGHAM. The amendment offered by the Senator from Tennessee provides that—

> No part of the money shall be paid to any company for carrying air mail under contract with the Government in an aggregate sum exceeding 50 per cent of the amount paid by the Government to it at the present time.

Mr. TYDINGS. Let me say to the Senator from Connecticut that the Senator from Tennessee, as I understand it, proposes to revise his amendment so as to carry out the Senator's intention, and strike out the words the Senator has just read.

Mr. McKELLAR. Mr. President, will the Senator from Louisiana yield?

Mr. LONG. I yield.

Mr. McKELLAR. It has been suggested that the proposed amendment be changed so as to provide as follows: To strike out $19,000,000 and to insert in lieu thereof $9,500,000, and that when the net receipts from domestic air mail exceed the sum of $9,500,000, then such excess shall be used for this purpose by the Postmaster General in addition to the said sum of $9,500,000.

Mr. LONG. The Senator means when it gets to be self-sustaining?

Mr. McKELLAR. In other words, when the receipts from the service exceed $9,500,000, in order to encourage these companies, the excess shall be used in addition.

Mr. BINGHAM. Mr. President, does not the Senator from Louisiana think that it would be just as fair to say that the money we spend on rural free delivery——

Mr. LONG. Should be cut 75 per cent? Certainly.

Mr. BINGHAM. Unless the rural free delivery pays for itself?

Mr. LONG. Yes. Why not say that the Army shall pay for itself? Why not say that the Navy shall pay for itself?

Mr. McKELLAR. Mr. President, will the Senator yield to me for a reply to what has just been said?

Mr. LONG. Yes; I yield to the Senator.

Mr. McKELLAR. The Senator from Connecticut asks why it would not be just as reasonable to make the rural free delivery self-sustaining.

Mr. LONG. On principle.

Mr. McKELLAR. I think there is a good deal in what the Senator has to say, but let me ask the Senator a question, in reply. For the last three years this Government has been behind $5,200,000,000 in running expenses, and our deficit is increasing $200,000,000 a month. Where would the Senator get the money to pay these extravagant subsidies out of the Treasury?

Mr. LONG. Does the Senator want me to tell him?

Mr. McKELLAR. I would like to have the Senator do so.

Mr. LONG. I put that all in the newspapers, and in the RECORD. The Senator failed to read it. I have explained all that.

Mr. McKELLAR. Will not the Senator tell us again? How would he do it?

Mr. LONG. That has been answered. I was accused of filibustering. I told the Senate that at great length here the last three weeks, and the Senator from Tennessee voted to stop me when I was trying to inform him; and now it develops that he did not even hear what I said, and wants me to tell him again. I will not do it. [Laughter.]

Mr. McKELLAR. I accept the Senator's explanation.

Mr. LONG. I knew that the Senator from Tennessee would be fair about it now that he remembers it. I will get for the Senator a memorandum of the pages where I made the explanation, for there are several of them.

Where are we to get the money? I am not going to argue that just for the moment; I will come to that in a little while. What I am saying is this: We are about to cripple an industry that the Government has had the State of Louisiana spend $5,000,000 on this year, and we are only one little State. We went out and floated bonds. Only yesterday we got $1,300,000 from the Reconstruction Finance Cor-

poration to complete an airport at New Orleans which we have been working on all this time. We built highways to the airport. We spent over $5,000,000. I do not know how much other States have spent, but I venture the assertion that my State is not an exception. The State of Florida spent several million dollars and Maryland has done likewise.

Mr. TRAMMELL. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Louisiana yield to the Senator from Florida?

Mr. LONG. I yield.

Mr. TRAMMELL. A great many of the Florida towns have established airports and spent the public money for that purpose. I imagine the expenditures run into the millions of dollars.

Mr. LONG. I know that is so; and yet now it is proposed to clip the wings of all of us by taking $10,000,000 off of the air mail service, which costs only $19,000,000 all together. If Senators want to save something, I suggest that they attack the War Department and the Navy Department. We can a great deal better afford to have one less dreadnaught for the next year than to discontinue the air mail service. I do not want to have one less dreadnaught built, but I would rather dispense with one battleship than to cut off half of the air mail service.

Mr. President, we have barely started into the airplane business yet. We are only getting started. We are not up to date with airplane service. Foreign countries are away ahead of us. They have supported it much better than we have. We are not keeping up with it. In my opinion the appropriation ought not to be reduced below $19,000,000, and then spend $400,000,000 for the Navy and perhaps as much more for a building program. We ought to be spending a greater percentage of our funds for the air service. We are not hurting anybody in particular when we do not build a battleship, but when we interfere with the air service we are hurting every town in the country. Every little municipality that has not had an airport has arranged to put up one. They have gone into debt. If there was ever any idea that we were going to reduce the air program, we certainly ought not to have allowed our people to spend all the money they have and encouraged them in this way for years to put up airports, and then suddenly say that we have decided that the air mail contracts are not any good and that we ought to have been carrying the mail by train all the time.

If the Congress had said last year or the year before any such thing as that, we would have been in a position to do it. But now the Senate comes along—after having encouraged everybody in the United States to go out and light up the airways, North, East, South, and West, from one end of the country to the other, and to build airports—when the people became accustomed to air mail service, and says we are going to cripple it. I submit that is not good sense and it is not good business.

I voted with the Senator from Tennessee for his amendment to strike out a subsidy for the Seatrain Co. which goes to New Orleans. I voted to strike that out. I voted to strike it out—although it is my city that is affected—because I could not see where a national service was being rendered. But if Senators are talking about discontinuing the air service after the municipalities have equipped themselves to provide for it, I submit that we are striking out one of the most valuable and most progressive things we have undertaken in the country.

The Senator from Tennessee talks about economy. I will show him where we can economize. If he will build up a first-class air service it will save this country not less than 25 per cent of the cost of the Navy and the Army. If this country will build up an air-trained people, according to the economists and statisticians without one single exception, whether in the Army or the Navy or anywhere else, it will save 25 per cent of the cost of the national defense. It will probably save the country $100,000,000, for it will develop the air service, and it is on the way to saving that much now.

Mr. ODDIE. Mr. President, before I ask for a recess I want to put some figures in the RECORD.

Supplementing the figures I presented a few minutes ago regarding reductions in the rate per mile paid air mail contractors, I will state that under the first formula of $1.26 per mile two and a half years ago, 1,932,439 miles per month were being flown. Now they are flying 2,927,349 miles a month.

Mr. President, I oppose the amendments reducing the amount in the bill. I feel that it will do harm if either of these amendments is adopted. The wages paid the air-mail pilots will probably have to be reduced. I will resist with every power that I have any reduction in the pay of these men. These brave, noble men who are flying our mail every day and night, through all kinds of weather, are entitled to what they are getting, if not more, and either one of these amendments will probably mean a serious reduction in their pay. Their occupation is necessarily a hazardous one, and we certainly should not cut down the appropriations in this bill for air mail, which cuts will probably make necessary the reduction of their pay if the service is not to be seriously crippled or ruined.

Mr. HALE. Mr. President, I dislike to put myself in the attitude of one who is criticizing this honorable body of which I am a Member. I realize the importance of the amendment that is before us and the other amendments which have been offered and which will be offered to the pending bill. But, the fact remains that we are not making satisfactory progress with the appropriation bills. We have but 1 day left of this month, 24 legislative days next month, and 3 legislative days in March, before the end of the session. Unless we speed up and get somewhere with legislation and unless the whole Senate takes hold and helps, we are not going to get the appropriation bills through at this session of Congress.

Mr. President, I am going to insist that the Senate begin holding night sessions. It is absolutely necessary to do so, if we are going to make any progress. There is other important legislation besides the appropriation bills that ought to be attended to at this session. Not only will there be no time to get the appropriation bills through, but there will not be time to take up any other measures unless we make much better progress than we are now making.

Mr. ROBINSON of Arkansas. Mr. President, it is apparent that we are not making as much progress in the disposition of appropriation bills as we should. I have no criticism to offer of anyone or of the management of the bill, but the bill has already been before the Senate several days. We have only disposed of a few amendments. The features of the bill which are calculated to provoke long discussion remain undisposed of. I wish to join with the Senator from Maine [Mr. HALE] in the request that we try to speed up our work all we can.

It will not be possible to dispose of the appropriation bills and other legislation which ought to be considered if we devote 10 days or two weeks to a single bill. There are less than five weeks remaining of the present session and there are many measures which require attention. Certainly we ought not to take so much time on an appropriation bill. I hope we may make better progress. It will be necessary to hold night sessions unless we can find some way to move forward a little faster.

Mr. McKELLAR. Mr. President, I agree with all the Senator from Maine and the Senator from Arkansas have said. I want to say that I shall join with the Senators in every effort to expedite the bill. I think we ought to make greater progress than we have made to-day. We should use every effort not only to get this bill through, but to get all the appropriation bills through at the present session of Congress.

Mr. HALE. Mr. President, I would like to say that tomorrow, with the cooperation of the Senator in charge of the bill, I shall ask the Senate to hold a night session.

THE JOURNAL

Mr. FESS. I ask unanimous consent for the approval of the Journal for the calendar days of Friday, January 27, and Saturday, January 28, 1933.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

CLAIMS OF THE SEMINOLE NATION OR TRIBE OF INDIANS—VETO MESSAGE (S. DOC. NO. 177)

The PRESIDENT pro tempore laid before the Senate the following message from the President of the United States, which was read, as follows:

To the Senate:

I return herewith without approval S. 4340, an act authorizing the District Court of the United States for the Eastern District of Oklahoma to hear and determine certain claims of the Seminole Nation or Tribe of Indians.

The tract of land therein described was formerly owned by the Seminole Tribe of Indians in Oklahoma. It was appraised and sold at public auction as provided by law. The full consideration was paid and title to the land has passed into the hands of a bona fide purchaser through transactions with the Government had in the utmost good faith. There is no substantial basis for thinking that Congress was without power to grant authority to the Secretary of the Interior to make the sale. There would seem to be no justification for now authorizing a committee of the tribe to bring a harassing suit against a private owner who bought and paid for this property in good faith many years ago. Moreover, this legislation might prove to be a precedent for private litigation affecting many other titles and large sums of money through other than the regular procedure. The rights of the Indians, if any, can be presented and adjudicated by the Court of Claims in the litigation pending before it under the act of May 20, 1924.

I attach hereto a letter from the Secretary of the Interior setting forth the views of the department on the bill.

HERBERT HOOVER.

THE WHITE HOUSE, *January 30, 1933.*

Mr. THOMAS of Oklahoma. Mr. President, just a word in explanation of the bill. In the Seminole Indian Nation in Oklahoma for years we had a school for the benefit of the Indian children of such tribe of Indians. Some years ago oil was discovered in that section of the State. The land upon which the school was located was desired by some of the large oil companies. The Seminole Tribe did not desire to dispose of the land.

The Secretary of the Interior tried to get the Seminole Tribe to enter into an arrangement for the sale of the property. The Indians refused to consider the sale of the property, and the chief refused to execute the deed. Whereupon the chief was removed and another chief appointed. The second chief likewise refused to sign the deed. And when it was discovered that no Indian could be secured to assume the rôle of chief who would sign the deed the Secretary of the Interior proceeded to sell the land himself and signed the deed as the guardian of the Indians. The land was sold, the deed was signed and approved by the Secretary of the Interior, and it has since proved to be oil property.

The Indians have never been satisfied with the transaction. Some time ago, as a representative in part of the tribe of Indians, I introduced a bill authorizing the tribe to go into the Federal court of the eastern district of Oklahoma and present their claims against the oil company, in the hope, of course, that the deed might be set aside and the property restored to the Seminole Tribe of Indians.

The Congress passed the bill and now the President has seen fit to veto the measure asked for by the wards of the Government. Not having the time now to go into the matter fully and thoroughly, I ask unanimous consent that the bill, with the message, lie upon the table for future consideration by the Senate.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

RELIEF OF AGRICULTURAL INDEBTEDNESS

Mr. SHIPSTEAD. I ask unanimous consent to introduce a bill, and, in order to save time, I ask that a short explanatory statement may be printed in the RECORD as a part of my remarks.

The PRESIDENT pro tempore. Is the Senator desirous that it be printed, together with the text of the bill?

Mr. SHIPSTEAD. The bill is quite extensive; but I should like, if there is no objection, to have the text of the bill printed.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

The bill (S. 5562) to relieve agricultural distress through the consolidation and adjustment of indebtedness and the reduction of the rate of interest thereon, to release frozen credits and stimulate the recovery of business, to create in the Department of Agriculture an administration of agricultural loans with which will be consolidated, in the interest of economy and efficiency, all agencies of the Federal Government concerned with agricultural credit, and for other purposes, was read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted, etc., That this act may be cited as the "Agricultural loan administration act of 1933."

SEC. 2. It is hereby declared to be the policy of Congress that the loaning of money to persons engaged in the production and distribution of agricultural products, and all undertakings relating, directly or indirectly, to agricultural credit in any of its phases, are affected with a public interest and that the proper regulation of the conditions under which the business of loaning money and of extending credit to persons engaged in producing and distributing agricultural products shall be carried on should be considered as an integral and inseparable part of the power of Congress to regulate commerce among the several States.

SEC. 3. The purposes of this act are hereby declared to be as follows:

(a) The consolidation of agricultural indebtedness;

(b) The relief of agriculture from onerous charges upon indebtedness to the Federal Government and to private lenders;

(c) The orderly facilitation of credit to agriculture for the seasonal movements of commodities and livestock;

(d) The stabilization, to a reasonable and practicable extent, of the range of prices obtainable by agricultural producers for what they produce, with reference to trustworthy indices of general price levels;

(e) The encouragement of all dependable marketing cooperative processes and devices calculated to cheapen the cost of distribution of agricultural products and their derivatives among consumers thereof at home and abroad;

(f) The reinforcement of buying power among all elements of the population of the United States through the restoration and preservation of equilibrium between consuming demand and reasonable costs of producing and distributing agricultural products;

(g) The consolidation in the Department of Agriculture in an administration of agricultural loans, in the interest of economy and efficiency, of all the powers, duties, and functions of the governmental agencies heretofore established by the Federal Government; and

(h) The improvement of the standard of living of the people of the United States.

SEC. 4. (a) There is hereby created in the Department of Agriculture an administration of agricultural loans, hereinafter referred to as the administration. The President, by Executive order, shall, within 60 days from the date of enactment of this act, consolidate and coordinate in the administration all executive and administrative bureaus, agencies, offices, or corporations (except those in the Department of Agriculture), especially created for or concerned in the administration of laws relating to agricultural credit in any of its phases, including the Federal Farm Loan Board, the Federal land banks, the Federal intermediate credit banks, the regional agricultural credit corporations of the Reconstruction Finance Corporation, and the Federal Farm Board and all agencies subject to its jurisdiction, and the President shall likewise transfer to the administration the duties, powers, and functions now vested in the bureaus, agencies, offices, or corporations so consolidated and coordinated, and the whole or any part of the records or public property belonging thereto. The Secretary of Agriculture shall, within 10 days from the date of enactment of this act, transfer to the administration all bureaus, agencies, offices, or corporations in the Department of Agriculture which are concerned with agricultural credit in any of its phases, together with the duties, powers, and functions now vested by law in such bureaus, agencies, offices, or corporations, including the whole or any part of the records and public property belonging thereto. The personnel of any bureaus, agencies, offices, or corporations so consolidated and coordinated in or transferred to the administration, may, in the discretion of the commissioner of agricultural loans, be transferred to and given employment in the administration, subject to such change in designation and organization as the commissioner may deem necessary.

(b) Upon the completion of the transfers to the administration provided for in this section the Federal Farm Board and the

Federal Farm Loan Board, and the offices of the appointive members thereof, shall be abolished; and all powers, duties, and functions vested (1) in such boards and the members thereof, (2) in the Secretary of Agriculture under the Reconstruction Finance Corporation act, as amended, and the emergency relief and construction act of 1932, and (3) in the Reconstruction Finance Corporation, with respect to regional agricultural credit corporations, shall be vested in the administration and shall be exercised, except as otherwise provided in this act, by the commissioner of agricultural loans.

SEC. 5. (a) There shall be at the head of the administration a commissioner, to be known as the commissioner of agricultural loans, to be appointed by the President, by and with the advice and consent of the Senate. The commissioner shall hold office for a term of nine years and shall receive a salary of $10,000 a year. No commissioner shall be eligible for reappointment.

(b) The commissioner shall have general supervision over the administration of this act, and is authorized, in accordance with the civil service laws, to appoint, and, in accordance with the classification act of 1923, as amended, to fix the compensation of such assistants, officers, and employees, and to make such expenditures (including expenditures for rent at the seat of government and elsewhere, and for printing and binding, law books, books of reference, and periodicals) as may be necessary to carry out the purposes of this act.

(c) The commissioner is authorized to establish regional offices at any place within the United States or its Territories and possessions whenever in his opinion such establishment is necessary to carry out the purposes of this act, but, so far as practicable, the work of the administration shall be carried on through the bureaus, agencies, offices, and corporations consolidated and coordinated in and transferred to the administration under section 4. The Federal land banks shall be the principal offices of the administration in their respective Federal land-bank districts, and after the date of enactment of this act such banks shall be known as principal offices of the administration of agricultural loans.

(d) Within 30 days after the date of enactment of this act the commissioner shall prepare, and within 50 days after such date he shall publish, a compilation of all regulations issued by the bureaus, agencies, offices, and corporations so consolidated and coordinated in and transferred to the administration, which the commissioner shall deem to be necessary and appropriate to continue in effect for the purposes of this act, and from the date upon which such consolidation of regulations takes effect, as determined by the commissioner, all other regulations of such bureaus, agencies, offices, or corporations not included in such consolidation of regulations shall be without legal force and effect. A copy of such consolidated regulations shall be furnished upon request to any person applying therefor, and to every corporation which has any business relations with or which is in process of transacting any business with any of such bureaus, agencies, offices, or corporations.

(e) In addition to the consolidation of regulations hereinbefore provided for, the commissioner is authorized to make such further rules and regulations as he may deem necessary and appropriate for carrying out the purposes of this act, but before any such regulations are issued the commissioner shall submit the same to the advisory council and to the Secretary of Agriculture for their information and recommendations.

(f) Within 60 days after the date of enactment of this act the commissioner shall transmit to the Director of the Budget, and the President shall transmit to the Congress, an estimate of the appropriations required by the administration for the balance of the fiscal year ending June 30, 1933, and for the fiscal year ending June 30, 1934. For the expenses of the administration there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $500,000. The unexpended balances of all appropriations for administrative expenses of the bureaus, agencies, offices, or corporations consolidated and coordinated in and transferred to the administration under section 2 shall be covered into the Treasury as miscellaneous receipts upon the expiration of 60 days after the date of enactment of this act.

(g) The commissioner shall submit estimates of expenditures and receipts of the administration to the Director of the Budget, and he shall submit to the Comptroller General of the United States all accounting records which are required under the provisions of the budgeting and accounting act of 1921, as amended.

(h) The commissioner shall cause to be prepared and published prior to the 1st day of February of each year a handbook containing, in simple language, a statement of the procedure to be followed by applicants for loans from the administration and a summary of all regulations issued by the commissioner during the preceding calendar year for the purpose of carrying out the provisions of this act. Such handbook shall be distributed at cost by the Public Printer.

(i) The commissioner shall transmit to the Congress in January of each year a report on the state of agricultural credit in the United States during the preceding calendar year and the factors which fundamentally affect it. The commissioner shall also submit to the Secretary of Agriculture for inclusion in the annual report of the Department of Agriculture a report showing the operations of the administration for the fiscal year preceding the issue of such annual report, and he shall include in the appendix to the report submitted to the Secretary of Agriculture an independent report by the board of review of the administration with respect to administrative and budgetary matters of concern to the board.

SEC. 6. There shall also be in the administration five assistant commissioners of agricultural loans, to be appointed by the President, by and with the advice and consent of the Senate. Each assistant commissioner shall hold office for a term of three years and shall receive a salary of $7,000 a year. Such assistant commissioners shall perform such duties as the commissioner may prescribe and, in addition, they shall have general supervision over the various divisions of the administration hereinafter provided for.

SEC. 7. (a) There shall also be in the administration an advisory council, to be composed of three members appointed by the President, by and with the advice and consent of the Senate. Such appointments shall be made with due regard to representation on the council of different sections of the country. No person shall be appointed as such member who has not had a broad experience in the field of agricultural credit and related fields. Terms of office of the members first taking office after the date of enactment of this act shall expire, as determined by lot, one at the end of 6 years, one at the end of 9 years, and one at the end of 12 years after the date of enactment of this act. The term of office of a successor to any such member shall expire 12 years from the date of the expiration of the term for which his predecessor was appointed, except that any person appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed only for the remainder of such term. The members appointed for 6 and 9 years, respectively, shall be eligible for reappointment, but no member appointed for a term of 12 years shall be eligible for reappointment. Each such member shall receive a salary of $9,000 a year.

(b) It shall be the duty of the advisory council to determine the general policy of the administration, and to render opinions upon all questions submitted to it in writing by the commissioner of agricultural loans, including questions relating to the interpretation of this act and of relevant legislation, questions relating to the loan policies of the administration, and like general questions; but the opinions of the advisory council shall not be binding upon the commissioner. All such opinions shall be duly recorded in a journal and shall be transmitted annually to the Congress by the commissioner as an appendix to his report on the state of agricultural credit.

(c) The advisory council shall have a secretary, to be selected by the council, and such additional clerical assistants as it may require, to be assigned to the council by the commissioner.

SEC. 8. (a) There shall be in the administration of agricultural loans the following divisions:

(1) The division of titles and records, which shall receive and record all transcripts of mortgages or original mortgages on land, and all chattel mortgages, warehouse receipts, and other collateral instruments held by the administration, and transact all business relating to the validity of title, and the due and proper form of the instruments; and shall have general jurisdiction over all files of the administration.

(2) The division of loans, which shall state and carry out the loaning policy of the administration, regulate and supervise appraisals, and conduct all correspondence relative to new or old loans secured by mortgages on farm land and buildings, and shall certify to the divisions of finance and of accounts the action it has taken in each instance.

(3) The division of seed, crop, and livestock loans, which shall be concerned with all short-term and intermediate-credit operations, appraise the value of security proffered in each instance, accept and deposit with the division of titles and records all chattel mortgages, warehouse receipts, and other collateral instruments, and certify to the divisions of finance and of accounts the action it has taken in each instance.

(4) The division of finance, which shall receive all funds paid into the administration, and make disbursements of such funds as provided by law, and in accordance with the regulations of the Comptroller General.

(5) The division of accounts, which shall compute and record all payments due to or payable by the administration, prepare and certify all bills, pay rolls, vouchers, and like instruments.

(6) The division of property, which shall have general charge of all property, equipment, supplies, and material belonging to the administration.

(7) The division of operations, which shall be responsible for the administration of all property taken in foreclosure, and all crops and livestock acquired by the administration under the provisions of this act, and shall render current reports in detail of its action in each instance, to the divisions of loans, finance, and accounts, and shall pay to the division of finance all proceeds from the operations of management or of sale, pursuant to regulations to be prescribed by the commissioner.

(8) The division of research, which shall study all economic, statistical, and related problems arising out of the administration of this act.

(9) The legal division, which shall supervise the preparation of all legal cases before the board of review of the administration, and before the courts of record in the United States.

(10) The personnel division, which shall establish and maintain personnel records in accordance with the civil service act, as amended, and the classification act of 1923, as amended.

(b) Each such division shall be under the control and administration of a director to be appointed by the commissioner. Each such director shall receive a salary of $6,000 a year. The commissioner is also authorized to appoint an assistant director for each

such division and to assign thereto such other employees as may be necessary to carry out the work of the division. No assistant director or other employee in any division shall receive a salary in excess of $5,500 a year.

SEC. 9. (a) There shall be in the administration a board of review consisting of seven members, to be appointed by the President, by and with the advice and consent of the Senate. Each member shall hold office for a term of six years and shall receive a salary of $7,500 a year.

(b) The board shall have jurisdiction to hear and determine all questions arising out of the administration of this act and the extension of agricultural credit thereunder. The hearings of the board shall be public, and all persons interested in any such question shall be notified and afforded a reasonable opportunity to be heard, in accordance with such rules of procedure, practice, and evidence as the board shall prescribe. In each case brought before the board for determination an assistant commissioner shall be designated by the commissioner as attorney for the administration.

(c) An appeal may be taken to the commissioner from any decision of the board within 30 days from the date such decision was rendered, and the decision of the commissioner upon any such appeal shall be final; except that the circuit courts of appeals and the Court of Appeals of the District of Columbia shall have exclusive jurisdiction to review the decisions of the commissioner (except as provided in section 239 of the Judicial Code, as amended); and the judgment of any such court shall be final, except that it shall be subject to review by the Supreme Court of the United States upon certiorari in the manner provided in section 240 of the Judicial Code, as amended. Upon such review such courts shall have power to affirm or, if the decision of the commissioner is not in accordance with law, to modify or to reverse the decision of the commissioner, with or without remanding the case for a rehearing, as justice may require.

(d) The decisions of the board and the decisions of the commissioner on appeal from the board shall be published each month in an official edition.

(e) The board shall select its own secretary, recorder, and reporters, and such additional assistants as the board may require shall be assigned to the board by the commissioner.

SEC. 10 (a) The administration of agricultural loans is authorized and directed to accept from any individual or joint-stock land bank, national farm-loan association, insurance company, or any other institution organized under the laws of the United States, or of any State or Territory, engaged in the business of making loans on farm mortgages, any obligations which are secured by duly recorded first mortgages on farm lands and buildings, but no such obligations shall be accepted by the administration unless the holders thereof are willing to receive in exchange for such obligations certificates to be issued by the commissioner. Each such certificate shall be in an amount equal to the face value of the obligation received by the administration plus interest thereon accrued and unpaid at the time of the presentation of such obligation to the administration and shall be convertible at the Treasury of the United States or at any Federal reserve bank into bonds of the United States of the character described in section 11, except that the amount by which the face value of the certificate exceeds the highest multiple of $50 shall be paid in cash. All such obligations accepted by the administration under this section shall be accompanied by an assignment to the administration of the mortgages securing the farm indebtedness evidenced by such obligations. With the consent of the mortgagors, the administration shall provide for refinancing the farm indebtedness secured by such mortgages on an amortization plan providing for the payment of the principal and interest by means of a fixed number of annual or semiannual installments sufficient to extinguish the indebtedness within an agreed period of not to exceed 47 years. The farm indebtedness so refinanced shall bear interest at the rate of 2¼ per cent per annum, and the amount of each such installment shall be covered into the sinking fund provided in section 11; except that not to exceed one-ninth of all amounts received by the administration as interest shall be covered into the Treasury as miscellaneous receipts. As a condition to refinancing the indebtedness secured by any such mortgage the mortgagor shall agree not to assume any further financial obligation with respect to the farm land or buildings covered by such mortgage without first obtaining the consent of the administration. At any time during the first five years after the date of enactment of this act the commissioner is authorized to grant an extension of time for the payment of such installments for not to exceed two years from the date on which the same are due.

(b) The administration is further authorized to accept, under the terms and conditions provided in subsection (a), any obligations which are secured by other than duly recorded first mortgages on farm lands and buildings if such obligations are offered to the administration either at the time the obligations secured by such first mortgages are offered or within such time thereafter as the commissioner may by regulation prescribe; except that if any such obligation is offered to the administration at any time after the expiration of the time so prescribed by the commissioner it shall be accepted by the administration only on condition that the holder thereof agrees to accept in exchange therefor a certificate of the character described in subsection (a) in an amount equal to the value of such obligation computed on the basis of the fair market value of the farm land and buildings securing such obligation as determined upon a reappraisal thereof by the administration.

(c) The administration is further authorized and directed to refinance the farm-mortgage indebtedness due to the Federal land banks on the same terms and conditions as are applicable with respect to the farm-mortgage indebtedness taken over by the administration under subsection (a) of this section.

(d) In so far as practicable, the administration shall provide for an adjustment of the terms of the loans heretofore made by any bureau, agency, office, or corporation consolidated and coordinated in or transferred to the administration under section 4 which are not secured by duly recorded first mortgages on farm lands and buildings, in a manner corresponding to that employed with respect to farm indebtedness which is refinanced under subsection (a) or (c) of this section.

(e) All new loans made by the administration within a period of nine years from the date of enactment of this act shall be secured by a duly recorded first mortgage on farm lands and buildings and shall be made on the same terms and conditions with respect to amortization and rates of interest as are applicable under this section with respect to farm indebtedness taken over or refinanced by the administration; except that in the case of loans made for agricultural purposes (including crop production) and for the raising, breeding, fattening, or marketing of livestock where it is impracticable to secure the same by a duly recorded first mortgage on farm lands and buildings, such loans shall be made on such terms and conditions and on such security as the commissioner shall prescribe, but in no case shall the combined interest rate and amortization payment exceed 3½ per centum per annum.

SEC. 11. (a) The Secretary of the Treasury is authorized and directed to borrow from time to time on the credit of the United States and to issue bonds to be known as United States agricultural loan bonds, in such form as he may prescribe. Such bonds shall be in denominations of not less than $50, and shall mature 50 years from the date of their issue, except that the Secretary of the Treasury may, upon 90 days' notice, call in at any time any such bonds which are outstanding 30 years after such date. Each such bond shall bear interest at 2 per centum per annum and shall bear the circulation privilege. The principal and interest of such bonds shall be payable in United States gold coin of the present standard of value, and such bonds shall be exempt, both as to principal and interest, from all taxation (except estate, inheritance, and gift taxes, and surtaxes) now or hereafter imposed by the United States, by any Territory, dependency, or possession thereof, or by any State, county, municipality, or local taxing authority. Such bonds shall be issued by the Secretary of the Treasury from time to time as required for the purposes of this act in such amounts as may be certified by the Commissioner of agricultural loans. Such bonds shall be available for the purposes of this act at the Treasury of the United States, or at the Federal reserve banks, under regulations to be prescribed by the commissioner, with the approval of the Secretary of the Treasury.

(b) There is hereby created in the Treasury a cumulative sinking fund for the retirement of the bonds issued under this section. The sinking fund and all additions thereto are hereby appropriated for the payment of such bonds at maturity or for the redemption thereof before maturity by the Secretary of the Treasury at such prices and upon such terms and conditions as he shall prescribe, and shall be available until all such bonds are retired. The average cost of the bonds purchased shall not exceed par and accrued interest. Bonds purchased, redeemed, or paid out of the sinking fund shall be canceled and retired and shall not be reissued.

(c) The Secretary of the Treasury is authorized to sell in the open market or otherwise such amounts of United States agricultural-loan bonds or other obligations of the United States as may be necessary to provide funds for the administration of agricultural loans for carrying out the purposes of this act, and there is hereby authorized to be appropriated all amounts obtained from the sale of such bonds or obligations for such purposes. Such bonds shall be first offered at not less than par, as a popular loan, under such regulations to be prescribed by the Secretary of the Treasury as will give all citizens of the United States an equal opportunity to participate therein. Any portion of the bonds so offered and not subscribed for may be otherwise disposed of by the Secretary of the Treasury at not less than par. No commission shall be allowed or paid in connection with the sale or other disposition of any such bonds.

(d) The Secretary of the Treasury shall submit to Congress at the beginning of each regular session (until all bonds issued under this section are retired) a report of the action taken under the authority contained in this section.

SEC. 12. If any provision of this act, or the application thereof to any person or circumstance, is held invalid, the remainder of the act and the application of such provision to other persons or circumstances shall not be affected thereby.

Mr. SHIPSTEAD. Mr. President, there have been signs for a long time that a major crisis was coming in the matter of long-term loans on land. The accumulation of indebtedness has threatened to ruin agriculture as a whole. The Nation is vitally interested, and has always been vitally interested, in the stability and prosperity of its agricultural producers. Many acts of government can be cited, from the earliest days of the Republic, to demonstrate that sound public policy was considered to be based upon intelligent assistance to agriculture. It may be that from time to time acts were committed inconsistent with this general intention, but

the general intention has been repeatedly affirmed. We have passed various important acts to provide and stabilize agricultural credit in all its phases, short term and long term, on land, on crops, in livestock.

And now in this last session of the Seventy-second Congress we are faced with the necessity of reconsidering the whole subject, and of furnishing facilities greater than we have heretofore thought necessary. Many bills have been introduced in this session. Some are predicated upon the theory that Congress should cut down the principal of public loans secured by mortgages, just as Congress has already authorized the Secretary of Agriculture to adjust, within reasonable discretion, loans secured by crops and other chattels. Others contemplate the reduction of the interest rate and leave the principal untouched. Both schools of thought expect private lenders to come in with their mortgages and take whatever compensation is provided for them.

As I think over this complicated question, I believe that I see certain basic principles. First, we all want the problem out of the way for the balance of the current economic crisis, and for as much longer as we can see ahead. Secondly, we want a solution that is in line with basic objectives in recovery, that is, we do not wish to settle the farm credit problem by resort to measures that will throw everything else into worse conditions than we have now. Thirdly, those basic objectives of a sound program of recovery seem to begin with the urgent need of getting the unemployed back to work not by job sharing and wage cutting, but by providing credit for producers in industry, and legitimate distribution in commerce. But the banks will lend only on Government securities, and all the money that has gone to them from the Treasury to absorb the shock caused by their own imprudent policies before 1930 has stayed right where it went, and has not gone on to help industry. So that making funds available to industry is indispensable, whether it is done by conferring upon the reserve banks power to do a general banking business, or through the Reconstruction Finance Corporation, or through releasing the frozen hundreds and thousands of millions of dollars tied up in farm mortgages. Fourthly, I see the paramount necessity of getting interest rates down at all costs, for all the Nation. I am convinced that a sound and lasting public policy can be worked out to provide for low interest rates at the same time that quickened and stimulated industry leads to a gradual reabsorption of the unemployed, and a gradual rise in commodity prices, and a gradual increase in the volume of traffic, and of transaction. I am convinced that the key log in the jam will continue to be the farm-credit situation, unless we provide some comprehensive scheme for lowering rates and on such a scale as will be calculated to fix the standard interest rates of the country for at least 8 or 10 years. And we will need that long to repair the damage, and recover equilibrium.

Fifthly, I wish to get through this operation soon. Time is important in this matter. It will not do, in my opinion, to start some elaborate process of revaluation. We have no William the Conqueror to ordain the preparation of a domesday book, in which would be the revaluation of all land, farm or city, and all improvements thereon. Theoretically I accept the idea of revaluation of the capital structure of the Nation, but practically I find it quite impossible. It seems to me like deciding upon several capital operations at one and the same time upon a famished and anemic patient, instead of giving him rest and nourishment and composure to face the operations. I am prepared to take mortgages, even second mortgages, at their face value and provide so low a rate of compensation upon the security I give for them as to reduce carrying charges by at least one-half. By doing so I believe that we will achieve much more than merely to solve the farm problem, serious and indispensable as this is. We hold down interest rates generally and contribute to make recovery possible upon a basis that does not involve too much mortgaging of future income for the Nation as a whole. Writing down capital sums and letting interest take care of itself would probably lead to a scramble for funds and a very high interest rate. Holding down the interest rate, but leaving the capital unimpaired, would have the effect of freeing funds for industry without asking the farmer to carry a loan which in a few years might again paralyze his efforts.

It is not generosity to mortgagees that prompts me to propose that we take all mortgages at par of the amount due plus unpaid interest but cold considerations of the practical necessity of liquidating the whole complicated situation at once. I think that this bill will do it, and I invite the attention of the Senate to the following statement which summarizes its provisions.

This bill undertakes to make possible the expeditious, efficient, and inexpensive refinancing of all the farm indebtedness in the United States of whatever character. It aims to consolidate all agencies of the United States Government primarily concerned with agricultural credit, whether long time or short term, set up by the farm loan act of 1916, the rural credits act of 1923, the agricultural marketing act of 1929, and the Reconstruction Finance Corporation act of 1932; and to effect this object the bill creates a new agency in the Department of Agriculture, to be known as the administration of agricultural loans, to which it proposes to transfer all the powers, functions, and duties of the Federal Farm Loan Board and the Federal Farm Board and, so far as they have to do with agricultural credit, those of the Reconstruction Finance Corporation and the Secretary of Agriculture. Greater efficiency and economy seem certain to result from the elimination of overlapping services and from the intelligent coordination of the functions of these various establishments. The Federal land banks will become the principal regional offices of the administration.

Under the bill all first mortgages held by land banks would be taken over at par by the administration of agricultural loans, with all unpaid interest, and all first mortgages held by other mortgagees would be taken at par if offered for this purpose.

The mortgagor would contract a new mortgage for this total outstanding of principal and unpaid interest upon the face value of which he would make an annual payment of 3½ per cent, and the interest rate would be uniformly 2¼ per cent, thus amortizing the mortgage in about 46½ years. A 2-year moratorium upon these payments would be permitted, under regulations prescribed by the administration. Second mortgages and other junior liens secured by land or buildings would be taken over at par and assimilated with the old first mortgages, in the making of the new first mortgages, provided the holders of second mortgages and similar liens would offer them within a reasonable time to be prescribed; otherwise, if offered at any later time, their mortgages would have to be submitted for revaluation upon a basis of reappraisal of the fair value. All loans for seed, crop production, and like objects secured by chattel mortgages and other collateral would be adjusted by a special division of the new administration in accordance with general principles defined in the bill.

Under this bill the farmer will pay interest at the rate of 2¼ per cent on his mortgage plus 1¼ per cent per annum to pay off principal, making a total annual charge of 3½ per cent instead of 6 per cent or more as at present.

None of the assistance thus accorded to farmers would be granted unless they explicitly committed themselves to incur no further indebtedness on their land without the prior consent of the administration during the life of such mortgages.

The mortgagees would receive from the United States Treasury, upon presenting receipts for their first or second mortgages, bonds of the United States to be known as the United States agricultural-loan bonds, maturing in 50 years, but callable after 30 years. These bonds would bear 2 per cent interest and would be tax free (except from inheritance, estate, gift taxes, and surtaxes). They would be issued in denominations of $50, $100, $500, $1,000, $5,000, and $10,000 and would bear the circulation privilege for national banks. Odd amounts not divisible by 50 would be paid in cash. For example, the Federal land banks, which would hereafter be the branches of the new administration, receiving these bonds, would be in a position to offer them at par to holders

of their present outstanding bonds in exchange for the latter, or to sell them in the market, and with the proceeds purchase their outstanding bonds to-day commanding a rather low price. Similarly, the outstanding securities of the other establishments which the bill contemplates winding up would be taken in exchange or acquired by purchase. Thus there would be no increase in the aggregate indebtedness of agriculture, but a writing down of interest rates on all that is now outstanding; and the 50-year bonds would be retired at the same rate as the 46 or 47 year mortgages (plus the 2 years of breathing space for the nearly insolvent agricultural producers). The bill contemplates new business which would be held to a 3½ per cent basis including amortization of principal for at least nine years. Thus, it is hoped to keep the general interest level down in this country, at least for agriculture, during the period of reconstruction lying ahead, when the liquidation of the inheritance of debts can be carried out in an orderly fashion, with no destruction of private property, and no discouragement of real saving. The bill contemplates driving out of business the high-interest second-mortgage racketeer and freeing agriculture from the threat of perpetual servitude. It also protects the farmer against his own improvident incurring of new indebtedness.

The bill has numerous other administrative features, such as the creation of an advisory council solely concerned with agricultural-credit policy and a board of review to deal with litigation and controversies arising out of the operation of the law. The bill also declares the loaning of money to agriculture to be a business having a public interest of the Nation as a whole, subject to the power of Congress to regulate commerce; but the bill makes no immediate use of the power thus defined.

It is believed that this measure will greatly simplify the process of according credit to those engaged in agriculture in the United States and render it inexpensive to them, and at the same time relieve the Nation as a whole of the burden of heavy expenditure. Moreover, a great deal of money now tied up in frozen farm loans will be liberated, and insurance companies and other lenders will be in a position to reinvest their money, even though on a lower average interest level. They will at least recover the principal sums of their investments. This should provide additional sources of capital for industry and other purposes.

There are several thousand people now employed in this field by the Federal Government directly, with a total annual outlay in salaries approximating $2,000,000; and there are probably a still larger number in the numerous land banks, joint-stock banks, and other subordinate corporations receiving an aggregate in salaries much greater than $2,000,000.

The entire major personnel of the new administration would receive less than $175,000 yearly in aggregate salaries; and any agency authorized to refinance the total—conceivably exceeding $10,000,000,000—of farm indebtedness, in the business world, would carry a far larger salary item for its responsible officers. It is expected that a saving of several million dollars can be effected in administrative costs under this bill. The saving to the Nation as a whole from the rehabilitation of agriculture will be incalculable.

FINANCIAL CONDITION OF THE REPUBLIC OF COLOMBIA

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent that there may be printed in the RECORD an abstract of the indebtedness, defaults, revenues, resources, security pledges, original and present market values, and so forth, of the departments and municipalities of the Republic of Colombia, being a statement of the financial condition of that Republic.

There being no objection, the abstract was ordered to be printed in the RECORD, as follows:

STATISTICAL ANALYSIS OF THE FINANCIAL POSITION OF COLOMBIAN DEPARTMENTS AND MUNICIPALITIES

The following statistical analysis of the financial position of the various departments and municipalities of Colombia is based on the best available information taken, in most part, from official sources, but it is not entirely complete in many instances, inasmuch as many departments and municipalities have not given out pertinent statistics with respect to their financial affairs. The independent bondholders committee for the Republic of Colombia, therefore, does not assume responsibility for the accuracy of the statistics, although it is believed to be correct as far as can be ascertained by its statistical staff.

Every bond issue has been analyzed separately, the analysis showing the amount of debt outstanding, annual debt service thereon, and interest in arrears to the end of 1932. The nature of the lien guaranteeing each issue is recorded and the amount of pledged revenues under each issue for several years is shown. In addition, the revenues and expenditures of each department and municipality for five years are given and a 5-year average of total revenues and expenditures is compiled upon which the ratios of debt charges are calculated in order to indicate the approximate financial condition of the various debtors over a period of time, inasmuch as revenues have had a considerable decline in the past three years, and current returns do not necessarily reflect the proper position of the debtors. Likewise, debt charges are based on the debt presently outstanding, which debt did not exist to the same extent in previous years, being created largely in the past five years. Various items are shown in round numbers and are calculated in many instances, inasmuch as statistics obtained with regard to finances of Colombian departments and municipalities vary with the source from which they have been obtained.

The statistical representation of the financial position of the departments and municipalities and the ratios which have been compiled are an attempt to indicate the approximate financial position of the departments and municipalities. The percentage of pledged revenue to interest and debt service respectively indicates the number of times by which the receipts from pledged revenues have covered the debt-service charges of each issue. The calculations are based usually on the latest year of pledged receipts available. The ratio of total interest and total debt service to the average revenue indicates the percentage of the revenue of each department and municipality required to meet respective debt charges. A large ratio indicates heavy debt charges with respect to income of the debtor and as such must be considered burdensome, although the Colombian departments and municipalities own and operate various railways and public utilities which are revenue producing, and this factor is lightening the burden. Such ratios would be considered normal if they were approximately 25 per cent for the departments and approximately 30 per cent for the municipalities.

The prices at which the various bond issues were offered are included as well as the price of the bonds at the close of the year 1932, showing the abnormally low quotations at which the bonds are presently valued and the liquidation of which would involve an unwarranted sacrifice on the part of the bondholders.

REPUBLIC OF COLOMBIA

Antioquia (Department of), Series A, B, C, and D, 7%, 1945: Outstanding, $17,100,000; defaulted July 1, 1932; partial payment, $23.80 per $35, coupon of July 1, 1932.

Annual debt service:

Interest	$1,200,000
Sinking fund	745,000
Interest in arrears to end of 1932	792,000

Security of issue: First lien upon 75% of the tobacco revenues of the department; also first lien on the properties and earnings of the Antioquia Railway, including all extensions with a few exceptions.

Receipts from pledged revenues, year ended June 30

	Net operating income of the railway (calendar year)	Net deficit (after fixed charges of railway)	Tobacco receipts
1928	$1,829,300	$284,480	$2,389,800
1929	2,089,260	378,100	2,622,071
1930	2,183,424	431,000	2,279,691
1931	1,902,283	884,472	2,115,886
1932			[1] 1,731,749

[1] Official estimate.

Pledged revenues to interest of this issue, approximately 260 per cent.

Pledged revenues to debt service, including sinking fund of this issue, approximately 160 per cent.

Position of the department: Antioquia has an area of 25,019 square miles and a population of about 1,000,000. It owns and operates the Antioquia Railway, due to which the bulk of the debt has been contracted.

Total debt, approximately	$42,000,000
External	28,900,000
Internal	13,100,000

Year ended June 30—	Revenues	Expenditures
1929	$9,539,313	[1] $13,280,678
1930	7,345,023	9,271,916
1931	6,916,659	9,099,576
1932 budget	6,394,386	6,394,386
1933 budget	5,035,465	[2] 5,035,465

[1] Includes $5,000,000 capital expenditures. [2] Not including external debt service.

Annual revenue (5-year average)	$7,046,150
Annual expenditures (5-year average)	7,616,500
External-debt interest	2,005,000
Total debt interest	2,922,000
Total debt service (including S/F; appr.)	3,900,000

Ratio of total debt interest to average revenue, 41.5 per cent.

Ratio of total debt service (including S/F to average revenue), 55.3 per cent.

NOTE.—On or about March 2, 1932, departmental assembly approved an ordinance notifying the foreign creditors that the department was unable to appropriate any amount of funds in the fiscal year beginning July 1, 1932, for foreign-debt service.

Originator of issue: Bankamerica-Blair Corporation.

Participating: E. H. Rollins & Sons; Chase, Harris, Forbes Corporation.

Offered in 1925 and 1926 at 90 and 95½.

Present price, December 31, 1932, 7.

Antioquia (Department of), Series 1, 2, and 3, 7 per cent, 1957: Outstanding, $11,500,000; defaulted April 1, 1932; paid $7 per $35, coupon of April 1, 1932.

Annual debt service:

Interest	$805,000
Sinking fund	195,000
Interest in arrears to end of 1932	725,000

Security of issue: First lien upon 75 per cent of the gross receipts of the liquor tax; 75 per cent of slaughterhouse taxes; and upon 100 per cent of the registration taxes.

Receipts from pledged revenues, year ended June 30

	75 per cent liquor	75 per cent foreign liquor revenues	75 per cent slaughter-house	Registration	Total
1929	$1,809,055	$156,898	$468,914	$262,081	$2,696,948
1930	1,140,226	105,767	410,145	165,554	1,821,692

1932 [1]	870,350	110,296	374,334	100,066	1,455,046

[1] Official estimates.

Pledged revenues to interest of this issue, approximately 180 per cent.

Pledged revenues to debt service of this issue, approximately 145 per cent.

Originator of issue: Guaranty Co.

Participating: International Acceptance Bank.

Offered in 1927 at 93.

Present price (December 31, 1932), 6¾.

Cundinamarca (Department of), 6½–1959: Outstanding, $11,537,000; defaulted May 1, 1932; paid $19 per $32.50 coupon of May 1, 1932.

Annual debt service:

Interest	$750,000
Sinking fund	151,000
Interest in arrears to end of 1932	525,000

Security of issue: Direct first lien upon the gross revenues of the department derived from its monopoly on distilled liquor and taxes thereof, taxes on foreign liquors, and slaughterhouse and tobacco taxes, after deducting the participation of the municipalities.

Receipts from pledged revenues, year ended June 30

	Liquor	Tobacco (net)	Slaughter-house	Total
1929	$2,944,900	$776,100	$262,000	$3,983,000
1930	3,606,000	733,700	265,500	4,605,200
1931	2,168,700	684,900	255,200	3,108,800

Pledged revenues to interest of this issue, approximately 415 per cent.

Pledged revenues to debt service of this issue, 345 per cent.

Position of the department: Cundinamarca has an area of 10,810 square miles and a population of 1,500,000, with its capital the city of Bogota.

Dollar loan	$11,500,000
Other external debt	3,000,000
Internal (maximum)	1,000,000
Total debt	15,500,000

Year ended June 30—	Revenues	Expenditures
1928	$5,807,470	$6,511,980
1929	8,257,326	8,281,040
1930	9,912,899	8,240,092
1931 [1]	5,131,192	2,757,308
1932 [2]	8,273,050	8,273,050

[1] Only 6 months.

[2] Budget which was subsequently revised placing expenditures at 6,621,925 pesos as against 7,363,077 pesos in 1931.

Annual revenue (5-year average)	$7,600,000
Annual expenditures (5-year average)	7,400,000
External-debt interest, approximately	$1,000,000
Total debt interest, approximately	1,100,000
Total debt service	1,400,000

Ratio of total debt interest to average revenue, 14.5 per cent.

Ratio of total debt service to average revenue, 18.4 per cent.

NOTE.—On or about March 10, 1932, the departmental assembly approved an ordinance prescribing a new order of payment on departmental obligations relegating service on public debt to practically last place. On April 10, 1932, the assembly voted to suspend making deposits against debt service due in New York after it rejected the scrip plan as unconstitutional.

Originator of issue: J. & W. Seligman & Co.

Participating: E. H. Rollins & Sons; Redmon & Co., Graham, Parsons & Co.

Offered in 1928 at 95½.

Present price (December 31, 1932), 10.

Caldas (Department of), 7½-1946: Outstanding, $8,591,000; defaulted July 1, 1932.

Annual debt service:

Interest	$645,000
Sinking fund	222,000
Interest in arrears to end of 1932	650,000

Security of issue: First lien upon 93 per cent of tobacco tax; 85 per cent of liquor tax; 50 per cent of the slaughter tax; and a first mortgage upon the properties of the Caldas Railway and its gross receipts.

Gross receipts from pledged revenues, year ended June 30

	Liquor	Tobacco	Slaughter-house	Gross railway revenues	Total revenues
1928	$1,855,866	$1,628,100	$220,000	$1,039,000	$4,742,966

1931 [2]	1,785,975	1,931,961
1932 [3]	1,979,909	1,979,644

[1] Includes the extraordinary budget.
[2] For 8 months ended Dec. 31.
[3] Budget figures; includes a provision for debt service of 552,325 pesos, agains 492,867 in 1931 and 755,136 in 1930.

Annual revenue (5-year average)	$2,133,590
Annual expenditures (5-year average)	2,198,100
External-debt interest	150,000
Total debt interest	250,000
Total debt service	340,000

Ratio of total debt interest to average revenue, 11.7 per cent.
Ratio of total debt service to average revenue, 16 per cent.
Originator of issue: Redmond & Co.
Participating: E. H. Rollins & Co.
Offered in 1928 at 93½.
Present price, (December 31, 1932), 8.
Bogota (municipality of), 6½–1947: Outstanding, $2,257,000; defaulted April 1, 1932.

Annual debt service:	
Interest	$147,200
Sinking fund	96,000
Interest in arrears to end of 1932	200,000

Security of issue: First lien upon the majority of shares and dividends thereon of the United Electric Power Co.; first lien upon the city's share in the taxes of the Department of Cundinamarca on liquor, tobacco, and slaughterhouses; and a second lien upon other municipal taxes.

Receipts from pledged revenues

Year ended Dec. 31—	Pledged and income taxes	Earnings of pledged shares
1928	$756,715	$166,612
1929	800,656	217,524
1930	865,847	201,186
1931 (6 months only)	427,726	132,043

Pledged revenues to interest of this issue, 800 per cent.
Pledged revenues to debt service of this issue, 485 per cent.

Position of the city: Bogota has a population of about 225,000. It is the capital of Colombia. The city has a substantial interest in the utilities operating in Bogota.

External (dollar bonds)	$7,006,000
Other external debt	1,800,000
Internal	1,200,000
Total debt	10,000,000

Year ended Dec. 31—	Revenues	Expenditures
1928	$3,020,741	$2,988,125
1929	3,215,726	2,787,229
1930	2,582,168	2,700,387
1931	2,458,133	(1)

[1] Not available; it was reported that tax collections in arrears amounted to approximately 1,500,000 pesos.

Annual revenue (5-year average)	$2,750,000
Annual expenditures (5-year average)	2,750,000
External-debt interest	675,000
Total debt interest	760,000
Total debt service	1,060,000

Ratio of total debt interest to average revenue, 27.5 per cent.
Ratio of total debt service to average revenue, 38.5 per cent.

NOTE.—Early in 1932 a resolution was passed by the city council requesting the American bondholders to reconsider the loan terms, and a committee was appointed to arrange to end the proposition of the National Government whereby scrip was to be issued in the place of interest due to bondholders.

Originator of issue: Baker, Kellogg & Co.
Participating: P. W. Chapman & Co.; Tucker, Anthony & Co.
Offered in 1927 at 91.
Present price (12/10/32), approximately 10.

Bogota (city of), 8 per cent, 1945; Outstanding, $4,749,000; defaulted April 1, 1932.

Annual debt service:

Interest	$385,000
Sinking fund	200,000
Interest in arrears to end of 1932	400,000

Security of issue: First lien upon the gross income from the real-estate taxes and all the public utilities owned and operated by the city. These include trainways, waterworks, electric power plants, markets, etc.

Receipts from pledged revenues, year ended December 31, 1931[1]

Gross revenues of utilities	$1,327,260
Real-estate taxes	296,018
Total	1,623,278

Pledged revenues to interest of this issue, 800 per cent.
Pledged revenues to debt service of this issue, 510 per cent.
Originator of issue: Dillon, Read & Co. No participants.
Offered in 1924 at 98.
Present price, December 31, 1932, 14.

Medellin (municipality of), 7 per cent 1951; Outstanding, $2,644,000; defaulted December 1, 1931; paid $10.80 per $35, coupon of December 1, 1931.

Annual debt service:

Interest	$186,500
Sinking fund	84,475
Interest in arrears to end of 1932	250,000

Security of issue: Secured by a first lien upon the physical properties of the public utilities and net earnings of such properties. In addition, the issue is secured by a first lien upon all the revenues of the municipality.

Receipts from revenues pledged, year ended December 31

	Gross income of utilities	Net before depreciation
1929	$1,551,960	$830,780
1930	1,669,000	840,000
1931	1,489,195	845,743
1932*	367,072	187,405

* Three months only.

[1] Only 6 months.

NOTE.—Ratios were not calculated because net income is not available, inasmuch as depreciation is not given.

Position of the municipality: Medellin has a population of about 120,000. It is the capital of Antioquia. Medellin owns and operates the utilities of the city. Debts have been largely contracted for the construction of new hydroelectric plants which are said not to have been completed as yet. The city, however, is applying part of debt service for completion of its electric properties, this being to the benefit of the bondholders, according to the municipality's contention.

External	$11,000,000
Internal	2,500,000
Total debt	13,500,000

Year ended Dec. 31—	Revenues	Expenditures
1928	$2,970,000	[1] $8,039,975
1929	3,016,500	[1] 6,916,394

1931	3,327,072	3,516,652
1932 [3]	3,976,469	3,976,469

[1] Include extraordinary expenditures but amounts are not known.
[2] Not available.
[3] Budget estimates.

Annual revenue (5-year average)	$3,200,000
Annual expenditures (estimated, not clear as to what it includes)	3,800,000
External-debt interest	731,500
Total debt interest	931,000
Total debt service	1,200,000

Ratio of total debt interest to average revenue, 29.1 per cent.
Ratio of total debt service to average revenue, 37.5 per cent.

NOTE.—In November, 1931, the municipality authorized the suspension of debt service by requesting a moratorium on its external debt, inasmuch as the continuance of service payment was impossible.

Originator of issue: Hallgarten & Co.
Participating: Kissell, Kinnicutt & Co. (not Kidder, Peabody & Co.); Halsey, Stuart & Co.
Offered in 1927 at 93½.
Present price (December 31, 1932), 12¼.

Medellin (municipality of), 6½, 1954: Outstanding, $8,378,000; defaulted December 1, 1931; paid $9.10 per $32.50 coupon of December 1, 1931.

Annual debt service:

Interest	$545,000
Sinking fund	177,050
Interest in arrears to end of 1932	600,000

Security of issue: None. It is the only Colombian issue (department and municipality) which is not specifically secured.

Originator of issue: Hallgarten & Co.
Participating: Kissell, Kinnicutt & Co. (now Kidder, Peabody & Co.); Halsey, Stuart & Co.
Offered in 1928 at 93¼.
Present price (December 31, 1932), 7½.

Cali (municipality of), 7 per cent, 1947: Outstanding, $2,408,000; defaulted May 1, 1932.

Annual debt service:

Interest	$169,000
Sinking fund	103,700
Interest in arrears to end of 1932	200,000

Security of issue: First lien and mortgage on the waterworks and on the principal items of improved real property owned by the municipality. Also secured by a first lien upon all the revenues except the municipality's participation in the departmental revenue.

Receipts from revenues pledged—Year ended December 31

	Total receipts
1928	$855,719
1929	915,279
1930	707,065
1931[1]	312,512

Pledged receipts to the interest of this issue, 353 per cent.
Pledged receipts to debt service of this issue, 225 per cent.

Position of the municipality: Cali has a population of about 125,000. The city was reported to have properties with a value of about $2,500,000 in 1928.

External	$2,408,000
Internal	592,000
Total debt	3,000,000

Year ended Dec. 31—	Ordinary revenue	Extraordinary revenue	Expenditures
1928	$972,407	$1,108,369	$1,783,192

[1] Only 6 months.

Annual revenue (4-year average)	$875,000
Annual expenditures	950,000
External-debt interest	169,000
Total debt interest	215,000
Total debt service	318,500

Ratio of total interest to average revenue, 24.5 per cent.
Ratio of total debt service to average revenue, 36.4 per cent.
Originator of issue: Field, Glore & Co.
Participating: Baker, Kellogg & Co.
Offered in 1927 at 93.
Present price, approximately, 8.

NOTE.—The Colombian peso is equal to United States $0.973 at par, but its current value is being regulated and quoted at $0.955.

SPANISH-AMERICAN WAR VETERANS' PENSIONS—ADDRESS BY HON. RICE W. MEANS

Mr. ROBINSON of Indiana. Mr. President, a few days ago, on Friday, January 20, 1933, Col. Rice W. Means, a former Member of this body, delivered a radio address, upon invitation of the National Broadcasting Co., on the subject of the Spanish War Veterans' Pensions. It is a very interesting address and full of information which I think the Senate ought to have. I ask unanimous consent to have it printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Thirty-five years ago May Day the world received news of the wonderful victory of Dewey and his fleet. That moment we became a great world power. Our people lifted their eyes from the horizon of domestic affairs and saw their relationship to the other peoples of the world.

Our country was totally unprepared for war. When the President called for volunteers, men responded immediately. They were hastened to camps in southern States located in places that we go to war in behalf of suffering humankind.

The young men from the North and the young men from the South marched away shoulder to shoulder. The wounds from the great civil strife were healed by the patriotism of those sons of America.

Our country was totally unprepared for war. When the President called for volunteers, men responded immediately. They were hastened to camps in southern States located in places which were considered most convenient but which, in most instances, were insanitary and injurious to the health of the command. The doctors had little or no medicine. They were without experience in the handling of large groups of men. What uniforms they had were heavy ones for service in the North and not fit to be worn by men in service in the Southland and in the Tropics. The commissary department absolutely broke down. The whole country was shocked by the "embalmed beef scandal" and the terrible epidemic of fever that broke out in those camps. Men were taken to the Tropics without proper clothing or food and without medicines. It is a wonder that any of them lived to tell the story of their experiences.

Those men carried liberty to Cuba; they fed the starving in Puerto Rico, took happiness to the Philippine Islands, provided for the open door in China, and stamped out the yellow fever in our Southern States. They carried the sunlight of American ideals into the darkest places of the world. They were the cause of the building of the Panama Canal. The period from 1900 to 1907 has been declared by statisticians to be the most prosperous in the entire existence of this Nation. It has been truly called the "golden era."

Through their insistence this Nation provided for a national defense. Their organization was dedicated to be a valuable aid to the Army and Navy and the Government of the United States during any future war.

The Spanish War, including the Philippine campaign, lasted 4 years, 2 months, and 14 days. Congress has repeatedly declared that to be the period of the war. Sixty-one per cent of the men saw service in the Tropics and the other 39 per cent in the fever-infected camps in this country.

DEFINITE POLICY EXISTED

When those veterans entered the service there was in existence a definite fixed veterans' policy established by the Congress of the United States in the year 1862 and amended in 1890. That policy constituted a definite promise to those men. It was a part of their enlistment contract, as definitely known as if it had been in words written therein.

When this Nation entered into the World War the Congress on October 6, 1917, declared a new veterans' policy by which the Government of the United States would reward the officers and enlisted men of the World War. It provided for compensation, family allowances, increased pay, additional pay because of continued service, vocational training, a new rating schedule, and the advantage of presumptions in aid of proof. No one at that time ever suggested that this same act or any part of the benefits it gave to the boys of the World War was to apply to the veterans of the Civil War or of the Spanish War.

Now certain leaders of organized business, after a period of 34 years, have asked the Government to repudiate its solemn obligation to those Spanish War veterans and thus take away all pension rights unless they can prove their disabilities to be service connected. They must know that is an impossibility. There are no medical or hospital records in existence of sufficient value to constitute such proof.

DIFFICULT TO GET RECORDS

The Surgeon General of the United States Army, in a report to the Secretary of War as of date June 30, 1899, said: "It was difficult to obtain, even from the regular regiments when in the field, the monthly reports of sick and wounded required by the regulations. This was due in part to the impossibility of having a full staff of regular medical officers with each regiment, on account of the limited number of the regular Medical Corps, and of the many members of that corps who had to be assigned to important administrative duties as chief surgeons or corps, division, and brigade surgeons on duty in hospitals and hospital ships, medical supply depots, etc.

"Many surgeons on contract, with no experience in the keeping of the records of sick and wounded, had therefore to be assigned to duty with the regiments. Chiefly, however, was this difficulty due to the unusual conditions under which the Medical Department was required to do its duty during and after the attack on Santiago. Something may be understood of these conditions when I state that the casualty lists required to be forwarded to my office by each surgeon immediately after an engagement with the enemy were not received for a month after the fighting had ceased. When they arrived they were found to be written in pencil on blank sheets torn, apparently, from private letters and other such scraps of soiled and weather-stained paper as could be obtained in the trenches or in the camps to which the regiments were afterwards withdrawn.

CHIEF SURGEON'S REPORT

"Later, when the health of the troops broke down under the exposure and fatigue of the campaign, with malarial fevers prevalent, yellow fever spreading, and from 100 to 200 men in each regiment claiming attention at sick call every morning, even the best trained and most energetic medical officer found it difficult to keep a satisfactory record of his cases, while others gave up the attempt to do so and devoted the whole of their energies to the care of their sick men."

Now, let us inquire into the conditions surrounding the service of the men in the Philippine Islands.

The chief surgeon of the Eighth Army Corps, in an official report to the Surgeon General, United States Army, said:

"SIR: I have the honor to herewith submit report of a special examination as made by the writer of the First South Dakota Volunteer Infantry, one of the units of his division, on account of complaint from headquarters at Manila that 'so many men from this expedition have been sent in from duty for treatment.'"

In order to ascertain present physical condition of troops, this regiment was selected by "lot."

"Total number of men examined was 540, balance of the regiment (over 600) being in hospital in Manila, Corregidor Island, or elsewhere. A very few were away on detached service.

"Of the entire number examined only 96 were normal. The unique feature of this examination was the condition of the heart; 179 of those examined had a pulse rate from 85 to 100, and 191 ranged from 100 to 150 (normal is 72).

"A large majority of these tachycardiacs had normal temperatures, the exception being an occasional slight rise. These observations were under exceptionally quiet conditions, men sitting, with absolutely nothing in the surroundings tending to excitement. Many of these cases used no tobacco, and the majority were young men. Those not on 'sick report' made no complaint of condition.

"These men have been either on the firing line, in the trenches, or on outpost duty almost continuously since February 4, 1899. Their sleep has been broken night after night by the now famous night attacks of the enemy, and during a great part of this time they have been exposed to the tropical sun at midday, poor water, no shelter at night, no bathing facilities or change of clothing, and from date of leaving Calumpit there was about two weeks of subsistence upon 'travel ration' only.

"This somewhat extensive campaign has demonstrated the fact that the white man in the Tropics can not endure the same amount of nerve tension and physical exertion that he can in the Temperate Zone.

"From many personal inspections, careful observations during this campaign, together with the result of the above examination, it is the opinion of the writer that the entire Second Division, Eighth Army Corps, is near a physical breakdown, and it is herewith recommended that each unit be relieved from duty as rapidly as it can be replaced by fresh troops and sent in from the front for rest and recuperation.

"Very respectfully, your obedient servant,

"HENRY F. HOYT,

"Major and Chief Surgeon, United States Volunteers."

ADHERED TO OLD POLICY

"When those men were discharged, they did not seek special legislation for their benefit. They willingly adhered to the policy then in existence, deeming it to be a part of their contract with the Government. It is well to bear in mind that President Roosevelt, an active, enthusiastic member of our organization, whose attitude toward veterans was well known, would have caused the enactment of special legislation for our benefit had we asked him so to do. Spanish War veterans had every reason to believe that the Government would carry out its solemn obligations to them

and would grant benefits in the same manner and in like amounts as were then or would thereafter be granted to veterans of the Civil War.

The United States Court of Claims, in a decision which has been cited with approval by the United States Supreme Court, has defined a pension to be: "A pension is a periodical allowance of money to a person, in the nature partly of a gratuity and partly of payment for past benefits conferred; payment because it is supposed to be in consideration of previous services rendered to the Government or the public, for which the compensation before made, if any, was inadequate in proportion to the benefits received and the ability of the nation in its prosperity to pay."

NATIONAL ECONOMY LEAGUE

The National Economy League, that illegitimate child of organized business and international bankers, appeared before the joint committee of Congress authorized to examine into all existing legislation and report to the Congress a veterans' policy, and testified through the medium of their attorney, Mr. Marshal Bullitt. I quote from the record:

"Mr. BULLITT. There is no reason for this dole.

"Senator ROBINSON. A dole! Do you mean that this money paid to veterans is a dole?

"Mr. BULLITT. Yes; nothing but a pure dole; and the position of the Economy League is that there is no reason for its payment; that it is a dole, a gratuity for nothing."

If he had uttered those words in the years 1898 or 1918, he would have been incarcerated as an enemy of his country. His present employers would have at that time called it treason.

ISSUE IS CLEAR CUT

The issue has been made; it is clear cut and understandable. The amounts received by Spanish War veterans have never been questioned. The issue is: Were the services of those veterans of such value to this Nation and its people as to warrant a payment of the benefits they now receive as a reward for those services? Or were their services valueless and the amounts now received by those veterans a dole, a gratuity for nothing?

It seems hardly possible that citizens would so far forget themselves as to besmirch the services of America's only volunteer army. Because of those services more benefits flowed to this country than from any other conflict in which this country has been engaged since the day of independence.

The New Orleans Times-Picayune, in a recent editorial said: "If ever a war pension was justified by logic and sentiment, it is that small amend made to the most patriotic and worst-treated army ever assembled by the American Republic."

We are content to submit our case to the Congress and to the patriotic people of the United States. We are proud of our service, proud of our country, and proud of our contract of enlistment which has been partly performed on the part of the Government and fully performed on the part of Spanish War veterans. The Congress will never consent to this Government's repudiating that contract. They will declare in no uncertain language the debt to Spanish War veterans must be paid.

BONDS OR CHARITY—ADDRESS BY REV. CHARLES E. COUGHLIN

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by Rev. Charles E. Coughlin. It contains so much valuable information and thought that I believe it to be deserving of the attention of the Senate.

There being no objection, the address was ordered printed in the RECORD, as follows:

It appears that religion has lost much of its charm and forcefulness in the scheme of our modern civilization.

This is so true that more than 60 per cent of our fellow citizens profess no allegiance whatsoever to any organized church. They regard dogmas as unscientific presumptions. They look upon morals as unreasonable impositions.

While the Bible is regarded as a book to be revered, it is oftentimes considered archaic to maintain that its contents are revealed truths.

This is most unfortunate, especially when we are confronted with the momentous problems of the present day.

For a short period of time the world of men more or less became disciples of the goddess of a science divorced from religion. Like a meteor in the night she appeared on the distant horizon of the eighteenth-century sky. Brighter and more beautiful she loomed through the years, transforming darkness into apparent sunshine. Then, at the very moment when men deemed that day had dawned forever, there was a hissing sound as this vagrant of the heavens dashed herself into the depths of an ocean of blood where mingled the rivers of sorrow which flowed from the wounds of the Great War.

Night returned from its darkness, more terrible than ever. Men once more began their gropings and their searchings after light. When, lo! through the clouds of doubt there appeared the dim silver shining of the morning star, God's ambassador, heralding the approach of the eternal Sun of Justice, Christ Jesus, the Light of the World!

My friends, it were inexpedient for me to scorn the magnificent developments attributed to the scientific experimentation of the century which has passed. Too well are you acquainted with the progress of steam and of electricity, with the marvels of chemistry, with the secrets of physics which now are so commonplace. Too well have we all tasted of the sweets of their victories. Our generation, equipped with a new ammunition of learning and fortified with new weapons of science, has fought battles on the frontiers of a new world of progress—frontiers which were uncharted on the maps of our grandparents' knowledge.

Nevertheless, I honestly lament the absence of religious principles during this period of magnificent material achievement—principles designed not to impede progress; not to retard the advance of science; not to perpetuate the abuses of the past, but, on the contrary, religious principles which are intended to reach out a guiding hand to science as together they both seek their way from the deserts of bondage to the meadows of liberty; from the winter of discontent to the summer joys of happiness.

Unguided by faith or by Biblical principles, what solution has science offered to liquidate the imponderable debts accumulated by the Great War or to stem the ever-increasing tide of losses which threaten to engulf us?

With all the gifted intelligence resident in the minds of economists, which one of them, divorced from religion, has approached the problem of unemployment with such clarity of thought as is manifest in the legislation of the Mosaic Law or in the verses of Saint Paul's inspired Letter to the Corinthians, chapter the thirteenth?

Not one of them! These problems which are deep-rooted in man's social relations, one to another, have baffled a Pericles and an Aristotle of old, and will continue to defy lesser minds to-day unless the dim, fluttering candle of reason gives way to the lustrous, shining of the Light of the World!

God's standard has been bartered for an impossible gold standard. Debts and financial rights have been deemed more precious than love and human rights.

I

First. Let us consider the stupendous debts which are devastating our farms, confiscating our homes, divorcing our life's savings, destroying our industries, and throwing into inevitable bankruptcy our once prosperous country.

As you are already apprised of the fact, our national and private debts have reached approximately $235,000,000,000.

Definitely related to these debts is a conservative loss of $264,000,000,000, sustained by our citizens during the past three years.

This total of nearly $500,000,000,000 is so staggering that our capacity to pay has long since become an impossibility.

Now, with what solution do the sacred Scriptures supply us when we are confronted by such a perplexing situation?

Read with me the twenty-fifth chapter of the Book of Leviticus. There you find inscribed the following words:

"Thou shalt sanctify the fiftieth year, and shalt proclaim remission to all the inhabitants of thy land; for it is the year of jubilee. Every man shall return to his possession, and everyone shall go back to his former family. * * *

"In the year of jubilee all shall return to their possessions.

"When thou shalt sell anything to thy neighbor or shalt buy of him * * * thou shalt buy of him according to the number of years from the jubilee. * * *

"Do not afflict your countrymen."

Here, then, both a principle and a practice are expressed.

The principle is plainly this, namely, that debts have a limitation and an ending. They must not afflict your fellow countrymen, nor, in any event may they endure in perpetuity.

It is a principle which plainly infers that financial rights have a termination and that human rights are eternal.

It is a principle which was not abrogated under the Christian dispensation; for Christ came to perfect and not to destroy.

It is a divinely inspired principle which seemingly has not filtered through the minds of those into whose hands the destiny of our Nation has been placed.

"Do not afflict your countrymen!" What care they for this economic inspiration that was born in heaven?

If it fits not into the philosophy of creditors, let it perish. Let poverty reign; let stark starvation run rampant through our countryside; let evictions multiply. In a word, crush out human rights. Pillory them in every public place to teach a broken-hearted people that financial rights are supreme.

How inconsistent we so-called Christians are. Invokers of the name of God in our political speeches. Builders of churches with our ill-gotten gains. Mumblers of prayers in public places. And hypocrites when actions would be more eloquent than words.

II

Take up and read not only those of you who still cling to the outstretched hand of religion, but also those of you who, oppressed by debt, have forsaken her guidance to wander aimlessly down life's treacherous pathway.

Take up and read this twenty-fifth chapter of Leviticus in its entirety.

And what else shall you find?

At least one more principle that is applicable in our present day when the Budget is unbalanced, when taxes are being multiplied, when unemployment has reached a national crisis, and when the concentration of wealth in the hands of a few rides ruthlessly on under the whip and spurs of bonds and interest.

Let me read for you the passage at hand:

"If thy brother be impoverished and thou receive him as a stranger and sojourner, and he live with thee, take not usury from him nor more than thou gavest.

"Thou shalt not give him thy money upon usury, nor exact of him any increase of fruits. * * *

"If thy brother, constrained by poverty, sell himself to thee, thou shalt not oppress him with the service of bond servants."

Usury! Interest! Bonds! Taxation!

Were we religiously minded, it would not be difficult to apply this principle to-day.

It is a long, sordid story, my friends, in the telling of which I shall try to be brief.

Many of our social and economic sorrows are traceable to the lust for power and to the greed for gold which dictated the policies which culminated in the Great War.

No one seriously denies that this wholesale carnage was an inevitable sequence to the commercial and financial greed which characterized the age of reason.

This is a serious statement to make. It is one which should not go unchallenged unless substantiated by facts.

For a moment let us disregard the European nations and focus our attention upon America.

If you recollect, we entered the Great War on Good Friday in the year 1917.

On the eve of that eventful day our Senate was assembled.

Long into the hours of Holy Thursday night serious-minded men debated both on grounds of patriotism and of righteousness whether or not we should take up arms against the Central Powers.

The night when nearly 1,900 years before the Master supped with His apostles and said to them, "This is the chalice of the new and eternal testament which shall be shed for you and for many unto the remission of sins!"

The night when Judas betrayed Him for 30 pieces of silver!

The night of Gethsemane with its horrors, with its infuriated mob.

The night when were spoken the words, "Put up thy sword into its scabbard. Know ye not that they who use the sword shall perish by it."

The short-lived night when Annas and Caiaphas gloried in their passing triumph.

The clock in the Senate Chamber moved toward midnight.

Frenzied words passed to and fro.

Voices were filled with emotion.

Was there ever such nervous tension before in the history of that august body? Never! Never!

The hands of the clock ticked off the seconds, the minutes.

It was 10 minutes to 12—and yet no decision had been made.

From his seat rose a white plumed, fearless, honest man. It was Senator James Reed, of Missouri.

"If you must declare war," said he, "for God's sake, do it now before it becomes Good Friday."

And then the bells of midnight began to toll the yearly requiem for the Prince of Peace.

The Senate had waited too, too long.

Waited for the anniversary of His death day to declare the most iniquitous war that was ever waged.

It was the Good Friday of that memorable year of 1917.

It was the doomsday of thousands of America's youths who, like the innocent Victim of old, were herded to their Calvary of sacrifice to be crucified between the two thieves of gold and greed.

On that eventful day the president of the bank board of the United States was Mr. W. P. G. Harding.

If the Senators knew not why they declared war, at least Mr. Harding was not ignorant.

On March the 22d previous to the declaration, mind you, he knew that eventually we would commit ourselves against the Central Powers. He knew it and knew why, as is evident from these historic words—words that shall go down to blot with shame the pages of American history. Mr. Harding said:

"As a banker and creditor, the United States would have a place at the peace-conference table, and be in a much better position to resist any proposed repudiation of debts, for it might as well be remembered that we will be forced to take up the cudgels for any of our citizens owning bonds that might be repudiated."

What a confession, my friends; what a paradox to Christian teaching; what a burlesque on human rights. To think of it we must take up the cudgels, we must rush headlong into a sea of blood, we must sacrifice our boys, we must crush the hearts of their mothers, we must multiply barbarously the orphans in our fair land, we must crucify again the Prince of Peace, we must consign to hell the doctrines of charity—all for the sake of bloody bonds, owned by private citizens, and bought at their personal risk. Bonds which to-day sleep in vaults where wealth lies buried but which to-morrow shall rise like ghosts from graves in hell to haunt and to torment both us and our children.

Some future historian, my friends, will have both the courage and the honesty to analyze that statement of the president of the bank board of the United States and to tell fearlessly to the generations to come that our entrance into the Great War was motivated not to make the world safe for democracy but to make the bonds and debts collectible by our private lenders.

Christ was betrayed again for 30 dirty pieces of silver. And once again they who thus used the sword shall perish by it.

What had happened to evoke such a heinous, sinful statement from the official mind of the president of the bank board of the United States?

Briefly, this is the outline of the facts:

We are discussing the year 1917.

For three years previous to this date American corporations had been waxing fat on the war materials which they were shipping, chiefly to England and to France.

Already billions of dollars worth of wheat, of cotton, of arms and munitions had been poured into the lap of the Allies. Hardly a penny in actual money had been extended to them.

Now, in 1917, it seemed certain that Germany would be victorious. If so, it seemed equally certain that England and France and the Allies would repudiate their debts to private bondholders in the United States.

Thus, it appeared that the private contracts entered into directly by American munition manufacturers with the allied Governments of Europe would be disavowed.

So we went to war to save our thirty pieces of silver; to guarantee that the Allies, whom our wealthy citizens had staked for three years, would win and therefore pay.

Now, the United States as a nation, after 1917, was officially participating in the conflict.

Now, the complexion of the loans to the Allies was undergoing a change. Their payment was being made secure by the bodies and souls of innocent men.

More than ever in 1917 arms, munitions, coal, and foodstuffs were required by the Allies as well as by our own Army and Navy. But from this year on our Federal Government, which means the American taxpayer, undertook to carry the burden.

Roughly estimated, $14,000,000,000 of war material was loaned to the Allies by the broad shouldered American taxpayer until eventually came the armistice, and with it a second chapter of bond history was written.

For behold! The $14,000,000,000 worth of material—of wheat and of cotton, of meat and coal and munitions which we shipped abroad to England, to France, to Italy, to the Allies—was summarily canceled. Their war debts were officially wiped out!

Meanwhile the American producers of these war materials had been paid in American dollars.

Meanwhile Government interest-bearing bonds had been sold to our banks and to our citizens to raise these dollars. Those who were crucified to the cross of poverty must offer up sacrifice to those, their fellow citizens, who sat upon the thrones of the Herods of wealth.

Do you understand? The taxpayers of the United States assimilated the debts canceled so generously to the European nations. We assimilated the debts; and the taxpayers, through the medium of bonds, began to pay back the manufacturers of munitions and bullets used to kill and to destroy.

Oh, indeed, if the debts had been canceled in favor of the foreigners, the bonds representing them and piled upon the backs of the American public had not been canceled! They still remained. Our citizens were still pledged to redeem these bonds which our Government had issued to pay the great corporations of America for their profitable contribution in having made a shambles of the civilized world.

We who thought that the flower of our youth had been sacrificed to make the world safe for democracy now agreed with President Wilson when he disillusioned us with the statement: "This was a commercial war."

Thus, once more I stress the point that as a result of the Great War the citizens of this Nation are, in one sense, debtors to the war profiteers of this country.

Their profits ran into billions of dollars. And as a result of it all there sprang up in our midst in a period little over one year and a half 16,500 more millionaires than we had before we entered the conflict.

Let me give you a few examples from the official records in our Federal archives.

First comes the Bethlehem Steel Co. The profits of this corporation for the years 1911, 1912, and 1913 averaged $3,075,108 per year. But in 1915 the profits jumped to $17,762,813. In 1916 they totaled $43,503,968. And in 1918 they pyramided to $57,188,769.

Second. Twenty-nine leading copper-producing companies from 1915 to 1918 had a surplus of $330,798,593 compared with the surplus of $96,711,392 on the same day of 1914.

Third. The United States Steel Corporation, with a capital stock of approximately $750,000,000, made a profit in 1916 and 1917 alone of $888,931,511.

Fourth. In the Senate Document 259 of the Sixty-fifth Congress there are made manifest the profits gained by American business during the year 1917. This document contains 388 pages of almost unbelievable facts.

In the meat-packing business alone half of the concerns made a profit of more than 50 per cent, and a sixth of them admit they made a profit of over 100 per cent.

Of the 340 coal producers in the Appalachian field 79 of them reported profits between 50 and 100 per cent; 135 of them testified that they profited to the extent of 100 to 500 per cent; 21 reported profits of from 500 to 1,000 per cent; and 14 testified that they made profits of more than 1,000 per cent.

Of course, my fellow citizens, immediately following the Great War $14,000,000,000 which Europe owed us at that moment in 1918 were summarily canceled. But that does not signify that the United States Government bonds which floated these debts and which eventually are payable by your tax money and by mine—it does not signify that these were canceled. For generations to come the American people will be paying out taxes to the dollar-a-year profiteer who already had grown fat upon the misery of a stricken people.

Perhaps the truthful historian to whom I referred a few moments ago will regard the Great War as the death knell to a system of irrational capitalism which greedily profiteered upon misery, and to a system of financial control which waxed fat upon the bonded debts of a patient people.

And so to-day, my friends, the American people are demanding the normalization of the American dollar—a dollar that was abnormalized and rendered dishonest by the issuance of war bonds, by the inflation of domestic credit at home, by the breakdown of foreign commerce and trade, and by the subsequent flight of currency money from the channels of circulation.

To-day as in the year 1862, we are being terrorized and tyrannized by the philosophy which then was spoken by the house of Rothschild to the American bankers.

In a letter, known as the "hazard circular," received by every bank in the State of New York and in New England on that date, we find the following statement:

"The great debt that capitalists will see to it is made out of the war must be used as a means to control the volume of money. To accomplish this, the bonds must be used as a banking basis."

Thus everyone is aware that money is controlled both by the debts and the profits arising from the war and by the multiplicity of bonds, bloody bonds, which bind us to the past and prevent us striving for the better things of the future.

No wonder that to-day following the Great War it is just as true as in the days following the Civil War that bankers are adverse to the issuance of currency money to replace the existing interest-bearing bond money that is sucking the lifeblood from our Nation.

In 1872 a mighty group of New York bankers sent the following circular to every bank in the United States. It reads as follows:

"DEAR SIR: It is advisable to do all in your power to sustain such prominent daily and weekly newspapers, especially the agricultural and religious press, as will oppose the issuing of greenback paper money, and that you also withhold patronage or favors from all applicants who are not willing to oppose the Government issue of money. * * * To repeal the law creating national-bank notes, or to restore to circulation the Government issue of money, will be to provide the people with money, and will therefore seriously affect your individual profit as bankers and leaders."

Thus the question of issuing noninterest bearing Government money to replace the interest-bearing bond money has become a national issue.

The principle of Scripture supports Government non-interest-bearing money. The principle of bankers stands firmly behind the bond money.

"If thy brother be impoverished," says the Scripture—and God knows as a Nation we are not only impoverished, but we are on the verge of bankruptcy—"if thy brother be impoverished and weak of hand, take not usury from him nor more than thou gavest."

By which principle do the people of this Nation wish to stand?

By the principle revealed by Almighty God to His chosen people or by the policy advocated in the financial documents which I quoted?

Billions of dollars of war bonds bearing interest and multiplying wealth at the expense of our misery!

Or the equivalent of these bonds handed to their present posessors in new currency at which they will scoff and say: "Fiat money" as if it were not backed by gold; as if it were not cleaner and holier than the blood money of war bonds to which they cling!

It would be billions of sterile currency dollars which the present bondholders would perforce invest in industry or in other tax-bearing bonds.

It would help substantially to end the famine of money from which we are suffering.

Religion! Faith! Revelation. These things, so taught the proud rationalist of the previous century, were relics of the uncultured past. Let us replace them with the clay god of reason. Let us substitute for God's word the word of erring man.

If in ancient days it was taught that thou shalt not oppress thy brother, we of this new age shall shout from the housetops and preach in the press that this absurdity must terminate once and for all.

If bonds and interest were forbidden even in the dim past of Mosaic days, we of this age of reason shall teach a new doctrine that there can be no progress, no concentration of wealth in the hands of a few unless these instruments of tyranny are revived.

If there needs be such an illusion as religion, says the rationalist, bind it and cabin it up within the narrow precincts of a Sabbath day, for it has no place in the bank, no place in the stock exchange, no place in the secular life of a world's prosperity.

Oh, my fellow men, what price have we paid for this philosophy, for our cleverness, for our rationalism; what sacrificial victim have we offered up at the feet of this dirty god of clay!

With tears in our eyes, with hearts filled with sepentance, we have sadly staggered under the weight of this cross; we became its victims until we were crucified between the thieves of greed and gold. But to-day I trust that we are glimpsing the first rays of a new sunrise, of a revived faith, of a happy Easter morn of resurrection from the dead past.

Once more we shall take up and read the Scriptures. Once more we shall turn to that beautiful letter which Paul inscribed to the Corinthians and read therein God's philosophy of man's relation to his fellow man as we put aside once and for all the rugged individualism, the pagan selfishness, and the cursed exploitation which have temporarily replaced it in the days just passed.

"If I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal.

"And if I should have prophecy and should know all mysteries and all knowledge, and if I should have all faith, so that I could remove mountains, and have not charity, I am nothing.

"And if I should distribute all my goods to feed the poor, and if I should deliver my body to be burned, and have not charity, it profiteth me nothing.

"Charity is patient, is kind; charity envieth not, dealeth not perversely, is not puffed up, is not ambitious, seeketh not her own, is not provoked to anger, thinketh no evil; rejoiceth not in iniquity, but rejoiceth with the truth; beareth all things, believeth all things, hopeth all things, endureth all things.

"Charity never falleth away: whether prophecies shall be made void or tongues shall cease or knowledge shall be destroyed.

"For we know in part: and we prophesy in part.

"But when that which is perfect is come, that which is in part shall be done away.

"When I was a child, I spoke as a child, I understood as a child, I thought as a child. But, when I became a man, I put away the things of a child.

"We see now through a glass in a dark manner; but then face to face. Now I know in part; but then I shall know even as I am known.

"And now there remain faith, hope, and charity, these three; but the greatest of these is charity." (I Cor. xiii, 1–14.)

And that, my friends, is the beautiful philosophy which God reveals to us—the doctrine of charity which is counter to the doctrine of rugged individualism. Charity, which looks into the soul of your fellow man and sees there not only the facial expressions of another human being but the borrowed splendor of the God who created him!

Charity bids us love our fellow men not for what they are in themselves but because God dwelleth in the temple of their hearts.

Charity, greater than all things, greater than all power, all wealth, teaches us to love the Lord our God with our whole heart, with our whole soul, with our whole mind, and our neighbor as ourselves. Charity teaches us that whatsoever we do unto the least of God's little ones we do unto Him!

Without charity you can not even pretend to Christianity.

Thus, my friends, shall we go down the highway of time perpetuating the hypocrisy of the past? Shall we endeavor to work hardship and exploitation upon our fellow man, knowing that whatever we do unto him we are doing unto Christ?

Oh, rob, steal, profiteer, and exploit, bend low and break your fellow citizens! Every time you lift a lash of oppression; every time you raise a scourge of exploitation you are lashing Christ again at the pillar in Pilate's hall, you are driving home once more the thorns of worry into His brow; you are crucifying Him upon the cross of Calvary!

Whatsoever you do to the least of His little ones you do unto Him!

Unless we adopt this doctrine, proclaimed both by Catholic and Protestant and revered by Jew, let us be honest and take the name of God from our coins; erase the image of Christ from our minds, and become pagans in deed and in name both. Like Magdalen of old, or like the thief upon the cross, let us turn to the crucified Christ, beg for forgiveness, and from Him the promise shall come to-day as of old, "This day thou shalt be with Me in paradise."

DISTRIBUTION OF GOVERNMENT-OWNED COTTON—CONFERENCE REPORT

Mr. BINGHAM. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Connecticut?

Mr. ODDIE. I yield.

Mr. BINGHAM. Mr. President, it is obvious that to-morrow we shall be occupied all day long, and somewhat into the evening, with the pending appropriation bill. It is well known that we have been endeavoring now for some weeks to get a little relief for those who are cold by distributing through the Red Cross cotton that is owned by the United States Government.

The bill for that purpose passed the House; it passed the Senate with amendments; it went to conference; the conferees agreed; the House has adopted the conference report; it came to the Senate; the report was adopted by the Senate; but when the Senator from Utah happened to return to the floor and discovered that it had been adopted, he, very properly, in his own right, entered a motion to reconsider.

We have been endeavoring now for some 10 days to get the Senator from Utah to press his motion to reconsider. I realize that I or any other Senator might have pressed it; but, out of courtesy to him and his desires, I have refrained from doing so. Now we have been told by the chairman of the Appropriations Committee that we have got to hold night sessions in order to secure the passage of the appropriation bills. I wonder if the Senator from

Utah will not be willing—it is not very late—to take the matter up at this time?

I dislike to make a motion, but we have had a promise from him at least three times during the last 10 days that the report might be taken up on either the next day or the next day but one. The Senator realizes that winter is progressing, and that every day's delay means additional discomfort for thousands of people. I appreciate the fact that the Senator has very strenuous objections to certain features of the bill, but the Senator from Tennessee has assured us to-day that the majority of the Senate are in sympathy with him; so why not let us vote on the question as to whether the conference report shall be agreed to or, if the Senator wishes to make his motion, vote on the question of sending the bill back to conference? Let us vote on it and get somewhere. It seems to me it is not quite fair for two or three Senators who are particularly interested, although they have every right to oppose a certain feature of the bill to which they object and which was agreed to in conference with the House, to prevent us from giving any relief through the Red Cross.

I dislike to emphasize this matter any more, but it does seem to me we have a right to have this question settled once and for all and as promptly as possible. If it be true, as the Senator from Tennessee says, that a majority of the Senate wants to send it back to conference to see if we can not write a better bill, let us send it back. I do not want to delay it, and I beg of him that he will not delay it any longer, but let us vote on the question this evening and determine whether or not we want to send the bill back to conference.

Mr. McKELLAR and Mr. KING addressed the Chair.

The PRESIDENT pro tempore. The Senator from Nevada continues to hold the floor. To whom does he yield?

Mr. ODDIE. I yield first to the Senator from Tennessee.

Mr. McKELLAR. Mr. President, the Senator is not charging me with delay? I have no objection to voting on the question right now.

Mr. BINGHAM. Then let us vote.

Mr. McKELLAR. And I asked unanimous consent to proceed a while ago, but the Senator objected.

Mr. BINGHAM. No; I did not object. The Senator wanted to ask unanimous consent that Senators who believed in the bill as it stands at present should waive consideration and that the bill should be sent back to conference. That is quite a different thing from voting on it.

Mr. McKELLAR. I merely suggested there was no reason in the world why we could not expedite the matter by sending it back to conference and upholding what the Senate has already done and not vote a subsidy to the Farm Board.

Mr. BINGHAM. Let us vote on it now without further discussion.

Mr. KING. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Connecticut yield to the Senator from Utah?

Mr. KING. I do not want to take the Senator from Connecticut off the floor.

The PRESIDENT pro tempore. The Senator from Utah is recognized.

Mr. KING. Mr. President, the Senator from Connecticut knows that the Senator from Oklahoma objected to his motion a little while ago. The Senator is absent from the Chamber. When he shall return in the morning I will have not the slightest objection to the consideration of the report, but I want to say to the Senator that there is more involved than what he attempts to indicate to the Senate. He does not seem to think it is important to take ten or twelve million dollars out of the Treasury. Under the bill as it passed the Senate the Farm Board would be compelled to pay out of its funds obligations which it had directly or indirectly brought about. I want to save the Treasury of the United States that ten or twelve million dollars. I have not any objection at all to the bill which passed the Senate. The Senator from Tennessee and myself indicated when the measure was before us and when the amendment was tendered by the Senator and later amended by myself that we had no objection to the bill with the amendment which was offered and which was unanimously accepted by the Senate. The bill went to conference; the action of the Senate was disregarded entirely; the House bill was brought back as a conference report; and I have simply urged that we have an opportunity to consider the entire question.

I should like to see the bill passed, but not in a form to take ten or twelve million dollars out of the Treasury of the United States. The Farm Board obtained an appropriation of $500,000,000. It has now on deposit in the Treasury of the United States adequate funds for the purpose of meeting the obligation, the lien, upon this cotton; and the only controversy between the Senator and myself is that I insist that we shall not take the money out of the Treasury but let the Farm Board pay its own obligations.

Though he is struggling with the Economy Committee and the Appropriations Committee to balance the Budget, and insisting that we balance the Budget, he is perfectly willing to dip into the Treasury of the United States and take out ten or twelve million dollars more instead of taking it out of the funds which belong to the Farm Board. I am perfectly willing when the Senator from Oklahoma shall return to the Chamber to-morrow morning to have the matter taken up for consideration.

Mr. BINGHAM. Mr. President, that is the fourth time the Senator from Utah has said he would be "perfectly willing" to take the matter up at some future date. I hope that this time he may succeed in doing so. I will refrain from making a motion now. I realize that it is late. The Senator incidentally said that he objected to my motion. I made no motion, although I have every right to do so and perhaps I am wrong in not making the motion. The Senator from Massachusetts asked unanimous consent that the matter might be considered at 4.30 to-day. The Senator from Oklahoma entered an objection to that; but, Mr. President, I now give notice that to-morrow morning when the Senate shall meet, unless the Senator from Utah chooses to do so I will ask for the consideration of the motion to reconsider which he has entered.

TREASURY AND POST OFFICE APPROPRIATIONS

The Senate resumed the consideration of the bill (H. R. 13520) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes.

Mr. McKELLAR. I desire to have printed and lie on the table a proposed substitute for the amendment which I offered this afternoon.

The PRESIDENT pro tempore. The amendment in the nature of a substitute proposed by the Senator from Tennessee will be printed and lie on the table.

RECESS

Mr. ODDIE. I move that the Senate stand in recess until 12 o'clock noon to-morrow.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m.) the Senate took a recess until to-morrow, Tuesday, January 31, 1933, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 30 (legislative day of January 10), 1933

SECRETARY IN THE DIPLOMATIC SERVICE

Robert G. McGregor, jr., of New York, now a Foreign Service officer, unclassified, and a vice consul of career, to be also a secretary in the Diplomatic Service of the United States of America.

PROMOTIONS IN THE REGULAR ARMY

To be first lieutenant

Second Lieut. Francis Elliot Howard, Infantry, from January 21, 1933.

DENTAL CORPS

To be captains

First Lieut. Leland Grant Heder, Dental Corps, from January 9, 1933.

First Lieut. Samuel Rush Haven, Dental Corps, from January 14, 1933.

First Lieut. Mallery Carpenter Jones, Dental Corps, from January 22, 1933.

CHAPLAINS

To be chaplain with the rank of major

Chaplain Perry Orlando Wilcox (captain), United States Army, from January 20, 1933.

HOUSE OF REPRESENTATIVES

MONDAY, JANUARY 30, 1933

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Heavenly Father, Thou art still stretching out Thine arms of love to claim us as Thine own. O Thou in whom power and pity blend tenderly and freely, Thou dost give us all things. By many considerations Thou dost restrain us from evil impulses and wrongdoing. O fill us with the visions, the charities, and the enthusiasms of a new life and make us Christian in deed and in truth. Create in us new instincts, new desires, new powers of thought and feeling and will. Almighty God, may we prescribe to-day sovereign remedies that shall bless and brighten every hearthstone in all the land. In the name of Jesus our Savior. Amen.

The proceedings of the Journal of Saturday, January 28, 1933, were read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Craven, its principal clerk, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 4412. An act to provide for the safer and more effective use of the assets of Federal reserve banks and of national banking associations, to regulate interbank control, to prevent the undue diversion of funds into speculative operations, and for other purposes.

The message also announced that the Vice President had appointed Mr. REED and Mr. FLETCHER members of the Joint Select Committee on the part of the Senate as provided for in the act of February 16, 1889, as amended by the act of March 2, 1895, entitled "An act to authorize and provide for the disposition of useless papers in the executive departments," for the disposition of useless papers in the War Department.

JOINT COMMITTEE ON INTERNAL-REVENUE TAXATION

Mr. COLLIER, pursuant to section 710 of the revenue act of 1928, submitted a report by the Joint Committee on Internal Revenue Taxation, dated January 28, 1933, covering refunds and credit of internal-revenue taxes for the calendar year 1931, which was referred to the Committee on Ways and Means and ordered printed.

ORDER OF BUSINESS

The SPEAKER. If the House will permit, the Chair will make a statement so the Members may know the order of business for the day.

It has occurred to the Chair that probably it would be well to begin suspension of the rules at once. Next Tuesday is Consent Day and we can devote almost the entire day to the Consent Calendar. However, if we should get through with the suspensions in time to-day the Chair hopes the House can spend an hour or more on some of the bills on the Consent Calendar. The Chair understands there are some bills on the Consent Calendar that are quite important and are perhaps emergency matters; but the Chair thought it best to first recognize the gentleman from Alabama, Mr. STEAGALL, then the gentleman from Mississippi, Mr. COLLIER, and then the gentleman from Texas, Mr. SUMNERS.

CALENDAR WEDNESDAY

Mr. RAINEY. Mr. Speaker, I ask unanimous consent that business in order on Calendar Wednesday of this week be dispensed with.

The SPEAKER. Is there objection?

There was no objection.

IMPROVEMENT OF FACILITIES OF THE FEDERAL RESERVE SYSTEM

Mr. STEAGALL. Mr. Speaker, I move to suspend the rules and pass the bill (S. 5484) to extend the time during which certain provisions of the act of February 27, 1932, relating to improving the facilities of the Federal reserve system to meet the needs of member banks in exceptional circumstances, shall be effective.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 10(b) of the Federal reserve act, as amended (U. S. C., Supp. 6, title 12, sec. 347b), and the second paragraph of section 16 of the Federal reserve act, as amended by section 3 of the act entitled "An act to improve the facilities of the Federal reserve system for the service of commerce, industry, and agriculture, to provide means for meeting the needs of member banks in exceptional circumstances, and for other purposes," approved February 27, 1932 (U. S. C., Supp. 6, title 12, sec. 412), are amended by striking out the date "March 3, 1933" wherever it appears and inserting in lieu thereof "March 3, 1934."

The SPEAKER. Is a second demanded?

Mr. McFADDEN. Mr. Speaker, I demand a second.

Mr. STEAGALL. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

The SPEAKER. Is there objection?

There was no objection.

Mr. STEAGALL. Mr. Speaker, this is a Senate bill which has also been reported by the House Committee on Banking and Currency. We are asking the House to pass the Senate bill in order to simplify the procedure.

The purpose of the bill is to extend for one year the operation of the second and third sections of the Steagall-Glass bill, which was passed last year.

Section 1 of this bill permits Federal reserve banks to make loans to a group of five banks upon the joint obligation of those banks. This is permanent law under the original act.

Section 2 of the bill authorizes Federal reserve banks, under exigent circumstances, to make loans on collateral not eligible for loans under the general provisions of the Federal reserve act; but no such loans are permitted under this provision of the bill except to banks not in position to offer eligible collateral, and such loans must be approved by not less than five members of the Federal Reserve Board, and a rate of interest must be imposed amounting to 1 per cent in excess of the highest interest rate obtaining in the Federal reserve district in which the loan is to be made; and under the bill no such collateral pledged to a Federal reserve bank is permitted to be used as a basis for note issue by the Federal reserve bank.

Under this provision considerable loans have been made to banks that otherwise could not have obtained the accommodations that were extended.

Any bank with a capital not in excess of $5,000,000 is permitted to apply for such loans. Only 62 banks are excluded from this provision of the bill.

Mr. SNELL. Will the gentleman yield?

Mr. STEAGALL. I yield.

Mr. SNELL. I understood the gentleman to say that the banks in quite considerable number have been taking advantage of these provisions, and that a good many loans have been made under the provisions of the bill.

Mr. STEAGALL. A substantial number; yes. Loans made aggregate $134,000,000.

Mr. SNELL. And I understand there is no opposition anywhere to this extension.

Mr. STEAGALL. There is not the slightest opposition, so far as I know. There was no opposition in the committee and the Senate passed the bill unanimously.

The proposal before us is to extend the last two provisions of the act for a period of one year.

The third section of the Glass-Steagall bill authorizes the Federal reserve banks to use Government securities in lieu of commercial paper as collateral for note issue. The purpose of the legislation was to ease the gold position of the banks and the country and to free something like $1,000,000,000 of gold that was tied up at that time as security for note issue, the banks carrying, as I recall, 77 per cent in gold against the note issue when, under the law, it was never contemplated they should carry more than 40 per cent. Under the original Federal reserve act banks are permitted to use obligations of member banks secured by Government bonds as a basis for note issue. The bill permits freedom of action in the operation of the Federal reserve banks that will enable them to adopt liberal policies in extending credit and in expanding the currency in the effort to relieve conditions.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. STEAGALL. I will.

Mr. LAGUARDIA. I heard the gentleman with a great deal of interest when the original bill was before us. But admitting that it eased the credit, admitting that it has permitted some expansion of the currency, it certainly has not been reflected in the commodity prices. Can the gentleman account for that?

Mr. STEAGALL. Of course, that is true in the sense that we have not witnessed a rise in the commodity price level, as many of us so much desire. I am not sure that the gentleman's suggestion is literally true, for the reason that he leaves out of the calculation the clearly beneficent effect of this legislation as it affected the lack of confidence and general trend downward that might have been much worse than they have been.

Mr. LAGUARDIA. I concede that it eased credit in some instances, but it would seem to me that the banks have not carried out their duty. Senator Pomerene told me that most of the large banks were 86 per cent liquid, and yet would not extend credit.

Mr. STEAGALL. The gentleman's suggestion leads us somewhat afield in regard to the bill under consideration, and would certainly extend the discussion along lines that can hardly be allowed in the limited time. The truth of the situation is—and I think the gentleman from New York is in accord with me—it is important that the credit situation be kept easy; and I think it is important, in view of the breaking down of bank credit, that we should supply more money with which the people buy commodities.

I am in accord with the gentleman's view so long as measures in that direction are kept within the proper bounds and under proper control and do not operate to destroy confidence or reach the point where there might be danger of defeating purposes contemplated.

In my view of the matter, if we were to expand the currency or coin gold and silver in great amounts, it would not relieve the situation in this country unless such money could be put in circulation. So long as the available supply of money or currency is tied up in banks, idle and unused, we can not return to normal conditions.

Wrapped up in that problem and playing a stupendous part is the lack of confidence. The business of the country requires bank credit, and bank credit depends on the deposits of the public. The public will not deposit unless they are assured their deposits are safe.

There is an unfortunate state of fear in the mind of the public to-day. Worst of all, this fear is not limited to the depositing public, but the bankers themselves are afraid. Conservative banks, banks operated in accordance with sound rules of banking developed by experience, solvent banks, no matter how well they are managed, are in continual danger of frightened depositors, liable any day to rush in demanding cash to cover their deposits.

I believe—and I think the gentleman from New York agrees with me—that we ought to require the banking system in this country to apply the principle of insurance to bank deposits. [Applause.] It is a thoroughly recognized principle universally applied in the business affairs of the world.

I believe that if we had employed the vast resources set up by the Government for the operation of the Reconstruction Finance Corporation and used a portion of the money that has been loaned by the Reconstruction Finance Corporation to insure deposits of the public, that their deposits would be protected against loss, confidence would have been restored, and, instead of having a decline of ten or fifteen billion dollars in bank deposits, the banks would have more money than ever and, above all, free to employ their deposits as a basis for bank credit. We can never work out of our difficulties without the normal use of bank credit. Ninety-five per cent of the Nation's business is done with bank credit, and to afford the credit banks must have deposits and be free to use them.

Mr. CELLER. Mr. Speaker, will the gentleman yield?

Mr. STEAGALL. I yield to the gentleman from New York.

Mr. CELLER. Has there been any substantial demand for additional printing of Federal reserve notes? If the gentleman knows that, will he kindly state it?

Mr. STEAGALL. There is one of the difficulties. There is not the demand, because confidence is lacking and business is paralyzed. Everyone knows that he has no collateral that will be accepted as security or that anybody will loan money on.

Mr. CELLER. In other words, what is needed is more bank credit in place of more currency.

Mr. STEAGALL. What we need is a restoration of confidence and a resumption of bank credit in the business of the country. We need more confidence and more money.

At the time the Glass-Steagall bill was passed Federal reserve banks had only $416,000,000 of gold not required under the law. They were carrying nearly $1,000,000,000 as collateral for note issue beyond the 40 per cent required by law. By using Government securities in place of gold, using Government securities instead of commercial paper, banks are in position to release that amount of gold for use in connection with additional note issue. It makes possible an easy credit policy and encourages banks to use their credit facilities to the improvement of prices and business conditions.

Mr. Speaker, I reserve the remainder of my time.

Mr. McFADDEN. Mr. Speaker, I yield five minutes to the gentleman from Texas [Mr. PATMAN].

BANKERS' BONUS BILL

Mr. PATMAN. Mr. Speaker, I respectfully take issue with the distinguished gentleman from Alabama [Mr. STEAGALL], chairman of the Committee on Banking and Currency. This bill is a bankers' bonus bill. It is not an expansion measure; it will not expand the currency. It is very doubtful that it will expand credit except for the purpose of speculation. What do you want your gold reserve used for? Do you want it used for speculation, to be used by a few bankers for that purpose, or do you want it used in trade and commerce? If you want it used in trade and commerce, you had better vote against this bill. I know the bill is going to pass, because we have not the time to inform the membership about its proposals. If we had the time, I believe you would be convinced that it is not sound legislation.

FIAT MONEY SECRETARY OF TREASURY

If you take Mr. Mills's definition of fiat money, this is a fiat money bill. Imagine Mr. Mills, Secretary of the Treasury, and Mr. Meyer, governor of the Federal Reserve Board, coming up here and advocating the issuance of fiat money! For whom? Not for the people, but to put more idle dollars into the vaults of the big banks that already have plenty of idle dollars in them. You might just as well expect more commodities to move over the railroads if you put more idle box cars on the railroad tracks as to expect business to pick up by giving a few large banks more idle dollars to do business with. They are not going to do business with them.

FEDERAL RESERVE STILL DEFLATING COUNTRY

The Federal reserve system instead of expanding the currency, as the gentleman from Alabama [Mr. STEAGALL],

suggested was possible under this bill—and I will admit it is possible, but not probable—is actually contracting the currency to-day. For every dollar that is put in circulation under the terms of the Glass-Borah amendment to the home loan bank bill, the Federal reserve system is taking a dollar out of circulation. Instead of expanding the currency, as they should, they are actually contracting the currency to-day, and if you want to give them a better opportunity of continuing this depression and using the reserves of gold of the people of this Nation for the purposes of speculation and not for trade and commerce, then vote for this bill.

GAG RULE

I am very sorry that bills like this and the bankruptcy bill are brought up under suspension of the rules. If any kind of bill should be passed under suspension of the rules, I would prefer to pass an appropriation bill in that way and give more time for legislation like this and legislation like the bankruptcy act. If we make a mistake in an appropriation bill, the same bill will be before us the next year and we can correct that mistake, but whenever we pass a bill like the bankruptcy bill it is permanent law, it can not be changed the next year, and it should certainly be thoroughly discussed in the House of Representatives before it is passed. I am sorry that the condition of the calendar is such that the leaders have seen fit to bring this legislation and the bankruptcy proposal up under suspension of the rules. They are very important measures. Great principles are involved, and they should be discussed more thoroughly.

AMENDMENT SUGGESTED

This bill, for instance, should contain a very material amendment. We have no opportunity of offering that amendment. It is an amendment that was suggested by me to the committee, but the committee said that this is only for one year, and that they would not consider it as this time, but I shall tell you what the amendment is. Under section 16 of the Federal reserve act the law states that whenever Federal reserve notes are delivered by the Federal reserve agent to the Federal reserve bank, an interest charge shall then be collected for those notes to go into the Public Treasury of the United States. Why was that written into the law, a mandatory provision like that? It was written into the law in order that those who are permitted to use the credit of this Nation, which represents a mortgage on all of the homes and other property of all of the people in the country, shall pay a small interest charge for the use of that credit.

BANKERS EXPEDITIONARY FORCE

This bill should contain a provision requiring payment for the use of the Government credit if it is going to be used by a few large bankers in order to speculate with.

Under the home loan bank bill two banks, the National City Bank and the Chase National Bank, can obtain $272,000,000 in money on Government bonds and still get interest on the bonds they place on deposit as collateral security for that money. Under this bill they are not restricted to $272,000,000, but they can get $500,000,000 by putting up an obligation of this Government that is drawing interest and getting money and using the money and also getting interest on the bonds. If you believe in debt-secured and bond-secured money and believe in paying the banks a bonus to take money, vote for this bill.

The SPEAKER. The time of the gentleman from Texas has expired.

Mr. McFADDEN. Mr. Speaker, I yield three minutes to the gentleman from Mississippi [Mr. BUSBY].

Mr. STEAGALL. Mr. Speaker, I yield three minutes to the gentleman from Mississippi [Mr. BUSBY].

The SPEAKER. The gentleman from Mississippi is recognized for six minutes.

Mr. BUSBY. Mr. Speaker, I am favorable to the bill which is presented to extend for another year the provisions that were originally incorporated in the Glass-Steagall Act. The Glass-Steagall Act as administered was a disappointment. It did not pan out as the Members of Congress hoped it would.

TREASURY AND FEDERAL RESERVE MUST AID

I want to say this to you, and I hope you will bear it in mind, that it is absolutely impossible for any monetary policy devised by legislation in Congress to be successful if the Treasury officials are opposed to that legislation and its workings and if the Federal Reserve Board and the Federal reserve system is opposed to that legislation's being put into effect. It is not possible, Mr. Speaker, for the Congress of the United States to lay down by legislation any monetary policy which will become effective if we do not have cooperation by the Treasury and by the Federal reserve system. Let me call attention to the manner in which this proposition has been dealt with.

FEDERAL RESERVE BANKS HAVE FAILED TO HELP

It is possible to issue Federal reserve notes on 40 per cent gold and 60 per cent eligible paper and Government bonds. The two largest Federal reserve banks in this country are in Chicago and New York. The January statement in the Federal Reserve Bulletin, page 39, shows that the New York bank had $616,000,000 in gold back of its $587,566,000 notes in circulation, and it had $30,000,000 in eligible paper and only $5,000,000 in Government bonds. Chicago used $699,000,000 in gold, $14,000,000 in eligible paper, and $22,000,000 of Government bonds to back its $692,150,000 notes in circulation. It will be noted that those two banks alone used and are using at the present time $1,316,500,000 of this country's gold to back their issues of reserve notes in circulation of only $1,279,716,000, or a $1.03 of gold for each dollar of reserve notes in circulation. It will be noted also that the two banks used only $65,000,000 of eligible paper and $27,000,000 of Government bonds, a total of—except $1,316,000,000 gold—of only $92,000,000. Now, what is the result of that?

OVER 100 PER CENT GOLD USED BY BANKS

You have just 6 per cent of eligible paper and national bonds back of the note issues of the Federal reserve banks of New York and Chicago and 1.03 per cent of gold back of their notes in circulation. That is the way they have been cooperating in handling this proposition, and of using the advantage that will be given by the provisions of the act that is now before you.

There is another thing I want to refer to. You have been told the banks are full of cash. The banks are not full of cash. They have not got the money, and they can not make loans because they do not have money in their vaults to make loans safe. Somebody said if you issued new currency and put it out among the people it would soon get back into the vaults of the banks. The banks have $700,000,000 in their vaults. I am sure they would feel a lot more comfortable if they had a billion or so additional in their vaults. They have $600,000,000 excess reserves in the Federal reserve banks. They owe the Federal reserve system $300,000,000 on borrowings. They are indebted to the Government for $9,032,000,000 for postal savings deposited in the banks. It is required by law that postal savings be deposited in banks. They owe the Reconstruction Finance Corporation $475,000,000. Bank assets are absolutely static, except for the little amount of cash they have, and what they call their liquid assets, which for the most part are Government bonds. What does a bank do business on? It makes loans in the community, and it owns an interest in the properties of that community, which property is the security for its loans, and when the properties of a community get to the point where they will not sell at public auction, the bank has to carry them on its books as long as it can.

BANKS ARE NATURAL INFLATIONISTS

Banks are natural inflationists because to them is entrusted "bank credit money" which is made at will by the banks and borrowers. Banks in good times will not let business proceed on a level. They make loans and inflate the "medium of exchange." The banks of the country have been given the opportunity and the duty of furnishing nine-tenths of the circulating medium that goes into business. We hear a great deal about the fear of "inflating the currency," but you hear very little about the most dangerous of all "inflations," that of bank credits—increased loans—

gambling credit loans often—the kind of inflation which skyrocketed prices and brought the present ruin upon the country.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Mr. McFADDEN. Mr. Speaker, a year ago, when this particular bill was passed, it was stated to the House that it was an emergency bill. Those people who appeared before committees representing the Treasury and Federal reserve system stated that they wanted to use this bill to release the gold which was tied up back of Federal reserve notes and in the Federal reserve system; that the free gold in the United States was down to a low point of about $450,000,000. There were demands from abroad which were embarrassing to the Federal reserve and the Treasury at that time. It was also stated that they wanted to help out many of the little banks so that they could use their Government bonds to secure relief in this emergency. Now we find, a year after the bill has been in operation, that this emergency act is still required; that the situation has not been relieved. It is a fact, however, that the gold reserves of the country have been replenished by shipments of gold from abroad; and, as I recall it, the Secretary of the Treasury stated to the committee the other day that something over $1,100,000,000 was the free-gold reserve at this time, although there is some question in my mind regarding the accuracy of that, because of the uncertainty with which the Secretary stated it. The press informed us a few days ago, in a communication that was apparently sent to the Senate by Acting Governor Hamlin, of the Federal Reserve Board, that the first section of this bill has not been operative, owing to some defect which forbids the administration of the act, and that the relief which was intended to be given to the small banks has not been extended. Whether or not loans have been applied for is an uncertain question.

The uses under this bill have come where advances have been made to the large banks, where they have been authorized to make loans to them in the aggregate not exceeding $5,000,000 against paper which is eligible, for the substitution of Government bonds. The method under which this release of gold comes about is through the permitting of the substitution of Government bonds for eligible paper as security for Federal reserve notes. The gentleman from Mississippi [Mr. BUSBY] has pointed out this morning the small amount of paper that is used by the two largest Federal reserve banks. They find it more convenient to use Government bonds than to use eligible paper. The truth of the matter is, and we must recognize it, that the original provisions providing for the use of eligible paper in connection with the issuance of Federal reserve notes, has almost completely broken down, and the banks of the Federal reserve system are holding increased amounts of investment securities and we now have gone back to the old basis, which was largely the argument back of the creation of the Federal reserve act, that we must get away from Government bond-secured currency, because Government bond-secured currency was not elastic. The big banks find it more convenient to use United States bonds than eligible paper.

I am sure some of the older Members who were here during the enactment of the Federal reserve law will recall the argument that this was the one great thing we were getting away from. Now we find we were taking a step backward and continuing the use of Government bonds, and under this act a substitution of Government bonds for eligible paper can be made to almost any extent. Still it is advocated here, and put forward as an emergency piece of legislation.

Mr. MAY. Mr. Speaker, will the gentleman yield?

Mr. McFADDEN. Very briefly.

Mr. MAY. Is it not a fact there are approximately $45,000,000,000 of deposits in the entire banking system of the country, approximately $12,000,000,000 of which are invested in Government bonds?

Mr. McFADDEN. The gentleman is practically correct, yes; and I may add right here that the real purpose of this bill is to aid the Treasury in carrying on its operations with foreign countries in connection with gold shipments and in order to stimulate the market for Government bonds. Perhaps this is a proper thing to do, but we might just as well recognize the fact that the banks of the United States are carrying almost three-quarters of the indebtedness of the United States to-day. The banks are frozen with Government securities almost to the extent, if not to a greater extent, they were in 1929 with stock exchange securities; and if the same situation developed where all at once everybody was selling Government bonds, we would see what the price of Government bonds would do in such a situation. I do not say that it will happen, but I do say that the Government bonds of the United States, for the benefit of the people, might better be held by the investors of the country than by the banks of the country. The banks of the country find themselves frozen now to a great extent with assets which are unliquid in addition. To-day, because they do not know what else to do with their money, they are being used to handle these Government bond transactions.

Mr. Speaker, my position in regard to the Federal reserve system is pretty well known to the Members of this House. I have pointed out repeatedly that the greater part of the economic distress was because of the change of policy in the operation of the Federal reserve system. What this House should do, instead of passing this kind of punitive legislation, is to go into the fundamental operations of the Federal reserve system and understand what effect the maladministration of this system is having on our whole economic and financial structure.

Mr. Speaker, I have had pending in the Committee on Rules for over a year a resolution proposing to make this study, this investigation, if you please, of the operations of the Federal reserve system. Nothing has been done except the holding of a hearing last year, at which the Treasury and the Federal reserve people discussed and resisted the matter. Action was postponed until after the election on the theory that if the investigation were made then it might get into politics.

I may say to the responsible leadership of this House that it is making a mistake if it does not give consideration to this resolution for the investigation of the operation of the Federal reserve system. Go into fundamentals and you will come nearer solving this whole economic problem than in any other manner. All these bills that are being passed deal with the effects and not the causes of this situation.

I stated in the committee the other day when this matter was up before the committee, that so far as I was concerned I was not going to support any more petty amendments to the Federal reserve act until we had gone into the fundamental causes and operations of the Federal reserve system so we could act intelligently; and that is my position at this moment.

[Here the gavel fell.]

Mr. STEAGALL. Mr. Speaker, I yield the balance of my time to the gentleman from Massachusetts [Mr. LUCE].

Mr. LUCE. Mr. Speaker, in February of last year, in a time of the greatest peril, the President summoned to the White House Republican and Democratic members of the Senate and House Committees on Banking and Currency. He laid before us the situation as far as in my belief it was prudent for him to do. This is, if I understand aright, the episode he had in mind when in the course of the campaign he disclosed that at one time there was grave danger we would have to go off the gold standard within a few days. Had we gone off the gold standard then, we would have plunged ourselves into the depths of disaster. The President asked, under these circumstances, that we take out of the so-called Glass banking bill three sections and give them temporary life. We so did, and by an overwhelming, possibly a unanimous vote in both branches—I do not recall its exact size—we enacted this legislation to continue for one year.

We had hoped that by this time need for it would no longer exist, but most lamentably the need still exists. Therefore, in the judgment of your committee, unanimous,

I think, with the possible exception of the gentleman from Pennsylvania, we advise that the life of this bill be extended for one year, again in the hope that before 12 months have passed the emergency occasion for it will have ended.

If the committee had changed the proposal at all, I am confident it would have so done by advising that the provisions be made permanent.

[Here the gavel fell.]

The SPEAKER. The question is on the motion to suspend the rules and pass the bill.

The question was taken; and two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

A similar House bill (H. R. 14252) was laid on the table.

FEDERAL GASOLINE TAX

Mr. COLLIER. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 14416) to make the Federal gasoline tax effective until June 30, 1934, as amended.

The Clerk read the bill, as follows:

Be it enacted, etc., That section 629 of the revenue act of 1932 is amended by striking out the following: ", or after June 30, 1933, in the case of articles taxable under section 617, relating to the tax on gasoline."

SEC. 2. Section 617 of the revenue act of 1932 (relating to the tax on gasoline) is amended by adding at the end thereof a new subsection to read as follows:

"(d) Refund of the tax imposed by this section may be made to a State, or political subdivision thereof, in the amount of any tax under this section which has been paid with respect to the sale of gasoline purchased by it after this subsection takes effect for use solely in the exercise of an essential governmental function."

The SPEAKER. Is a second demanded?

Mr. HAWLEY and Mr. HASTINGS demanded a second.

The SPEAKER. Is the gentleman from Oregon opposed to the bill?

Mr. HAWLEY. I am not.

The SPEAKER. Is the gentleman from Oklahoma opposed to the bill?

Mr. HASTINGS. I am.

The SPEAKER. The Chair recognizes the gentleman from Oklahoma [Mr. HASTINGS] to demand a second.

Mr. COLLIER. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

The SPEAKER. Is there objection?

There was no objection.

Mr. COLLIER. Mr. Speaker, it was the hope of every member of the Ways and Means Committee when the gasoline tax was imposed that it would run for only one year; but in view of the fact that the condition of the Treasury is about as bad now as it was then and that our deficit is continually increasing, and in view of the further fact that of all the taxes we imposed the gasoline tax as a revenue-producing tax has proved to be more fruitful than any of the others, we have found it is absolutely necessary to continue it for another year.

The verbiage of the bill may mislead some of the Members. All the taxes in section 617 expire in 1934, except gasoline, which was especially exempted, and we simply remove the exemption by this bill.

In the first month of July last we collected very little money from the gasoline tax, because the taxpayer had 30 days in which to pay, but in the months of August, September, October, November, and December we have collected $63,000,000, and it is estimated that this tax will bring in $137,000,000 by the 1st of July of this year. The experts state that by reason of the fact that we collected so little the first month, the $137,000,000 is practically based on a period of 11 months, and I think we can estimate about $145,000,000 to $150,000,000 as the amount to be received from this tax from July 1, 1933, to July 1, 1934.

Mr. TREADWAY. Will the gentleman yield?

Mr. COLLIER. I will.

Mr. TREADWAY. Is it expected there will be any other form of revenue taxation reported before the close of the present session?

Mr. COLLIER. It is not.

Mr. LAMNECK. Will the gentleman yield?

Mr. COLLIER. I yield.

Mr. LAMNECK. I have had considerable correspondence about the discrimination against the dealer with respect to refunds when selling to States or other government agencies. Has this matter been corrected in the provisions of the bill?

Mr. COLLIER. The committee added an amendment which provides that any State or political subdivision thereof, whenever this tax is paid, may get refunds from the Government where the gasoline is used for purely government functions.

Mr. LAMNECK. When sold by either a dealer or a refiner?

Mr. COLLIER. Yes. We had the very point raised by the gentleman in mind.

Mr. WARREN. Will the gentleman yield?

Mr. COLLIER. I yield.

Mr. WARREN. I happen to be one who thinks this particular tax is a most unwarranted transgression, we might say, on the rights of the States. I wonder if the committee, headed by the gentleman, is considering making this Federal tax a permanent thing?

Mr. COLLIER. Without agreeing to the gentleman's premise as to this being distinctly a State tax matter, I may say they did beat us to it. There has been much pro and con discussion about that. I do not care to go into any argument of the matter, but the States have invaded the Federal Government field in the taxing of cigarettes and other things and for this reason we had the Joint Committee on Internal Revenue Taxation bring in this report, which I have just submitted, and which I commend to the reading of every Member of the House.

In answer to the gentleman's question in regard to the permanency of this tax, I may say to the gentleman from North Carolina that this question was asked the committee a number of times during the hearing. Every tax in section 617 expires in 1934, including now the gasoline tax. I can not tell what the condition of the Treasury will be a year from now, nor what a future Congress may do, but it is not the intention of the present committee to make this a premanent tax. It is only an emergency matter.

Mr. DOUGHTON. Will the gentleman yield?

Mr. COLLIER. I yield to the gentleman from North Carolina.

Mr. DOUGHTON. As the matter was discussed in committee, this was simply a tax imposed to meet a temporary emergency or until a general revision of the revenue law could be taken up, and there was no thought at all in the committee to make this permanent legislation.

Mr. COLLIER. The House never put this tax in effect in the original instance. It came from the other body, and it is not the present purpose to make this tax permanent.

Mr. KNUTSON. Is it the chairman's hope that in another year we will be able to do away with this tax?

Mr. COLLIER. It certainly is.

Mr. HOUSTON of Hawaii. Will the gentleman yield?

Mr. COLLIER. I yield.

Mr. HOUSTON of Hawaii. Would not the gentleman accept an amendment to add Territories to the government units referred to in the bill as to which refunds may be made on gasoline purchased for State or government purposes?

Mr. COLLIER. I would have to submit a parliamentary inquiry to find out whether that could be done. I would have no objection myself.

Mr. WHITLEY. Will the gentleman yield?

Mr. COLLIER. Yes.

Mr. WHITLEY. What procedure would a municipality have to take in order to get the refund?

Mr. COLLIER. The administration of that will be set out by the Treasury. I do not know just what it is, but, of course, it will be a rather easy matter.

Mr. BOLAND. Will the gentleman yield?

Mr. COLLIER. Yes.

Mr. BOLAND. I would like to ask the chairman of the Ways and Means Committee whether he expects to give any

consideration to the tax on busses and trucks, as called for by the bill which I have introduced. The bill has been before the Ways and Means Committee for some time.

Mr. COLLIER. I may say to the gentleman that, personally, I would like to go into that tax, but owing to the fact that we have only five or six weeks between now and adjournment of Congress, I will have to answer the question in the negative. It is not the purpose of the committee to do that at this time.

Mr. BOLAND. Will the chairman have the committee take it up next session?

Mr. COLLIER. I will not have that opportunity. If the committee is willing to go into it, the chairman will be willing to go into it with it.

Mr. CULLEN. Will the gentleman yield?

Mr. COLLIER. I yield.

Mr. CULLEN. With all due deference to the chairman of the Ways and Means Committee, of which I am a member, I want to say to the gentleman from Pennsylvania [Mr. BOLAND] that in regard to the motor-bus tax, we discussed it informally in the Ways and Means Committee, and it was suggested that that matter go over to the next session when in all probability another tax bill will be considered. And if there is any effort to distinguish between the bills to be considered by the next Congress the gentleman from Pennsylvania's bill would receive preference.

Mr. BOLAND. I am happy to know that, because it is an important matter before the people to-day, and it is really a way of raising revenue for the Government that would balance the Budget.

Mr. COLLIER. In conclusion, I want to say that the committee knows that this gasoline tax is a disagreeable tax. In fact, I have not found any one that is pleasant. I reiterate that in taking the picture of the Federal Treasury we can not go along without this tax without invading a field that would be more obnoxious than this.

Mr. GIFFORD. Will the gentleman yield?

Mr. COLLIER. I yield.

Mr. GIFFORD. I would like to ask the gentleman if he has considered those who oppose the principle of the sales tax—will they vote for this already too-much-taxed article?

Mr. COLLIER. I am hopeful that the bill may pass.

Mr. GIFFORD. Hopeful that they will lay aside their principles.

Mr. COLLIER. It has always been the custom to levy special excise taxes, and this bill violates no principle of established precedents.

Mr. CAVICCHIA. Will the gentleman yield?

Mr. COLLIER. I yield.

Mr. CAVICCHIA. As I understand, the State that buys from the refinery pays no tax. But if an individual sells to the State, he does pay the tax. Does the bill correct that?

Mr. COLLIER. It attempts to.

Mr. CAVICCHIA. The dealer pays the tax, and the Government makes a refund.

Mr. CHINDBLOM. Will the gentleman from Mississippi [Mr. COLLIER] yield?

Mr. COLLIER. I yield.

Mr. CHINDBLOM. I want to call attention to the language of the bill, which is:

> Refund of the tax imposed by this section may be made to a State, or political subdivision thereof, in the amount of any tax under this section, which has been paid with respect to the sale of gasoline purchased by it after this subsection takes effect for use solely in the exercise of an essential governmental function.

It appears plain to me that the refund will be made to the State or political subdivision of the State, and the dealer who sells the gasoline to the State will have to make an arrangement with the State or the political subdivision.

Mr. COLLIER. I think that is true.

Mr. CAVICCHIA. If the gentleman from Illinois [Mr. CHINDBLOM] is correct, you are not curing the matter. I want to know whether the refinery and the dealer are put on the same basis in dealing with the State or political subdivision. Heretofore the refinery had the better end of it.

Mr. COLLIER. The dealer will have to go to the State to get his refund. I imagine he keeps books and will have no difficulty in so doing.

Mr. CAVICCHIA. The private dealer will have a great amount of money held up for months, whereas the refinery has no money tied up at all.

Mr. CHINDBLOM. Mr. Speaker, will the gentleman yield?

Mr. COLLIER. Yes.

Mr. CHINDBLOM. In my opinion, inasmuch as the refund is given on account of the purchase by or for a State or political subdivision thereof, and since the refund shall be made to the State or to the political subdivision thereof, it will be made in that manner in every case, whether the seller is a refiner or a wholesaler or a retail dealer. I do not see how there can be any question about that.

Mr. COLLIER. Mr. Speaker, I thank the gentleman for his contribution, and I reserve the remainder of my time.

Mr. HASTINGS. Mr. Speaker and Members of the House, if gentlemen will recall the history of this legislation, when the revenue bill was under consideration a year ago, a tax on gasoline was not included in the bill as it passed the House, but was added as an amendment over in the Senate. It was then stressed that it was emergency legislation and that the condition of our Treasury made it necessary to include it only for one year. A great many of us who were opposed to this legislation indulged in the hope that it would not be continued. The only thing that I see at all good about this bill is that it continues the tax for only one year. However, I want you to know that we are not deceived. I fear that many years will elapse before this Federal tax is removed from gasoline.

I am opposed to it for two reasons. First, I think there ought to be something left for the States to tax. The genial chairman of the committee evaded the question the gentleman from North Carolina asked, whether gasoline had been previously taxed by the Federal Government. I think this is the first instance. This field has been used by every State in the Union. The lowest State tax on gasoline is 2 cents a gallon. My recollection is that the highest is 7 cents. I think the average State tax is about 4 cents. We find in some States that some of the counties have a county tax and some of the cities have a municipal tax on gasoline. So that, in my judgment, gasoline is paying a disproportionate share of the taxes, or the people who use gasoline are.

Mr. CHINDBLOM. Mr. Speaker, will the gentleman yield?

Mr. HASTINGS. Yes.

Mr. CHINDBLOM. It appeared before the committee that while the price of gasoline, f. o. b. at the refinery, is 3½ to 4 cents per gallon, there are places in the United States where the total of the State, Federal, and local taxes amounts to 10 cents per gallon on gasoline.

Mr. HASTINGS. I thank the gentleman for his contribution. I have just stated that gasoline is taxed from 2 to 7 cents, and that, in addition, counties and cities impose an additional tax.

Mr. RANKIN. Mr. Speaker, will the gentleman yield?

Mr. HASTINGS. Yes.

Mr. RANKIN. I agree with the gentleman from Oklahoma. I opposed this tax before. I think this is the opening wedge to usurp the gasoline tax and to driving the States out of this field. When you do that, under present conditions, we will not have much left to tax.

Mr. HASTINGS. I was about to remark that the State and local subdivisions have been taxing gasoline for a number of years. The Federal Government has now entered the field, and you know it is driving the States to a larger ad valorem tax, and that is what I want to discuss with you for just a moment. Throughout practically every State in the Union the gasoline tax is used for the purpose of building roads, matching the Federal contribution to roads, maintaining roads, and building bridges. We had hoped

in Oklahoma and in a number of other States that sooner or later we should be able to redistribute more of the gasoline tax to the several counties, and that the money derived from the tax could be use in lieu of this heavy ad valorem tax on farm lands. On Wednesday last I tried to discuss this question of farm mortgages, and to analyze a bill which I have introduced, which is now pending before this committee. In yesterday's New York Times it is reported that the farm mortgages throughout the United States aggregate $9,100,000,000, and that the other farm indebtedness aggregates a little more than $4,283,000,000, making the farm indebtedness total about $13,283,000,000.

One of the reasons for the present condition of the farmer is that the Federal Government is entering every field of State taxation, including gasoline, and therefore the States can not tax some of the things as much as they otherwise would and redistribute the taxes back to the counties and to the school districts so as to be able to reduce the ad valorem tax on farm lands. In my judgment, the question of the ad valorem tax on farm lands and of farm mortgages is the most pressing thing that comes before this Congress for consideration. Of course, Congress can not lower the ad valorem tax on farm lands; but we can keep from placing a tax on gasoline. We can leave that for the several States, and the States can tax gasoline and the amount of money derived from that source can be redistributed back to the several school districts, and in that way the States would be able to lower the ad valorem tax on farm lands. You have seen in the last few days where distressed farmers out in Iowa have resisted the sale of land under foreclosure. You read in the newspapers yesterday where that had been done in Minnesota. You find it all over the South and the West, and the trouble is just beginning. I warn the membership of the House that there must be some legislation looking to a relief of the ad valorem tax on farm lands; and when you go into the field of taxing gasoline, which has never been entered before and was not entered last year by the affirmative action of the House, you are invading the prerogatives of the States. Yesterday I read the hearings on this revenue bill, held last year. The gasoline tax was not originally advocated by the Secretary of the Treasury; and when he appeared before the committee, he invited attention to the fact that it was a tax imposed by the States and was regarded as a State tax.

Mr. VINSON of Kentucky. Will the gentleman yield?

Mr. HASTINGS. I yield.

Mr. VINSON of Kentucky. I understood the gentleman to say that the Secretary of the Treasury did not initially recommend this?

Mr. HASTINGS. He did not.

Mr. VINSON of Kentucky. On January 13 last year when the Secretary came here, he did not, but after they figured out that they needed $320,000,000 additional, then he did recommend it, and the committee and the House did not add it to the bill.

Mr. HASTINGS. I am glad to have the gentleman's correction. I read his original statement on yesterday; and when he was asked whether or not he advocated it, he invited attention to the fact that this field had been entered by practically every State in the Union, and it was regarded as a field that ought to be left to the States.

The next point I wish to make is this: The chairman of the committee stated a few moments ago the wholesale price of gasoline was around 3 or 3½ cents a gallon. The average State tax per gallon is 4 cents. If we add 1 cent a gallon Federal tax, that makes 5 cents a gallon. In other words, we will be taxing gasoline by this bill, when added to the average State tax, 166⅔ per cent of the wholesale price.

Mr. YON. Will the gentleman yield for a question?

Mr. HASTINGS. I do.

Mr. YON. It is the gentleman's idea, is it not, that this field of taxing gasoline should be left to the exploitation of the States?

Mr. HASTINGS. Well, I did not use the word "exploitation." But I do think it ought to be left to the States, and I think the gentleman's State taxes gasoline 7 cents a gallon.

Mr. YON. My State taxes it 7 cents a gallon, and in some municipalities there is another cent added; and when they pay the Federal tax, it will be 9 cents a gallon.

Mr. HASTINGS. I think the highest tax is in Florida, and perhaps the next highest, or the same, 7 cents, is in the State of Tennessee.

Mr. YON. Still, I think that ought to be left to the States entirely.

Mr. HASTINGS. I am glad the gentleman from Florida agrees with me.

Mr. GIFFORD. Will the gentleman yield?

Mr. HASTINGS. I do.

Mr. GIFFORD. I should like to ask the gentleman from Oklahoma and the gentleman from Kentucky [Mr. VINSON], who is so anxious about his tobacco industry, with 166⅔ per cent tax on gasoline and almost that tax on tobacco, would the gentleman not prefer a general sales tax of 2½ per cent on all things?

Mr. HASTINGS. No, sir. I will answer flatly. I made an extended speech last year against the sales tax. I was opposed to the sales tax then, and I am opposed to a sales tax now.

Mr. GIFFORD. Is the gentleman opposed to a sales tax on tobacco?

Mr. HASTINGS. I have tried to express myself as vigorously as I possibly could.

Mr. GIFFORD. But the gentleman has always supported the sales tax on tobacco?

Mr. HASTINGS. I have not taken any active part in taxing tobacco. I have not extensively studied the tobacco question; but I want to say again, if the gentleman will permit, that I am opposed to a sales tax. I was opposed to it last year, and I am opposed to it now.

Let me say again, a great many of the States and local subdivisions have anticipated the gasoline tax for the payment of bonds which they have issued. I think some of the States have also, yet this is a further entering wedge that looks to permanently invading the field by the Federal Government. I think that gasoline and the gasoline industry pay too great a proportion of the taxes both for State, municipal, and Federal Governments.

Mr. DISNEY. Will the gentleman yield?

Mr. HASTINGS. I yield.

Mr. DISNEY. Will the gentleman please discuss the effect of this tax on the two important industries, that is to say, the oil business and the automobile business, if the gentleman has gone into its effect upon those two important industries.

Mr. HASTINGS. Of course, it is very important. In our State and in every State where petroleum is produced, there is a gross-production tax. That tax in Oklahoma is 3 per cent of the gross proceeds. Then we place a license tax on automobiles.

Mr. CHINDBLOM. Will the gentleman yield?

Mr. HASTINGS. I do.

Mr. CHINDBLOM. Reference was made to a general manufacturers' sales tax. The sales tax recommended last year by the Ways and Means Committee at the rate of 2¼ per cent would have placed a tax on gasoline of nine-tenths of 1 mill. That would not have been burdensome, would it?

Mr. HASTINGS. Well, the gentleman answers himself. What question does the gentleman want to ask me?

Mr. CHINDBLOM. My question is this: If the gentleman would support a general sales tax, the burden on gasoline would be the same as on every other article, and it would not be burdensome.

Mr. HASTINGS. Yes. I tried to explain to the gentleman from Illinois and to the Members of the House in some remarks that I made to the House when that bill was being considered, that I was opposed to a tax on consumers, and I am opposed to a sales tax. I went into that rather extensively when the bill was considered in the House before.

Mr. CHINDBLOM. We would all be happy if we did not have to vote for any taxes.

Mr. GIFFORD. Will the gentleman yield further?

Mr. HASTINGS. I yield.

Mr. GIFFORD. I had expected the remarks of the gentleman from Oklahoma would lead to the argument that a tax on gasoline was a depressive tax on industry, on the gasoline and automobile business in general. Was that the gentleman's idea?

Mr. HASTINGS. I did intend to discuss that, but my attention was diverted to other things; but that is the fact.

Mr. GIFFORD. The gentleman realizes that the tobacco interests argue that the tax which the gentleman and I pay on cigarettes has a general depressive effect on that industry. We still ride and we still smoke. Is that not the reason this tax is a favored tax?

Mr. HASTINGS. Well, I suppose that is one of the reasons.

Mr. GIFFORD. The gentleman does not think it has a depressive effect on the automobile industry?

Mr. HASTINGS. Yes; I think it has.

Mr. RANKIN. Will the gentleman yield?

Mr. HASTINGS. Yes; I yield.

Mr. RANKIN. There is quite a difference between a gasoline tax and a tobacco tax. Gasoline has become almost one of the necessities of life, and it is utterly impossible to carry on the business of this country as now constituted without the use of gasoline.

When you place this additional tax on it, you are placing an additional burden on the man of enterprise who has to use gasoline in his business.

Mr. HASTINGS. Mr. Speaker, I reserve the balance of my time.

Mr. COLLIER. Mr. Speaker, this bill was unanimously reported by the committee. I now yield all my remaining time to the gentleman from Oregon [Mr. HAWLEY], to dispose of in any way he may see proper.

Mr. HAWLEY. Mr. Speaker, I yield three minutes to the gentleman from Massachusetts [Mr. TREADWAY].

Mr. TREADWAY. Mr. Speaker, the argument of the gentleman from Oklahoma, who has just taken his seat, to my mind is about the best proof we can have that we should pass this bill. He brings in the question of the Federal Government stepping aside in order to permit States to lay as large a tax upon gasoline as they may see fit. I believe the levying of taxes to meet the expenses of running the Federal Government certainly should take precedence over the levying of taxes for local purposes. Further than that, he also made a splendid argument in behalf of the manufacturers' excise tax which was reported to this House by the Ways and Means Committee last year.

As has been pointed out, nine-tenths of a mill would have been the tax on gasoline had the House seen fit to adopt the recommendations of the Ways and Means Committee. Therefore, when we come to placing a gasoline tax as an emergency measure, I do not think the Members of the House who voted against the excise tax will have any excuse whatsoever to oppose this bill. We would not have needed a 1-cent gasoline tax had we passed the manufacturers' excise tax as we should have done at the last session. This, it seems to me, covers the point at issue.

The excessive amounts which certain States, particularly Florida, are charging in the nature of gasoline taxes is unfair. Instead of its being said that gas is taxed 166 per cent in some instances, it should be said that practically 99 per cent of it is levied by the States. I, for one, have bought a good deal of gasoline in the State of Florida. I hope to buy more. I am proud of the State roads in Florida, but I do not think tourists ought to be called upon to support all the institutions of the State of Florida.

Mr. YON. Mr. Speaker, will the gentleman yield?

Mr. TREADWAY. I can not yield.

I think in view of the emergency in which we find ourselves, the impossibility of balancing the Budget, and the statement the chairman has made that this is the only tax measure the Democratic majority intends to bring in, we should pass this gasoline tax and give the Federal Government this opportunity of securing at least a portion of the revenue needed to run the affairs of government.

Mr. Speaker, I yield back the balance of my time.

Mr. HASTINGS. Mr. Speaker, I yield two minutes to the gentleman from Iowa [Mr. GILCHRIST].

Mr. GILCHRIST. Mr. Speaker, when this tax was before the House last year, I made some inquiry as to the amount of tax that was being paid on gasoline in the several States. I do not have the figures with me, but at that time I had them and I became convinced that the farmers of my State, and perhaps of other States, are paying a great deal more in Federal gasoline taxes than is equitable; and that the law which Congress passed last year, and which this bill will continue for another year, does them injury. For example, the amount of gasoline consumption in Iowa, when compared to the gasoline consumption in continental United States, is much higher proportionally than is the population of the State when compared to the population of the United States. The gasoline-tax law which Congress passed last year and which this bill will continue for another year does an injury to the farmers of Iowa and, I think, also to the farmers of the United States as a whole. This is true because the amount paid by the farmers of my State under this tax is much more than they should pay as measured by their population, their wealth, their income, their proportion of other Federal taxes, or their ability to pay.

This is a discrimination against the farm sections. If there is any person on earth who needs to use gasoline, it is the farmer. He uses it in his tractors, in his farm machinery, and in his engines. He must have it. He trucks his livestock and grain to market with it; he runs his automobile by it. And, if there is any business man on earth who needs an automobile, it is the farmer, because he lives at a great distance from the place where he must go to do business. A business man in the city is not compelled to use an automobile, because he can go to and from his home, his office, his bank, his store, or his factory in a taxi or a street car. But the farmer has no such accommodations. He must use an automobile. He can not carry on without it. He is the one business man in the world who must have it.

This bill further taxes him unjustly and out of all proportion when considered in the light of cardinal principles of just and fair taxation and is a discrimination against that basic industry which we all know is in the greatest distress. Almost every wind that blows, the click of many telegraph instruments, the voices in the air, the dispatches in the daily papers—all bring fresh intelligence to this Congress of the suffering and destitution which have overtaken those engaged in that industry. If you will not listen to those who are asking for relief, if it is settled that you will not help them affirmatively and quickly, if you are decided to continue to fiddle while Rome burns, you may of course do so and go on with your irresolution and static inertia, but in any event and for every reason you should not add new burdens for the farmer to carry and new taxes for him to pay.

Mr. HAWLEY. Mr. Speaker, I yield two minutes to the gentleman from Georgia [Mr. LANKFORD].

Mr. LANKFORD of Georgia. Mr. Speaker, I am not in favor of the extension of the Federal gasoline tax and, therefore, shall not vote for this bill. I voted against the imposition of this tax last year. I feel that Congress is going entirely too far in this matter; and unless a halt is called at once, the States will not have any source of revenue other than the present objectionable ad valorem property tax. For this reason, and others, I am also opposed to all other similar excise taxes for national purposes. I am opposed to, and at the last session of Congress voted against, all excise taxes on candies, cool drinks, cosmetics, and other similar articles. I am still very much opposed to them and will fight them at every opportunity.

I am most anxious for the States and local governments to be able to relieve the home owners and others of much, if not all, of the present ad valorem taxes and, for this reason, am very much opposed to all these excise taxes, and also purpose to fight in every way possible the so-called

manufacturers' general sales tax, regardless of the form in which such proposal may be presented.

It will be remembered that I bitterly opposed and voted against the bank-check tax and also the postage increase at the last session of this Congress. The check tax is unwarranted, is an unnecessary and unfair nuisance, and causes more trouble and annoyance than is at all right or necessary in order to raise the small amount of revenue derived from this source. I am very much opposed to it as a national means of raising revenue.

The increase of postage on first-class mail from 2 cents to 3 cents should never have taken place. It is not fair and does much more harm than good. The first-class mail had been paying a profit to the Government, and there was absolutely no excuse for Congress to make this increase.

Many Members say that Congress must simply impose these burdens in order to raise revenue that we must have at this time. I feel that this is an erroneous idea, but I have heretofore presented my views rather fully along this line, and time will not permit further elaboration of this subject at this time.

Mr. HAWLEY. Mr. Speaker, under the existing law, the tax on gasoline is included in a paragraph containing several items. The tax on these items expires on June 30, 1934, with the reservation, however, in the case of gasoline, on which the tax expires June 30, 1933. This bill strikes out that reservation and allows the gasoline tax to continue until June 30, 1934, at which time all the taxes under that paragraph will cease.

It has been stated that the States have had the gasoline tax heretofore as a source of revenue and that the Federal Government is invading the prerogatives of the States. I do not agree that either the States or the National Government have any prerogative or exclusive right to the use of any tax. The United States first taxed tobacco. A great many States tax tobacco now. The United States established the income tax. Many States have established an income tax since then. The United States introduced the estate tax as a measure of raising revenue, and later, upon the insistence of the States, the Federal Government yielded to them 80 per cent of the income from this tax.

The United States is endeavoring to deal fairly with the subdivisions of the Union, namely, the States and their political subdivisions. There now comes a time in our history when the National Government, which has contributed large sums of money to many enterprises more of a State character than of a national character, finds itself as the result of the Great War in serious difficulties in the matter of revenue. The pending bill provides that the Federal Government take a very small proportion of the gasoline tax.

It has been stated that the States use the proceeds of the gasoline tax for roads. They are not using it all for roads. Many of the States are diverting it to other uses than that of road construction or road maintenance. The United States has contributed tremendous sums to the construction of roads. So, taking it as a whole, the necessities of the States as compared with the Union and considering that the Federal Government is bearing many burdens that are more strictly of State character than of national character, I think the continuance of the gasoline tax for one year at the low rate of 1 cent a gallon is entirely justified.

The SPEAKER. The question is on the motion to suspend the rules and pass the bill.

The question was taken; and on a division (demanded by Mr. WARREN and Mr. RANKIN) there were—ayes 136, noes 49.

Mr. RANKIN. Mr. Speaker, I object to the vote on the ground there is not a quorum present and make the point of order there is no quorum present.

The SPEAKER. The gentleman from Mississippi makes the point of order there is not a quorum present. The Chair will count. [After counting.] Two hundred and sixty-one Members present, a quorum.

Mr. RANKIN. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were refused.

So the bill was passed.

ESTABLISHMENT OF A UNIFORM SYSTEM OF BANKRUPTCY THROUGHOUT THE UNITED STATES

Mr. SUMNERS of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H. R. 14359) to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States," approved July 1, 1898, and acts amendatory thereof and supplementary thereto, as amended.

The Clerk read the bill, as follows:

Be it enacted, etc., That the act of July 1, 1898, entitled "An act to establish a uniform system of bankruptcy throughout the United States," as amended by the acts of February 5, 1903, June 15, 1906, June 25, 1910, March 2, 1917, January 7, 1922, May 27, 1926, and February 11, 1932, be, and it is hereby, amended by repealing sections 12 and 13 thereof and by adding thereto a new chapter to read as follows:

"CHAPTER VIII

"PROVISIONS FOR THE RELIEF OF DEBTORS

"SEC. 73. Additional jurisdiction: In addition to the jurisdiction exercised in voluntary and involuntary proceedings to adjudge persons bankrupt, courts of bankruptcy shall exercise original jurisdiction in proceedings for the relief of debtors, as provided in sections 74, 75, and 76 of this act.

"SEC. 74. Compositions and extensions: (a) Any person excepting a corporation may file a petition, or, in an involuntary proceeding before adjudication, an answer within the time limited by section 18 (b) of this act, accompanied in either case, unless further time is granted, by his schedules, stating that he is insolvent or unable to meet his debts as they mature, and that he desires to effect a composition or an extension of time to pay his debts. The term 'debt' for the purposes of an extension proposal under this section shall include all claims of whatever character against the debtor or his property, whether or not such claims would otherwise constitute provable claims under this act. Upon the filing of such a petition or answer the judge shall enter an order either approving it as properly filed under this section, if satisfied that such petition or answer complies with this section and has been filed in good faith, or dismissing it. If such petition or answer is approved, an order of adjudication shall not be entered except as provided in subdivision (j) of this section: *Provided, however*, That in staying the action for adjudication in an involuntary proceeding the court shall make such stay conditional upon such terms for the protection and indemnity against loss by the estate as may be proper, and that in any other proceeding under this section the court may, as the creditors at the first meeting may direct, impose similar terms as a condition of delaying the appointment of a trustee and the liquidation of the estate. Any person by or against whom a petition is filed shall be referred to in the proceedings under this section as a 'debtor.' The term 'creditor' shall include for the purposes of an extension proposal under this section all holders of claims of whatever character against the debtor or his property, whether or not such claims would otherwise constitute provable claims under this act.

"(b) After the filing of such petition or answer, the court may upon reasonable notice to creditors and attorneys of record appoint a custodian or receiver, who shall inventory the debtor's estate and exercise such supervision and control over the conduct of the debtor's business as the creditors at any meeting or the court shall direct.

"(c) The court in cases involving extension proposals where it is not necessary to appoint a custodian or receiver shall promptly call the first meeting of creditors, stating in the notice that the debtor proposes to offer terms of composition or extension, and inclosing with the notice a summary of the inventory, a brief statement of the debtor's indebtedness as shown by the schedules, and a list of the names and addresses of the secured creditors and the 15 largest unsecured creditors, with the amounts owing to each as shown by the schedules.

"(d) At the first meeting (1) the debtor may be examined; (2) the creditors may nominate a trustee, who shall thereafter be appointed by the court in case it becomes necessary to liquidate the estate as provided in subdivision (j) of this section; and (3) the court shall, after hearing the parties in interest, fix a reasonable time within which application for confirmation shall be made. The court may later extend such time for cause shown, and may require, as a condition of such extension, additional terms for the protection of and indemnity against loss by the estate as may be proper.

"(e) An application for the confirmation of a composition or extension proposal may be filed in the court of bankruptcy (1) after, but not before, it has been accepted in writing by a majority in number of all creditors whose claims have been allowed, including secured creditors whose claims are affected by an extension proposal, which number must represent a majority in amount of such claims; (2) failing to obtain the acceptance of a majority in number of all creditors whose claims have been allowed, including secured creditors whose claims are affected by an extension proposal representing a majority in amount of all claims as in clause (1) the debtor may file a proposal for an extension, including a feasible method of financial rehabilitation for the debtor which is for the best interest of all the creditors, including an equitable liquidation for secured creditors whose claims are affected; and the money or security necessary to pay all debts which have

priority unless waived and the costs of the proceedings, and in case of a composition the consideration to be paid by the debtor to his creditors, have been deposited in such place as shall be designated by and subject to the order of the court.

"(f) A date and place, with reference to the convenience of the parties in interest, shall be fixed for a hearing upon each application for the confirmation of the composition or extension proposal, and such objections as may be made to its confirmation.

"(g) The court shall confirm the proposal if satisfied that (1) it includes an equitable and feasible method of liquidation for secured creditors whose claims are affected and of financial rehabilitation for the debtor; (2) it is for the best interests of all creditors; (3) that the debtor has not been guilty of any of the acts, or failed to perform any of the duties, which would be a ground for denying his discharge; and (4) the offer and its acceptance are in good faith, and have not been made or procured except as herein provided, or by any means, promises, or acts herein forbidden. In application for extensions the court shall require proof from each creditor filing a claim that such claim is free from usury as defined by the laws of the place where the debt is contracted.

"(h) The terms of an extension proposal may extend the time of payment of either secured or unsecured debts, or both, and may provide for priority of payments to be made during the period of extension as between secured and unsecured creditors. It may also include specific undertakings by the debtor during the period of the extension, including provisions for payments on account, and may provide for supervisory or other control over the debtor's business or affairs during such period by a creditors' committee or otherwise, and for the termination of such period under certain specified conditions.

"(i) Upon its confirmation an extension proposal shall be binding upon the debtor and his secured and unsecured creditors: *Provided*, That such extension or composition shall not impair the lien of any secured creditor, but shall affect only the time and method of its liquidation.

"(j) Upon the confirmation of a composition the consideration shall be distributed as the court shall direct, and the case dismissed. Upon the confirmation of an extension proposal the court may dismiss the proceeding or retain jurisdiction of the debtor and his property during the period of the extension in order to protect and preserve the estate and enforce the terms of the extension proposal.

"(k) The judge may, upon the application of the parties in interest, filed at any time within six months after the composition or extension proposal has been confirmed, set the same aside and reinstate the case, if it shall be made to appear upon a trial that fraud was practiced in the procuring of such composition or extension, and that knowledge thereof has come to the petitioners since the confirmation thereof.

"(l) If the debtor shall (1) fail to comply with any of the terms required of him for the protection of and indemnity against loss by the estate; or (2) fail to apply for confirmation within the time fixed therefor; or (3) have applied for confirmation and confirmation has been denied; or (4) without sufficient reason default in any payment required to be made under the terms of the composition or extension proposal, the court may appoint the trustee nominated by the creditors at the first meeting, and if the creditors shall have failed to so nominate, may appoint any other qualified person as trustee to liquidate the estate except debtors engaged in farming or the tillage of the soil unless they consent. The court shall in addition adjudge the debtor a bankrupt if satisfied that he commenced or prolonged the proceeding for the purpose of delaying creditors and avoiding an adjudication in bankruptcy, or if the confirmation of his proposal has been denied.

"(m) The filing of a debtor's petition or answer pleading for relief under this section shall subject the debtor and his property, wherever located, to the exclusive jurisdiction of the court in which the order approving the petition or answer as provided in subdivision (a) is filed. In proceedings under this section, except as otherwise provided therein, the jurisdiction and powers of the court, the title, powers, and duties of its officers and, subject to the approval of the court, their fees, the duties of the debtor, and the rights and liabilities of creditors, and of all persons with respect to the property of the debtor, shall be the same as if a voluntary petition for adjudication had been filed and a decree of adjudication had been entered on the day when the debtor's petition or answer was filed and any decree of adjudication thereafter entered shall have the same effect as if it had been entered on that day.

"(n) After the filing of the petition, as provided in subdivision (a) of this section, the court, on such notice and on such terms, if any, as it deems fair and equitable may enjoin secured creditors from enforcing their rights in security held by them until the confirmation of the composition, or the extension has been denied by the court.

"(o) Notwithstanding the provisions of this act, in any proceedings under this section involving a plan of extension the following fees, and none other, shall be charged to the debtors;

"For the clerk's fees, $2;

"For the referee, upon entry of order of confirmation, $10 if the total assets as shown by the schedule are $10,000 or less, and $5 for each $5,000 of assets, or fraction thereof, that exceeds $10,000; and

"Upon the filing of a petition the filing fee in all cases shall be $5.

"(p) The judges of the courts of bankruptcy shall appoint sufficient referees to sit in convenient places to expedite the proceedings under this section, and where the business and conditions permit there shall be at least one in each county: *Provided*, That hearings and examinations before the referee shall be held in the county of the debtor's residence.

"SEC. 75. Corporate reorganizations: (a) Any corporation which could become a bankrupt under section 4 of the act, drainage, irrigation, levee, sewer, and paving improvement districts established under the laws of the State of their creation, except as hereinafter provided, may file a petition, or, before adjudication in an involuntary proceeding, an answer, stating that the corporation is insolvent or unable to meet its debts as they mature and that it desires to effect a plan of reorganization. The petition shall be filed with the court in whose territorial jurisdiction the corporation, during the preceding six months or the greater portion thereof, has had its principal place of business or its principal assets. The petition or answer shall be accompanied by payment to the clerk of a filing fee of $100, which shall be in addition to the fees required to be collected by the clerk under other sections of this act. Upon the filing of such a petition or answer the judge shall enter an order either approving it as properly filed under this section if satisfied that such petition or answer complies with this section and has been filed in good faith, or dismissing it. If the petition or answer is so approved, an order or adjudication in bankruptcy shall not be entered and the court in which such order approving the petition or answer is entered shall during the pendency of the proceedings under this section have exclusive jurisdiction of the debtor and its property wherever located, for the purposes of this section. The corporation shall be referred to in the proceedings as a 'debtor.'

"(b) A plan of reorganization within the meaning of this section (1) shall include a proposal to modify or alter the rights of creditors generally, or of any class of them, secured or unsecured, either through the issuance of new securities of any character or otherwise; (2) may include, in addition, provisions altering the rights of stockholders generally, or of any class of them; (3) shall provide adequate means for the execution of the plan, which may include the transfer of all or any part of the property of the debtor to another corporation or to other corporations, or the consolidation of the properties of the debtor with those of another corporation, and the issuance of securities of either the debtor or any such corporation or corporations, for cash, or in exchange for existing securities, or in satisfaction of claims or rights, or for other appropriate purposes; and (4) may deal with all or any part of the property of the debtor. The term 'securities' shall include evidences of indebtedness, either secured or unsecured, stock, certificates of beneficial interest therein, and certificates of beneficial interest in property. The term 'stockholders' shall include the holders of voting trust certificates. The term 'creditors' shall include for the purposes of a reorganization proceeding under this section all holders of claims of whatever character against the debtor or its property, whether or not such claims would otherwise constitute provable claims under this act.

"(c) Upon approving the petition or answer, the judge (1) may temporarily appoint a trustee or trustees of the debtor's estate, who shall have all the title and shall exercise subject to the control of the judge and consistently with the provisions of this section all the powers of a trustee appointed pursuant to section 44 of this act, and, subject to the court's control, the power to operate the business of the corporation, shall fix the amount of the bond of such trustee or trustees, and require the trustee or trustees to give such notice as the order may direct to creditors and stockholders and to cause publication thereof to be made at least once a week for two successive weeks of a hearing to be held within 30 days after such appointment, at which hearing or any adjournment thereof the judge may make permanent such appointment, or terminate it and appoint a substitute trustee or substitute trustees, and may appoint an additional trustee or additional trustees, and shall fix the amount of the bond of the substitute or additional trustee or trustees; (2) may, for cause shown, authorize the trustee or trustees to issue certificates for cash, for such lawful purposes, and upon such terms and conditions and with such security and such priority in payments over existing obligations, secured or unsecured, as may be lawful in the particular case; (3) shall require the debtor, at such time or times as the judge may direct, and in lieu of the schedules required by section 7 of this act, to file such schedules and submit such other information as may be necessary to disclose the conduct of the debtor's affairs and the fairness of any proposed plan; (4) shall determine a reasonable time within which the claims and interest of creditors and stockholders may be filed or evidenced and after which no such claim or interest may participate in any plan, except on order for cause shown; the manner in which such claims and interests may be filed or evidenced and allowed, and, for the purposes of the plan and its acceptance, the division of creditors and stockholders into classes according to the nature of their respective claims and interests; (5) shall cause reasonable notice of such determination and of all hearings for the consideration of any proposed plan, or of the dismissal of the proceedings, or the liquidation of the estate, or the allowance of fees or expenses, to be given creditors and stockholders by publication or otherwise; (6) if a plan of reorganization is not proposed or accepted within such reasonable time as the judge may fix, or, if proposed and accepted, is not confirmed, may, whether the proceeding be voluntary or involuntary, dismiss the proceeding or direct the trustee or trustees to liquidate the estate, as the interests of the creditors

and stockholders may equitably require, provided that if the proceeding is involuntary it shall not be so dismissed until after a hearing upon notice sent to the creditors and stockholders; (7) may allow a reasonable compensation for the services rendered and reimbursement for the actual and necessary expenses incurred in the proceeding by officers and parties in interest, including reorganization managers and committees or other representatives of creditors or stockholders, and their attorneys or agents; and (8) may refer any matters to a special master, who may be one of the referees in bankruptcy, for consideration and report, either generally or upon specified issues, and allow such master a reasonable compensation for his services. Any creditor or stockholder shall be heard on the question of the appointment of any trustee or trustees, and on the proposed confirmation of any reorganization plan, and upon filing a petition for leave to intervene, on such other questions arising in the proceeding as the judge shall determine.

"(d) A plan of reorganization which has been approved by creditors of the debtor, being not less than 25 per cent in amount of any class of creditors and not less than 10 per cent in amount of all the creditors of the debtor, whose claims or interests would be affected by the plan, may be proposed by the debtor or by any creditor or by any stockholder at a hearing duly noticed for its consideration or for the consideration of any other plan of reorganization similarly proposed.

"(e) A plan of reorganization shall not be confirmed until it has been accepted in writing and such acceptance shall have been filed in the proceeding by or on behalf of creditors holding two-thirds in amount of the claims of each class whose claims or interests have been allowed and would be affected by the plan, and, unless the judge shall determine after a hearing that the debtor is insolvent, by or on behalf of stockholders of the debtor holding two-thirds of the stock of each class: *Provided, however,* That if adequate provision is made in the plan for the protection of the interests, claims, and liens of any class of creditors or stockholders in the manner provided in subdivision (f), clause (5) of this section, then the acceptance of the plan by such class of creditors or stockholders shall not be requisite to the confirmation of the plan. With such acceptance there shall be filed a statement, verified in such manner as the judge shall require, showing what, if any, claims and shares of stocks have been purchased or transferred by those accepting the plan after the commencement or in contemplation of the proceeding, and the circumstances of such purchase or transfer: *Provided, however,* That if the judge is satisfied that by reason of the number of securities outstanding and the extent of the public dealing therein the preparation of such a statement would be impractical, he may direct that it be not filed.

"(f) Upon such acceptance, and after hearing such objections as may be made to the plan, the judge shall confirm the plan if satisfied that (1) it is equitable and does not discriminate unfairly in favor of any class of creditors or stockholders; (2) all amounts to be paid by the debtor or by any corporation or corporations acquiring the debtor's assets, for services or expenses incident to the reorganization, have been fully disclosed and are reasonable, or are to be subject to the approval of the judge; (3) the offer of the plan and its acceptance are in good faith and have not been made or procured by any means or promises forbidden by this act; (4) the plan provides for the payment in cash of all costs of administration and other allowances made by the court; (5) the plan provides with respect to stockholders not accepting the plan (unless the corporation shall have been found to be insolvent) and who do not become bound by the plan under the provisions of subdivision (g) of this section adequate protection for the realization by them of the value of their equity, if any, in the property of the debtor dealt with by the plan, either by a sale of the property at not less than a fair upset price or by appraisal and payment in cash of the value of such stock, or, at the objecting stockholders' election, of the securities allotted to such stockholders under the plan, if any; and the plan provides with respect to creditors not accepting the plan, and who do not become bound by the plan under the provisions of subdivision (g) of this section adequate protection for the realization by them of the value of their liens on or claims against the property of the debtor dealt with by the plan, either (a) by the sale of such property subject to such liens or claims, or (b) by the sale free of such liens or claims at not less than a fair upset price, and the transfer of such liens or claims to the proceeds of such sale, or (c) by appraisal and payment in cash of the value of such liens and claims, or, at the objecting creditors' election, of the securities allotted to such liens and claims under the plan; (6) the debtor, and every other corporation issuing securities or acquiring property under the plan, is authorized by its charter, and has obtained such authority as may be required by the laws of the United States or of any State or Territory or subdivision thereof, to take all action necessary to carry out the plan.

"(g) Upon such confirmation the provisions of the plan shall be binding upon (1) the corporation, (2) all stockholders thereof, (3) all creditors whose claims are payable in cash in full under the plan, (4) all creditors entitled to priority under subdivision (c) of this section, whose claims are not payable in cash in full under the plan, provided two-thirds in amount of such creditors shall have accepted the plan in writing filed in the proceeding, (5) all other unsecured creditors, provided two-thirds in amount of such creditors shall have accepted the plan in writing filed in the proceeding, and (6) all secured creditors of each class of which two-thirds in amount shall have accepted the plan: *Provided, however,* That any secured creditor who is unwilling to accept the benefits provided for him under the plan may file with the clerk at any time prior to the confirmation of the plan a demand in writing that his lien be afforded the protection required by subdivision (f), clause (5) of this section, in which event he shall be entitled to such protection of his interests. The confirmation of the plan shall discharge the debtor from its debts except as provided in the plan.

"(h) Upon confirmation of the plan the property dealt with by the plan shall be transferred by the trustee or trustees to the debtor or the other corporation or corporations provided for by the plan, free and clear of all claims of the debtor, its stockholders and creditors, except such as may consistently with the provisions of the plan be reserved in the order directing such transfer. Upon the termination of the proceedings a final decree shall be entered discharging the trustee or trustees and closing the case.

"(i) If a receiver of all or any part of the property of a corporation has been appointed by a Federal, State, or Territorial court, whether before or after this amendatory act takes effect, the corporation may nevertheless file a petition or answer under this section at any time thereafter, but if it does so and the petition or answer is approved, the trustee or trustees appointed under the provisions of this section shall be entitled forthwith to possession of such property, and the judge shall make such orders as he may deem equitable for the protection of obligations incurred by the receiver and for the payment of such reasonable administrative expenses and allowances in the prior proceeding as may be fixed by the court appointing said receiver. If a receiver has been appointed by a Federal or State or Territorial court prior to the dismissal, under subdivision (c) clause (6), of a proceeding under this section, the judge may include in the order of dismissal appropriate orders directing the trustee to transfer possession of the debtor's property within the Territorial jurisdiction of such court to the receiver so appointed, upon such terms as the judge may deem equitable for the protection of obligations incurred by the trustee and for the payment of administrative expenses and allowances in the proceeding hereunder. For the purposes of this section the words 'Federal court' shall include the district courts of the United States and of the Territories and possessions to which this act is or may hereafter be applicable, the Supreme Court of the District of Columbia, and the United States Court of Alaska, and the District Court of the United States for the Territory of Hawaii.

"(j) In addition to the provisions of section 11 of this act for the staying of pending suits against the debtor, such suits shall be further stayed until the question of the confirmation of a proposed plan of reorganization has been determined; and until such determination the judge may, upon notice and for cause shown, enjoin or stay the commencement or continuance of any judicial proceeding to enforce any lien upon the estate.

"(k) A certified copy of an order confirming a plan of reorganization shall be evidence of the jurisdiction of the court, the regularity of the proceedings, and the fact that the order was made. A certified copy of an order directing the transfer of the property dealt with by the plan as provided in subdivision (h) of this section shall be evidence of the transfer of title accordingly, and if recorded shall impart the same notice that a deed, if recorded, would impart.

"(l) If an order is entered directing the trustee or trustees to liquidate the estate pursuant to the provisions of clause (6) of subdivision (c) of this section: (1) The case may be referred to a referee as provided in section 22, who shall be compensated as provided in section 40, except that such compensation shall not exceed a total of $7,500 in any single case; (2) the first meeting of creditors shall be held as provided in section 55, upon notice as provided in section 58; (3) a trustee or trustees shall be appointed as provided in section 44, and be compensated as provided in section 48; (4) claims which are provable under section 63 may be proved as provided in section 57, except that the time within which proof may be made shall not expire until six months after the date of the last publication of the notice of the first meeting; (5) debts shall be entitled to priority as provided in section 64; (6) sales shall be made as provided in subdivision (b) of section 70; (7) dividends may be declared and paid as provided in section 65. None of the sections enumerated in this subdivision (l), except subdivisions (g), (l), (j), and (m) of section 57, and subdivisions (a) and (e) of section 70, shall apply to proceedings instituted under this section 75 unless and until an order has been entered directing the trustee or trustees to liquidate the estate. All other provisions of this act, except such as are inconsistent with the provisions of this section 75, shall apply to proceedings instituted under this section, whether or not an order to liquidate the estate has been entered. For the purposes of such application, provisions relating to 'bankrupts' shall be deemed to relate also to 'debtors'; 'bankruptcy proceedings,' or 'proceedings in bankruptcy,' shall be deemed to include proceedings under this section; the date of the order approving the petition or answer under this section shall be taken to be the date of adjudication, and such order shall have the same consequences and effect as an order of adjudication.

"(m) Whenever in this act the words 'receiver' or 'trustee' are used, same shall mean a natural person, except, however, upon good cause affirmatively shown by any interested party or parties that it is for the best interests of the debtor or the plan generally, the court may appoint a corporation, but such corporation shall not be appointed in a multiplicity of cases.

"(n) Nothing contained in this section whatsoever shall be construed or be deemed to affect or apply to the stockholders, creditors, or officers of any corporation operating a railroad or railroads owned in whole or in part by any municipality and/or

owned or operated by a municipality, or under any contract to any municipality by or on its behalf or in conjunction with such municipality under any contract, lease, agreement, certificate, or in any other manner provided by law for such operation."

"SEC. 76. Reorganization of railroads engaged in interstate commerce: (a) Any railroad corporation, but subject to first having obtained the approval of the Interstate Commerce Commission, may file a petition stating that the railroad corporation is insolvent or unable to meet its debts as they mature and that it desires to effect a plan of reorganization. The petition shall be filed with the court in whose territorial jurisdiction the railroad corporation, during the preceding six months or the greater portion thereof, has had its principal or executive or operating office. The petition shall be accompanied by payment to the clerk of a filing fee of $100, which shall be in addition to the fees required to be collected by the clerk under other sections of this act. Upon the filing of such a petition the judge shall enter an order either approving it as properly filed under this section, if satisfied that such petition complies with this section and has been filed in good faith, or dismissing it. If the petition is so approved, the court in which such order approving the petition is entered shall, during the pendency of the proceedings under this section, have jurisdiction of the debtor and its property wherever located, for the purposes of this section. The railroad corporation shall be referred to in the proceedings as a 'debtor.' Any railroad corporation, the majority of the capital stock of which having power to vote for the election of directors is owned or controlled, either directly or indirectly through an intervening medium, by any railroad corporation filing a petition as a debtor under this section, or substantially all of whose properties are operated by such a debtor under lease or operating agreement may file, with the court in which such other debtor had filed such a petition, and in the proceeding upon such petition under this section, a petition stating that it is insolvent or unable to meet its debts as they mature and that it desires to effect a plan of reorganization in connection with, or as a part of, the plan of reorganization of such other debtor; and thereupon such court shall have the same jurisdiction with respect to it, its property, and its creditors and stockholders as the court has with respect to such other debtor. Creditors of any railroad corporation, being not less than 25 per cent in amount of any class of creditors and not less than 10 per cent in amount of all creditors of such railroad corporation, whose claims or interests would be affected by the plan proposed by them, may, if the railroad corporation has not filed a petition under this section, but subject to first having obtained the approval of the Interstate Commerce Commission, file with the court in which such railroad corporation might file a petition under the provisions of this section, a petition stating that such railroad corporation is insolvent or unable to meet its debts as they mature and that such creditors propose that it shall effect a plan of reorganization; upon such filing of such a petition a copy thereof shall be served by the petitioning creditors forthwith upon the railroad corporation; the railroad corporation shall, within 10 days after such service, answer such petition; if such answer shall admit the jurisdiction of the court, that the claims of the petitioning creditors constitute the amounts necessary to entitle them to file such petition under this section, and that the railroad corporation is either insolvent or unable to meet its debts as they mature, the court shall enter an order approving the petition as properly filed under this section, and the proceedings thereon shall continue with like effect as if the railroad corporation had itself filed a petition under this section; if such answer shall deny either the jurisdiction of the court or that the claims of the petitioning creditors constitute such necessary amounts or that the railroad corporation is insolvent or unable to meet its debts as they mature, the court shall summarily try the issues, and if it shall find that the petition has been properly filed under this section, the court shall enter an order approving the petition as so filed, and the proceedings thereon shall continue with like effect as if the railroad corporation had itself filed a petition under this section; otherwise the court shall dismiss the petition.

"(b) A plan of reorganization within the meaning of this section (1) may include a proposal to modify or alter the rights of creditors generally, or of any class of them, secured or unsecured, either through the issuance of new securities of any character or otherwise; (2) may include, in addition, provisions altering the rights of stockholders generally, or of any class of them; (3) shall provide adequate means for the execution of the plan, which may include the transfer of all or any part of the property of the debtor to another corporation or to other corporations or the consolidation of the properties of the debtor with those of another railroad corporation, or the merger of the debtor with any other railroad corporation and the issuance of securities of either the debtor or any such corporation or corporations, for cash, or in exchange for existing securities, or in satisfaction of claims or rights, or for other appropriate purposes; and (4) may deal with all or any part of the property of the debtor. The term 'securities' shall include evidences of indebtedness, either secured or unsecured, bonds, stocks, certificates of beneficial interest therein, and certificates of beneficial interest in property. The term 'stockholders' shall include the holders of voting trust certificates. The term 'creditors' shall include, for the purposes of a reorganization proceeding under this section, all holders of claims of whatever character against the debtor or its property, whether or not such claims would otherwise constitute provable claims under this act. Nothing contained in this act shall be construed as amending or in any way altering the provisions of the railway labor act, as amended and supplemented.

"(c) Upon approving the petition as properly filed the judge (1) may temporarily appoint a trustee or trustees recommended by the Interstate Commerce Commission of the debtor's estate, who shall have all the title, powers of a trustee appointed pursuant to section 44 or any other section of this act, and, subject to the judge's control, shall have the power to operate the business of the railroad corporation; the judge shall fix the amount of the bond of such trustee or trustees and require the trustee or trustees to give such notice as the order may direct to creditors and stockholders and to cause publication thereof to be made at least once a week for two successive weeks of a hearing to be held within 30 days after such appointment, at which hearing and/or any adjournment thereof the judge may make, upon such recommendation, permanent such appointment, or may terminate it and may, upon such recommendation, appoint a substitute trustee or substitute trustees, and may, upon such recommendation, appoint an additional trustee or additional trustees, and shall fix the amount of the bond of the substitute or additional trustee or trustees; any creditor or stockholder shall be heard on the question of the appointment of any trustee or trustees; (2) may for cause shown, and with approval of the Interstate Commerce Commission, authorize the trustee or trustees to issue certificates for cash, for such lawful purposes, and upon such terms and conditions and with such security and such priority in payments over existing obligations, secured or unsecured, as might in an equity receivership be lawful; (3) shall require the debtor, at such time or times as the judge may direct and in lieu of the schedules required by section 7 of this act, to file such schedules and submit such other information as may be necessary to disclose the conduct of the debtor's affairs and the fairness of any proposed plan; (4) shall determine a reasonable time within which the claims and interests of creditors and stockholders may be filed or evidenced and after which no such claim or interest may participate in any plan, except on order for cause shown; the manner in which such claims and interests may be filed or evidenced and allowed, and, for the purposes of the plan and its acceptance, the division of creditors and stockholders into classes according to the nature of their respective claims and interests; (5) shall cause reasonable notice of such determination, or of the dismissal of the proceedings, or the allowance of fees or expenses, to be given creditors and stockholders by publication or otherwise; (6) if a plan of reorganization is not proposed or accepted within such reasonable time as the judge may, upon cause shown, fix, or, if proposed and accepted, is not approved, shall dismiss the proceeding; (7) may, subject to the approval provided in subdivision (f) of this section, allow a reasonable compensation for the services rendered and reimbursement for the actual and necessary expenses incurred in connection with the proceeding and plan by the Interstate Commerce Commission, officers, parties in interest, reorganization managers, and committees or other representatives of creditors or stockholders, and their attorneys or agents; and (8) may on his own motion or at the request of the Interstate Commerce Commission refer any matters for consideration and report, either generally or upon specified issues, to one or more of six special referees, who may also perform all the functions and exercise all the powers of referees in bankruptcy and who shall be appointed by the President of the United States, by and with the advice and consent of the Senate, each for a term of six years, except that the first two appointments shall be for two and the next two appointments for four years. Authority is herewith granted for the appointment of such special referees and such additional special referees as may be required. Such special referees shall sit in Washington, D. C., and in such other places as may be designated in any instance by the judge referring a matter to them on his own motion or at the request of the commission, and shall receive such compensation as shall be allowed them by such judge, with the approval of the Interstate Commerce Commission, including reasonable traveling and subsistence allowances, and shall be subject to all applicable provisions of this act, except fees, regarding referees in bankruptcy. For all purposes of this section 76, claims against a railroad corporation which would have been entitled to priority over existing mortgages if a receiver in equity of the property of the debtor had been appointed by a Federal court at the date of the filing of the petition hereunder shall be entitled to such priority, and holders of such claims shall be treated as a separate class of creditors. Any creditor or stockholder shall be heard on the question of the proposed approval of any reorganization plan, and upon filing a petition for leave to intervene on such other questions arising in the proceeding as the judge shall determine. The debtor, or the trustees if appointed, shall within 15 days or, upon cause shown, such other time as may be directed by the judge, prepare (1) a list of all known bondholders and creditors of, or claimants against, the debtor and the amounts and character of debts owing to them or claims by them against the debtor, with the last known post-office address or place of business of each creditor or claimant, and (2) a list of the stockholders of the debtor, with the last known post-office address or place of business of each. The contents of such lists shall not constitute admissions by the debtor or the trustees in a proceeding under this section or otherwise. Such lists shall be open to the inspection of any creditor or stockholder of, or claimant against, the debtor, during reasonable business hours, upon application to the debtor or trustees, as the case may be.

"(d) Before creditors and stockholders of the debtor are asked to accept any plan of reorganization, the Interstate Commerce Commission shall, after due notice, hold a public hearing at which the debtor shall present its plan of reorganization and at which, also, such a plan may be presented by or on behalf of creditors of the debtor, being not less than 25 per cent in amount of any class of creditors and not less than 10 per cent in amount of all the creditors of the debtor whose claims or interest would be affected by the plan. Following such hearing, the commission shall render a report in which it shall recommend a plan of reorganization (which may be different from any which has been proposed) as it shall find will be equitable, will not discriminate unfairly in favor of any class of creditors or stockholders, will be financially advisable, and will be compatible with the public interest. In such report the commission shall state fully the reasons for its conclusions, and it may thereafter, upon petition for good cause shown, modify any of its findings and conclusions in a supplemental report stating the reasons for such modification. Thereafter the plan of reorganization recommended by the commission shall be submitted to the creditors and stockholders of the debtor for acceptance or rejection, together with the report or reports of the commission thereon; and the commission may at the same time afford an opportunity to accept or reject any other plan of reorganization.

"(e) A plan of reorganization shall not be transmitted by the commission to the court until it has been accepted in writing and such acceptance shall have been filed in the proceeding by or on behalf of creditors holding two-thirds in amount of the claims of each class whose claims or interests have been allowed and would be affected by the plan, and, unless the judge shall have determined after a hearing that the debtor is insolvent, by or on behalf of stockholders of the debtor holding two-thirds of the stock of each class: *Provided, however,* That if adequate provision is made in the plan for the protection of the interests, claims, and liens of any class of creditors or stockholders in the manner provided in subdivision (f), clause (5), of this section, then the acceptance of the plan by such class of creditors or stockholders shall not be requisite to the approval of the plan. With such acceptance there shall be filed a statement, verified in such manner as the commission shall require, showing what, if any, claims and shares of stock have been purchased or transferred by those accepting the plan after the commencement or in contemplation of the proceeding, and the circumstances of such purchase or transfer. If the United States is directly a creditor or stockholder, the Secretary of the Treasury is hereby authorized to accept or reject the plan for the United States.

"(f) Upon the acceptance as provided in subdivision (e) the Interstate Commerce Commission shall reopen the proceeding in which it recommended the plan of reorganization, for the purpose of considering the accepted plan and if the commission finds, after due notice and a public hearing, that (1) the accepted plan is equitable and does not discriminate unfairly in favor of any class of creditors or stockholders; (2) all amounts to be paid by the debtor or by any corporation or corporations acquiring the debtor's assets, for services or expenses incident to the reorganization and cost of financing, have been fully disclosed and are reasonable; (3) the offer of the plan and its acceptance are in good faith and have not been made or procured by any means or promises forbidden by this act; (4) the accepted plan provides for the payment of all costs of administration and other allowances made by the court; (5) the accepted plan provides, with respect to stockholders of any class when two-thirds in amount of that class have not accepted the plan (unless the railroad corporation shall have been found to be insolvent), adequate protection for the realization by them of the value of their equity, if any, in the property of the debtor dealt with by the plan either by a sale of the property at not less than a fair upset price, or by appraisal and payment in cash either of the value of such stock or, at the objecting stockholder's election, the value of the securities, if any, allotted to such stock under the plan, and the plan provides with respect to any class of creditors not accepting the plan, and who do not become bound by the plan under the provisions of subdivision (g) of this section, adequate protection for the realization by them of the value of their liens on or claims against the property of the debtor dealt with by the plan, either (a) by the sale of such property subject to such liens or claims, or (b) by the sale free of such liens or claims at not less than a fair upset price, and the transfer of such liens or claims to the proceeds of such sale, or (c) by appraisal and payment in cash of either the value of such liens and claims or, at the objecting creditors' election, the value of the securities allotted to such liens and claims under the plan; (6) the debtor, and every other corporation issuing securities or acquiring property under the plan, is authorized by its charter to carry out the plan and should be granted for that purpose by the commission such further authority as may be necessary under and consistent with the provisions of the interstate commerce act; and (7) in respect of the financial advisability of the plan and otherwise, the consummation of the plan is compatible with public interest; the commission is hereby authorized and directed thereupon and without further proceedings to grant, subject to the provisions of the interstate commerce act as amended, authority for the issue of any securities or the assumption of any obligations by the debtor or by any other railroad corporation in accordance with the accepted plan, and likewise authority for the transfer of all or any part of the property of the debtor to another corporation or to other corporations or the consolidation of the properties of the debtor with those of another railroad corporation, or the merger of the debtor with any other railroad corporation to the extent that such transactions are contemplated by the accepted plan and are consistent with the provisions of the interstate commerce act, as amended. In such proceeding the commission shall also fix the compensation to be paid to reorganization managers, special referees, trustees, officers, parties in interest, committees, or other representatives of creditors or stockholders for services rendered and reimbursement for the actual and necessary expenses incurred in connection with the proceeding and plan: *Provided,* That unless good and sufficient reasons appear therefor no allowance for fees or compensation shall be made to officers of corporations who acted as managers or in any capacity in connection with the reorganization when such corporation had an interest in the matter.

"(g) Thereupon the commission shall transmit the accepted and approved plan, its findings, and the record in the proceedings to the court, and the said plan upon approval by the judge on the said record shall be final and binding upon (1) the corporation; (2) all stockholders thereof; (3) all creditors whose claims are payable in cash under the plan; (4) all creditors entitled to priority under subdivision (c) of this section, whose claims are not payable in cash in full under the plan, provided two-thirds in amount of such creditors shall have accepted the plan in writing filed in the proceeding; (5) all other unsecured creditors, provided two-thirds in amount of such creditors shall have accepted the plan in writing filed in the proceeding; and (6) all secured creditors of each class of which two-thirds in amount shall have accepted the plan. The approval of the plan shall discharge the debtor from its debts except as provided in the plan. In the event that the judge should disapprove the plan on the said record he shall enter an order together with his reasons therefor.

"(h) The provisions of the revenue act of 1932, sections 721, 722, 723, 724, and 725, shall not apply to the issuance, transfers, or exchange of securities or filing of conveyances to make effective such reorganization, mergers, or consolidations.

"(i) Upon approval of the plan the property dealt with by the plan shall be transferred by the trustee or trustees to the debtor or the other corporation or corporations provided for by the plan, free and clear of all claims of the debtor, its stockholders, and creditors, except such as may consistently with the provisions of the plan be reserved in the order directing such transfer. Upon the termination of the proceedings a final decree shall be entered discharging the trustee or trustees and closing the case.

"(j) If a receiver of all or any part of the property of a corporation has been appointed by a Federal or State court, whether before or after this amendatory act takes effect, the railroad corporation may nevertheless file a petition or answer under this section at any time thereafter, but if it does so and the petition is approved the trustee or trustees appointed under the provisions of this section shall be entitled forthwith to possession of such property, and the judge shall make such orders as he may deem equitable for the protection of obligations incurred by the receiver and for the payment of such reasonable administrative expenses and allowances in the prior proceeding as may be fixed by the court appointing said receiver. If a receiver has been appointed by a Federal or State court prior to the dismissal, under subdivision (c), clause (6), of a proceeding under this section, the judge may include in the order of dismissal appropriate orders directing the trustee to transfer possession of the debtor's property within the territorial jurisdiction of such court to the receiver so appointed, upon such terms as the judge may deem equitable for the protection of obligations incurred by the trustee and for the payment of administrative expenses and allowances in the proceeding hereunder. For the purposes of this section the words 'Federal court' shall include the district courts of the United States and of the Territories and possessions to which this act is or may hereafter be applicable, the Supreme Court of the District of Columbia, and the United States Court of Alaska.

"(k) In addition to the provisions of section 11 of this act for the staying of pending suits against the debtor, such suits shall be further stayed until the question of the approval of a proposed plan of reorganization has been determined; and until such determination the judge may, upon notice and for cause shown, enjoin or stay the commencement or continuance of any judicial proceeding to enforce any lien upon the estate.

"(l) A certified copy of an order approving a plan of reorganization shall be evidence of the jurisdiction of the court, the regularity of the proceedings, and the fact that the order was made. A certified copy of an order directing the transfer of the property dealt with by the plan as provided in subdivision (h) of this section shall be evidence of the transfer of title accordingly, and if recorded shall impart the same notice that a deed if recorded would impart.

"(m) All other provisions of this act, except such as are inconsistent with the provisions of this section 76, shall apply to proceedings instituted under this section. For the purposes of such application, provisions relating to 'bankrupts' shall be deemed to relate also to 'debtors'; 'bankruptcy proceedings' or 'proceedings in bankruptcy' shall be deemed to include proceedings under this section; the date of the order approving the petition under this section shall be taken to be the date of adjudication, and such order shall have the same consequence and effect as an order of adjudication.

"(n) The term 'railroad corporation' as used in this act means any common carrier by railroad engaged in the transportation of persons or property in interstate commerce, except a street, suburban, or interurban electric railway which is not operated as a part of a general railroad system of transportation."

SEC. 2. This amendatory act shall take effect and be in force from and after the date of its approval, and shall apply as fully to debtors, their stockholders and creditors, whose interests or debts, whether secured or unsecured, have been acquired or incurred prior to such date, as to debtors, their stockholders and creditors, whose interests or debts have been acquired or incurred after such date. Proceedings under sections 74 and 75 of this amendatory act may be taken in proceedings in bankruptcy which are pending when it takes effect.

The SPEAKER pro tempore (Mr. WOODRUM). Is a second demanded?

Mr. DYER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Is the gentleman from Missouri opposed to the bill?

Mr. DYER. I am.

Mr. SUMNERS of Texas. Mr. Speaker, I ask unanimous consent that a second may be considered as ordered.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. SUMNERS of Texas. Mr. Speaker, this is an important bill, and I ask unanimous consent that the time for debate may be extended to 2 hours, 1 hour to be controlled by myself and 1 hour to be controlled by the gentleman from Missouri [Mr. DYER].

The SPEAKER pro tempore. The gentleman from Texas asks unanimous consent that the time for debate on the bill be extended to two hours, the time to be equally divided and controlled by himself and the gentleman from Missouri. Is there objection?

Mr. MICHENER. Mr. Speaker, reserving the right to object, this is possibly the most important bill that has been or will be before this Congress at this session; certainly, the most important bill that has been before the Congress in years in its ultimate effect.

The bill is to be considered under suspension of the rules, which permits 20 minutes of debate on the side. I am informed that when the chairman of the Judiciary Committee was recognized and moved to suspend the rules, he also added the statement to suspend the rules and pass the bill with amendments.

I want it understood that the committee knows nothing about the amendments which are proposed. We have not seen them; we do not know what they are, and under the procedure the gentleman from Texas has unlimited authority to offer such amendments as to him may seem advisable.

Some of us have a number of amendments which we feel are of vital importance and which the Department of Justice insists upon, and we should like an opportunity to offer these amendments.

Mr. BLANTON. Mr. Speaker, I ask for the regular order. The proposed amendments were all read from the Clerk's desk immediately following the reading of the bill.

The SPEAKER pro tempore. The regular order is demanded. Is there objection to the request of the gentleman from Texas?

Mr. MICHENER. Mr. Speaker, I do not think the gentleman wants to be quite so unfair.

Mr. BLANTON. I shall not insist on the regular order if the gentleman is not going to make an extended speech in time that others may want.

Mr. MICHENER. This would not be taken out of the time for debate.

Mr. BRITTEN. Why can not the gentleman submit a unanimous-consent request to offer such amendments?

Mr. MICHENER. If the gentleman will let me proceed, that is what I am coming to.

I would like to couple with the unanimous-consent request of the gentleman from Texas the request that amendments which were embodied in the memorandum prepared by the Solicitor General, which were submitted to the House on Saturday last and which are included in Saturday's RECORD, be also in order.

The SPEAKER pro tempore. The Chair can not entertain the request of the gentleman from Michigan at this time. Is there objection to the request of the gentleman from Texas that the time for general debate be extended to two hours?

Mr. DYER. Mr. Speaker, reserving the right to object, I would like to ask the gentleman from Texas how many amendments he has in connection with this bill, which I am advised were not presented to or considered by the Judiciary Committee.

Mr. SUMNERS of Texas. Mr. Speaker, may I say to my friend from Missouri that if I have the opportunity I am going to direct attention to the amendments, and I believe every member of the committee will recognize that these amendments simply clarify the measure and do not add materially to the provisions of the bill.

Mr. DYER. How many amendments are there, may I ask the gentleman?

Mr. SUMNERS of Texas. Five or six.

Mr. DYER. I think if we added two or three hundred amendments, Mr. Speaker, we would not clarify the bill.

Mr. LAGUARDIA. It depends on who is trying to understand the bill.

Mr. DYER. I shall object to two hours if there is no chance to amend the bill except by the amendments which have been offered by the gentleman from Texas and about which we know nothing. I shall not object to 1 hour or 30 minutes on the side.

Mr. SUMNERS of Texas. Mr. Speaker, may I suggest to the gentleman from Missouri that I agree with the gentleman from Michigan that this is an important piece of legislation. I have no disposition to make a speech on the bill, but we are all engaged here in a common effort to do the thing that is right. We may have gone about it in the wrong way. I hope the gentleman will not object.

Mr. DYER. Is the gentleman's request to have one hour on the side?

Mr. SUMNERS of Texas. Yes.

The SPEAKER pro tempore. The gentleman from Texas asks unanimous consent that the time for debate be extended to two hours, to be equally divided and controlled by the gentleman from Missouri [Mr. DYER] and himself Is there objection?

There was no objection.

Mr. CELLER. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. CELLER. Mr. Speaker, do I understand the arrangement to be that the request of the gentleman from Texas is modified by the request of the gentleman from Michigan?

The SPEAKER pro tempore. No.

Mr. SUMNERS of Texas. Mr. Speaker, in view of the observations made in reference to the amendment, I ask unanimous consent that I may have 10 minutes in which I may direct the attention of gentlemen of the House to the amendments that have been proposed, not to be taken out of the time, neither for the bill nor against the bill.

Mr. DYER. We would not know any more about the bill after we take two hours than we know now, and I object.

Mr. MICHENER. Mr. Speaker, I ask unanimous consent that it may be in order to offer such amendments to the bill as were submitted to the House on Saturday last and printed in the CONGRESSIONAL RECORD, a part of the memorandum suggested by the Solicitor General of the United States.

The SPEAKER pro tempore (Mr. WOODRUM). Is there objection to the request of the gentleman from Michigan?

Mr. LAGUARDIA. Reserving the right to object——

Mr. BLANTON. I make the point of order against the request, that it is out of order. The motion has been made to suspend the rules and pass the bill, and the Chair has recognized the gentleman from Texas [Mr. SUMNERS], and I have demanded the regular order.

The SPEAKER pro tempore. Does the gentleman from Texas object to the request?

Mr. BLANTON. I make the point of order that it is out of order; I have demanded the regular order.

Mr. CHINDBLOM. The unanimous-consent request is not out of order.

The SPEAKER pro tempore. The point of order is tantamount to an objection. Objection is heard. The gentleman from Texas is recognized for an hour.

Mr. BLANTON. I made the point of order that the request was not in order. I had demanded the regular order.

Mr. RAMSPECK. Mr. Speaker, I object to the request of the gentleman from Michigan.

Mr. MAPES. A point of order, Mr. Speaker.

The SPEAKER pro tempore. The gentleman will state it.

Mr. MAPES. I think it is rather important that the Chair should not decide that the unanimous-consent request is out of order. It seems to me that it is in order. The House may do by unanimous consent almost anything it wants to do, and I do not understand how the request to submit a unanimous consent can be ruled out on a point of order.

Mr. MICHENER. As I understand the situation, the gentleman from Michigan submitted a unanimous-consent request, and the gentleman from Texas made a point of order against that request, and the Speaker overruled the point of order.

Mr. BLANTON. The gentleman from Georgia objected to the request.

The SPEAKER pro tempore. The gentleman from Georgia has already objected to the request. The gentleman from Texas is recognized for one hour.

Mr. SUMNERS of Texas. Mr. Speaker, I ask to be notified when I have used five minutes.

Gentlemen of the House, if you are interested in these amendments, turn to your bills. The first is on page 9, at the end of line 15, add the following:

The judges of the courts of bankruptcy shall appoint sufficient referees to sit in convenient places to expedite the proceedings under this section, and where business and conditions permit there shall be at least one in each county, provided the hearings and examinations before the referee shall be held in the county of the debtor's residence.

Mr. STAFFORD. Will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. STAFFORD. Would it be agreeable for the gentleman to have the Clerk report each amendment?

Mr. SUMNERS of Texas. Mr. Speaker, I ask unanimous consent that the Clerk report the amendments, not to be taken out of my time.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read as follows:

Page 9, line 16, strike out subsection (p), beginning in line 16 and ending in line 19, and insert in lieu thereof the following: "The judges of the courts of bankruptcy shall appoint sufficient referees to sit in convenient places to expedite the proceedings under this section, and where the business and conditions permit there shall be at least one in each county: *Provided*, That hearings and examinations before the referee shall be held in the county of the debtor's residence."

In line 21, page 9, strike out the word "including" after the word "corporation" and insert "which could become a bankrupt under section 4 of the act."

Page 10, beginning with the word "any" in line 2, strike out the language "any corporation which could become a bankrupt under section 4 of this act may file such a petition or answer."

Page 22, beginning with line 22, strike out all of section 2 and, beginning in line 1 on page 23, strike out all of section 3.

Page 27, after the word "act" in line 9, insert "nothing contained in this act shall be construed as amending or in any way altering the provisions of the railway labor act as amended and supplemented."

Page 32, in line 21, after the word "shall," insert the word "have" and strike out the word "determine" and insert in lieu thereof the word "determined," so that it will read "shall have determined."

Page 33, after the word "transfer" in line 10, insert "If the United States is directly a creditor or stockholder, the Secretary of the Treasury is hereby authorized to accept or reject the plan for the United States."

Page 35, line 20, after the word "plan," insert "and are consistent with the provisions of the interstate commerce act as amended."

Page 40, line 1, strike out the parentheses and the letter "o" and insert in lieu thereof "Sec. 2," and at the end of line 7, after the word "date," insert "proceedings under sections 74 and 75 of this amendatory act may be taken in proceedings in bankruptcy which are pending when it takes effect."

Mr. CHINDBLOM. Mr. Speaker, will the gentleman yield before he starts with the amendments?

Mr. SUMNERS of Texas. Yes.

Mr. CHINDBLOM. Were any of the amendments recommended by the Solicitor General incorporated in the amendments just reported by the Clerk?

Mr. SUMNERS of Texas. I do not know.

Mr. McKEOWN. If I may be permitted to answer the question, all of the amendments in sections 74 and 75 were recommended by the Solicitor General.

Mr. CHINDBLOM. My question is whether the amendments recommended by the Solicitor General in the document printed in the RECORD last Saturday are included in the amendments that have been reported now.

Mr. McKEOWN. Not all of them.

Mr. MICHENER. One or two formal ones.

Mr. LAGUARDIA. None of them in the railroad reorganization. I want to make that clear.

Mr. CHINDBLOM. I am very glad that the gentleman made it clear.

Mr. SUMNERS of Texas. Mr. Speaker, this bill in its first provisions seeks to retain as far as it may the present economic organizations, to make it possible for the bankrupt or distressed creditor to avail himself of the machinery of the Federal courts and effect if he can a settlement with his creditors. The philosophy of the bill rests upon the assumption that it is better for all parties concerned that these various activities—farms, businesses, and so forth—shall be kept intact than to break them up and undertake out of the junk to find something that shall go to the creditors. With regard to the railroad features of the bill—and I am touching only a few high spots—it is recognized, I believe, by everybody who understands the situation that many of the railroad companies must soon reorganize. They must reorganize through equity receiverships or reorganize under some such proceeding as is provided in this bill. The general plan with regard to individuals, with regard to corporations which are not railroads, is identical except as it is required to be modified by reason of the difference in the character of the things being dealt with.

With regard to the plan for the reorganization of the railroads, and I am not speaking technically accurately, an effort has been made to utilize the organization and expert knowledge of the Interstate Commerce Commission, to assist the court, sitting as a court of bankruptcy, and in a sense relate the Interstate Commerce Commission to the court of bankruptcy much as a master in chancery is related to the court whose master he is.

In the framing of this bill in so far as it relates to interstate railroad companies, of course, the Congress may act under two powers, the power conferred by the interstate commerce clause of the Constitution and the power conferred by the bankruptcy provision of the Constitution. Then, of course, there is that other power, incidental power, namely, the equity power of the courts. With regard to that feature of the bill, I doubt that it can be very much objected to. With regard to the provisions of the bill which are applicable to farmers and persons in that class, and I think still within the constitutional powers, an effort is made to preserve a breathing spell, to go as far as the Congress can constitutionally go to ease up on the ouster suits and foreclosures which are taking place in this country. This is incidental of course to the general powers and plan embodied in the bill. That is a very important provision of the bill, a very important feature of the bill. Just how much good will come from that will depend much upon some additional contemplated legislation.

Mr. SIROVICH. Will the gentleman yield for a question?

Mr. SUMNERS of Texas. I yield for a very brief question.

Mr. SIROVICH. On page 11, section 3, I think that section provides the means, under the guise of the bankruptcy act, to accomplish mergers and consolidations of corporations in violation of the Sherman and Clayton Acts. I would like to have the gentleman interpret that section.

Mr. SUMNERS of Texas. I do not have time to go into detail, but I do not believe so. Mergers are not per se illegal. Certain mergers may be effected which do not vio-

late the antitrust act. No merger is authorized by this bill which violates the law.

Mr. CULLEN. Will the gentleman yield for a question?

Mr. SUMNERS of Texas. I yield.

Mr. CULLEN. Is there anything in this bill that will cause tax liens of municipalities and States to be wiped out?

Mr. SUMNERS of Texas. That will wipe them out?

Mr. CULLEN. Yes.

Mr. SUMNERS of Texas. There is not.

Mr. CULLEN. That is a point that has been raised by the city of New York, and I am anxious to have that point cleared up.

Mr. SUMNERS of Texas. May I say to the gentleman there is no disturbance by this bill of the relative relationship of liens, and certainly no disturbance of tax liens in this bill.

Mr. GARBER. Will the gentleman yield?

Mr. SUMNERS of Texas. I yield.

Mr. GARBER. What will be the preferential status given loans made by the Government to the railroads, over investments in stocks and bonds?

Mr. SUMNERS of Texas. They are not given by this bill any preferred status which they do not now have and to whatever degree now preferred the status is not lessened. They are not disturbed.

Mr. LAGUARDIA. In answer to that, I would suggest that they are treated as creditors. All loans made under section 2 of the transportation act.

Mr. GARBER. On the same status as investment creditors?

Mr. SUMNERS of Texas. Mr. Speaker, I am sorry I can not yield further.

Mr. EATON of Colorado. Will the gentleman yield?

Mr. SUMNERS of Texas. I yield.

Mr. EATON of Colorado. My question concerns the last amendment which would attempt to make this bankruptcy statute immediately applicable to pending cases. Is that correct?

Mr. SUMNERS of Texas. Yes; with some qualifications, I believe.

Mr. EATON of Colorado. Does the gentleman consider it constitutional and proper legislation to apply it to bankruptcy cases now pending?

Mr. SUMNERS of Texas. I can not yield further. I am sorry.

Mr. HORR. May I be permitted to ask the gentleman a question?

Mr. SUMNERS of Texas. I yield.

Mr. HORR. May I inquire whether or not, where the word "reorganization" is used, the gentleman is of the opinion that this would encourage consolidations of railroads?

Mr. SUMNERS of Texas. They could not be consolidated in violation of the interstate commerce act.

Mr. HORR. They would first have to go through that?

Mr. SUMNERS of Texas. They would first have to go through that.

Mr. LANKFORD of Georgia. Will the gentleman yield?

Mr. SUMNERS of Texas. I yield.

Mr. LANKFORD of Georgia. In a case where a farmer owes over half of his debts to a loan concern, can he file a petition under this bill without getting the consent of that creditor who holds over one-half of his claims?

Mr. SUMNERS of Texas. I think so.

Mr. HASTINGS. Will the gentleman yield?

Mr. SUMNERS of Texas. I yield.

Mr. HASTINGS. Is this a unanimous report from the Committee on the Judiciary?

The SPEAKER pro tempore. The time of the gentleman from Texas has expired.

Mr. DYER. Mr. Speaker, I desire to use five minutes.

Mr. Speaker, the Congress obtains jurisdiction of this matter because of the provision in the Constitution that authorizes the Congress to establish uniform bankruptcy laws. This is supposed to be an amendment to the bankruptcy act in three sections. One of them has to do with individuals. Another has to do with corporations that are now subject to the bankruptcy act. The other section, section 76, is a new effort to put in the railroads which are not now subject to the bankruptcy laws.

The first two, Mr. Speaker, are, in effect, to establish a moratorium for debtors. It is not a far stretch when I say it is akin to what is already being done in some sections of the country by those who owe debts, and are preventing foreclosures. This is to do the same thing, in effect, legally.

I do not know, Mr. Speaker, about the amendments that have been offered, except as I have listened to them as they have been read by the Clerk. The chairman of the Committee on the Judiciary has not given the members of the committee of which he is chairman an opportunity to find out about them before he presented them. That is true largely of the whole bill. Of that committee of some 22 members, I dare say, Mr. Speaker, there are not 5 members who know what this legislation will or will not do. It was considered by two or three members. The gentleman from Oklahoma [Mr. MCKEOWN] has worked upon the first two provisions. The gentleman from New York [Mr. LAGUARDIA] has worked upon the railroads. They have conferred with numerous people, most of them outside the committee room. We have held no hearings; and you are asked to-day to vote to suspend the rules and pass one of the most complicated and important pieces of legislation that have been before this House in more than 20 years of my service here.

It was stated this morning by the gentleman from Texas [Mr. PATMAN] that you are asked to-day to vote up or down an important piece of legislation under suspension of the rules, whereas we come here and spend two or three days in general debate, talking about anything and everything, upon an appropriation bill. Some Members say, "Let us pass it and let us send it to the Senate. They will straighten it out." That is a fine way for the House of Representatives to discharge its responsible duty.

Mr. Speaker, let us look at the last section, section 76, the amendment pertaining to railroads.

This legislation will take away from the United States courts what authority they have heretofore had in the reorganization of railroads. It transfers it to the Interstate Commerce Commission, not composed necessarily of lawyers, but of men who come and go. It takes away from the United States courts the authority they have heretofore had in the reorganization of our railroads. It gives to the Interstate Commerce Commission authority in perfecting the plans, not only from the public standpoint but from the standpoint that they are to determine, in effect, upon the plan that has to do with millions of dollars' worth of securities. The courts are not permitted to pass upon the question of the rights of the people in these great concerns. It is only submitted to the courts when the commission has worked out this plan.

Mr. BURTNESS. Mr. Speaker, will the gentleman yield?

Mr. DYER. I yield.

Mr. BURTNESS. What authority have the Federal courts heretofore exercised with reference to the reorganization of railroads? The gentleman suggests that the courts are being deprived of the powers they have heretofore had. I am just wondering what sort of power the courts have had heretofore over the reorganization of the railroads other than the pure liquidation of them in bankruptcy and receivership?

Mr. DYER. Of course, the gentleman knows railroads can go into court. Creditors can go into court. They work out a reorganization. The values of the securities are considered. Now the authority is to be transferred. If the House is in favor of it, then that will be the will of the House, but I think it is a very serious problem, and I, for one, do not approve of taking away from the courts the question of the settlement of these important rights affecting the railroads.

Mr. RAYBURN. Mr. Speaker, will the gentleman yield?

Mr. DYER. I yield to the gentleman from Texas.

Mr. RAYBURN. The gentleman, of course, knows that since 1920 no railroad can issue new securities, either stocks or bonds, in any reorganization without approval of the Interstate Commerce Commission. This does not change that law, and should not.

Mr. DYER. It does not change the law with reference to the issuance of new securities. I agree with the distinguished gentleman from Texas.

Mr. RAYBURN. And, if the gentleman will yield one moment further, with reference to reorganization: They can not do so under this act either without the approval of the Interstate Commerce Commission.

Does not the gentleman think that a body expert in these matters, a body that has made long and painstaking study of them, would have a better idea of a proper reorganization set-up, especially with reference to finances, than the courts would have?

Mr. DYER. Mr. Speaker, the judges of the courts are appointed for life or during good behavior. The members of the Interstate Commerce Commission are not so appointed. A President could appoint all members of the Interstate Commerce Commission during his term of office and have a partisan control of the railroads. We certainly want to prevent such a thing happening.

Mr. MAPES. Mr. Speaker, will the gentleman yield?

Mr. DYER. I yield.

Mr. MAPES. It has been difficult for me to figure out just what this bill does, but is it not true that the rights which minority security holders now have under existing law to go into court are taken away from them by this bill?

Mr. DYER. Mr. Speaker, the bill is too important, as has been evidenced by some of the questions that have been asked affecting all the railroads of our country and transferring to the Interstate Commerce Commission of these important matters, to be acted on thus hurriedly. Under this bill they not only have the question of the consideration under which these securities are to be issued, but the plan for reorganization must be submitted to them; it must be equitable, but the plan must be submitted by the Interstate Commerce Commission. Not only must they submit the plan affecting the private rights of those who have money invested in securities, but the question of policy.

Mr. Speaker, my judgment is that we should leave to the Interstate Commerce Commission, as we have largely in the past, the question of policy, but these matters affecting property and rights heretofore under the jurisdiction of the courts should remain there.

In general the plan is to put under the jurisdiction of the Interstate Commerce Commission the reorganization of railroads, and substantially everything in connection with such reorganization has to have its approval.

If a receiver has been appointed by a Federal or State court, whether before or after the act, the railroad may file a petition or answer under this section and thereupon the trustee appointed under the act shall be entitled to possession of the property, and this proceeding will supercede the equity proceeding. Apparently this applies to an involuntary as well as a voluntary proceeding.

While it is a proceeding in court, practically the court is subject to the action of the Interstate Commerce Commission in all important matters.

The railroad, having first obtained approval of the Interstate Commerce Commission, may file its petition, which must be filed in a court having jurisdiction at its principal or operating office.

Creditors of any railroad, not less than 25 per cent in amount of any class, and not less than 10 per cent in amount of all creditors whose claims would be affected by the plan, may file a petition, but must first obtain the approval of the Interstate Commerce Commission. The court classifies the creditors, except there is a provision that claims having priority over mortgages on receivership, which means claims for labor and material, shall be treated as a separate class, and, therefore, 25 per cent of such creditors might be held to be sufficient with 10 per cent of other creditors to file an involuntary petition. The fact that the approval of the Interstate Commerce Commission is necessary would prevent filing of an involuntary proceeding in many cases. Therefore, if a receiver had been appointed in equity, it would seem very unlikely that the Interstate Commerce Commission would authorize an involuntary petition and permit interference with the normal proceeding in equity for reorganization.

Upon approving the petition the court may temporarily appoint a trustee or trustees recommended by the Interstate Commerce Commission, and upon such recommendation may make such appointment permanent or terminate it and appoint other trustees. While it is not clear that the court would not have the right to appoint other trustees of its own selection if the Interstate Commerce Commission permitted the termination of the temporary appointment, yet it is not to be expected that the Interstate Commerce Commission would permit such action without approving the appointment of such substituted trustees. Therefore the trustees would be persons selected by the Interstate Commerce Commission. These trustees, with the approval of the Interstate Commerce Commission, may issue trustees' certificates similar to those authorized by a court of equity, and generally would have the power of receivers.

Before a plan of reorganization can be accepted by creditors the Interstate Commerce Commission shall hold public hearings, following which the Interstate Commerce Commission shall recommend a plan, which will be equitable and compatible with the public interest. The latter provision gives the Interstate Commerce Commission great latitude in determining what is a proper plan. The plan may be satisfactory to the several classes of creditors, but the commission may find that it is not in the public interest. The commission is not required to approve any plan presented by creditors, but may approve a plan different from any which has been proposed, all of which makes it clear that the reorganization will be a reorganization by the commission, which will not be limited to a plan agreed upon, but may be modified as the commission thinks necessary in the public interest.

The commission shall not report the plan to the court until it has been accepted in writing by creditors holding two-thirds in amount of the claims of each class which would be affected by the plan and unless the judge shall find that the railroad is insolvent by stockholders holding two-thirds of the stock of each class and unless provision is made for the protection of certain claims.

The commission must find that the plan is equitable and does not discriminate and that the offer of the plan is in good faith, with provision for protection of the interest of stockholders or creditors not assenting and who are not bound by the plan.

The plan is then submitted to the court, and, if the judge approves, it becomes binding on the railroad and its stockholders and all creditors whose claims are payable in cash under the plan and all creditors entitled to priority, provided two-thirds of their class have assented, and unsecured creditors, provided two-thirds have assented. It does not appear that the judge has any right to modify the plan, and can only approve or disapprove.

If the receiver has been appointed by a Federal or State court, whether before or after the act takes effect, the corporation may file a voluntary proceeding or answer (which indicates that an involuntary proceeding may be filed and if the petition is approved the trustees appointed shall immediately take possession of the property. Until a plan has been approved or the petition dismissed, all other proceedings are stayed.

The method of reorganization by appointment of receivers and the working out of a plan by committees of bondholders with the aid of bankers, and so forth, has been thoroughly tested out, takes a long time, and is the result of compromise, and, if there are creditors who will not assent, the court has the power to order a foreclosure of mortgages, and nonassenting creditors must either accept what is offered them or take their pro rata share on sale. Practically, if the court approves the plan and there are non-

assenting creditors, the court will fix an upset price, which will give them what it thinks is fair to them.

The obvious objection to this bill is that it is a reorganization by the Interstate Commerce Commission, which would control in every respect, and the interposition of the court is simply to give legality to the Interstate Commerce Commission action. Substantially, it amounts to an act authorizing the Interstate Commerce Commission to reorganize railroads not only in the interest of the owners but in public interest, which may mean anything.

It does not seem that it would be more speedy than the present procedure. The usual objection by different classes of creditors and the final agreement by them will not be avoided, except that their rights will be submitted to the Interstate Commerce Commission, which will hold hearings and ultimately decide as to what their rights are and proceedings which may consume more time than the present method.

One of the ideas seems to be that it might be possible to deal with the single class of creditors and require nonassenting creditors of that class to come in. This can not be done under this bill, as all through it the provision is for a reorganization and not the adjustment of the rights of the single class, and therefore all creditors must be taken in except those whose securities are not to be disturbed, as in a case of reorganization plans, which do not deal with certain classes of underlying bonds.

The bill does state that the petition may propose to modify or alter the rights of creditors generally or of any class of them; but it is evident that if applied to a single class it would affect the rights of other classes and stockholders, except in the case of a very simple capital structure.

It is difficult to see how Congress can "modify or alter the rights of creditors," which is the expression used in many places in the bill.

In the first Legal Tender case, which held the act unconstitutional, it was said that a law which necessarily and in direct operation impairs the obligation of contracts is unconstitutional. This decision was overruled a number of times, first on the ground that it was exercise of war power, and later on the ground of the exercise of the right to coin money, and so forth, and in another case arising under the bankruptcy act, in all of which specific grants of power were given to Congress. While the provision of the Constitution forbidding States to impair the obligation of contracts is not directly binding on Congress, the "due process" provision has been construed to mean almost the same thing. The most extreme case was Wilson *v.* New, Two hundred and forty-third United States Reports, page 332, upholding the Adamson Act; but this decision was based on the fact that it did not violate any contracts, and further that it was an emergency act.

In the case of Wolff Co. *v.* Industrial Court, Two hundred and sixty-second United States Reports, page 522, the court said of this decision that—

> It is not too much to say that the ruling in Wilson *v.* New went to the border line, although it concerned an interstate common carrier in the presence of a nation-wide emergency and the possibility of great disaster.

It is hardly possible that the Supreme Court would sustain an act altering or modifying contract rights. Further, as it appears in the case of Wilson against New, and many other cases, the power to legislate as to interstate commerce extends only to those matters which directly affect it, and does not include things which can not have any direct bearing. An argument can be made that the reduction of the fixed charges of carriers is a thing necessary for the continuance of their operation, and, therefore, within the power of Congress; but it is hardly possible that the court would sustain such an argument. If carriers can not bear their present fixed charges, the law provides a method by which they can be reduced, namely, foreclosure and reorganization, which is the method adopted now to accomplish this purpose; but to say that the Interstate Commerce Commission can provide a plan and take away the rights of nonassenting creditors, except by "due process" of enforcing legal rights, can hardly be maintained.

It must also be remembered that "due process" applies not merely to forms of procedure but applies to substantive rights and it is held that a law, although conforming to "due process" but taking away substantive rights, is unconstitutional.

The right attempted to be given by this bill to "alter or modify" contractual rights would go far beyond any power that has ever been yet upheld.

Whether the plan is equitable and does not unfairly discriminate between security holders depends upon the legal rights of the various classes of security holders. Examination of these rights involves the passing upon complicated, legal questions of an essentially judicial character.

Furthermore, the question of private right, to be distinguished from questions of public interest—such as the financial soundness or desirability of the plan, or, more specifically, whether the plan is equitable—depends on whether the securities provided for in the plan, which is financially sound and compatible with the public interest, are distributed among the several classes of security holders in accordance with their respective legal positions.

Should questions of private right be confused with questions of public interest, should not the former be passed upon by the court rather than by the administrative commission charged with passing upon the latter character of questions?

In providing that the plan which was to be submitted to the security holders for acceptance or rejection shall be the plan proposed by the commission, with no regard to plans which may be proposed by security holders, this bill goes far beyond regulation.

This grant of power to the commission to initiate a plan to the exclusion of the desire of the interested creditors vests in the commission the management of security holders' property. Assuming that the commission is given power to deal with questions of private right, is it wise to extend this power beyond the regulation of what the security holders propose to do with their own property?

The provision that creditors and stockholders can not be asked to accept any plan until after a public hearing before the commission means that the present practice of getting securities deposited under a plan, wherever possible, must be abandoned and committees must seek deposit of securities which they propose to represent without having a plan in advance. Practice has shown this to be most difficult. Accordingly, the bill imposes a serious obstacle in securing a responsible representation of securities.

The provision that creditors and stockholders can not be asked to accept any plan before hearing by the commission would seem inconsistent with the provision that at the hearing a plan may be presented by the creditors, being not less than 25 per cent of any class. Almost never would it happen that 25 per cent of a class, other than in the case of small, divisional mortgages, would agree on a plan. Accordingly, it is difficult to see how any plan could be presented at the hearing other than such a plan as the commission might itself propose.

Secondly, it is not intended that a group of fiduciary holders of a bond issue can not get together and work out a plan to which they all agree. A prohibition upon security holders discussing among themselves their own property rights, without first having a public hearing before the Interstate Commerce Commission, is, at least, of doubtful constitutionality.

The grant of power to the commission to initiate a plan submitted to the security holders and then to recall it and propose other plans would seem to make for delay.

Under the provisions of the bill, declaring a policy against compensation to officers of the corporation who act as managers or in any capacity in connection with the reorganization, when such corporation has an interest in the matter, means that the institutions, represented on committees by securities of which such institutions hold large amounts, must donate all the time of their officers for the benefit of other security holders of the same class, while self-appointed committees, wholly without financial interest in

the situation, which are gotten up with such frequency at the present time, under the guise of independent committees, remain free to receive compensation.

The court's action upon the plan, as well as other provisions, raises serious questions as to the constitutionality of the bill.

Mr. SUMNERS of Texas. Mr. Speaker, I yield five minutes to the gentleman from Georgia [Mr. TARVER].

Mr. TARVER. Mr. Speaker, in the brief time allotted to me I desire to draw the attention of the House to subsection (e), subdivision 2, on page 5 of the bill.

This, in my judgment, is the portion of the bill which, together with other paragraphs related to it, carries with it some prospect of relief to a class of people in this country for whose welfare the membership of this House has long been expressing a great deal of concern, and that class embraces the owners of mortgaged farms and the owners of homes who are losing their property by foreclosures. Members of this House have shed many crocodile tears over the fate of many hundreds of thousands of our farmers who are now being deprived of their property under mortgage-foreclosure proceedings who, could they be given a short time in the nature of a moratorium or otherwise, might be enabled to pay off the mortgages and save their homes.

When you vote against this bill you will vote against the sole proposal which will be presented to the Congress at this session by which any character of relief might be afforded to this class of debtors. This subparagraph provides in connection with related provisions that such a debtor may come into a Federal court and file his petition for an extension, together with his plan by which he may eventually, in his opinion, get out of his financial difficulties, and may without the approval of a majority in number and amount of his creditors, secure the approval of the court of an extension of the due dates of his indebtedness and may thereby be enabled for a period of time which in the judgment of the court is reasonable, whether 1 year, 2 years, or 3 years, to avoid the sacrifice of his home by foreclosure. He could not do it under the first portion of that subsection because that part requires the approval of a majority in number and amount of his creditors. We all know that in the great majority of instances, particularly in the cases of farmers whose farms are mortgaged, the majority of their indebtedness is represented by one mortgage. So, if we required that they secure a majority in number and amount of their creditors, the holder of that one instrument would represent a majority in amount and could prevent the successful presentation and consideration of a petition for an extension of time; but with this provision in the bill there is no reason why under the jurisdiction of a sympathetic court willing to consider the troubles of this class of our people and to afford them relief if it can reasonably, they might not be granted an extension of perhaps 1, 2, or 3 years. This might put it within the power of the farmer of the country to secure means to prevent the sacrifice of his home. This provision will also furnish him a club to fend off unreasonable creditors. He can say to them, "Unless you give me reasonable time, I can probably obtain it through the court. Do not foreclose, I will pay you what such a proceeding would cost, and we will both be better off."

As far as I am concerned, I believe the bill should have gone farther, and I intended to offer on the floor an amendment which would have, in substance, provided for a 2-year moratorium without the necessity of going through these proceedings in the case of farm and home owners whose farms and homes were about to be taken away from them by foreclosure proceedings, but under the methods which have been followed in the presentation of this bill to the House it will not be possible to offer this amendment. In my judgment it would be as nearly constitutional, or at least as free from doubt as to its constitutionality, as the provision in subdivision 2 of subparagraph (e) which I have just been discussing.

Under the decision in Isaacs *v.* Hobbs (282 U. S. 734) I am hopeful that the constitutionality of this provision will be sustained. Certainly the Supreme Court will hardly be able to decide it for a couple of years, and in the meantime the distressed debtors will have some relief. But surely, if we can vest courts with authority to extend time, it would seem that we can ourselves provide an extension of time in certain classes of debts by legislative act. It is unreasonable to say that we can give more power than we ourselves, as the Congress, have. The creature can not be greater than the creator. The effect of this amendment, which I do not have the opportunity to offer under suspension of the rules, but which I hope may in substance be added to the bill in the Senate, would be to enable the farm or home mortgagor, when proceedings are filed to foreclose the mortgage, to obtain a stay of proceedings for two years upon application to a Federal court pending his filing an application for extension. The amendment reads:

After section 2, add a new section to be numbered section 3, numbering the succeeding section accordingly:

"SEC. 3. A national emergency in respect to agriculture and home ownership existing, the filing or pendency of a petition or proceeding for the foreclosure of a mortgage or other lien on a farm or home personally occupied by the mortgagor or lienor, or by the family of the mortgagor or lienor, shall, if such filing or pendency occur or exist within two years subsequent to the approval of this act, immediately vest in the court of bankruptcy having territorial jurisdiction the exclusive jurisdiction provided in subdivision (m) of section 74 of the act entitled 'An act to establish a uniform system of bankruptcy throughout the United States,' approved July 1, 1898, as herein enacted by amendment to said act, provided such mortgagor or lienor is insolvent or unable to meet his debts as they mature. The exercise of jurisdiction shall be stayed pending the filing of a petition or answer by the debtor, as provided in subdivision (a) of said section 74, except that it shall be the duty of the court, upon proper preliminary petition by the debtor (which petition shall include an allegation that he thereafter intends to file a petition or answer under such subdivision (a) of said section 74), and after reasonable notice to the mortgagee or lienee and hearing, by proper order to restrain the further prosecution of such mortgage or lien foreclosure proceeding until such petition or answer, as provided for in subdivision (a) of section 74, shall be filed and adjudicated, which said filing must occur within two years after the approval of this act, or such restraining order shall become void and of no effect. Said restraining order shall make proper provision for the protection of the mortgaged property, but the mortgagor shall not be removed from custody thereof. The term 'home' as herein used shall refer to a dwelling occupied by not more than three families and the lot upon which it is located."

Mr. DYER. Mr. Speaker, I yield five minutes to the gentleman from Virginia [Mr. MONTAGUE].

Mr. MONTAGUE. Mr. Speaker, it is not my purpose to discuss this bill. It is impossible to do so under the procedure which we have adopted. It is useless to discuss without the power of amendment, and the power of amendment in this instance is negligible.

A bill of this importance ought not to be sacrificed to a procedure of this character. This bill involves a subject of immeasurable magnitude and, perhaps, consequences, and yet it is put in this particular measure with no special demand for it, and with no opportunity to debate or amend. It had no hearing in the Judiciary Committee. I beg the House to remember it has not been considered in that committee so far as this bill is concerned, but it is thrust before us to-day under suspension of the rules, to be disposed of in the very arbitrary manner which that procedure provides.

I can not agree with the gentleman from Georgia [Mr. TARVER]. I do not think this bill affords the relief which he indicates. This is the only comment I wish to make upon that phase of the matter, and in view of the inability to have a discussion, although a member of the committee, I shall not now trespass upon the House any further.

I yield back the residue of my time, Mr. Speaker.

Mr. DYER. Mr. Speaker, I yield three minutes to the gentleman from Colorado [Mr. EATON].

Mr. EATON of Colorado. Mr. Speaker, I asked for this time merely to draw your attention to the unfair manner, in my opinion, in which this bill is presented to you.

On page 22 I read section 2, which says that the provisions of this amendatory act shall not apply to proceedings in bankruptcy cases pending when it takes effect.

Mr. LAGUARDIA. That has been stricken out.

Mr. EATON of Colorado. I know it has been stricken out, but who said so and how did we find it out? You read the printed bill, and you find it is not going into effect in so far as pending cases are concerned, and then, after the Clerk reads for 15 minutes, amendments which it has taken the reporter 40 minutes to copy, you hear the words:

Proceedings may be taken under sections 74 and 75 pending when this act goes into effect.

When I mentioned this, those who are in the know said, "Stricken out, stricken out." Sure, it was stricken out. The entire bill is changed. It is just like leaving out the word "not."

For the measure to be presented here for debate at this time, without any opportunity to consider the amendments that have been put in here that took 15 minutes to read, I say is unfair to every man in the House. The least you should do is to have the amendments printed in the RECORD and give us at least until to-morrow to read what was read so plainly by the Clerk, but which most of us can not remember at this minute. [Applause.]

Under the general permission to extend my remarks, I want to draw your attention to another amendment in the first sentence of section 75. As it appears in the printed bill, the words are:

Any corporation, including drainage, irrigation, levee, sewer, and paving improving district * * * may file a petition—

And so forth. As I understood the amendment, it was substantially to insert after the word "corporation" the words "which could become a bankrupt under section 4 of the act." Section 4 of the bankruptcy act provides that—

Any person, except a municipal, railroad, insurance, or banking corporation, shall be entitled to the benefits of this title as a voluntary bankrupt.

In the printed bill is a new section 75 providing for the filing of a petition by railroad corporations which are insolvent or unable to meet their debts as they mature. No other section of the bill refers to municipal, insurance, or banking corporations. I submit that it therefore follows that no drainage, irrigation, levee, sewer, or paving improving district, which may be classified as a municipal corporation, is entitled to any benefits under section 75, and by this amendment has been deleted from the bill.

[Here the gavel fell.]

Mr. SUMNERS of Texas. Mr. Speaker, I yield five minutes to the gentleman from Rhode Island [Mr. CONDON].

Mr. CONDON. Mr. Speaker, it is easy to criticize this bill and it is not easy to answer those criticisms in the few minutes allotted to me; in fact, it is impossible.

This is a sincere attempt upon the part of the majority of the Committee on the Judiciary to do something that will relieve debtors from the present condition in which they find themselves. It is not, as some of those who oppose the bill say, tearing the bankruptcy act to pieces and sprawling the act all over with amendments. It is nothing more, Mr. Speaker, than an extension of the present composition feature of our bankruptcy law, and when that composition provision was, in 1874, put into the act of 1867, the same criticisms and the same fears were expressed upon that occasion that the bill was unconstitutional; that it was violating the rights of creditors, and that it was contrary to what was permitted under the grant of power to Congress under the Constitution to pass uniform laws on the subject of bankruptcies; but within the very year that it was enacted the courts passed upon the provision and declared it constitutional.

Examine this bill, you Members of the House of Representatives who are lawyers, you Members of the House who have had some experience in bankruptcy practice, and you will agree that in so far as the individual section is concerned, and in so far as the private corporation section is concerned, there is nothing revolutionary, there is nothing radical in the provisions of the bill.

It is true that in section 76 the railroad corporations are included in the bill, whereas under the present law they are not so included; but it is carefully provided that if the plan with reference to the railroads does not succeed there will be no adjudication of bankruptcy of the railroad.

Mr. Speaker, this bill can be of real benefit to those farm-mortgage debtors who are now suffering the loss of their farms because of defaulted mortgages, and I say to the men and women of this House that should the Robinson-Steagall agricultural refinancing bill pass at this session of the Congress, you will need this provision of the bankruptcy law, not only to give effect to it and protect the agricultural debtor, but you will need it to supplement the provisions of existing law in order to protect the funds of the United States Treasury that may be advanced to these agricultural debtors to continue them in business.

Mr. Speaker, I do not believe the criticism that has been directed at the substance of the bill is justified. I do agree with my distinguished colleague on the committee, Governor MONTAGUE, of Virginia, that this is a very bad way to bring this bill before the House and seek to pass it under suspension of the rules. An amendment of the bankruptcy law that has to cover so many sections, may well be considered with a great deal of concern, particularly by the lawyers of the House, who are deprived of an opportunity to offer what, in their judgment may be legitimate amendments; but aside from this criticism, it seems to me, Mr. Speaker, this bill does something that ought to be done and that ought to be done at this time; and I am satisfied if the bill is enacted into law, the fears that have been expressed outside this Chamber and that will be expressed on the floor of this House to-day will be dispelled by the events that come after it, and it will be pointed to as a real forward-looking amendment of the bankruptcy act, in exactly the same way that the composition provision turned out to be in 1874.

I confess myself to a feeling that the bill might have been drawn in such a manner as to give it more system in the arrangement of its parts and thus produce a readier understanding of its numerous subdivisions and the purpose and effect of them. In this respect it may be that it does not measure up to the standard of legislative draftsmanship of the present bankruptcy act. When it is considered, however, that the bill is a breaking of new ground in this field of the law and that the authors of the original bills and the committee were laboring under pressure of time to report the measure without delay, in order to cope somewhat with the present emergency, captious criticism of its form is quite out of place, especially if its substance affords a measure of relief that will ease the crushing burden of debts now grinding millions of our people into hopeless default and breeding the spirit of revolution.

I believe, Mr. Speaker, that this bill will afford such relief. It will not save from ultimate bankruptcy the unfortunate cases where the debtor is hopelessly involved and can not present to his creditors any plan of adjustment of his debts or any reasonable proposal for a further extension of time to enable him to refinance his obligations and effect payment.

For such cases the bankruptcy act as it exists to-day is the proper remedy and it will be better for the debtor and for the state of business credit in the country that he take advantage of its present provisions and free himself from further legal obligations to his creditors. For the individual or corporation, however, that is possessed of assets which in ordinary times would be sufficient assurance to its creditors of its financial ability to meet its obligations and who needs more than anything else time and perhaps a reasonable concession by way of readjustment in the amount of his debts by his creditors, this bill, if enacted into law, will be a life-line of succor.

It will afford an opportunity under the supervision of the court for all creditors to gather around the table and con-

sult with the debtor without fear of some recalcitrant and perhaps minor creditor or creditors taking unfair advantage while attempts at readjustment are in progress to realize satisfaction of his or their claims out of the prostrate debtor's effects. The court will stay every proceeding of whatever kind that might be the means of subjecting any portion of the debtor's estate to the satisfaction of any debt until a reasonable time is afforded for all classes of creditors to meet with the debtor and work out a solution of his problem, if such a solution is possible.

In the case of private corporations that are not actually insolvent, but are unable to pay their debts as they mature, this measure ought to be of inestimable benefit, not only to the debtor corporation itself but to the creditors also, because it will effectually prevent minority groups of creditors from embarrassing honest and sincere attempts at amicable settlement of the debtor's difficulties and the holding up by them of such proceedings for their own financial benefit and reward.

As for railroad corporations, it will not only prove of some benefit to the corporation and its creditors, but as far as the public interest is concerned it will introduce into the reorganization of these corporations and the readjustment of their capital structures the supervisory approval of the Interstate Commerce Commission in a manner that ought to prove far more effective than it is possible for it to be through court receiverships under existing law.

It has been said that the bill can not and will not help the farmers whose farms are subject to foreclosure sales on defaulted farm mortgages, and this is certainly true if the farmer can not offer any satisfactory plan of readjustment and obtain assistance in refinancing himself. At the present time this is probably the unfortunate condition of the agricultural debtor in a great section of our country, and if there were not to be any hope held out to them of some assistance in refinancing their mortgages this bill would be without interest or importance to them whatsoever. But it is seriously planned to help these farmers by affording them the assistance of the resources of the Federal Government in refinancing their mortgages.

The recently introduced Robinson-Steagall bills in the Senate and in the House have, as I understand it, this very object and purpose in view. Without asserting at this time any intention to support such a measure, it is my belief, forcasting the future by the experience of the recent past, that the Congress will enact such a bill as the Robinson-Steagall measure or something similar to it into law. The bill before us, under such circumstances, will supplement, and I might say implement, the provisions of such a refinancing act by providing a safe and orderly course of procedure under the control of the United States courts exclusively, for arranging the readjustment of the debtor's difficulties by and with funds advanced out of the Treasury of the United States under certain specified terms and conditions, so that, assuming the agricultural refinancing bill becomes a law, this bill will be of actual benefit to all classes of debtors under sections 74, 75, and 76 thereof, and will in addition be a protection to the United States in some degree for such of the public funds as may be advanced by it through the Reconstruction Finance Corporation to assist railroads under these proceedings and through the proposed agricultural refinance corporation to assist agricultural debtors, and it may conceivably be the means of making possible actual relief to home mortgage debtors through the home-loan bank if Congress is persuaded to endow that institution with a like plenitude of power proposed for the agricultural refinance corporation.

It has been objected that this bill is unconstitutional in that it exceeds the grant of power to Congress to pass uniform laws on the subject of bankruptcy. The argument to support this contention, briefly stated, is that inasmuch as this bill does not contemplate the ultimate bankruptcy of the petitioner and the liquidation of his estate and the distribution of its proceeds to his creditors, it is not a bankruptcy proceeding.

It is further argued that the end proposed by a bankruptcy law is the discharge of the debtor as a bankrupt and the liquidation of his estate and not its preservation. This argument would come with more force and cogency were it not for the fact that the existing bankruptcy act contains in section 12 the provision for compositions, which does not contemplate the discharging of the debtor as a bankrupt, but on the contrary affords a method whereby, if coming in or being petitioned into the bankruptcy court, he may avoid adjudication as a bankrupt and preserve his estate by a settlement with his creditors upon the confirmation of which by the court the proceedings in bankruptcy are dismissed.

The constitutionality of this provision was early disposed of in the case of In re Reiman (7 Ben. 455), and this decision was later cited with approval by the Supreme Court in the case of Hanover National Bank *v.* Moyses (186 U. S. 181), wherein the entire bankruptcy act was held constitutional by a unanimous opinion delivered by Mr. Chief Justice Fuller. In the Reiman case Mr. Justice Blatchford, afterwards a member of the Supreme Court, wrote the opinion sustaining the constitutionality of the amendment of 1874 providing for compositions, and quoted this expression from Story's Commentaries, discussing the scope of the bankrupt law as follows:

> Perhaps as satisfactory a description of a bankrupt law as can be framed is that it is a law for the benefit and relief of creditors and their debtors in cases in which the latter are unable or unwilling to pay their debts. And a law on the subject of bankruptcies, in the sense of the Constitution, is a law making provisions for cases of persons failing to pay their debts.

And in answering the question propounded in his opinion, "What is the subject of bankruptcies?" Mr. Justice Blatchford himself made the following sweeping assertion by way of response:

> It is not properly anything less than the subject of the relations between an insolvent or nonpaying or fraudulent debtor and his creditors, extending to his and their relief.

In other words, it can not be doubted that the power of Congress over bankruptcies contemplates all the relations between the debtor and his creditor under the broadest signification and interpretation of the term "bankruptcies."

The bill before us to-day seeks only to do that and nothing more. It is merely a further amplification of the power exercised by Congress in 1874 when it passed the amendment to the act of 1867 providing for compositions. And in this connection it is interesting and instructive to observe that this innovation in the bankruptcy law to which such prompt and vigorous objection was made in the Reiman case in that very year—1874—was enacted during a period of our economic and financial history not unlike that in which we find ourselves to-day. The disastrous panic of 1873 was then running its ruinous course, leaving in its wake closed banks, prostrate industries, with millions of unemployed wage earners and bankrupt business men and farmers.

Then, as now, there was increasing criticism of our currency system and our banking laws. Then, as now, were heard threats of wholesale repudiation of private debts on the part of sorely pressed debtors in the agricultural States of the Union, and this dissatisfaction and unrest gave rise to political movements that did not run their course finally until the opening of the present century.

Congress sought at that time to do something that would allay this spirit of economic revolt on the part of the debtor class of our population as this Congress seeks to do now by the passage of this bill. There is no more reason to suppose that the passage of this act will alarm the creditor classes of the country than did the passage of the Composition Amendment of 1874. There is no reason to believe that the creditor classes will suffer in any way by the liberalization of the composition provision intended by this bill and the extension of it to include within its sphere of operation the reorganization of financially embarrassed private corporations and railroad corporations.

On the contrary, it is fair to assume that the enactment of this bill by Congress will, in the last analysis, be in the

true interest of the creditor as well as the debtor and will do much to allay the rapidly spreading discontent and dissatisfaction among thousands of hard-pressed debtors who view with discouragement and dismay the loss of their homes and their farms, in the acquisition of which they have spent a lifetime of labor. It is far better for the creditor as well as the debtor that these forced sales of property to satisfy debts, impossible of payment at this time, be stayed by the authorized action of our courts of law under a mandate of Congress rather than by revolutionary actions of the debtors themselves acting in open defiance of the law and its duly chosen ministers. In other words, Mr. Speaker, we are presented here to-day with a choice between doing something that will restore a respect for the law on the part of the debtor, by encouraging him to believe and to hope that the legislative department of the Government is sincerely and honestly seeking to assist him in his difficulties, or refusing to do anything at all and thus serving notice to these desperate debtors that their pitiful plight is of no concern to us and that we do not propose to bother ourselves about it.

When called upon to make this choice, regardless of my opinion of the defects of draftsmanship in the bill, or its failure to do all that I would like to see done by it, I choose to support the measure and vote for it even though deprived of an opportunity, under suspension of the rules, to offer amendments. The present situation is too grave, the need for such legislation as this is too imperative, and the welfare of my country and millions of its law-abiding citizens is too much at stake to justify me in opposing this measure. Reasons such as these prompted me to support it in committee and I shall welcome the opportunity to vote for it here to-day.

Mr. DYER. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. OLIVER].

Mr. OLIVER of New York. Mr. Speaker, I rise to enter a protest by the mayor of the city of New York, Hon. John P. O'Brien, against certain features of this bill. He says he is not opposed to the entire bill or to the purpose of those who uphold it, but he opposes it on the ground that he fears that under the terms of the bill the taxes levied by cities in this country might be postponed indefinitely, to the ruin and destruction of municipal government.

He sent a telegram to the distinguished and able leader of the New York delegation, Congressman CULLEN, asking him to have some one voice that opinion in this House.

The telegram is as follows:

Hon. THOMAS H. CULLEN,
House Office Building, Washington, D. C.:

In answer to your telegram I direct your attention to section 104, title 11, United States Code, providing that all taxes legally due and owing by the bankrupt to the United States, State, county, District, or municipality shall be paid in the order of priority here stated, and, further, that no order shall be made for the payment of a tax assessed against real estate of a bankrupt in excess of the value of the interest of the bankrupt estate therein as determined by the bankruptcy court, and upon filing the receipts of the proper public officers for such payments the trustee shall be credited with the amounts thereof, and in case any question arises as to the amount or legality of any such tax the same shall be heard and determined by the bankruptcy court. In re Bradley (16 Fed. (2d) 301), holds that the statute authorized bankruptcy court to determine amount and legality of taxes against bankrupts' estate, and ordinary rules governing collection of taxes do not apply to trustee in bankruptcy. In re Sheinman (14 Fed. (2d) 323). And the Supreme Court in Van Huffel *v.* Harkelrode (284 U. S. 285) held that bankruptcy courts have power to sell real estate of bankrupts free from liens of State taxes, transferring the liens from the property to the proceeds of sale. And at page 229 the court emphasizes that no case has been found in which the power to sell free from the lien of State taxes was denied. Section 104 and the Van Huffel decision prejudicial to the best interests of city. Page 17 of House bill 14359, lines 4 to 14, reads that a plan for reorganization must provide with respect to creditors not acceding to the plan adequate protection for the realization by them of the value of their liens on or claims against the property of the debtor dealt with by the plan either by the sale of such property subject to such liens or claims or by the sale free of such liens or claims at not less than a fair upset price and the transfer of such liens or claims to the proceeds of such sale or by appraisement and payment in cash of the value of such liens and claims or, at the objecting creditor's election, of the securities allotted to such liens and claims under the plan. Under this scheme city's liens in jeopardy. Furthermore, the filing of the petition stays any and all proceedings and city may not enforce its liens until proceedings closed, which may be protracted for years.

JOHN P. O'BRIEN.

He calls to our attention that under the right of petition to postpone the payment of debts the taxes of the municipality or the State, as well as of the Nation, may be postponed in the discretion of the court. We do not know for how long, we can not tell. The wisdom of the postponement is entirely in the mind of the judge. We do not know as a practical proposition how many will file petitions for delay. If this measure is availed of by the vast numbers it seems will take advantage of it, the collection of taxes will be postponed on a large scale for a long time.

Mr. ARNOLD. Will the gentleman yield?

Mr. OLIVER of New York. Yes.

Mr. ARNOLD. The manner of the collection of taxes is in the power of the court under existing law. A party can file a suit to enjoin the payment of taxes, and that is in the hands of the court. This does not do any more.

Mr. OLIVER of New York. I will answer the gentleman. It does not do any more than in a bankruptcy case, but we must realize that when a petition for extension of time is asked for, if the petition complies colorably with the conditions provided in the bill, that entitles the petitioner to an extension of time to pay taxes.

Under the provisions of the bill there will be hundreds of thousands come in, individuals and corporations, and if they get extensions, wholly within the discretion of the court, municipal government will have no certain foundation upon which to base its financial arrangements.

Mr. CULLEN. Will the gentleman yield?

Mr. OLIVER of New York. With pleasure.

Mr. CULLEN. On page 10, subdivision (b), it provides—

A plan of reorganization within the meaning of this section shall include a proposal to modify or alter the rights of creditors generally or any class of them, secured or unsecured, either through the issuance of new securities of any character or otherwise.

In the judgment of my distinguished colleague, whom I consider as good a lawyer as there is on the floor of this House, can that not apply to municipalities and States in so far as it relates to taxes, as pointed out by the mayor?

Mr. OLIVER of New York. There is no question about it.

Mr. CULLEN. Then, Mr. Speaker, we have gone far afield when we attempt to pass a bill of this character with only two hours of debate, without having an opportunity to offer amendments which would correct the inconsistencies and cost municipalities and States millions of dollars loss.

Mr. OLIVER of New York. The gentleman is right. Under the Constitution the bankruptcy power given Congress is tremendous. We have the power to shoot the debtor, and I think we have the power to shoot the creditor. It gives us omnipotent power. In this case we are going to be lenient with the debtor, but we may shoot down municipal government if we go too far. [Applause.]

Had the committee held hearings, perhaps the protests of his honor the mayor could have been met by amendment or his fears might have been explained away. This bill affects every dollar invested in the United States. It is not to be wondered at that the public at large have little confidence in its provisions when they have been denied the right to be heard before it was reported to the House.

The protest of the distinguished mayor of New York is the protest of a man whose voice has been dedicated to the public interest for 30 years. He stands in the front rank of the bar of New York. Therefore, what he says is entitled to solemn consideration.

His problems are intricate and delicate. If this bill postpones the payment of taxes in a wholesale way as he claims, his problems are magnified and his difficulties increased.

He sent to Mr. CULLEN the following amendments, which, under the rule that binds us to-day, can not be offered for the consideration of the House:

On page 3, line 14, after the word " character," insert the following: " other than claims for taxes legally due and owing to a State, county, district, or municipality."

On page 11, line 22, after the word "character," insert the following: "other than claims for taxes legally due and owing to a State, county, district, or municipality."

On page 12, line 22, after the word "obligations," insert the following: "other than obligations for the payment of taxes legally due and owing to a State, county, district, or municipality."

On page 15, line 4, after the word "holding," strike out the words "two-thirds in amount" and insert the following: "a majority in number."

On page 15, line 6, after the word "plan," insert the following: "which number must represent a majority in amount of such claims of each class."

On page 16, line 15, after the word "all," insert the following: "taxes legally due and owing to a State, county, district, or municipality."

On page 17, line 9, after the word "claims," insert the following: "other than liens or claims for taxes legally due and owing to a State, county, district, or municipality."

On page 17, line 12, after the word "claims," insert the following: "other than liens or claims for taxes legally due and owing to a State, county, district, or municipality."

On page 18, line 15, after the word "debts," insert the following: "other than those for taxes legally due and owing to a State, county, district, or municipality."

On page 18, line 21, after the word "except," insert the following: "claims for taxes legally due and owing to a State, county, district, or municipality."

On page 18, line 25, at the end of the sentence, insert the following: "The confirmation of a plan of reorganization which includes the transfer of all or any part of the property of the debtor to another corporation or to other corporations, or the consolidation of the properties of the debtor with those of another corporation, shall not be deemed an adjudication to the effect that the plan and the resulting reorganization are not violative of the provisions of Title 15 of the United States Code."

On page 20, line 12, after the word lien, insert the following: "other than liens for taxes legally due and owing to a State, county, district, or municipality."

On page 21, line 11, after the figure "64," insert the following: "except that taxes legally due and owing by the debtor to a State, county, district, or municipality shall not be released, diminished, abated, postponed, or otherwise affected in any proceeding under this section, notwithstanding any provision to the contrary contained in this or any other section of this act; and the amount of such tax claims as duly fixed in the State, county, district, or municipal tribunals of appropriate jurisdiction shall be conclusive and binding upon the Federal courts acting under and pursuant to this section."

Mr. SUMNERS of Texas. Mr. Speaker, I yield myself half a minute, to make this statement, that if we do not do something of this sort as is provided in the bill to help these distressed debtors, the municipalities and States will be owning all of the homes in this country under the foreclosure of their tax liens.

I yield five minutes to the gentleman from Kentucky [Mr. GREGORY].

Mr. GREGORY. Mr. Speaker, ladies and gentlemen of the House, when the passage of this bill was first suggested some months ago I heartily approved it. Nevertheless I must confess that I entertained grave doubts about the constitutionality of the measure and had some misgivings as to the power and authority of Congress to enact such legislation. However, having made a careful study of the history of bankruptcy legislation in this country and the decisions of the courts in relation thereto, I am thoroughly convinced that the bill we are considering this afternoon comes clearly within the purview of the powers conferred on Congress by the bankruptcy clause of the Constitution.

With the limitation placed upon debate, I shall, of course, be unable to go into the merits of the various provisions of the bill. I shall be compelled to review only in a general way the reasons which I entertain for supporting the bill as it is reported by the committee.

Reference has been made by the gentleman from Georgia to the vast number of farmers who are losing their homes. I have seen in my own district farmers driven from their homes by foreclosure, going out with grief and despair, like a specter at the funeral of hope, written on their faces, in an endeavor to get a new start in life. You gentlemen who come from the cities have witnessed the same thing among the laboring class who are home owners in the cities. Something like 700,000 foreclosures of this kind have been made within the last three years, and the time has arrived when we find ourselves faced with the necessity of making some provision whereby this tragedy may be stopped, or the financial life of the Nation will sustain such a shock that it will be unable to withstand it.

I heard in this Chamber last week accusations and censure of snoopers and stool pigeons in the enforcement of certain of our criminal laws. I have been engaged in the practice of law since the days of my early manhood. I have a high regard for the profession to which I belong; but, as in every avenue of human endeavor, we find certain groups of lawyers in practically every city of the country who are snooping around hunting for a sufficient number of accounts, and a sufficient amount, to throw persons into bankruptcy, without regard to the rights or to the benefits that will accrue either to the creditor or to the debtor. Under the provisions of this bill I believe a brake will be placed upon these human vultures whom we find in the cities.

The story of the railroad reorganization in the United States is a very sordid one, as we find it, to the advantage and power of certain financial groups in this country. I am for this bill because of the reorganization plan that is incorporated within it. Regardless of the rights of stockholders, of creditors, and of the public welfare, we have seen great railroad corporations wrecked in order to satisfy the greed of certain financial interests in this country. Under the provisions of this bill a safe and sane way is provided for the reorganization of these great railroad corporations.

I am for this bill, Mr. Speaker, because the exigencies of the times demand it. I am for it because reason approves it. I am for it because simple justice requires it, and I am for it because every generous impulse of the heart urges it upon me. [Applause.]

Mr. DYER. Mr. Speaker, I yield three minutes to the gentleman from Michigan [Mr. MAPES].

Mr. MAPES. Mr. Speaker, I have asked for this time merely for the purpose of raising a question or expressing a doubt as to the wisdom of passing this bill with the information, or lack of information, which the membership of the House as a whole has about it.

The bill, as far as the railroad title or section of it is concerned is a radical departure from existing law. As stated in the report of the committee, railroads can not now come under the bankruptcy law. Reference was made this afternoon by the gentleman from Oklahoma [Mr. HASTINGS] to an article in yesterday's New York Times. In that article it was stated that of the 138 legally solvent Class I railroads of the country 100 of them last year failed to earn operating expenses and fixed charges, and 45 per cent of that 100 failed to earn even operating expenses, to say nothing of fixed charges.

This bill provides that a railroad corporation, subject to first being able to obtain the permission of the Interstate Commerce Commission, if it is unable to meet its debts as they mature, may file a petition with the court and take advantage of its provisions. The language is broad enough so that the 100 of the 138 legally solvent Class I railroads of the country may come under it if they choose to do so, and if they can get the approval of the Interstate Commerce Commission for that purpose. Upon filing a petition with the court, subject to the approval of the Interstate Commerce Commission, they may transfer their stock from one corporation to another or merge or consolidate with other railroad corporations. Who can tell what the set-up of the railroads of the country would be in the end if all of them who are able to do so should elect to take advantage of this legislation if it is enacted into law? For one I do not care to vote for a bill of this importance without knowing more about it than I have been able to learn. It certainly should not be passed under suspension of the rules, with no opportunity to amend it or to discuss it section by section under the 5-minute rule.

The Committee on Interstate and Foreign Commerce, which has jurisdiction over railroad legislation generally, has never considered the bill except very informally. It did not report it; it knew practically nothing about it until after it was reported by the Committee on the Judiciary one week ago.

The SPEAKER. The time of the gentleman from Michigan [Mr. MAPES] has expired.

Mr. SUMNERS of Texas. Mr. Speaker, I yield five minutes to the gentleman from Texas [Mr. RAYBURN].

Mr. RAYBURN. Mr. Speaker, I do not think I can be accused of being one of those Members of the House who is easily swept off his feet, who becomes easily excited, and who desires to do radical and ill-considered things. I have been living with the railroad question, as a member of the Committee on Interstate and Foreign Commerce, for many years. At this time I have the honor to be chairman of that committee. Because of that position, everybody who has railroad trouble comes to me. Only last Saturday I had the privilege of sitting for an hour and a half with a group of men appointed by savings banks and insurance companies.

Last year 122 railroads in the United States failed to earn their fixed charges. The condition is no better. It is inevitable that under the old law or under the new law, these railroads must pass through the mill. They must go through the wringer. There is not a question in the world about it. I believe therefore that in order to save confidence, in order to protect stockholders, in order to protect bondholders, in order to protect everyone who is a creditor of a railroad, and the public as well, we should pass this or some other legislation at the earliest possible hour, to put an end to these long-drawn-out, these expensive, these unnecessary, and in many instances these disgraceful receiverships that have happened in the past.

Mr. McCORMACK. Will the gentleman yield?

Mr. RAYBURN. I yield for a question.

Mr. McCORMACK. There is only one feature of this bill that I am disturbed about voting for under suspension of the rules, and that is the railroad provision. I have every confidence in the gentleman from Texas, who is chairman of the committee before which railroad legislation comes. Will the gentleman from Texas state that in his opinion the stockholder, the small creditor, the average person will be protected under the provisions of this bill, so far as it relates to reorganization or liquidation of railroads?

Mr. RAYBURN. To a greater, a larger extent than at the present time.

Mr. McCORMACK. I put it to my friend from Texas because I have such great confidence in him.

Mr. RAYBURN. I answer that, to a much larger extent than he is now.

Let me say one other thing, that the fees of these receiverships can not be allowed by a court until they are approved by the Interstate Commerce Commission. No financial setup, no reorganization to squeeze out stockholders or do an injustice to the public can come about until the Interstate Commerce Commission, the arm of Congress, the representative of the public in this country, has placed its stamp of approval upon any plan of reorganization. I am convinced that the seriousness of the situation that faces us at this hour demands, in the public interest, that the Congress of the United States pass favorably upon legislation of this character at the earliest possible moment.

Mr. DYER. Will the gentleman yield?

Mr. RAYBURN. I yield.

Mr. DYER. The gentleman says the courts would pass upon it. They will pass upon the plan that is submitted by the Interstate Commerce Commission, but they can not amend that plan or change it. Is that not correct, under this bill?

Mr. RAYBURN. That is correct; and that is exactly what I think the power ought to be. I do not believe there is a judge of a court in this land or that there is a single referee who is appointed by any judge in this country who is as capable as the Interstate Commerce Commission of passing on a set-up for reorganization of a vast railroad corporation. [Applause.]

The proposed section 76 of this bill has been drawn to meet what, in my judgment, is an emergency. I am informed that several important railroad companies and a number of smaller ones face inevitable receivership within the next few months. Legislation of this character was recommended by the Interstate Commerce Commission in its last annual report. The President of the United States and the President elect both recommend such legislation.

This bill provides for reorganization of railroad corporations in advance of receivership, with the consent of interested creditors. Railroad companies are in this situation through the operation of forces they did not foresee. For several years after the railroads were turned back to their owners in 1920, they got along very well. Traffic rapidly increased, and the increased earnings of railroads attracted capital for what appeared to be desirable expansion of their facilities. Since 1929, the railroads have faced a surprising decrease in their business: First, because of business depression; second, because of the astonishing development of new, economical, and competing forms of transportation. With readjustment of their fixed charges, satisfactory to two-thirds of the creditors affected, a number of companies can continue to operate, which might otherwise be thrown into expensive receiverships to the great inconvenience of the public.

This bill provides that the proposed reorganization of railroad companies shall be worked out under the jurisdiction of the courts and that the actual plans shall be formulated under the watchful eye and supervision of the Interstate Commerce Commission. Some object that this bill substitutes the commission, an agent of the Congress, for the courts. As I understand it, it does nothing of the sort. All the proceeding is under the jurisdiction of the court and must have the court's approval before it becomes effective. This bill proposes to place the expert services of the Interstate Commerce Commission at the disposal of the court. Instead of having to rely upon some master who would have to set up his own staff and who would have no, or but little, experience in these matters, the court would rely upon the commission, which would act very much as a master would be required to do. The bill provides that the commission shall take off of the court all of the burden of holding hearings on the proposed plans of reorganization, of recommending a plan to creditors and stockholders who would be affected, of authorizing the issuance of securities and making orders conforming to the interstate commerce act, and of submitting to the court a complete record on which it could determine whether or not, in fairness and justice to all concerned, a plan of reorganization acceptable to two-thirds of the creditors in amount for each class should be approved. If the court does not find that the plan acceptable to the creditors and to the commission is equitable, the court will disapprove it. All of this looks toward prompt, equitable, and economical proceedings.

Further, in the interest of economy and efficiency, the bill provides for six special referees, or more if necessary. These referees are to be appointed by the President of the United States and approved by the Senate. That is in recognition of the great importance of the work that they shall do in serving the judges who may from time to time select them. These special referees merely constitute a panel from which a judge may select one or more to perform for him the same duties which are imposed on a referee in bankruptcy under our present bankruptcy laws. That is to say, instead of having a miscellaneous collection of referees called at the discretion of the courts the courts will look to this panel of at least six men set apart by the President of the United States, with the approval of the Senate, and from this group each judge will select whatever referee or referees may be needed.

Again, in the interest of economy, the fees of trustees, of organization managers, of referees, of attorneys, and of investment bankers are to be recommended to the court by the Interstate Commerce Commission. This is done so that the mind of the court may be enlightened by the findings of a group expert in appraising the value of such services.

Fear has been expressed that with the enactment of this bill the powers of the Interstate Commerce Commission and the courts over consolidations and mergers would be expanded. It is my firm conviction that this proposal in specific pro-

visions safeguards the present consolidation and merger provisions of the interstate commerce act and gives no additional authority to the commission or the courts in these matters.

This bill, if it becomes a law, I believe will better protect bondholders and other preferred claimants in their rights than has been customary in receiverships. I believe that it will result in fair reorganization of the financial structure of many railroad companies, with the consequence that the fixed charges will be greatly reduced and the various classes of creditors will realize much more fully upon their expectancies than would be possible through receiverships. Moreover, it is my opinion, that the expenses of these reorganizations will be much less than of receiverships. Finally, I believe that this is an amendment to the bankruptcy act such as is contemplated by clause 4 of section 8 of Article I of the Constitution of the United States. For these reasons I think this House should promptly pass this bill.

The SPEAKER pro tempore. The time of the gentleman from Texas [Mr. RAYBURN] has expired.

Mr. DYER. Mr. Speaker, I yield four minutes to the gentleman from Texas [Mr. DIES].

Mr. DIES. Mr. Speaker, I am opposed to this bill in its present form. It contains many dangerous provisions that will enable a little group of insiders to engineer through the Federal courts reorganization plans that will completely wipe out individual stockholders who are unable to protect themselves through the employment of attorneys and attendance upon the Federal courts in New York and other great cities where the corporations involved have their principal place of business.

I am opposed to it because it does not offer adequate relief to farmers and individual debtors. The inclusion in the bill of the sections relating to individual debtors was evidently done for the purpose of persuading us to swallow the indefensible provisions of the bill relating to corporations and railroads. The provision in reference to farmers is merely a sop to deceive the unwary into believing that this is a farm relief measure. It is a bait to conceal the hook, and to render the bill enticing to those who do not have the time and opportunity to carefully investigate the legal effects of this bill. It is unfortunate that a measure of such vital importance should be considered under the suspension of the rules which only permits a few minutes for debate and which makes it impossible for Members to offer amendments to safeguard and protect the rights of our people. But let us not deceive ourselves. The real effect of this bill will be to permit a little group of protected insiders to reorganize corporations and railroads at the expense of thousands of scattered and defenseless stockholders and creditors of corporations and railroads.

In order for a farmer or individual debtor to secure a composition of his debts or an extension, there are a number of difficult requirements that he will have to meet. Those who are able to satisfy these requirements do not need the aid of the bankruptcy courts under the provisions of this bill. First, the farmer or individual debtor will have to employ an attorney to file his petition and to prosecute his case through the bankruptcy courts. This will require money, and few farmers or individual debtors are able under the present circumstances to raise money for the purpose of paying attorney's fees. Second, the farmer or individual debtor may be required, as a condition to any extension, to furnish his creditors indemnity against loss. This indemnity would probably consist of a good bond which few individual debtors could furnish under the terrible conditions that prevail throughout our country. Third, the individual debtor, before filing an application for confirmation of a composition or extension proposal would have to secure the consent in writing of a majority in number and amount of his creditors. This, of course, would be very difficult and would involve considerable time and expense to the debtor. Fourth, before the debtor could secure a composition of his debts he would have to furnish the money or security necessary to pay all debts which have priority and the costs of the proceeding and the consideration to be paid to his creditors. There are few, if any, individual debtors who could secure the money or security to deposit with the court, as a condition to any composition. Before the court is permitted to confirm the composition or extension proposal, the court must be satisfied that—

(1) It includes an equitable and feasible method of liquidation for secured creditors whose claims are affected and for financial rehabilitation for the debtor; (2) it is for the best interests of all creditors; (3) the debtor has not been guilty of any of the acts or failed to perform any of the duties which would be a ground for denying his discharge; and (4) the offer and its acceptance are in good faith and have not been made or procured except as herein provided, or by any means, promises, or acts herein forbidden.

I submit, Mr. Speaker, that few, if any, debtors can comply with these difficult requirements. If a farmer had an equitable and feasible method of liquidation, he would not need the aid of the court in dealing with his creditors. With 5-cent cotton, and with high taxes, high interest, and scarce money no farmer can present any feasible method of liquidation. How can anyone under the present conditions show a feasible method of his financial rehabilitation when he can not secure for the products of his labor and investment sufficient returns to pay the expenses of operation, and when the Government itself has been unable to devise any such plan?

Subdivision 4 of section 1 provides that—

> The courts shall in addition adjudge the debtor a bankrupt if satisfied that he commenced or prolonged the proceeding for the purpose of delaying creditors and avoiding an adjudication in bankruptcy.

What other purpose could any debtor have for filing a petition under the provisions of this act except to delay his creditors and keep from becoming a bankrupt? But under this bill, if it could be shown that the individual debtor was seeking to delay his creditors, the court would immediately adjudicate him a bankrupt and his property would be sold at public auction.

Under the provisions of this bill an extension or composition "shall not impair the lien of any secured creditor but shall affect only the time and method of its liquidation." In other words, under this proposed bill no mortgage debts can be scaled down or reduced in amount even though the indebtedness is greater than the reasonable market value of the property. Everyone knows that debts have increased tremendously on account of the increased purchasing power of the dollar. Our debts, with interest and with taxes and other fixed charges, have to be paid in dollars which have suddenly increased in value—in a dollar which now requires 6 bushels of corn instead of 1, 3 bushels of wheat instead of 1, 5 pounds of cotton instead of 1, and 10 shares of United States Steel stock instead of 1.

Many of the debts under which our farmers and individual citizens are staggering have, therefore, doubled and trebled in amount, and yet under this bill no method is provided whereby these debts can be scaled down and whereby the debtor can return to his creditor a dollar worth no more than when he borrowed it. But when the bill comes to deal with corporations, it provides that any reorganization plan can modify or alter the rights of creditors generally, or of any class of them, secured or unsecured, either through the issuance of new securities of any character or otherwise. In other words, corporations can scale down secured and unsecured debts and impair the validity of liens, but a farmer or individual debtor is not given this right. Can anyone explain why the individual debtor is discriminated against in the matter of scaling down secured debts? The farmer has to secure the consent of the majority in number and amount of his creditors, whereas a corporation only has to secure two-thirds of the amount of the claims of each class whose claims or interests have not been allowed and would be affected by the plan. Why this discrimination against the individual debtor in favor of corporations?

Twenty-five per cent in amount of any class of creditors and not less than 10 per cent in amount of all the creditors

of the debtor may propose a reorganization plan in a court located in a judicial district where the principal place of business is situated. It is generally known that the principal place of business of most corporations is in New York City. Therefore, a small group in New York can propose a reorganization plan in the courts of New York, and in order for the multitude of secured and individual stockholders and creditors of the corporation to defend and protect their rights, they would have to go to New York and employ attorneys there to represent them. Since many of these stockholders and creditors have small holdings, they would be unable to defend their rights, and the result would be that they would be wiped out. The reorganization would be accomplished at their expense. The little group of insiders who sold them their stock would regain the title to the corporation.

The bill also provides that in order to carry out the reorganization plan, the proposal may—

Include the transfer of all or any part of the property of the debtor to another corporation or to other corporations, or the consolidation of the properties of the debtor with those of another corporation and the issuance of securities of either the debtor of any such corporation or corporations, for cash, or in exchange for existing securities, or in satisfaction of claims or rights, or for other appropriate purposes.

This provision nullifies the Sherman antitrust law and the Clayton Act. During the past decade we have had more than 1,267 mergers in the United States. This is one of the principal causes for the economic crisis that threatens the very life of this Republic. Many of these mergers were brought about for the purpose of issuing worthless stocks and securities and unloading them on the investing public. Thousands of our citizens have been the victims of these illegal mergers that were formed in violation of the Sherman antitrust law, but with the tacit consent of a sympathetic administration. These mergers not only violated the law and not only dumped upon the market millions of dollars of worthless securities and stocks, but they produced great concentration of wealth in the hands of a few and resulted in enabling the operators of the merged concerns to eliminate competition and fix the prices of their commodities on a plane much higher than agricultural commodities produced through competition. This produced inequality of price levels between agricultural and nonagricultural commodities, threw the economic system out of balance, produced maldistribution of wealth, and contributed materially to the economic collapse that threatens us. Yet in spite of this experience, this Congress proposes by its solemn act to permit wholesale consolidations, mergers, and combinations in violation of the law and to the complete destruction of independence and individual initiative in our economic life.

Paragraph (C) of section 75 empowers the judge to appoint trustees of the corporation with power to operate the business of the corporation and to issue certificates for cash, with security and priority in payments over existing obligations, secured or unsecured. As the law now stands, the court is not permitted to issue receivers' certificates in the case of private corporations unless those creditors whose liens are displaced by such receivers' certificates consent to their issuance. Under this provision thousands of preferred stockholders who purchased in good faith upon the assurance that they would have prior claims against the assets of the corporation would be completely displaced and new creditors would step in and have the first right to the assets of the corporation. This would place the public who subscribed to bonds and to the preferred and common stock of corporations at the mercy of a group of creditors usually representing the large banking interests who will use the process of the court to salvage their private investment and who will eventually bid in the property for a nominal sum in utter disregard of the rights of their creditors and stockholders.

Under this bill an individual debtor is required to file schedules showing all his assets and liabilities, whereas corporations are merely required to submit such schedules "as may be necessary to disclose the conduct of the debtor's affairs and the fairness of any proposed claim." Why this discrimination against individual debtors?

Under this bill, if the corporation is small, a statement must be filed showing "what, if any, claims and shares of stock have been purchased or transferred by those accepting the plan after the commencement or in contemplation of the proceeding and the circumstances of such purchase or transfer. But this statement may be dispensed with if the judge is satisfied that by reason of the number of securities outstanding and the extent of the public dealing therein the preparation of such a statement would be impractical. In other words, in the case of great corporations with imposing groups the court may keep the transactions in the dark and the public will remain in ignorance as to what has gone on behind closed doors. It certainly seems to me that the experience of the past few years shows the necessity for requiring greater publicity as to the financial condition of corporations and the conduct of their business by those in charge. Had the public known more about the conduct of certain corporations during the past 10 years untold suffering and losses could have been avoided.

This bill provides that the term "creditors" shall include for the purposes of a reorganization proceeding under this section all holders of claims of whatever character against the debtor or his property, whether or not such claims would otherwise constitute provable claims under this act. In other words, a suit or judgment for damages against a corporation would constitute a claim under the terms of the act. The claim or judgment of a widow or orphan for damages against a corporation on account of the killing of a husband or father would constitute a claim which could be wiped out by the small group in New York who were engineering the reorganization plan. A suit involving the title to land would constitute a claim that could be disposed of in the courts of New York. When the petition is filed under this proposed bill, the State court is ousted of jurisdiction and the matter is handled by the Federal court, in many instances situated thousands of miles from the home of the creditor or claimant.

We who have practiced law in small towns and whose business consisted of representing poor clients on contingent fees know that it is very difficult to prosecute a claim in the Federal courts against powerful corporations. Litigation in a Federal court is so expensive that few poor claimants can afford to prosecute their claims. The requirement that the litigant shall deposit cash and iron-clad bonds to secure payment of court costs and to have the statement of facts printed, the ability of the judge to comment upon the weight of the evidence, and the enormous other obstacles that stand in the way of a poor litigant give the corporation every advantage. It can encumber the record with a mass of documentary evidence and render the appeal so expensive as to be prohibitive. It can adopt dilatory practices of all kind and character until the poor litigant and his attorney are compelled to accept any proposal made by the corporation. No one knows better than I do. For more than 10 years my practice consisted of representing individual claimants and litigants against corporations. In most instances my firm worked on a contingent fee. If we won, we were paid; if we lost, we received nothing. The corporation had every advantage in the Federal courts, and wherever possible it always removed its cases from the State to the Federal courts. Therefore I am not willing to stand idly by while this monstrous and unfair bill is written into the law of our land. I do not believe that this House would consider this bill for a moment if it had an opportunity to study its outrageous contents and dangerous provisions. I do not believe that the Senate will ever permit it to become the law of the land in its present form.

In the name of the poor litigants who are unable to finance the prosecution of expensive litigation in Federal courts, in the name of hundreds of independent and fearless attorneys who protect the interests of poor litigants throughout this country, in the name of the multitude of individual debtors who can not protect themselves in the

courts of New York and who will be literally wiped out under the monstrous provisions of this bill, in the name of thousands of farmers who will not be deceived by the sop which is offered them as a blind to deceive the real purposes of this bill, I appeal to you to defeat this iniquitous and indefensible measure.

Mr. SUMMERS of Washington. Mr. Speaker, I yield five minutes to the gentleman from Pennsylvania [Mr. KURTZ].

Mr. KURTZ. Mr. Speaker, I have great respect for those persons on the committee and those who are not on the committee, who oppose this bill. When I think of the gentleman from Virginia [Mr. MONTAGUE], the gentleman from New York [Mr. OLIVER], and the gentleman from Missouri [Mr. DYER], I know they are men of ability and, so far as the legal profession is concerned, are among the master craftsmen of this House. I may say, however, that this is quite an extraordinary bill and under ordinary circumstances possibly I would not support it; but there is an extraordinary condition confronting the American people at the present time. When you realize that in one county of Pennsylvania out of a population of 86,000, 44,000 people have received aid within the last year it is time for the Congress of the United States to do something extraordinary.

If it is necessary in time of war that we do things that are extraordinary because war affects all of the people, then it is necessary now to do something extraordinary, because the stress and trial of this depression affect the American people to-day also, affect the woman in the home, the child in the cradle, vigorous manhood, and decrepit old age; every person is affected. Therefore, I, for one, am ready to vote for this particular bill even though it be extraordinary.

It seems to me we can liken the present times to the condition of a man who, in a measure, is ill. A man who has a crushed finger, a man who has a crushed toe, or a man with an aching tooth knows these conditions are local and can be treated locally, and that in the very near future he will be able to enjoy his usual normal health. But when his body is afflicted by some constitutional disease or some terrific fever and he is on the very brink of the grave—then he is not going to get well in a day. All that can be done is something which will alleviate his condition. At the present time not only America, but the whole world, is sick, and whatever we do here will only be a measure of alleviation; it is not going to be a cure because we find that this panic is not confined to the shores of America. It is world wide. We find six nations in South America have overthrown their governments by force and revolution in the last three years, one of them four times, and another three times; and if we can give credence to what people in authority say, all of these governments are worse than their predecessors. Such things are happening all over the world. Almost all of the nations that owe America are asking for moratoria. We are not asking for a moratorium; what we are asking for is a breathing spell for the American debtor. If we can give him that we will cause the American creditor to hesitate in this time of peril, and when he does that he is not only aiding the debtor but likewise himself. This is why I am going to vote for this bill even though it has extraordinary characteristics. [Applause.]

[Here the gavel fell.]

Mr. DYER. Mr. Speaker, I yield five minutes to the gentleman from Nebraska [Mr. BALDRIGE].

Mr. BALDRIGE. Mr. Speaker, there are three main purposes of our bankruptcy law. The first is to bring in under the court's jurisdiction all the assets of the debtor; the second is to distribute those assets in a fair and equitable way; and the third is to give the debtor, who has carried on his business honestly, a clean slate and a chance to start over again.

Our bankruptcy law has failed, mainly because it has not brought in the assets of the estates in proper time to save anything for creditors. The reason it has failed is because there has never been any inducement held out to the debtor to come in and talk over the table with his creditors. As soon as the average debtor sees the situation starting to slip away from him he endeavors to cover up; he can not let his creditors know trouble is coming, because as soon as he does they immediately pounce upon him, and the result is that there has never been any inducement for any debtor to come in and talk with his creditors. Whenever we can provide that inducement for a debtor who realizes that things are getting a little bad, to sit down and talk with his creditors, then the bankruptcy law will be a success, and not until then.

This is exactly what this bill does: It gives the debtor an inducement to come in and talk with his creditor to obtain an extension of time or a compromise. That is a tremendous step in favor of the bankruptcy law. In 65 per cent of the cases in bankruptcy last year no money was paid to the creditors. In the remaining bankruptcy cases only 5 per cent of the general claims were paid. Why? Because creditors could not talk over with the debtor his problem. The debtor usually held off for one or two or three years until everything slipped away from under him. This legislation gives him an inducement to come in and talk to his creditors and say, "I am in trouble; I want an extension of time," and he realizes he might go before the courts and get it, even though his creditors do not consent.

Up to this time whenever anybody started proceedings for an extension, three creditors with claims aggregating $500 could come in and upset the entire negotiation, after weeks and weeks of time and effort by creditors trying to bring the situation around. Under the proposed plan here, this can not be done.

This is a great step in favor of the bankruptcy law and I do not think, when the gentleman from Texas [Mr. DIES] stands up here and shakes the old bugaboo of Wall Street and New York, and tells what an awful thing it is to have to go there, he is going to particularly impress the group of men here, although that might be all right at home when we are campaigning.

Mr. DIES and Mr. WOOD of Indiana rose.

Mr. BALDRIGE. No; I can not yield because I have only five minutes.

Under this bill what can the debtor do? No one has particularly talked about this important part of the bill. Briefly, here is what happens. He first asks his creditors if he can get an extension of time or some sort of compromise. If they say "No, we will not give it to you," then he goes before the judge and states, "Here are all my assets, I will pay so much next year, I will pay so much six months from now, and I will carry on in a certain way. This is a fair and reasonable proposition. Now, will you give me a chance?" If the man has been honest, if the man has carried on his business in the past without any fraud, if he has a fair chance to pay out, nine times out of ten the court is going to say, "We will allow an extension of time and we will allow this man to try to work out of his present situation, and we will see how he makes out. During the interim, if he does not carry out his promise, under the law, the court has the right to stop it and put the man in bankruptcy." I am sorry my time is so short that I can not discuss the reorganization part of this bill that is so important to our railroads. I urge every member to vote for this legislation. [Applause.]

Mr. SUMNERS of Texas. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. CELLER].

Mr. CELLER. Mr. Speaker, I not only believe this bill has color of constitutionality, but actually is constitutional.

Mr. WOOD of Indiana. Will the gentleman yield for a question?

Mr. CELLER. Briefly.

Mr. WOOD of Indiana. What does the gentleman say with reference to the provision of the Constitution that provides that there shall not be any legislation impairing a contract?

Mr. CELLER. I may say to the gentleman that there is no express prohibition in the Constitution about the Federal Government impairing the obligation of a contract. There is, however, the express prohibition against the States

impairing the obligations of a contract. Let me call attention to the dissenting opinion—Mr. Justice Miller, with whom Swayne and Davis, JJ., concurred—in Hepburn *v.* Griswold (75 U. S. 627), which involved the proposition that no prohibition is placed upon the power of Congress to impair the obligation of contracts. This case was the first of the Legal Tender cases. This minority view became the majority view of the Supreme Court in Legal Tender cases (79 U. S. 549, 550), where we have this language:

* * * Nor can it be truly asserted that Congress may not, by its action, indirectly impair the obligation of contracts, if by the expression be meant rendering contracts fruitless, or partially fruitless. Directly it may, confessedly, by passing a bankrupt act, embracing past as well as future transactions.

This is obliterating contracts entirely. So it may relieve parties from their apparent obligations indirectly in a multitude of ways. It may declare war, or, even in peace, pass nonintercourse acts, or direct an embargo. All such measures may, and must operate seriously upon existing contracts, and may not merely hinder, but relieve the parties to such contracts entirely from performance. It is, then, clear that the powers of Congress may be exerted, though the effect of such exertion may be in one case to annul, and in other cases to impair the obligation of contracts.

If there is any doubt on our right to pass this bill, I would ask the gentleman to read the Hanover National Bank case, One hundred and eighty-eighth United States Reports, page 181), where the court in sustaining the constitutionality of the present bankruptcy act (act of 1898) said that the powers of Congress were so plenary and so complete as even to go to the extent of inflicting the death penalty upon a bankrupt.

The court in the Hanover case considered the intent of the framers of the Constitution. I quote from the opinion:

The framers of the Constitution were familiar with Blackstone's Commentaries and with the bankrupt laws of England, yet they granted plenary power to Congress over the whole subject of "bankruptcies" and did not limit it by the language used. This is illustrated by Mr. Sherman's observations in the convention, that "bankruptcies were in some cases punishable with death by the laws of England, and he did not choose to grant a power by which that might be done here"; and the rejoinder of Gouverneur Morris that "this was an extensive and delicate subject. He would agree to it because he saw no danger of abuse of the power by the Legislature of the United States." (Madison Papers, 5 Elliot, 504; 2 Bancroft, 204.) * * *

I repeat that the Supreme Court is in apparent accordance with the proposition that the power of Congress is so broad as to include even the death penalty. If the powers are so complete and so plenary, we certainly have the right to rearrange the rights of creditors, secured or unsecured, or rearrange the rights of bondholders and lienors in any insolvency or bankruptcy proceedings.

Mr. DIES. Will the gentleman yield?

Mr. CELLER. I can not yield, as I have only a few minutes.

I believe this bill is one that provides the greatest good for the greatest number. It is not a perfect bill. It certainly has its flaws. No bill that comes out of any committee or passes this House or the other Chamber is perfect. Such bills always contain some imperfections and we must consider the pending bill in this light.

However, I believe the debtor class of this Nation needs some blood transfusion. It is time we cease drifting. We must apply heroic measures, otherwise you will reduce your farming class to a tenant class; and, goodness knows, you do not want a farmer tenancy in this country.

As for the small tradesmen and merchants, they yearn for something of this sort which will enable them to go to their creditors with a plan of liquidation if given time. If their creditors refuse, this bill will enable them to go to the court and say, "We want to settle; we want to be given a chance to pay our debts; we can not be hurried, we want time; if given time, and not pressed, we can satisfy creditors." Under the present law there can be no composition or extension unless or until a petition in bankruptcy is filed by or against the debtor. In order to get time, the debtor must accept the stigma of bankruptcy. Under this bill that stigma is avoided. Practically the provisions for a moratorium for individual debtors become in this bill applicable to corporation debtors, and ample and liberal provisions are made for fair and equitable reorganizations of private corporations, with appropriate safeguards to creditors, secured and unsecured, to stockholders of all classes, and to those who have claims entitled to priority.

Much has been said about interfering with the priority of liens of municipalities. I have been considerably worried about this situation, and have fine-combed the bill with an eye single to detecting any provision that would militate against the priority of liens against properties for unpaid taxation. I confess I find nothing that would interfere unduly or unreasonably with the rights of municipalities with reference to their liens.

However, Surrogate O'Brien, the present mayor of New York City, has taken certain exceptions to the bill in this regard. I have great respect for his wisdom and opinions. I have known him for many years as a conscientious public servant. His views are entitled to the greatest respect. The parliamentary situation, of course, precludes the offering of any amendments that would meet the objections of Mayor O'Brien. These objections will be taken care of undoubtedly in the Senate or in conference. I assure my friend the mayor that I shall help in this regard.

However, I must direct attention to the evident intention of the framers of the bill to protect municipal liens. On page 21, line 10, subsection 5, we have the general provision:

Debts shall be entitled to priority as provided in section 64.

Section 64 means section 64 of the present bankruptcy act. Said section 64 is the direction to the trustee to pay all taxes legally due and owing by the bankrupt, first to the United States, then to the State, then to the county, then to the district, and finally to the municipality. These payments are made before payments to creditors, and so forth. Furthermore, on page 5, commencing at line 10, we find that there can be no confirmation of the composition or extension proposal unless—

The money or security necessary to pay all debts which have priority * * * shall have been deposited in such place as shall be designated by the court.

In addition to these safeguards, on page 6, line 10, it is provided that—

The terms of an extension proposal * * * may provide for priority of payments.

Under the present act the courts have gone far in construing the right to interfere with liens for State or municipal taxes. Permit me to direct attention to the case of Van Huffel *v.* Harkelrode, Treasurer (284 U. S. 225). The court, Mr. Justice Brandeis delivering the opinion, held that—

The bankruptcy courts have power to sell real estate of bankrupts free from liens of State taxes, and to transfer liens from the property to the proceeds of sale.

The court held that—

Like power had long been exercised by Federal courts sitting in equity when ordering sales by receivers or on foreclosure.

Section 75, subdivision (m), provides as follows:

(m) Whenever in this act the words "receiver" or "trustee" are used, same shall mean a natural person, except, however, upon good cause affirmatively shown by any interested party or parties that it is for the best interests of the debtor or the plan generally, the court may appoint a corporation, but such corporation shall not be appointed in a multiplicity of cases.

This is aimed, specifically, at the practice which has developed in the United States District Court of the Southern District of New York, whereby the Irving Trust Co., of New York, has been made the sole receiver in all bankruptcy cases and in most of the equity receivership cases. This practice must stop. If it does not, it will spread to other jurisdictions.

It has been proven that the Irving Trust Co. is no more efficient, and does not save any more of the creditors' money, than the receivers who acted before the Irving Trust Co. was appointed.

The district judges in New York have made grievous error in disregarding the members of the legal profession in the appointment of receivers. They probably have forgotten that they themselves at one time practiced law.

To avoid the scandals of a few years ago, some of the causes of which were traceable to one of their own members, Judge Winslow, they have set up the Irving Trust Co. as a huge monopoly. Nowhere else in this country does such a condition obtain. It should not exist in New York.

Relative to the difficulties that arose a few years ago, I believe the judges are not blameless. Why did they appoint incompetent and dishonest officials?

There are still honest and efficient lawyers left for appointment as receivers. The qualities of integrity and ability have not entirely departed from the legal profession to reside solely in the Irving Trust Co. These judges have set up a veritable Frankenstein to which they have surrendered all power to appoint not only the receivers but the appraisers, custodians, auctioneers, accountants, trustees, attorneys for trustees, and attorneys for receivers. The Irving Trust Co. now does all the appointing.

There often arises conflict of interests. As the Irving Trust Co. is receiver and trustee in all cases, it finds itself making claims against itself. A bankrupt estate has claims against another bankrupt estate. Thus, the trust company claims against the trust company. Such a situation is intolerable.

Lawyers are not permitted to solicit claims to elect a trustee, but the referee, a judicial officer, under a local court rule is required to send out with his notice for the first meeting of the creditors a printed blank of proof of debt and power of attorney to be executed by the creditors, authorizing the referee to vote for the Irving Trust Co. Thus, in the southern district, the referees have practically a proxy vote for the Irving Trust Co. as trustee. It has always been deemed unethical for a receiver to solicit the appointment of himself as a trustee. Evidently there is a double standard.

One of the principal justifications advanced by local judges for granting a monopoly of receiverships in equity and bankruptcy to the Irving Trust Co. is the argument that it relieves the judges of solicitation by attorneys seeking their own appointment in these cases. I have a great respect for these judges, but their position in this regard is untenable. The bankruptcy law was not enacted for the convenience of these judges nor for their peace of mind. They should have been able to steel themselves against such importunities of friends and lawyers and have rendered themselves impervious to these demands. The bankruptcy statute as written does not permit the action taken by these judges. The present statute provides for creditor control over bankrupt estates, but no creditors can elect their own trustee. They must accept the Irving Trust Co. The referee, with his proxy, sees to that.

The judges have complained that they were tired of political patronage in these appointments, but note what has happened now! There has been set up another kind of patronage—that of the Irving Trust Co. It is now receiver in over 5,000 cases. Under the instant act it becomes receiver, or trustee, in 5,000 more cases. It controls the appointment of thousands and thousands of employees. A trust company in these days might well "stick to its knitting." It is certainly not the business of a trust company to operate railways, manufacture shoes, run retail cigar stores or haberdasheries, or fabricate matches. This company now concerns itself as receiver in practically all lines of industry, most of which are quite unrelated to sound banking and the management of trusts.

It is only human, too, that the officers of the Irving Trust Co. in charge of these matters should favor in their appointments those lawyers who directly or indirectly encourage deposits or trust business with the bank. This is certain, appointments are not made exclusively upon merit or efficiency.

The practice which results in the Irving Trust Co. being appointed as sole receiver has been condemned in no uncertain terms by the New York State Bar Association, the Brooklyn Bar Association, the Westchester County Bar Association, the Richmond Bar Association, the Nassau County Bar, the New York County Lawyers' Association, the Federal Bar Associations of New York, New Jersey, and Connecticut as well as other bar associations.

Hon. Martin T. Manton, presiding judge of the United States circuit court of appeals, recently expressed dissatisfaction with the current practice of appointing the Irving Trust Co. in all bankruptcy cases. He said:

> All integrity, honesty, and understanding have not left the bar just because of the so-called bankruptcy scandal. Lawyers give to bankruptcy cases their individual, personal attention—their humane consideration. They are efficient and competent and, I believe, can handle the exigencies of bankruptcy situations more satisfactorily than a banking corporation.

Judge Manton is a painstaking jurist and speaks out of a richness of experience and knowledge.

I herewith submit a copy of a resolution of the New York County Lawyers' Association, one of the largest bar associations in the country:

> Whereas the judges of the United States District Court for the Southern District of New York in January, 1929, inaugurated the practice of appointing a banking corporation, namely, the Irving Trust Co., as receiver in bankruptcy cases and equity proceedings, and subsequently adopted rules designating that corporation as the standing receiver in bankruptcy; and
>
> Whereas the New York County Lawyers' Association believes that a corporation, which is an inanimate, artificial, and fictitious entity, without soul or conscience, is not an appropriate medium as the arm and conscience of the court for such appointment or to act in any capacity as an "officer of the court"; and
>
> Whereas this association believes that only natural persons, such as business men, lawyers, and other properly qualified individuals, should be intrusted with such functions; and
>
> Whereas this association believes that there are numerous honest, competent, and conscientious business men, lawyers, and other persons who will be willing, ready, and able to act honestly and efficiently as receiver under appropriate bond, if appointed by the said United States district court judges; and
>
> Whereas a careful examination and analysis of the report filed by the Irving Trust Co., dated November 30, 1932, shows this bank to be of no practical advantage to creditors over the administration by the creditors themselves under the bankruptcy law and no improvement for the public interest; and
>
> Whereas this association believes that the practice of appointing one corporation (or any corporation in the place of natural persons) as receiver and trustee in equity and in bankruptcy is unfortunate and results in monopolistic power and in direct control over the bar by a corporation, as well as over business, and should once and for all be wiped out and abolished; and
>
> Whereas this association believes that a monopoly of any nature or character is wholly contrary to the best interests of this community and is abhorrent to the spirit of Anglo-Saxon institutions as well as intolerant to the genius and intent of the common law: Now be it
>
> *Resolved*, That the New York County Lawyers' Association, in this special meeting assembled, disapproves the practice and rules adopted by the judges of the United States District Court for the Southern District of New York under which Irving Trust Co., a corporation, has been designated as standing receiver in bankruptcy and urges the abolition of said rules and practice as well as the practice of appointing corporations as receivers and trustees in United States courts.

Mr. BACHMANN. Mr. Speaker, I yield five minutes to the gentleman from Virginia [Mr. LANKFORD].

Mr. LANKFORD of Virginia. Mr. Speaker, I want to say that I have great respect for the chairman of the committee. I know that he is sincerely trying to help the debtor class, but I do not believe that he has given the consideration to this bill that he ordinarily does to most important measures of this kind.

When I came into the Chamber this morning, I had a conversation with one of the most distinguished lawyers in the country, and he said, "As I read this bill, my mind is one dark spot."

That is the case with me—that is the way it impresses me. I do not know all that is in the bill, but I do know that it breaks down the rules of bankruptcy established after many years and perfected by judicial decisions. If I vote for the bill, I do not know what effect it will have.

If you want to declare a moratorium, let us be fair and honest—let us declare a moratorium. I am prepared to vote for that to give temporary relief to all oppressed debtors, but I do not want to give them what is provided for here; I do not want to break down the precedents of the bankrupt law established for many years.

I believe the bill is unconstitutional.

Take the provision for debtors going into court, who have not secured the consent of the requisite number of creditors. You will have one court in Virginia giving relief under a certain state of facts and a court in West Virginia denying relief under the same state of facts. You might have the same court decide one way to-day and another way to-morrow. You would have no uniformity.

Mr. LAGUARDIA. Is not that true with the administration or enforcement of any law when you go to district judges? It is the uniformity of the law that we want.

Mr. LANKFORD of Virginia. There is no uniformity when you allow a judge presiding to decide the rights of creditors one way and on the same state of facts another judge decides the rights of other creditors another way. Section 8 of the Constitution only gives Congress the right to pass "uniform laws on the subject of bankruptcies." There is no gauge or yardstick to guide the judiciary in uniform decisions.

I think the bill has not been given sufficient consideration. It provides that a referee shall be appointed for every county. In Virginia we have a hundred counties, and if the judge appoints a referee in every county you will have an army of referees, many of them unprepared and not qualified to act. We have referees in most sections at the nearest town and it is a convenience for the farmers to go to these towns or cities where they transact their business; although it may not be in the farmer's own county, most of his creditors are located there. The bill limits the referee to a $10 fee. Do you think you could get competent referees to travel from place to place, take several days, perhaps, to hear these composition cases, and then make his report to the judge, for $10. This bill will break down the efficient referee system which is generally satisfactory in most sections of the country.

Mr. Speaker, I want to say that as much as I would like to go along with the committee, I can not get the consent of my mind to vote blindly for this bill, as indefinite, as uncertain, as destructive to the credit and finance of our country as this bill is. [Applause.]

It no doubt has some merit, especially the railroad portion of it, and if allowed to consider it maturely, and to offer certain essential amendments, I could possibly go along with the committee, but not in its present shape.

Mr. SUMNERS of Texas. Mr. Speaker, I yield 10 minutes to the gentleman from New York [Mr. LAGUARDIA].

Mr. LAGUARDIA. Mr. Speaker, I shall limit myself to a statement of the railroad organization provisions of the bill.

In the first place, railroads are now exempted from the provisions of the bankruptcy law. When a railroad now gets into financial difficulty a creditor applies for an equity receivership. We have had very sad experience with equity receiverships of railroads. If my colleagues will recall the history of railroad finance in this country, they will remember that there is not a railroad in this country to-day that provides a sinking fund for its bonded indebtedness. From the very beginning of railroads there had been no provisions made for depreciation and obsolescence up to the time that the interstate commerce act was enacted by Congress. The whole history of railroad financing is the most sordid, disgraceful page in the history of American industry.

If our railroad magnates were as anxious to move trains as they were to move the stock ticker the railroads would not find themselves in their present plight. From the day Daniel Drew, the drover, sold Jacob Astor, the butcher, a herd of bloated cattle, the peddling of "watered stock" has never ceased. It is strange that both the herder and the butcher were shortly thereafter to become financiers and both active in the manipulation of railroad securities. From that day the unsuspecting public looking for railroad investment has been duped. From that time the friendship and aid of political bosses have been sought and found useful to railroad financiers. That era is about to end. Railroads have been bled white. Shippers have been exploited and equipment run down and become obsolete. A new deal is absolutely necessary. This bill is but one of the preliminary steps to a complete change in railroad financing, management, and control.

The purpose of this bill is to provide, first, that railroads may avail themselves of the provisions of the bankruptcy act, for the purpose of reorganization. So that the first fundamental change is that the railroad itself can petition the court for a reorganization. The reason that we must provide for a reorganization rather than treat the railroads as an ordinary bankrupt is that a railroad is vested with a public duty, a public necessity. Railroads can not be permitted to liquidate according to the fundamental principle involved in bankruptcy. So that as I have stated the railroad itself may go in and petition for reorganization. If the railroad fails to do it and is insolvent or financially embarrassed, then, rather than that a favored creditor or a committee controlled by a bank come in and seek to control the reorganization of that railroad, 25 per cent of any class of creditors may petition the court and submit a reorganization plan.

There has been some confusion in the minds of Members who have spoken to me in not distinguishing between bondholders and stockholders and between unsecured creditors and bondholders. When we talk about secured creditors of railroads, we refer principally to bondholders, because as you all know, supplies and material and labor necessary for the operation of the railroad have priority for a period of six months.

The next thing we did in this bill which is innovation is to bring complete control or, as the Solicitor General says, "giving broad powers to the Interstate Commerce Commission in the initiation, formulation, and approval of the reorganization plan." We do just that. I do not mean to say that such broad powers to the commission meets with the personal approval of the present Solicitor General. It does not. Gentlemen will recall the message of the President of the United States only a few days ago, on January 11, in which he said that the provisions dealing with corporate reorganization should be applicable to railroads, and in such cases the "plan of reorganization should not become effective until it has been approved by the Interstate Commerce Commission." The purpose of this bill is to make that approval effective. It is to make that approval what it is intended it should be, a complete supervision and control of every detail and factor of a reorganization plan. It would be futile to give perfunctory power of approval to the Interstate Commerce Commission if the power were to be left in the court to start hearings de novo and pass upon an entirely different plan. Gentlemen, from the experience of the past we find that legislation of this kind is necessary and at this particular time urgent. An illustration of a case typical of the present unsatisfactory condition of railroad reorganizations may be found in the case of the United States v. Chicago, Milwaukee, St. Paul & Pacific Railroad (282 U. S. 311). In that case the Interstate Commerce Commission, acting under section 20 (a) of the interstate commerce act, sought to prevent the company and stockholders being saddled with exorbitant and unreasonable expenses in the shape of fees and compensation and commissions and charges.

Briefly, out of the assessment, a sum of $4 on each share of stock was set aside to create a reorganization fund. The $4 fund set apart for expenses approximated $9,330,000, of which another fund of $1.50 a share was a part, aggregating about $3,500,000, out of which were to be paid the reorganization managers, various protective committees, counsel, and depositaries. The estimated expenses to be paid from this fund ranged from $2,636,000 to $3,381,000, of which the compensation to be paid to the reorganization managers was $1,044,000.

The commission did not approve of this plan. It found the charges unreasonable and modified the plan to the extent of disapproving of the $1.50 fund and the exorbitant fees and compensation to be paid therefrom. An appeal was taken from the findings and order of the Interstate Commerce Commission and the court set aside the commission's findings and enjoined its enforcement. An appeal was taken to the Supreme Court which affirmed the court below. There is a strong dissenting opinion in this case by Mr. Jus-

tice Stone, in which Mr. Justice Holmes and Mr. Justice Brandeis concur. I shall quote from the dissenting opinion in the course of my remarks. To be perfectly frank, this bill now writes into the statute the law as construed by the dissenting opinion in this case.

The Interstate Commerce Commission at that time acted under authority of section 20 (a) of the transportation act. The majority opinion in the Chicago, Milwaukee, St. Paul & Pacific case emasculates, distorts, and weakens the expressed and clear intent of section 20 (a) of the transportation act. This bill corrects that error and not only restates the original intent and reconfers the originally intended powers, latitude, and discretion, but also adds to the scope, powers, and discretion in repeated provisions that no court, no matter how partial or prejudiced, can honestly escape the duty of properly construing and interpreting the intent of Congress.

The majority opinion in that case simply favored the money mongers; it placed private commissions and fees above public interest.

What do we find? We find that, although section 20 (a) of the transportation act gave the power, and the commission exercised it, the court nullified the commission's action and substituted a plan in full which the commission had disapproved, as stated by Mr. Justice Stone:

> The judgment below, as interpreted by this court, not only makes effective an order different from any the commission has granted but precludes any future action by the commission in the performance of its statutory duty. In this respect the case differs from those in which this court has set aside an unconstitutional condition imposed by State legislation on a foreign corporation seeking to do business within a State. In those cases the judgment of this court in no way restricts the further exercise of the legislative power of the State in any constitutional manner. Here the commission is ousted from the exercise of power which Congress has given it, and an order is sanctioned authorizing an issue of securities which it can not be said the commission has approved, and which this court does not purport to say is appropriate under the statute.

It is to overcome such a condition that we have written into this bill, as I said before, the powers of initiation, formulation, and approval of the plan, and outlined the procedure in such way as to make clear that the judgment and the decision of the Interstate Commerce Commission must prevail. Such powers in no way exceed the power that may properly be given to the Interstate Commerce Commission, as laid down in the case of Interstate Commerce Commission *v.* Union Pacific R. R. (222 U. S. 541). The court there held:

> There has been no attempt to make an exhaustive statement of the principle involved, but in cases thus far decided, it has been settled that the orders of the commission are final unless (1) beyond the power which it would constitutionally exercise; or (2) beyond its statutory power; or (3) based upon a mistake of law.

Naturally, we could not give the commission powers which it could not constitutionally exercise. It is not intended that mistakes of law should not be rectified. But the purpose of the bill is to convey such broad statutory powers to the commission as to give it from the very beginning to the end, complete supervision and control and decision of railroad reorganization.

The next thing the bill does is to take away from bankers the complete power of reorganization. Minority security holders and junior lienors and often stockholders have absolutely no say in the reorganization when it is under the control of these railroad bankers. The equities of all are protected in this bill. Of course, if there is no equity left in a class of security we can not provide it by legislation. Under this bill 25 per cent of the stockholders may present a petition. If the railroad is found to be insolvent, and that is a judicial function, then stockholders are wiped out, and that can not be prevented. If there is nothing back of the stock, naturally there is nothing that we can do in the way of giving value to such worthless stock.

The commission after the petition is approved by the court then holds a hearing under subdivision (d) of this bill, and the plan of reorganization of the railroad may be considered, the plan of reorganization of the creditors may be considered, and after the commission approves of a plan, which may be either of the plans submitted or which may be a modification of any of the plans submitted or which may be an entirely new plan of the commission, then it is submitted back to the creditors for their acceptance. If two-thirds of any class of creditors accept it, it becomes binding upon that class of creditors.

Minority creditors of any class are fully protected in that three alternative methods in the case of stockholders and four alternative methods in the case of other creditors (bondholders) fixing and protecting their equities are provided.

After the plan is accepted it comes back to the commission for its final approval. It is right here where the conflict between the two methods of reorganization comes in, and it is from this point on that there is opposition to this bill. I predict that the opposition will be greatly intensified before this bill finally passes both Houses of Congress. The purpose of leaving the acceptance of a plan until after a plan has been formulated by the commission is to prevent bondholders, creditors, stockholders, from being bound before they know just what the plan will be or what it may do to their interests. It takes from these bank organizers the whip hand and makes their absolute control of railroad reorganization impossible. Then when the accepted plan is before the commission it gives it its final approval and grants the authority necessary for the issuance of new securities under section 20 (a) of the transportation act. The plan now goes to the court for final approval, but this approval is on the record of the case as submitted by the commission to the court. The court can not commence hearings de novo, it can not modify the plan, it can not substitute its plan for the one approved by the commission. If the court disapproves the plan it must file its reasons for so doing. It will be seen that in this way the rights of all concerned are fully protected, as an appeal may be taken from such an order as is now possible under existing law. In this way the bill fully corrects all of the evils created by the decision in the Chicago, Milwaukee, St. Paul & Pacific Railroad case.

Perhaps it will be easier to understand the purpose of the bill and the procedure if I recite each successive step to be taken in the course of a railroad reorganization:

I. Filing of petition:
  a. Who may file petition?
    1. Corporation, with approval of commission.
    2. Creditors holding 25 per cent in amount of any class and 10 per cent in amount of all creditors, with approval of commission.
  b. What must petition state?
    1. Corporation is insolvent; or
    2. Corporation is unable to meet debts as they mature.
  c. Where must petition be filed?
    1. Federal courts after obtaining the approval of the Interstate Commerce Commission.
      (a) District courts
      (b) Supreme Court of the District of Columbia.
      (c) United States court of Alaska.
    2. In district where corporation has had its principal executive or operating office for preceding six months, or greater portion thereof.

II. First step after filing of petition:
  a. Petition filed by corporation—
    1. Court approves petition as properly filed—
      (a) If it complies with act.
      (b) If filed in good faith.
    2. Otherwise court may dismiss petition.
    3. If approved, court takes jurisdiction of all property.

II. First step after filing of petition—Continued.
b. Petition filed by creditors—
1. Serve copy immediately upon corporation.
2. Corporation must answer within 10 days; admit or deny—
(a) Jurisdiction of court;
(b) Claims of creditors entitle them to file;
(c) Insolvency; or
(d) Inability to meet debts as mature.
3. If admit these, court approves petition as properly filed.
4. If deny these, court shall immediately try issues and approve or dismiss.
c. Court temporarily appoints trustee or trustees but can only appoint such persons recommended by the Interstate Commerce Commission.
d. Court makes permanent appointment of trustee or trustees but only such persons as are recommended by the Interstate Commerce Commission—
1. Stockholders and creditors to be heard on appointment.
e. Powers of court—
1. With approval of Interstate Commerce Commission authorize trustee to issue certificates for cash—
(a) Which might in an equity receivership proceeding be lawful.
2. Require debtor to file schedules and submit information—
(a) To disclose conduct of debtor's affairs and fairness of any proposed plan.
3. Determine reasonable time for filing, manner of evidencing, and division into classes of claims and interest—
(a) Of stockholders and creditors.
(b) After time limit no claim or interest may participate.
4. Give reasonable notice (by publication or otherwise)—
(a) Of such determination.
(b) Of dismissal of proceedings.
(c) Of allowance of fees or expenses (but first approved by Interstate Commerce Commission).
5. Determine reasonable time for proposing and confirming plan—
(a) May dismiss proceeding if plan not proposed or confirmed within such time.
6. May refer matters to one or more of six special referees—
(a) Referees to be appointed by President, with advice and consent of Senate.
(b) Referees to sit in Washington unless otherwise directed by court.
(c) Referees to receive compensation allowed by court, with approval of Interstate Commerce Commission, and expenses.
7. May permit intervention by creditors or stockholders on questions other than appointment of trustee and confirmation of plan.
8. Shall hear creditors and stockholders on question of approval of plan.

II. First step after filing of petition—Continued.
f. Duties of trustee—
1. Prepare list of all known bondholders, creditors of and claimants against debtor, showing—
(a) Amounts of debts or claims.
(b) Character of debts or claims.
(c) Last known address of creditor or claimant.
2. Prepare list of stockholders with last known address.
III. Proposal of plan of reorganization:
a. Proposals to be filed with Interstate Commerce Commission.
b. Who may propose plans—
1. Debtor.
2. Creditors (25 per cent of any class and 10 per cent of all).
c. Interstate Commerce Commission to hold hearings on plans proposed.
d. Interstate Commerce Commission to issue report approving a plan—
1. Approved plan may be one of those proposed by debtor or creditors.
2. May be different from any of such proposals.
e. Interstate Commerce Commission report to find, respecting plan approved, with reasons—
1. That plan will be equitable.
2. Will not discriminate in favor of any class of creditors or stockholders.
3. Will be financially advisable.
4. Will be compatible with public interest.
f. Interstate Commerce Commission report may be modified by it for good cause shown.
g. Interstate Commerce Commission plan to be submitted to stockholders and creditors for acceptance or rejection.
IV. Acceptance of plan by stockholders and creditors:
a. Acceptance to be filed in writing in proceeding before Interstate Commerce Commission.
b. Who must accept before plan can be confirmed?
1. Creditors holding two-thirds in amount of claims of each class whose claims or interests have been allowed and would be affected by the plan.
2. Stockholders (unless judge finds debtor insolvent) holding two-thirds of the stock of each class.
c. Stockholders and creditors not required to accept plan—
1. Stockholders (less than two-thirds) who dissent, provided—
(a) Plan provides adequate protection for the realization by them of the value of their equity, if any, in the property—
(1) By sale of property at not less than fair upset price.
(2) By appraisal and payment in cash of value of stock held.
(3) (At stockholder's election.) By appraisal and payment in cash of value of securities allotted to such stock under plan.
2. Creditors not accepting plan, provided—
(a) Plan provided adequate protection for the realization by them of the value of their liens on or claims against the property—

IV. Acceptance of plan by stockholders and creditors—Con.
c. Stockholders and creditors not required to accept plan—Continued.
2. Creditors not accepting plan, provided—Continued.
(1) By the sale of property subject to such liens or claims;
(2) By sale of property free of such liens or claims at not less than fair upset price and transfer of such liens or claims to proceeds of sale;
(3) By appraisal and payment in cash of value of such liens and claims; or
(4) (At creditor's election.) Appraisal and payment in cash of value of securities allotted by plan to such liens and claims.

V. After acceptance of plan:
a. Interstate Commerce Commission reopens its proceeding to consider accepted plan.
b. Interstate Commerce Commission transmits accepted and approved plan, findings, and record to the court if it finds—
1. The plan is equitable and does not discriminate unfairly in favor of any class of creditors or stockholders.
2. All amounts to be paid by debtor or its successor for services or expenses incident to reorganization have been fully disclosed and are reasonable.
3. Offer of plan and its acceptance are in good faith and have not been procured by illegal means.
4. Plan provides for payment of all costs of administration and other allowances made by court.
5. Plan provides reasonable and adequate protection to creditors and stockholders not accepting it.
6. Debtor or successor is authorized by charter and should be granted authority to issue necessary securities; and
7. In respect of financial advisability and otherwise the plan is compatible with public interest.
c. Interstate Commerce Commission grants to debtor authority—
1. To issue securities or assume obligations under plan.
2. To transfer property in accordance with plan.
3. To merge debtor property if contemplated by plan.
d. Interstate Commerce Commission fixes compensation to be paid for service and reimbursement for actual expenses incurred in proceeding and plan—
1. To reorganization managers.
2. To special referees.
3. Trustees.
4. Officers.
5. Parties in interest.
6. Committees of stockholders and creditors.
7. Representatives of stockholders and creditors.
e. Court approves plan for record.

VI. After confirmation:
a. Plan is to be binding upon—
1. The corporation.
2. All stockholders thereof.
3. All creditors whose claims are payable in cash thereunder.
4. All creditors who would be entitled to priority if a petition for a Federal receiver instead of a petition under this act had been filed, whose claims are not payable in cash, provided two-thirds in amount have accepted the plan.
5. All unsecured creditors, provided two-thirds in amount have accepted the plan.
6. All secured creditors of each class of which two-thirds in amount have accepted the plan.
b. Confirmation shall discharge debtor from debts, except as otherwise provided by plan.
c. Property to be transferred by trustee to debtor or new corporation free of debts, except as to those reserved.
d. Certified copy of order approving plan shall be evidence—
1. Of the jurisdiction of the court.
2. The regularity of the proceedings.
3. The fact that the order was made.
e. Certified copy of order directing transfer of property shall be evidence—
1. Of the transfer of the title.
2. If recorded, shall impart same notice as recorded deed.

It will now be seen that every creditor has the opportunity of a hearing and can withhold his acceptance until such time as a complete plan is submitted for his decision. Every creditor has the opportunity of joining with any of the various plans that may be submitted for consideration. Heretofore all of this planning and reorganization was under the control of bankers. What little authority might have been vested in the Interstate Commerce Commission was practically removed by the decision in the Chicago, Milwaukee, St. Paul & Pacific Railroad case. Lest it may be said that I am unduly stressing what a good thing the present system of railroad reorganization has been for the bankers and what a bad thing for the creditors and the public, I shall in a moment quote from the dissenting opinion in this case. There is no reason why existing practices should not be changed. As a matter of public policy, Congress must act and take from a small group of bankers the power they now have over railroads and railroad reorganization, save whatever may be salvaged from the railroads, protect the remaining equities of investors, and protect the public interest.

We do not in any way violate any of the fundamental provisions as to property rights; but we do correct the evil which was created in the case laid down in the Chicago, Milwaukee, St. Paul & Pacific Railroad. We do that in keeping with the best thought in this country as to railroad securities. The savings banks of this country who own a large amount of railroad bonds are in favor of this bill. Of course, there is opposition. There are some interests opposed to the bill. Kuhn-Loeb & Co. are against it. J. P. Morgan & Co. are against this bill. Why? Because, as I have stated, they have practically had a monopoly on railroad reorganizations. Some of the provisions contained in the suggestions of the Solicitor General are known as the Swaine plan; the same Mr. Robert S. Swaine who appeared as counsel for the reorganization committee in the Chicago, Milwaukee, St. Paul & Pacific case. In the Chicago, Milwaukee, St. Paul & Pacific case, who benefited? Not the bondholders, not the stockholders, not the public, not the railroads, but some money mongers and some financial procurers and some lawyers in my city, to the tune of several million dollars.

What we have done is to provide an efficient, economical, and expeditious manner of reorganization. Ancillary receiverships are abolished. The bill provides for a trustee; not a political trustee, not a golf trustee of the judge, but a trustee recommended by the Interstate Commerce Commission. It provides for special referees; not local referees but six or more referees to be appointed by the President of the United States and confirmed by the United States Senate.

That is the reason that the bill provides complete supervision and control by the Interstate Commerce Commission of all expenses in connection with the reorganization of a railroad. It will be seen that even the fees and allowances of temporary trustees and permanent trustees are subject to the approval of the Interstate Commerce Commission. The compensation, commissions, and fees of reorganization committees and fees for lawyers and attorneys are all made part of the reorganization expense and subject to the approval of the Interstate Commerce Commission. In this way we have carried out, I believe in every detail, the enlightened, sound, and constructive suggestions contained in the dissenting opinion of Mr. Justice Stone in the Chicago, Milwaukee case from which I read:

The preservation of the transportation system and the stability of its credit essential to its preservation depend not alone upon the ability of individual carriers to meet their obligations, but upon the ability of all to attract the investment of funds in their securities. If such investments are impaired by receiverships of the carriers, followed by reorganizations of excessive cost, and if railroad shareholders, compelled by the necessities of their situation, must contribute to the rehabilitation of their properties excessive amounts upon which the reorganized carrier may not earn an adequate return, railroad credit in a broad sense is affected, the permanency and stability of the transportation system as a whole is impaired, and the public interest suffers. No one familiar with the financial and corporate history of this country could say, I think, that railroad credit and the marketability of railroad securities have not been profoundly affected, for long periods of time, if not continuously, by the numerous railroad reorganizations, in the course of which junior security holders have found it impossible to save more than a remnant of their investment, and that only by the assumption of a heavy burden of expense, too often the result of wasteful and extravagant methods of reorganization.

The public likewise has an interest in the costs of reorganization in so far as they may affect rates and the application of the recapture provision of the transportation act. Such costs may play an important part in the going-concern value of the new company, which is an element of value for rate-making purposes. See Des Moines Gas Co. *v.* Des Moines (238 U. S. 153, 165); Denver *v.* Denver Union Water Co. (246 U. S. 178, 184, 192); Bluefield Co. *v.* Public Service Commission (262 U. S. 679, 686); McCardle *v.* Indianapolis Water Co. (272 U. S. 400, 414). In United Railways *v.* West (280 U. S. 234), a substantial amount was included in the rate base to cover "cost of financing." The mere fact that going-concern value is supplied from sources other than the treasury of the carrier, here the stockholders of the old company who became stockholders of the new, is not material. See United Railways *v.* West, supra. The commission is specially charged with public duties with respect to rates, valuation, and the administration of the recapture provisions. In all these respects the public interest may be adversely affected if railroad securities may be issued to effect, either directly or indirectly, the payment of excessive costs of reorganization.

The financing of a railroad—the issuance of securities by it; the cost of financing and refinancing the cost; expenses, commissions, underwriting of organization of railroads—are all part of that railroad; they are just as essential as roadbeds or car tracks. They are all part of the railroad and so inseparably related and so interwoven as not to be susceptible of separation under the constitutional grant of authority to regulate interstate commerce.

Congress intended and now intends in giving the Interstate Commerce Commission authority to authorize or forbid the issuance of railroad securities real, actual, and effective supervision and jurisdiction of such securities; that authority naturally means not a perfunctory administrative duty, not a supervision of the designs and print of the paper certificates, but complete, thorough, and real supervision and control of all such securities in every financial detail.

Persons investing their money in railroads do so with the full knowledge of the nature of the enterprise—that it is a public necessity and under complete regulation of governmental agencies. The restrictions, limitations, and regulations placed on such enterprises can not and never have been detrimental to the bona fide investor. The trouble is that it is not the investor, but the promoters, money mongers, bankers, shysters, and stock speculators who seek to break down proper supervision of railroads and their securities. It is these gentry that profited by the decision in the Chicago, Milwaukee, St. Paul & Pacific Railroad case (supra), not the investor or the railroads.

Lest there be the slightest doubt as to the wide power and control the new section 76 intends to grant to the Interstate Commerce Commission over railroad reorganization, I will say that it is the intent of the drafters of this section—which was taken from my bills H. R. 13958 and H. R. 14110—and I know the intent of the majority of the Committee on the Judiciary and the House to give the Interstate Commerce Commission broad and complete powers in the initiation, formulation, and approval of any plan for the reorganization of a railroad engaged in interstate commerce—this in addition to correcting the law established in the Chicago, Milwaukee, St. Paul & Pacific Railroad case, as I have repeatedly stated. In other words, we sought and intended to reestablish the law as stated by Justice Stone in the dissenting opinion of that case as concurred in by Justices Holmes and Brandeis.

Labor is fully protected by the specific provision that nothing in the bill shall be construed as in any way amending or altering the provisions of the railway labor act. It was thought necessary to put this provision in because in some instances equity receivers have disregarded the provisions of the railway labor act and have arbitrarily reduced the wage scale. The provision to which I have just referred makes it clear that this can not be done in the future. Even though a railroad is under a trustee, all provisions of the railway labor act are not only applicable to the trustee operating the road temporarily but are binding on the court and the Interstate Commerce Commission.

Here is a constructive bill. It does not go as far as I would like to go. It does not go as far as some of my progressive friends would like to go, but it is the best bill we could get out of the committee at this time. Personally, I agree that the Interstate Commerce Commission should have as full and complete control over insolvent railroads as the Comptroller of the Currency has over insolvent national banks. At the present time the Interstate Commerce Commission is not equipped with the personnel that would be required to take over such duties. I believe that competent and experienced men could be found, but that would necessitate the creation of a new division in the commission and authority from Congress to employ the necessary personnel. Congress is in no temper at this time to create any new departments or divisions and certainly not to create any new jobs. That was a situation I could not ignore. Eventually it will have to be done. The cost of such a division could well be taxed as part of the operating costs of a railroad under such control and operation. But even so, money would have to be appropriated for the current pay and expense of these additional officials. I must say that some of the critics of the bill overlook the fact that it provides fundamental changes and that it takes the initiation and formulation of reorganization plans away—or at least it takes complete control away—from bankers' reorganization committees.

The statement was made that the Committee on Interstate and Foreign Commerce knew nothing about this. I was in constant conference with the distinguished gentleman from Texas [Mr. RAYBURN], chairman of that committee. The Committee on Interstate and Foreign Commerce held an informal hearing. The matter was before the Committee on the Judiciary, because it comes under the jurisdiction of that committee, as it is an amendment to the bankruptcy law. It is easy for any lawyer to take his pencil and write an amendment in a bill of this kind, but to take a bill as technical as a railroad reorganization bill, with its ramifications and far-reaching effects, and seek to amend it by 300 lawyers on the floor of this House, I say, is trying to repair a watch with a sledge hammer. We have worked hard on this bill. We have conferred with the Interstate Commerce

Commission constantly. We have conferred with the president and officials of the Reconstruction Finance Corporation. We have spent hours and hours in the Committee on the Judiciary, and we present what we believe in our judgment to be the best available bill to meet the situation at this time. [Applause.]

Mr. DYER. Mr. Speaker, I yield five minutes to the gentleman from Michigan [Mr. MICHENER].

Mr. MICHENER. Mr. Speaker, this bill is in no sense a general revision of the bankruptcy law. It does repeal sections 12 and 13 of the bankruptcy law, which deal exclusively with compositions under existing law, but at that no rights under existing law are taken away, but are amplified.

In short, a new chapter is added to the bankruptcy law liberalizing the law in behalf of debtors. If this bill becomes a law it will materially affect the creditor class, and especially the secured creditor. The prime purpose is to compel the creditor who refuses to compromise his claim, to accept the judgment of a majority of the creditors in numbers and amount as to that which is feasible under all the circumstances so far as the debtor's assets and his ability to pay are concerned. Thus far little objection can be raised to the bill. However, subsection (e), clause (2) goes farther than anything heretofore contemplated in the law, and permits the court to control compromises or extensions, regardless of the contractual rights of secured creditors. Provided only, that the court finds the action decided upon to be equitable and feasible for the financial rehabilitation of the debtor and for the best interests of the creditors, and that the extension or composition shall not impair the lien of any secured creditor but shall affect only the time and method of its liquidation. There are those among us who doubt the power of the court, under the Constitution, to take away from the secured creditor his right to enforce his lien in accordance with the stipulated contract. Of course, under this proposal the lien is not destroyed, but in many cases the only value of the lien is the right vested in the secured creditor to enforce the lien according to the terms of the contract. A delay may possibly, and in many cases will, impair the contract which the parties have solemnly entered into.

I realize that the courts have already gone a long way in permitting the Federal court to take jurisdiction over all of the property of the debtor, even to delaying the enforcement of liens in forums other than the bankruptcy court having jurisdiction, but it must be remembered that in those cases which have been cited to-day the court acted upon the principle that it was engaged in the orderly liquidation of the debtor's property, with the right to enforce the rights of the secured creditors. The very purpose of the contemplated procedure is to avoid liquidation, and it is at least very doubtful, if the court will ever go so far, under the bankruptcy clause of the Constitution, as to hold at bay indefinitely the right of a secured creditor to take advantage of his contract, in the presumption that the debtor might, if given an extension, some way, somehow, at some time in the future, be able to make the lien as valuable to the creditor as it was when the extension was granted. This is substituting the guess of the court for the written agreement of the parties. I realize that there is a distinction between destroying a lien and modifying the procedure by which a lien is made effective.

Time prevents further discussion of this matter. Suffice it to say that, in my opinion, this subdivision should be stricken from the bill, if constitutional barriers are to be avoided.

The Constitution provides that the Congress shall have power to establish uniform laws on the subject of bankruptcy throughout the United States, and inasmuch as the very purpose of this legislation is not liquidation, but the reverse, there are many who doubt the authority of Congress to pass legislation of this nature. The courts in the past have gone a long way in using the terms "bankruptcy" and "insolvency" interchangeably, and only a modern decision of the Supreme Court can settle this question, and in view of the present status of the law in this respect, and the exigencies of the times, it would seem advisable that an opportunity be given to the court to clarify the law in this regard.

This bill will add a new chapter to the present bankruptcy law entitled "Provisions for the Relief of Debtors." The extensions consist of section 74, dealing with individual debtors; section 75, dealing with corporate reorganization; and section 76, providing for the reorganization of railroads engaged in interstate commerce.

The gentleman from New York [Mr. LAGUARDIA], who has just preceded me, has discussed only the railroad section of the bill. He is the only man on the committee who is entirely familiar with this section. It expresses in general his economic views in reference to railroad reorganization. In fact I think he would go much farther than the bill under consideration, and lodge more authority, if possible, in the Interstate Commerce Commission, thus taking away from the courts the equity power which has heretofore been exercised by the courts and which, in the view of many, is judicial and therefore inherent in the court.

The bill utilizes the Interstate Commerce Commission to the limit in the reorganization of the railroads, and I believe that this should be done, yet I am not in harmony with all of the provisions of the railroad section, and hope that amendments will be made to the bill before it becomes a law.

There has been much discussion among the members as to the genesis of this bill. In the last session a bill providing for a general revision of the bankruptcy law was introduced in the House and in the Senate. Senator HASTINGS introduced the bill in the Senate and I introduced the same bill in the House. The bill was prepared in the Department of Justice. In that bill was a provision providing for corporate reorganization. It was found that the general subject was so controversial that it would be impossible of consideration in the House in the immediate future, and the Department of Justice extracted the section providing for corporate reorganization and prepared a bill which was introduced by Senator HASTINGS. Extensive hearings were held by a joint committee of the House and Senate on the general revision of the bankruptcy law, including the corporate reorganization section. The gentleman from New York [Mr. LAGUARDIA], then took the corporate reorganization bill as introduced by Senator HASTINGS and superimposed upon it his bill. The gentleman from Oklahoma [Mr. MCKEOWN], took the same bill and superimposed upon it his views with reference to insolvent debtors and insolvent corporations other than railroads.

It will be observed that section 75, providing for corporate reorganization, and section 76, providing for reorganization of railroads engaged in interstate commerce, follow the same general lines. After consideration in executive session by the Judiciary Committee, the McKeown bill and the LaGuardia bill were included in one bill and reintroduced by Chairman SUMNERS. Right here permit me to say that section 74 would not be a part of this bill were it not for the insistence and tenacity of the gentleman from Oklahoma [Mr. MCKEOWN], who had definite ideas in reference to extensions to be given to individual debtors.

As I said earlier in the day, this is possibly the most important bill that will come before this Congress. If it becomes a law, it will undoubtedly bring into the Federal courts thousands of cases, for as a practical matter most debtors unable for the moment to meet their obligations will seek the aid of the bankruptcy court, in the hope that some plan of rehabilitation might be worked out by the court and thus bankruptcy and liquidation of assets avoided. Reorganization of the railroads and corporations will involve not only millions but billions of dollars. Revaluation of securities and properties will be dealt with, and the whole financial structure of many industries and institutions will be affected, and it therefore seems unthinkable that this important bill should be brought before the Congress by those in control of the organization of the House, with only the privilege on the part of the House to discuss the matter for two hours. Then to be compelled to vote "yes" or "no" without any possibility of amendment, especially so inas-

much as the parties who will be affected were not permitted to be heard before the Judiciary Committee of the House reporting the bill. We, however, who are opposed to this procedure are confronted with the condition that an emergency confronts the country. Something, if possible, must be done to relieve the debtor generally and to provide a more equitable and less expensive method of reorganization of the railroads.

On Saturday last I presented to the House and inserted in the CONGRESSIONAL RECORD the views of the Solicitor General of the United States on this particular bill including desirable amendments. To-day no opportunity will be given for amendment on any of these proposals. It has been difficult for me under all of these conditions to arrive at a conclusion as to my duty in the premises. I wish that I had time to discuss this bill section by section, with the power to amend, and that others more familiar with the details would explain the bill more fully. This is a hope, however, which can not be realized under this procedure.

This bill is not the handiwork of a majority of the Judiciary Committee, and was not reported in all its details as the deliberate judgment of that committee; but if legislation along this line is to be given consideration at this session, this is the only avenue open. Because of the general necessity of some legislation along this line and in view of the fact that if passed here to-day this bill will go to the Senate where an opportunity to amend can not be prevented, and in view of the further fact that the bill as perfected by the Senate must go to conference and be returned to the House for further consideration, I shall vote for the bill.

Personally I can not assume the responsibility of delaying anything in these strenuous times that might help. It is a start in the right direction, and I am confident that the gentleman from Oklahoma [Mr. MCKEOWN] and the chairman of the committee [Mr. SUMNERS] will realize the necessity of changes and modifications, so let us approach the subject in a spirit of helpfulness and not in a technical spirit.

If I were thoroughly convinced that the bill is clearly unconstitutional, I should not vote for it, but in view of the doubt and the known fact that the Senate will give more consideration than is permitted in the House, I shall support the measure. This is no time for technicalities or niceties, and the necessities of the hour demand heroic treatment.

[Here the gavel fell.]

Mr. DYER. Mr. Speaker, I yield five minutes to the gentleman from Texas [Mr. PATMAN].

Mr. PATMAN. Mr. Speaker, if this bill is constitutional, a bill to grant a moratorium would be constitutional. If there is necessity for this bill, and there is necessity for legislation along this line, we should have a moratorium instead of this bill. Our people have two courses to pursue. One is expansion of the currency and the other is bankruptcy. Bankruptcy will help a few large creditors. Expansion of the currency will help everybody.

OBSTACLE IN WAY OF RELIEF

I believe this proposal if enacted into law will be an obstacle in the way of a real relief measure. There is only one way to get a relief measure discussed on the floor of this House and that is by refusing to suspend the rules and pass the bill. Then the Rules Committee can bring in a rule and we can have fair discussion of the bill and the amendments some of us desire to offer on the floor. Ordinarily a bill of this nature would not be brought up under suspension of the rules. Ordinarily there would be hearings and you could send for the printed testimony, read it, and make up your own mind as to whether you wanted to vote for or against this legislation, but this bill has not been considered in committee and they have no printed testimony. There is nothing for you to examine. The bill is hurriedly prepared as evidenced by the fact that several amendments have already been suggested by the chairman of the committee; and other meritorious proposals have already been presented. A bill of this nature should not be hurried through. Under suspension no one can offer amendments to the bill. It will not be read for amendments. We must either take it as it is or vote against it.

SAME OLD BATTLE CRY

We hear the same old battle cry we always hear about helping the farmers, helping the owners of the railroads, the small stockholders, helping the policyholders of the insurance companies, and helping the small banks and small depositors. This is the same old argument that has been made on the floor of this House for the last three years. It is the same argument that was made for the enactment of the Reconstruction Finance Corporation act. Since the enactment of that law it has been discovered that the railroads have been borrowing money from the Government in order to pay themselves, owners of those railroads, dividends on the stocks and bonds they hold; but that bill was passed on the theory that it would help the farmer, that it would help the small man.

NO BENEFIT FOR FARMERS IN THIS BILL

There is no real benefit in this bill for the farmer. There is nothing here that will help the farmer. I venture to say that there is not a Member of this House who has received one letter from one farmer asking him to vote for this bill. This is not a farmer's bill and will not help the farmer. If he had money enough to comply with the requirements of this bill, he would not want to go into bankruptcy; he would feed and clothe himself and his family; he would provide the necessaries of life for them that he is not now able to provide because he has not the money that would be necessary for him to comply with the terms of this bill.

Let me say with reference to the case of a railroad receivership, it is true that the Interstate Commerce Commission will be permitted to look over the plans of consolidation and merger, but when the plans are submitted to the court the court will be under gag rule just as we are. Under the railroad section of this bill local school districts may be deprived of the taxes due from the railroads and the schools may be forced to close in some sections. We are under gag rule to-day. The railroads have borrowed hundreds of millions of dollars from the Government through the Reconstruction Finance Corporation. This bill will enable that debt to be canceled. We are voting to put the courts under gag rule. Now, if you want this double gag-rule system invoked in this House and in this country, vote for this bill. I am not going to be swept off my feet by this argument that it will help the small man. Congress passed the Esch-Cummins railroad law to help the farmer and it ruined him. We passed the Reconstruction Finance Corporation act to help the farmer. Large bonuses have been given to a few powerful bankers to help the farmer. All the bad legislation of the past decade was presented with the argument that it would help the farmer, the wage earner, the small business man, and the home owner.

BONUS FOR BANKERS

The Glass-Borah amendment to the home loan bill provides a way that a few large banks may get a Government bonus of $30,000,000 a year. The Glass-Steagall bill permits a Government bonus of hundreds of millions of dollars to a few bankers. The Reconstruction Finance Corporation measure was a billion dollar Government bonus bill. The word "home" contains lots of sentiment. The home loan bank bill was another measure to finance the financiers. I voted against all these measures, although it was claimed for them that the plain citizen, the farmer, the wage earner, the home owner, the depositors in small banks, and the policyholders would be the beneficiaries. Much is said about the distress of these classes; but when a measure is passed by Congress, it seems that little relief is afforded to them.

Mr. DYER. Mr. Speaker, I yield four minutes to the gentleman from Arkansas [Mr. MILLER].

Mr. MILLER. Mr. Speaker, I am as loath as anyone here to cast a vote that might be construed as denying to any class of people, and particularly the farmers of this coun-

try, a chance to obtain relief from the indebtedness under which they are staggering at present.

During the last session of Congress we passed various legislation that was designed to benefit the wage earner and the farmer. We have poured into the railroad companies and into other corporations in this country millions and millions of dollars in the hope it would filter down to the wage earner and to the farmer, but such has not happened.

Now, this bill comes in here composed of three sections—the corporation section, the railroad section, and the section that it is claimed will benefit the farmers.

I do not want any man in this House to cast a vote for this bill upon the assumption that we are granting any relief to the farmers of this country. I say to you very frankly that it is an empty gesture.

The gentleman from Nebraska said, "Oh, this will provide a means whereby the creditors and the debtor may get around a table." This is true, but on page 3 of the bill it is provided that the creditors are the ones who will dictate the terms of the settlement, and in the absence of adoption of such terms the man goes into bankruptcy.

On the 29th day of February, 1932, the President sent a message to this Congress containing a report of the Attorney General, consisting of 211 pages, in which he pointed out certain facts, and in this message, on the last page, the President said it was necessary to so amend the bankruptcy law that provision may be made to require debtors of this country to pay their creditors out of after-acquired property. This bill is a child of that message; and whenever you think that the little man or the farmer or that the wage earner is to be benefited one iota by this bill, I am of the opinion that you have not read and studied the first section of the bill.

This section was incorporated in the bill for the purpose of obtaining the votes of the representatives from the agricultural States, and the argument is made that it provides a method whereby he may work out a plan with his creditors such as will enable him to pay his debts and thus prevent a foreclosure and sale of his property. I know that this argument is made in good faith by the proponents of the bill, but on page 3 of the bill it is provided—

> That in any other proceeding under this section the court may, as the creditors at the first meeting may direct, impose similar terms as a condition of delaying the appointment of a trustee and the liquidation of the estate.

The words "similar terms" refer to the terms that the court must direct to preserve the estate for the benefit of the creditors. Paragraph (m) on page 8 of the bill provides that the debtor and his property, wherever situated, shall be subject to the exclusive jurisdiction of the court. Nowhere in the bill is any provision made which will assist the farmer or wage earner in obtaining the money with which to refinance himself. On page 5 of the bill it is provided that the court may grant an extension of time, provided—

> The money or security necessary to pay all debts which have priority unless waived, and the costs of the proceedings * * * have been deposited in such place as shall be designated by and subject to the order of the court.

If the debtor had the money or security to pay his debt there would be nothing gained by his being in court. He would not be there. The bill will not stand analysis, and I do not want any of my constituents to obtain the idea that they will be benefited by the bill and I want them to stay out of the court just as long as possible, for one time they go into the court they may be assured that they will not escape therefrom with any of their property unless their property is readily salable for more than enough to pay their debts, and in that case the bill will not apply.

I hope the House will not be misled by this bill and by the arguments of able gentlemen because those who argue that it will save embarrassed debtors are not, in my opinion, familiar with the provisions of the bill. If this bill is passed, I fear that it may be impossible to pass a bill for the purpose of refinancing the indebtedness of the farmers. Under the rules that we are proceeding under such an amendment can not be offered. If it could be offered, I should offer it and insist upon its adoption. In this way we might provide some relief, but without such a provision no relief can be expected. I regret that the other sections pertaining to the reorganization of corporations and railroads should have been placed in this bill, because we can not give relief to the farmers of this country in the same bill in which relief is given to the oppressors of the farmers and wage earners, the railroads and corporations. It seems strange to me that this Congress will not recognize that if we are to aid in rehabilitating agriculture we must give to those engaged in that business the same consideration and the same amount of money that we have provided for the aid of the railroads and other corporations of this country. Instead of this bill being a bill for the relief of the farmer it is a bill to relieve him of what little he has if he is ever taken into court, and since we are prevented from offering amendments to the bill, I find myself unable to support it as I shall not be a party to legislation that will not help but hinder the farmer and wage earner and further impoverish agriculture.

Mr. DYER. Mr. Speaker, I yield the balance of my time to the gentleman from Illinois [Mr. CHINDBLOM].

Mr. CHINDBLOM. Mr. Speaker, I am sure there is not a Member of this House who would not go to the utmost extent, even in exercising as liberally as possible his best judgment, in order to pass legislation for the benefit of the debtors of the Nation; but there is a homely old saying about killing the goose that lays the golden egg. We can pass laws which make it so easy for debtors that there will hereafter be no creditors. We can enact legislation which makes it so easy for people to avoid their debts that nobody will lend them any money, and I am inclined to think we are in danger of going that far in this bill. Certainly, we should not pass legislation which may endanger the credit system of the country, under the pressure and lash of a suspension of the rules.

Secondly, this bill has been made the vehicle for a particular viewpoint with reference to the management and control of the railroads of this country. This does not belong in a debtors' bill. This bill comes from the Judiciary Committee and should concern itself with bankruptcy questions.

Mr. Speaker, under leave to extend my remarks, I will add that it is universally admitted that railroads are not included in existing bankruptcy legislation, and that this bill does not seek so to include them. Section 76 is entitled and relates entirely to "reorganization of railroads engaged in interstate commerce." It is true that this reorganization is based upon insolvency or inability on the part of a railroad to "meet its debts," but both the railroad company, in filing a voluntary petition, and creditors of a railroad, filing an involuntary petition, must set up that the purpose of the proceeding is to "effect a plan of reorganization." This is plainly legislation relating to interstate commerce and should have been considered and reported by the committee having that jurisdiction. The late James R. Mann, who built up the wide jurisdiction of the committee on interstate and foreign commerce, would certainly not have tolerated this usurpation of its authority. More than that, the members of the Committee on the Judiciary have frankly told us that section 76, relating to the reorganization of railroads, was written by the gentleman from New York [Mr. LAGUARDIA] while sections 74 and 75, relating to the "relief" of individual debtors and the reorganization of corporations, other than railroads, were prepared by the gentleman from Oklahoma [Mr. MCKEOWN]. Both or these gentlemen deserve great credit for their energy and industry, but their devotion and labor do not relieve the balance of the membership of the House from their responsibility. We are thus relieved, however, by the present procedure to pass the pending bill under suspension of the rules, without adequate debate and without opportunity for amendment.

Even for the purposes intended, the bill before us needs considerable amendment. One matter has been brought to my personal attention. The bill provides in paragraph (b) of section 75 that—

The term "creditors" shall include for the purposes of a reorganization proceeding [of a corporation, other than a railroad] under this section, all holders of claims of whatever character against the debtor or its property, whether or not such claims would otherwise constitute provable claims under this act.

I am advised that it was the intention to include under "claims," any liability for damages under executory contracts. Of course, it would have been better, and very easy, indeed, to make this intention perfectly clear. The omission simply furnishes one of many proofs of the mistaken policy in passing important technical legislation of this kind without opportunity for proper consideration in the House. It is no answer that the proposal may be perfected elsewhere. We should perform our full part, both now and later, if necessary.

Mr. SUMNERS of Texas. Mr. Speaker, I yield the remainder of my time to the gentlemen from Oklahoma [Mr. McKEOWN].

Mr. McKEOWN. Mr. Speaker, no matter what different Members may conclude in their own minds as a justification to oppose this bill, I say to you that when you vote against this bill you are voting against a bill that will give the poor debtors of this country an opportunity to protect themselves, and all this talk about not helping the farmers is wrong.

I know my good friend from Arkansas is just as sincere as I am, and he need not have any worry about this measure not helping the farmer. The bill will help the farmer. We have fixed it so it will do that very thing, and I have had to stand up and fight all summer contending for the right of the individuals to have the same extensions and compositions as the corporations.

Mr. Speaker, I know that gentlemen on the other side of the aisle are not going to vote against this bill. It has the indorsement of your President and also of your Solicitor General.

Mr. DYER. Will the gentleman yield?

Mr. McKEOWN. I will say now that you are not going to vote against this bill.

Mr. DYER. The President does not support this bill and neither does the Solicitor General.

Mr. McKEOWN. I can say to you that I have a little communication right here in my pocket from the Solicitor General.

Mr. DYER. Read it.

Mr. EATON of Colorado. Will the gentleman yield?

Mr. McKEOWN. No; I shall not yield now.

Mr. STAFFORD. Whom is the communication from?

Mr. McKEOWN. From the Solicitor General and it says—

I am convinced that if this bill becomes a law it will be one of the most important measures of the depression period.

Mr. CHINDBLOM. Which bill?

Mr. McKEOWN. This bill here.

Mr. EATON of Colorado. The bill as printed or as amended?

Mr. McKEOWN. This letter is from your Solicitor General.

Mr. BACHMANN. What is the date of the letter?

Mr. McKEOWN. It is dated January 28.

Mr. DYER. The Solicitor General sent amendments down here that the gentleman from Michigan [Mr. MICHENER] has called attention to and said they were very important amendments and should be added to the bill.

Mr. McKEOWN. That is correct. There are several, no doubt, that should be made, but that is no reason to oppose the passage of the bill.

Mr. EATON of Colorado. Will the gentleman yield to me for a question?

Mr. McKEOWN. I can not yield; I have but 10 minutes. This bill makes provision for the poor farmer, because, when he can not get an extension from his creditors, by their consent he can go into court, make application, and then show that it is not only for his benefit but for the benefit of the creditors; he can get the extension on the grounds that it will rehabilitate the debtor and be fair to the creditors as well.

What is the situation in the country to-day? People are being put out of their homes right and left, and this bill applies to bankruptcy cases now pending.

After this bill is passed a judge may arrest the ouster proceedings, although the judgment is of record. When the property comes within the jurisdiction of the court he can stay the proceedings.

The President of our country wants this legislation. Mortgagees will welcome this bill, because under the present situation they are having to foreclose their mortgages at a time when there is no market. When the mortgage is foreclosed and the property is put upon the market there are no buyers. The mortgagee does not want that. The merchant wants it so that he can get a respite from small nagging creditors who hold bankruptcy like the sword of Damocles over his head. The wage earner wants the law so as to readjust his lowered income, due to wage cuts, to his installment payments, and save his home. All classes of our citizens will welcome the act to save them from forced liquidation when there is no money with which to buy.

Gentlemen oppose the bill because it may interfere with some legislation. The bill is not intended to take the place of inflation or the coinage of silver or any other remedial measure. This bill is intended to stay the sheriff's hammer and stop the voice of the auctioneer and give us a chance to get a breathing spell, so we can get an opportunity to come out of this depression.

Let me tell you something. You have paving districts and sewer districts in your cities, you have improvement districts; you have levee improvement districts; you have reclamation improvement districts; and all of these are included in this bill, and they can get relief if it is passed.

Gentlemen of the House, I want to say to you who have criticized the Speaker in putting the bill through in this fashion, that you could not get it through in any other way. How else can you put it through? You could not get 12 lawyers to agree to a single amendment or to a single clause. Not a single thing could be agreed on. Why waste time? Let the bill be passed. Put it through the House and start it on its way to final enactment. Let the people of the country have a chance to breathe, and get from under the high tension now burdening the backs of the American debtors. We will never get the depression turned around unless we have something of this kind. Let us give the American people a chance to think and get down to business, and if we pass this bill you will do that very thing. [Applause.]

The SPEAKER. All time has expired, and the question is on suspending the rules and passing the bill.

The question was taken; and on a division (demanded by Mr. DYER) there were 201 ayes and 43 noes.

So, two-thirds having voted in favor thereof, the rules were suspended and the bill was passed.

Mr. DYER. Mr. Speaker, I ask unanimous consent that all Members may have five legislative days in which to extend their remarks on this bill.

The SPEAKER. The gentleman from Missouri asks unanimous consent that all Members may have five legislative days to extend their remarks on the bill. Is there objection?

There was no objection.

THE BANKRUPTCY BILL—EXTENSION OF REMARKS

Mr. LANKFORD of Georgia. Mr. Speaker, this is another measure seeking enactment in the name of the farmer. These bills could be more appropriately named by the farmers after they have been tried out on the farmers. This bill has at least a semblance of temporary relief for the farmer, and I favor this feature of the measure, knowing full well that no real lasting relief is afforded and that the bill has many very objectionable features. At best this bill would only secure for the distressed farmer-debtor additional time in which to pay, provided the farmer could raise enough money to pay lawyer fees and court costs. Many farmers and other distressed debtors can not get up enough money to pay a lawyer to handle this matter for them.

I am begging both Congress and the legislature of my State to enact laws giving the farmers and others extensions of their debts as an automatic matter of law without the payment of any attorney's fees or court cost. Then again, we must not forget that real relief can not come from the extension of credit alone but must come from the reduction of the principal and interest due by those who owe and from the placing of the buying power of the dollar on a parity with the buying power of cotton, tobacco, and other products of the farm. The purchasing power of the dollar—the dollar of the banker, farmer, and everybody else—is too high as compared with the purchasing power of what the farmer has to sell. The market value of the dollar must come down or the market value of farm products must go up before the farmer will be able to get any effective permanent relief. To my mind, this can only be brought about by the monetization of farm lands and products so as to reduce the farmers' debts at least half and extend the balance due for a long term of years without interest—all in connection with a contract system of controlling production, marketing, and prices, with proper tax-relief legislation.

No permanent relief can come until Congress quits issuing Government bonds backed up only by the Government's promise to pay, paying interest on these bonds, letting the big banking interest issue tax-free and interest-free money on these bonds and control, as suits the big interest, the inflation, deflation, issuance, and circulation of all our money.

The Government ought not to sell bonds, pay interest on them and thus pay the international bankers to strangle unto death the monetary system of our Nation. As I see it Congress should not authorize the issuance of interest-bearing bonds but, when necessary, issue Government, interest free, notes or money. This would save to the taxpayers millions and billions of money now unnecessarily paid out as interest, and actually reduce the public debt the amount of the annual interest thereon. This is the fundamental trouble with our Nation. Bills may come and bills may go rendering slight or temporary relief but our economic ills will never be permanently cured, while this cancerous monetary growth remains undisturbed.

Again referring to the provision of the pending bill which enables the farmer and others to get extensions of their debts by going into court, paying cost and hiring counsel, let me say that I very much regret that this bill was brought up in the House in such a way as to prevent its amendment; that I hope it will be amended later—if it becomes law—so that this slight relief will go to the farmers without the payment of court cost and attorney's fees. And I here and now promise the farmers living in and near my district that if this bill passes without this amendment I will, upon request, represent any and all distressed farmer debtors to the best of my ability and without the payment of any attorney fees whatever. Let them call on me, and I will be truly glad to do my best for them without charge.

This is no time to exploit our people. It is no time to make attorneys fees, advertising fees, and other charges out of the distress of our people. It is time to help our farmers and all distressed debtors just as they would aid us, without charge, if we were stricken ill at their homes. I regret that this bill can not be amended in the House so that bona fide attempts may be made to perfect the portions that are worth saving and to strike out its dangerous provisions.

Mr. GUYER. Mr. Speaker, the home is the basis of American civilization. It is the strongest link in its chain of destiny. Without it we would have progressed little beyond the culture of the aboriginal races we supplanted. It constitutes the object of all our best endeavors and will be the last and best product of the triumph of public virtue, and even of the tragedy of civic ruin, if that be our fate. First and last, it is the characteristic American institution, peculiar to this country, where womanhood is revered and respected, where her virtues have their finest field of devotion and the noblest opportunity for development. Whatever promotes the sanctity and security of the home strengthens her sovereignty in the circle of the family. No nation ever rises higher than its womanhood. No womanhood ever rose higher than Anglo-Saxon-Celtic womanhood. The American home is the American woman's throne and the Nation's citadel.

At the base of American devotion to the home is the Teutonic love of the soil, the thirst for land; for, whether English, German, or Scandinavian, we are, as a Nation, predominantly and fundamentally Teutonic in origin, however mixed with Celtic blood. This American home at this time as at no other period in our history is imperiled. It is assailed on many fronts. Even its physical existence is menaced. By reason of unprecedented calamities and unparalleled misfortunes the farm home in particular is threatened, and this farm home is the very foundation of our civic structure.

Several economic conditions menace the farmer and the farm home. First, low prices of farm products; secondly, high taxes; thirdly, the mortgage, interest, and other debt problems; and, last, depreciation of foreign currencies which makes ineffective present tariff rates, thus militating against the farmer the same as it does against industry involved in manufacture.

I do not here wish to discuss the price problem, which has made it impossible for the farmer to realize the cost of production, except to state that the House, to meet a great emergency, has passed the allotment-plan measure with the purpose of raising the price of farm products to give the farmer at least a small profit on his crops and that we are endeavoring to reduce the cost of Government and so reduce to a degree the burden of taxes.

I do, however, want to discuss briefly the mortgage and debt problem. By reason of the low prices of farm products the farmer has been caught in the jaws of this depression and is unable to meet payments of interest and taxes, to say nothing of the principal of his mortgaged indebtedness. Even if he were not in debt, which can be said of but few farmers, he would still have a very difficult task to meet current expenses in the operation of his farm. The farmer, like most other business men, reached out in prosperous times, incurring debts which in the usual course of ordinary business conditions he could without difficulty have met when due. But added to adverse business conditions were the ever-increasing tax burdens. The farmer with a mortgage on his farm finds himself utterly unable to meet payments of either interest or principal and delinquent in his taxes, and consequently facing financial ruin and the loss of the farm home which has grown to be a part of his very life and existence. Is it any wonder that he is desperate in this predicament, faced as he is with bankruptcy and the loss of all that he gained in long years of toil from early morning until late at night?

Every Member of Congress from the agricultural districts has been searching for months for a solution that will relieve this critical situation, so that the hard-working, industrious farmer may have a breathing spell during this storm of adversity. Congress has wisely come to the rescue of business, and with its strong arm has buttressed the foundations of our commercial life. This, while indirectly aiding the farmer to a degree, has been of course wholly inadequate to meet his dire need.

In this extremity Members of Congress have worked out this amendment to our bankruptcy law, hoping to rescue the farmer from his desperate condition. While it has been hastily formed and passed under suspension of the rules, it is confidently hoped that after consideration by the other branch of Congress its faults or weaknesses will be eliminated, so that creditor and debtor may mutually work out their problems for the benefit of both. In short, it is devoutly hoped that this measure will provide a moratorium for the farmer until he enjoys more prosperous times.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. SUTPHIN, on account of illness.

To Mr. STEWART, indefinitely, on account of the death of Mrs. Stewart.

FRANKLIN D. ROOSEVELT

Mr. LUDLOW. Mr. Speaker, I ask unanimous consent to address the House for three minutes.

The SPEAKER. Is there objection?

There was no objection.

Mr. LUDLOW. Mr. Speaker, on January 30, 1882, there was born in this country a baby boy who was destined to write his name high on the tablets of history and to become a leader of men in most troublesome times. When he grew to effulgent manhood all nations in the circle of civilization came to know him and to appreciate his worth, and to-day this man is the hope of the world.

Like Washington and Jefferson, he was born to the purple, but like Lincoln he is singularly blessed with the common touch.

A patrician by birth, he possesses in marked degree that love of humanity on which alone is founded true nobility of character.

Thirty-three days hence, standing yonder in front of this Capitol where Lincoln stood, this man will be inaugurated President of the United States. He will take his office at the climax of a depression whose devastating effects are visible everywhere. As he crosses the threshold of the Presidency, he will envision a picture of industrial and agricultural stagnation and unemployment, with attendant hunger and want—a brood of national ills that will test the stoutness of his heart and the strength of his soul.

With humility that befits a sincere patriot who has been called to exalted service, chastened by tremendous responsibility, he will assume a task of economic reconstruction even greater than Lincoln faced 68 years ago when the immortal commoner pledged himself humbly in the sight of his God, "with malice toward none and charity toward all," to bind the Nation's wounds and to rescue the social order from the economic disorganization caused by four frightful years of civil war.

When our chosen servant takes the oath of office the prayers and heart throbs of 120,000,000 people will bear mute testimony to a sorely stricken Nation's trust and confidence, and on this anniversary of his natal day, while he makes ready to shoulder the staggering load the faith of his countrymen has placed upon him, let us all join in wishing good luck and Godspeed to the next president of the United States, Franklin D. Roosevelt, who is 51 years old to-day. [Applause.]

ELECTION OF PRESIDENT AND VICE PRESIDENT, ETC.

The SPEAKER laid before the House a communication from the Governor of Idaho, C. Ben Ross, announcing that the Legislature of the State of Idaho had ratified the proposed amendment to the Constitution of the United States relating to the terms of President and Vice President and Members of Congress and fixing the time of the assembling of the Congress.

RELIEF OF AGRICULTURE

Mr. GLOVER. Mr. Speaker, I ask unanimous consent to extend my own remarks.

The SPEAKER. Is there objection?

There was no objection.

Mr. GLOVER. Mr. Speaker, ladies and gentlemen of the House, everyone who has given the subject careful consideration, knows that no Government can succeed that will suffer agriculture to be depressed as it is now in the United States, and we should give consideration to this subject first of all and correctly solve it.

I do not believe that all the trouble with agriculture can be cured by legislation, but it can be helped, and it is my purpose in this address to give you my idea of how it can be helped.

If Congress had given consideration to the farmers' problems first, it would have solved the other business problems of the business world. If our agricultural crops could be raised to a pre-war level, it would start the wheels of industry, the railroads would have plenty to do, it would give work to the 12,000,000 men now out of work, it would enable everyone to pay debts and the banks would have plenty of money without borrowing as many are doing now, merchants could again do business in a normal way, and confidence would be restored.

You will naturally ask yourself this question, What caused all this depression in prices? Next you will ask yourself, Is there any remedy, and if so, what is it? I shall try as best I can to answer these two questions, taking them in their order, and the first one is, What caused all this depression in prices? Some argue that it is overproduction. Let us reason that out and see if it is really overproduction or underconsumption. We have recently had, I think, a clear demonstration of the fact by an experience of the Red Cross. The Committee on Agriculture, of which I have the honor to be a member, prepared and passed a bill through this Congress giving 500,000 bales of cotton, which had been taken over by the Government in trying to stabilize the price of cotton, to the Red Cross to have it made into cloth or exchanged for clothing to give to those who were in need, and which had been brought on them by no fault of their own. It was soon distributed to those in dire need and had only partially relieved them, or a part of them, and then another bill was introduced by this committee to give the Red Cross 350,000 bales additional. In the hearings on this last bill Mr. John Barton Payne, who is at the head of the Red Cross, said it would probably take 2,000,000 bales to relieve all persons in dire need in the United States now. At that rate, if the needs of our people for clothing had been met for the last five years, it would take our 10,000,000-bale surplus off our hands. The same argument is true in the case of any of our agricultural crops. Then the real cause, if this be true, and it is true, is underconsumption and not overproduction.

Underconsumption is brought about by having no medium of exchange, as I will discuss further on in my address. If those in need now had the money with which to buy, the surplus in our food products would soon be reduced to a normal supply in this country.

There are some things that we must produce more of than what is needed for our own consumption, such as cotton, wheat, rice, and other crops in order that the world market may be supplied. And, we must have a world market for them. In my opinion the things that have brought on this condition that agriculture finds itself in is the Smoot-Hawley tariff bill, which has built a wall around the United States so that other nations can not get in here to trade with us. As soon as this legislation was passed by Congress, and I am glad to say I voted against it and fought it, the other nations immediately passed retaliatory legislation against us and we now have our foreign trade, which we once had, going to other countries.

This barrier must be removed and we must establish reciprocal trade relations with them by tearing down this tariff wall and gain back their markets for our surplus crops.

Another cause of the present depressed condition of agriculture and all business as to that matter is the sale in this country of practically worthless foreign securities. It is estimated that between thirty and forty billion dollars of this paper of foreign countries has been sold in this country, and the country drained of that much of its medium of exchange, and this helped to start a money panic which is now on. At least 75 per cent of the money of the United States is now securely hidden away in banks and lock boxes; and so far as the good it is doing, it might as well never have been coined or issued. Confidence must be restored, and nothing can bring it about more quickly than the restoration of agriculture to its normal conditions.

Another thing that is hurting agriculture is the fact that about four-fifths of the nations of the world have gone off the gold standard of money and are now on a silver standard, and their money, measured by our gold standard, is only worth about 25 cents on the dollar.

Let us see how it affects agriculture. Let us take China and India as an example. We are on a single gold standard, and they are on a silver standard. They have each in the

past years been our best customers in buying our surplus cotton. When they come here now to buy our cotton, they pay in their money about four times what our farmer gets when he sells it under our gold standard. Then if cotton is selling under the gold standard for 6 cents per pound, the buyer from India or China pays 24 cents per pound.

As a result of this condition, these and other countries have been forced to go to growing the short-lint cotton, which is the only kind they can grow; and they buy just enough of our cotton to mix with their short-lint cotton so that it will make clothing for their people. Prior to the last war they only grew a little over 6,000,000 bales of cotton, and now they are growing twelve and a half million bales per year, and that is the only reason you ever have a surplus of cotton.

If we had a bimetallic standard of money, as we should have, we would have no surplus of cotton in two years, because they would quit raising this short-lint cotton and buy our cotton. The same argument is true with other agricultural commodities.

We would not have to change our gold standard at all; just go back to the money of our Constitution, which is gold and silver.

Under a single standard of money it is easy to concentrate wealth as it is now concentrated, and it is the ruin of our Nation to-day.

My answer to the first question which is, What caused all this depression in prices is:

First. It is not overproduction. It is underconsumption.

Second. It was partly caused by draining the country of money by purchase of foreign securities.

Third. It was partly caused by the tariff bill.

Fourth. It was partly caused by the single gold standard.

Fifth. It is partly caused by concentration of wealth and cornering and hiding away money.

The second question was, Is there any remedy; and if so, what is it?

My answer is, Yes; there is a sure remedy and that is to reverse our action and correct the laws and causes that brought it on.

Agriculture would be helped more by providing a way to extend mortgage loans, for a long period of time, at a low rate of interest, than by any one act that Congress could pass. I have a bill pending before the Ways and Means Committee that will relieve this condition if I could get it reported out and passed. I have twice asked for a hearing on this bill, and I hope it or some bill of like kind will be passed.

My bill provides for the carrying of these loans for 10 years at a rate of interest not exceeding 3 per cent. We must save our farm lands and keep them in the hands of farmers who know how to farm them.

THE SHORTER WORKDAY

Mr. MEAD. Mr. Speaker, I ask unanimous consent to extend my remarks upon the shorter workday.

The SPEAKER. Is there objection?

There was no objection.

Mr. MEAD. Mr. Speaker, with our country in the midst of an unprecedented economic crisis, or as Justices Brandeis and Stone declared in a recent opinion "an emergency more serious than war," our motives must be prompted by a true spirit of patriotic devotion and guided by the light of reason and experience, in order that we may contribute in a large way to the future well-being of our great country.

These are truly times that try men's souls and require the same courage and leadership as those earlier days when Washington and his followers, in the midst of their dark and disheartening period, laid the foundations of our present self-governing institutions. It is the verdict of the most conservative and enlightened opinion of to-day that our present deplorable conditions presage the end of one economic and political era and the beginning of another. Old panaceas, remedies, and measures are obsolete and ineffective in this day. They are gone and belong to a day that is past. Our present remedies must be sound, and our future policies must be forward looking and constructive. Organized labor must be self-reliant, self-confident in its service to our country and our people in this the time of their great need.

Before we suggest remedies we must of necessity review the past which brought about our present calamity. Following the World War an industrial and financial "breakdown" brought on a depression which continued through 1920 until the end of 1922. At that time a "return to normalcy" was the cry and slogan of our economic and political leadership, with wage deflation and a general reduction in costs as the methods whereby trade and industry were to be stimulated and prosperity restored to a stricken country. But this policy proved to be unsound and fallacious and collapsed because of its own basic errors.

A new policy was then inaugurated by a group of public officials and leading industrialists, who held that to return to pre-war wages and standards of living as well as volume of business was both unthinkable and impossible. To them normalcy was a higher and better standard than the standard of 1913. They advocated the increased use of the machines to extend mass production, and to reduce labor costs and other costs of production, the elimination of waste and the standardization of output. It was pointed out that under these new conditions wage and salary rates could be increased while labor and other costs, including prices to consumers, could be reduced, and that a generous margin of profit would accrue to business.

These were considered revolutionary suggestions, but their application resulted in a period of an unprecedented prosperity. This new enlightened and far-seeing policy was accepted by industrial and financial leaders as well as by our labor organizations, and all went well with the country from 1923 until the collapse of the so-called "New Era," in 1929.

This new industrial order outrivaled the eighteenth century industrial revolution in Great Britain when steam power was for the first time applied and the foundation of our present factory system was laid. During this period from 1923 to 1929 improved machinery as well as new processes in our mills, factories, and mines increased to a very large degree the productivity of our workers.

These new American policies and practices astounded other countries, who were quick to send special investigators, students, and even official commissions here to study and to observe our changed systems.

If the sound principles and theories pronounced by the conference of 1923 had been adhered to, the gains of capital would have continued and at the same time the welfare of the masses would have reached to record heights; but the selfish appetite for immediate and unreasonable profits threw the machine out of balance and blasted the hopes of those who believed in the permanency of the new industrial revolution. Failure to stabilize industry, forgetting the need of proper planning, and without any thought of coordinating the activity of all industries were mistakes which doomed the new program. Prices were by no means reduced to the extent to which they might have been. Wages and salaries were not increased in proportion to lower costs and certainly not in keeping with the increased productivity of our workers; and, above all, the hours of service were not shortened to offset reduced employment resulting from mechanical displacements; and, finally, too large a share of output was reserved for profits, thereby diminishing the mass purchasing and consuming power so necessary for a continued and successful operation of the economic machine we were building.

A tremendous crop of share corporation, investment trust, holding companies, and other financial set-ups, all concerned with immediate profits, blossomed forth to condemn the new order to failure even before it got a fair start.

Permanent prosperity under existing conditions was impossible, and we were doomed to disaster by the short-sighted policy of those financially responsible for the control and administration of industry. They refused to apply the principles of the program. In the fall of 1927 disturbing elements began to appear which, in the judgment of far-

sighted leaders, presaged the approaching disaster. Large numbers of our workers were unemployed during the winter of 1927–28, and acute conditions were found in many industrial and commercial centers. The situation was recognized in the United States Senate where a resolution was adopted to investigate this alarming condition.

During that winter it was estimated that 4,000,000 were without gainful employment. Pay rolls were declining, profits were diminishing, and technological unemployment was increasing. The diminishing consuming power of the masses was proportionately reflected in decreasing industrial and commercial activities. The diversion of too large a share of the profits of this new industrial revolution into corporation income instead of increasing consumer demand by the payment of higher wages and salaries doomed the program and destroyed the prosperity we were told should be permanent. Industry continued to slow down throughout the spring and summer of 1929 in proportion to decreased employment opportunities and to diminishing consumer purchasing power, with the result that highly capitalized security values could no longer be maintained and in October of 1929 the world was rocked by the most tremendous stock-market collapse of all times. Following the stock-market crash there came an avalanche of general deflation which passed beyond the control of our financial leadership and now threatens the very existence of our political institutions as well as our economic system. While it was proper to deflate fictitious security and real-estate values, it was a mistake to deflate the earnings of our workers, because it only resulted in a diminishing demand for goods. Unemployment was increased, and the very serious situation that exists to-day developed. Had the avowed principles of the program of 1923 been carried out, if a fair share of the income of that "Golden Age" had gone to wage and salary workers, if a reduction had been made in the work period in direct proportion to displacements made by the machine, if our financial leadership had not been bent on securing immense and disproportionate profits, humanity and industry would have continued to enjoy the new program with its alluring future.

The situation to-day is most serious and only governmental action can rescue the country. So far we have expanded the credit structure of the Nation, lent aid to the railroads and banks, and appropriated for the relief of destitution. All of these measures have proved beneficial to a limited degree, but they have not increased consumer demand. They failed to lessen the ranks of the unemployed. Therefore, the effects of these measures have been but palliative and conserving. We have simonized the surface. While it is true the Congress of the United States has clothed the President with tremendous power and authorized the Reconstruction Finance Corporation to make loans that would actually stem the progress of the depression, they have been slow to act, and in the meantime we are informed that the volume of unemployed will reach its maximum during the coming winter. Human suffering will increase, and unrest bordering on desperation will continue a national menace. A more liberal policy must be adopted by the Federal Government if we are to mitigate the indescribable suffering of millions of our fellow men. The Reconstruction Finance Corporation has assumed a "hard-boiled" attitude with regard to loans to the States for the relief of destitution as well as with regard to the approval of projects and undertakings which would create employment opportunities for large numbers of our people.

Unless the Reconstruction Finance Corporation expedites and accelerates its activities and is guided by the intention and direction of Congress, a period of want and misery of unprecedented proportions is approaching to grip the Nation. Recognizing the unemployment resulting from mechanical displacements, labor-saving processes, and modern system, it is the duty of the Government not only to set an example for others to follow by diminishing the work period of its own employees, but by requiring the adoption of a 6-hour day and a 5-day week on all contracts for public works as well as on all enterprises of a public or private character, authorized by the Reconstruction Finance Corporation and in all fields where Federal authority has the right of authority, a 6-hour day must be mandatory by act of Congress. This was accomplished during the administration of the late lamented Woodrow Wilson when the work schedules on all railroads were reduced from 10 hours to 8, and a further reduction should be approved now from 8 to 6 hours per day.

This policy will not only extend the field of employment but will enable industry to absorb those technologically displaced in recent years. A real 5-day week with fair wages is the only safe basis on which to build for the future. A shorter period with adequate returns for service rendered is both socially and economically sound. It will result in more general employment for all our wage earners. It will increase the efficiency of those on the job and it will increase the leisure of our workers, enabling them to enjoy more of the cultural, spiritual, and family life than was heretofore their privilege.

Adding to the leisure time of our people will increase their demands, accelerate purchasing power, and stimulate the production of certain goods. The shorter workday and the shorter work week make for a constantly growing, higher, and better standard of productivity, health, longevity, morals, and citizenship. During the past century both the workday and the work week have been steadily reduced. The "sunup to sundown" or from "daylight to darkness" work period is over with. The 12-hour day, the 10-hour day, the 7-day week are memories of the past. The Saturday half-holiday, the 5-day week, the 8-hour day—yes, even the 6-hour day—are recent attainments credited to the labor movement of America. Labor now sets itself for a new goal, the universal 5-day week, and on the railroads, where men are paid by the mile, the 6-hour day instead of the 8-hour schedule now in operation, is the object to be achieved, and so the slogan of labor to-day is the "5-day week, the 6-hour day."

In this campaign we expect the same opposition that opposed the shorter workday in the past, for there are those who will not learn even from the terrible human sufferings of the depression. The increasing number of the unemployed during the past several years constitutes the most convincing argument in favor of reducing the work period. It is a forceful appeal for the adoption of the 5-day week and the 6-hour day. We will control the machine or the machine will control us.

OPPOSITION TO INCREASED TARIFF TO OFFSET DEPRECIATED FOREIGN CURRENCY

Mr. McGUGIN. Mr. Speaker, I ask unanimous consent to extend my own remarks.

The SPEAKER. Is there objection?

There was no objection.

Mr. McGUGIN. Mr. Speaker, under leave to extend my remarks, I insert the following, which is a statement I placed before the Ways and Means Committee, in opposition to increased tariff rates:

Gentlemen of the committee, your committee is now considering a proposal automatically to increase tariffs in keeping with the depreciation of foreign currencies. Since the enactment of the last tariff bill the British pound has depreciated from $4.86 to $3.30. This is a depreciation of slightly over 32 per cent. If the Congress should accept this proposal automatically to increase tariff rates in proportion to the depreciation of foreign currencies, it would, therefore, mean that the tariff rates would be increased slightly over 32 per cent on every British product imported into the United States. This legislation would mean an increase in the tariff on every commodity of each and every country imported into this country equal to the percentage of depreciation of the particular country's currency since the tariff act of 1930.

Depreciated foreign currencies are causing the United States and the world much economic trouble. Depreciated foreign currencies are either forcing all United States industry—agricultural, mining, and manufacturing—out of the world market or forcing it to take a terrific loss when its products are sold abroad for depreciated currencies, which when returned to the United States is exchanged for American money at a discount of 30 to 40 per cent under the basis of exchange of three years ago. As a general proposition, the manufacturing industry of the United States is simply withdrawing from the world market. This means that the American manufacturing industry is gradually restricting its production and thereby casting more men into unemployment.

The American agricultural industry can not restrict its production. As a result, it is simply going on, producing its products and shipping them abroad. It sells them for depreciated currencies and takes the loss of 30 to 40 per cent on exchange.

In addition to losing our foreign markets or taking a terrific loss on our exports, depreciated currencies are unquestionably giving an advantage to foreign products in the American market over the position of these foreign products at the time of the enactment of the last tariff law.

This proposed legislation can cure only one of the evils growing out of depreciated foreign currencies from which America is suffering. It can save for American industry a monopoly on the American market. That will not give us any reasonable measure of relief. While it will save the American market for American industry, yet, day by day, the American market will vanish. The greatest home market for the American manufacturing industry is agriculture. As long as agriculture must continue to suffer from depreciated foreign currencies, just that long American agriculture will become more and more unable to buy the products of the American manufacturing industry.

Any movement to meet the question of depreciated foreign currencies must meet it in its entirety. It must be such a movement as will permit American industry, agricultural, mining, and manufacturing, to enter the world markets on the old basis with foreign competition. The evil of depreciated foreign currencies presents a money problem. If this problem is to be met by any American legislation, it must be met by monetary legislation. Tariff legislation can not possibly meet it. If I were a doctor, I should try to have more than one kind of pills in my kit for the treatment of various diseases. I should at least have more than one color of pills. While I am a protectionist and believe in protecting the American market for American products against the normal condition of lower wage standards and cheaper living standards abroad, yet I do not believe in trying to meet every economic evil with more tariff.

Tariff can only be a treatment for economic ills growing out of normal foreign competition. Foreign competition is nothing more than merely a secondary cause for the loss of American markets for manufactured products. The principal cause is the economic discrimination which has been going on in this country since the war against agriculture and in favor of highly organized, centralized, and monopolized industry and finance. This has gone on until the 27,000,000 farm people have become impoverished and can no longer buy the products of industry any more than can any other peasantry. This discrimination has virtually reduced the once proud and free American farmer to the economic level of a peasant. In the first instance, the farmer suffered from this discrimination. Now industry and finance are on their knees. The manufacturing industry can not deliver itself from its present dilemma by coming to Congress and obtaining a further right and privilege to pick the pockets of American agriculture. Such a privilege has no value when the pockets of American agriculture are empty.

The principal offender in this discrimination against American agriculture is the steel industry. Following the steel industry and in conjunction with the steel industry, manufacturing industries making products from steel, which are used on the American farm, have done much to aid in bringing about this bankruptcy of the American farmer and destruction of the American market for American industry. Transportation has played its part in this discrimination against agriculture, yet transportation can truthfully say that the steel monopoly is largely responsible for the situation of transportation taking this unfair advantage of agriculture.

The statistics of the Labor Department pertaining to commodity prices prove conclusively the statements which I have here made that the manufacturing industry, and particularly the steel industry, has set up a monopolistic discrimination against agriculture. The Bureau of Labor Statistics, Department of Labor, on January 27, 1933, supplied me with the following wholesale price indices for the years of 1930 and 1932, based upon the 1926 commodities price index of 100:

Commodity	1926 commodities price index	1930	1932	Per cent reduction from 1926
Steel	100.0	87.3	80.9	19.1
Nails and wire	100.0	79.7	74.5	25.5
Steel rails	100.0	100.0	98.6	1.4
Agricultural implements	100.0	95.0	84.9	15.1
Lumber	100.0	85.8	58.5	41.5
All farm products	100.0	88.3	48.2	51.8
Grains	100.0	78.3	39.4	60.6
Livestock and poultry	100.0	89.2	48.2	51.8
Other farm products	100.0	91.1	51.4	48.6
Cotton	100.0	77.1	36.6	63.4
Wheat	100.0	66.0	33.8	66.2

These statistics disclose the following percentage reductions for the year of 1932 compared to the year 1926:

	Per cent
Steel	19.1
Nails and wire	25.5
Steel rails	1.4
Agricultural implements	15.1
Lumber	41.5
All farm products	51.8
Grains	60.6
Livestock and poultry	51.8
Other farm products	48.6
Cotton	63.4
Wheat	66.2

These figures show that everything the farmer buys to carry on his business has taken only a minor part of the reduction since 1926 that he has suffered in the reduction in price for the commodities which he sells. These figures disclose that the two principal commodities which are produced by the American farmer, cotton and wheat, have taken reductions of 63.4 per cent and 66.2 per cent, respectively. We hear it said that the farmer should diversify and shift from cotton and wheat to some other product. These figures disclose that there is no other product to which he can shift for which he will receive a price which is not reduced far more than the prices of the things he buys have been reduced. These figures show that all farm products as a whole have taken a reduction of 51.8 per cent, while the principal things which the farmer buys have taken the following reductions:

	Per cent
Nails	25.5
Agricultural implements	15.1
Lumber	41.5

In addition to this, the farmer is still robbed by transportation and one of the reasons for this is that the steel rails which the railroads buy have depreciated only 1.4 per cent since 1926.

These figures do not tell half the story. This is because even in 1926 and before that time, the farmer was suffering from a tremendous discrimination in those things which he buys made from steel.

There can not be any restoration of the American market for the manufacturing industry until there is a parity between the price of the things which the farmer sells and the things which he buys. We should be able to bring about this parity in a civilized manner. We have failed to do it during the last 13 years. As harsh as this depression may be, it is gradually bringing about this parity. We have reached that point where there is going to be a parity and agricultural prices and manufacturing prices are going to come to a common level, else there will be more and more unemployment and there will never be a profitable condition for American industry. Depreciated currencies are presenting competition in the United States which is doing to the American steel monopoly what the American Government either could not or would not do. The steel monopoly is still doggedly holding on to its prices. As its business has vanished, it has laid more men out of work, and has continued to sit back and take the arrogant attitude, "This is our price, and sooner or later the people will have to pay it." The people will have to do nothing of the kind. In the first place, they can not do it and are not going to do it. In the second place, before they will do it, they will buy foreign steel.

While I believe in protection for honest American industry, yet I do not believe in protection for any American industry which has a monopolistic control on its market and can dominate prices. The steel industry is such an industry. If I had my way about it, I would give the steel industry about six months to get its prices down in keeping with other commodities or I would put steel and all products made from steel on the free list. The price of steel is forcing every American factory engaged in the business of making its products from steel to keep up an abnormal price. In this great machine age the price of every product, manufactured, mineral, or agricultural, must take into consideration the price paid for machinery used to make such a product. This applies to the farmer producing his products with farm machinery, the textile factory making its clothes, and the newspaper plant setting up its type with a linotype machine and printing its paper on a printing press. This abnormal price of steel is holding up a price structure for manufactured products which is making it impossible for those products to be purchased by the people who produce the raw products of the farm and the mine.

We are not coming out of this depression until the 27,000,000 farm people can buy the products of industry and pay transportation charges. They can not buy until there is a parity between the prices of the things which the farmer buys and the things which he sells. The price of farm products is below the 1913 level. Wheat and cotton are selling for approximately one-third the 1913 level. We shall probably be lucky if we can bring farm products up to the 1913 level and industrial prices down to the 1913 level. It would be preferred to bring farm prices up to the industrial level. If I thought this could be done by government, I would be most enthusiastic in my support of such a program. We must not and can not go out of the world markets with our farm products. As long as our two principal farm products are sold on the world market, I do not see how government can bring farm prices up to a point many times the world market. Therefore, I do not know how and do not believe that we can reach a parity of farm prices and industrial prices by bringing farm prices up to the level of manufactured products. I do know how we can reach a price level by bringing manufactured prices down toward the level of agricultural prices. As this is done, I think the farm prices will gradually come up. It may be that we can reach the 1913 level. I should like for us to reach the 1926 level, but my honest judgment tells me that reaching the 1926 level is a dream rather than a reality. The only way that it could possibly

be done would be by drastic monetary inflation and then being able to hold industrial prices at their present level, while agricultural prices come up. That probably can not be done.

While this industrial discrimination has been primarily against agriculture, yet, in the broader sense, this discriminaton has been against the raw products of both the mine and the farm. Oil, copper, and lead are suffering distressingly low prices and are at the same time being forced to pay exorbitant prices for pipe, tools, and operating machinery, all of which is made from steel. The steel industry is bleeding the impoverished oil, coal, lead, and copper industries as it is bleeding agriculture, only to a somewhat lesser degree. The automobile industry is likewise suffering staggering losses and is trying to hold up its production by constantly making better products at a lower price, yet it too is receiving no reasonable cooperation from the steel industry.

This bill is only an effort on the part of the Government arbitrarily to maintain the exorbitant prices of certain manufactured articles. If this bill were to be passed, it should exclude from its benefits any manufactured commodity which is selling at a price above 10 per cent below the 1913 level. It should particularly exclude steel and every manufactured article made from steel. Steel is to-day the pirate in American economic life. This is not only the statement of a western Congressman. It was the statement of the conservative Alexander Hamilton Institute in one of its regular reports issued in the spring of 1932. This report pointed out that during the last two years the price of steel had been pegged and that the price of steel had depreciated 13½ per cent since the peak of 1929, as compared with 31½ per cent depreciation for all other commodities. This report of the Alexander Hamilton Institute further pointed out that the depression of 1921 was broken by a reduction in the price of steel, and that this depression can not be broken until there is at least a 31 per cent decrease in the price of steel from the peak of 1929. If this statement of the institute were true last spring, a greater reduction is now required in the price of steel in order to break this depression.

While the crying need of the country is a reduction in the price of steel, what do we find? We find the president of the United States Steel Co. standing before the Ways and Means Committee of the House of Representatives seeking an increase in tariff, which would only be a governmental guaranty to the steel industry that it may arrogantly keep up its prices, free from any outside competition. Considering the welfare of the Government and the country, I think Mr. Farrell was before the wrong governmental institution when he was before the Ways and Means Committee of the House of Representatives seeking greater tariff protection. I can think of a more proper governmental tribunal before which he and his company might appear.

If the Congress accepts this bill and permits steel to come under its protection, then the Congress becomes a party to the steel conspiracy in restraint of trade, a conspiracy which is standing in the way of economic and social recovery in this country.

If this bill should carry the provision that no manufactured article should receive the benefits of the bill, the current price of which article should be more than a price 10 per cent below the 1913 price level for that commodity, the manufacturing industry would still have an advantage over agriculture. It must be remembered that the very purpose of this legislation is to try to make the American farmer, who is the principal consumer of these articles, pay an arbitrary price for them, which price is above the world level. The truth is, there is no way you can make the farmer pay it. He can not pay it. He must pay transportation charges on his products from the Middle West to the Atlantic coast, ocean transportation charges to Europe, and then sell his articles on an open market for depreciated currency. He simply can not take the proceeds from such a transaction and buy the products of industry, if they are going to be sold at an arbitrarily sustained price. He can no more do it than a man can take 50 cents and buy a dollar's worth of merchandise. Any effort to make the farmer do this only means further stagnation of American industry. This in turn means more unemployment. This bill will make more unemployment instead of less unemployment. This will leave American industry in a position where it will have but one market, the American market. The American farmer, its principal customer, will be wholly unable to buy the products of industry. The enactment of this bill means that by man-made law industry will have only one market, the American market, and that by economic law the American market will vanish more and more.

In pleading against this bill, I am pleading for justice for agriculture and for the true welfare of the manufacturing industry itself. He who follows a course which will make it possible for the American manufacturing industry to have a home market for its products is, after all, the best friend of the American manufacturing industry. A while ago I said that denying the benefits of this act to any manufactured commodity selling at a price which is above a price of 10 per cent below the 1913 level price would still be giving industry an advantage over agriculture. The statistics which I have obtained from the Labor Department bear out this statement.

On the basis of the 1926 commodities price index of 100, the 1932 prices of the following commodities are here compared with the 1913 level:

	Per cent
Steel	+3.8
Nails and wire	+8.4
Steel rails	+28.8
Farm implements	+12.0
Lumber	+4.5
All farm products	—23.3
Livestock	—25.2
Wheat	—29.8
Cotton	—36.4

These figures show that all farm products were selling in 1932 for a price which is 23.3 per cent below the 1913 price, with both prices based upon a 1926 index of 100. If the present price of steel, nails, and farm implements were 10 per cent below the 1913 price, based upon a 1926 index of 100, these articles would still have an advantage over agriculture of 13.3 per cent. Such a condition would make it possible for agriculture to buy some of these products. Under present conditions, with agricultural products 23.3 per cent under the 1913 level, based upon the 1926 price index of 100, it is utterly impossible for agriculture to buy these manufactured products while they have a present price ranging from 3.8 to 28.8 per cent above the 1913 price, based upon their 1926 index of 100.

Mr. McGUGIN. As an illustration of the way in which this legislation is going to be received in the great middle western agricultural section, I wish to cite a recent editorial from the Kansas City Star, and a letter which I received to-day from Mr. R. J. Laubengayer, of Salina, Kans., editor of the Salina Journal. It must be remembered that Salina is in the heart of the Wheat Belt.

[From the Kansas City Star, January 25, 1933]

SHALL WE STOP FOREIGN TRADE?

While there has been some dumping of goods in the United States from countries with depreciated currencies, the situation is apt to be greatly exaggerated by manufacturers who are anxious to shut out every vestige of foreign competition.

Great Britain went off the gold standard in September, 1931. In the next year the value of British exports to this country was 44 per cent lower than in the preceding year. (These are Department of Commerce figures.) The value of imports from France, which remained on gold, declined 40 per cent.

Apparently, France was able to dump more from a gold-standard basis than England was able to dump from an off-gold basis.

Japan made a slightly better showing in exports to the United States after she went off gold. In 11 months her exports to this country declined 35 per cent, while the value of all imports to the United States declined 37 per cent. But the Japanese advantage was exceedingly small, although the yen fell in value almost 60 per cent.

Representative HAROLD MCGUGIN of Kansas was right in telling his Republican colleagues in the House that the question of depreciated currencies abroad can not be met by higher tariffs in the United States. This country has an immense stake in world recovery. If it tries to stop every trickle of foreign trade it impedes the recovery of our customers abroad and prevents them from buying wheat, cotton, and other American products that require an export market.

One reason why the world is in its present plight is that every country has tried to protect itself at the expense of its neighbors; and every country eventually has hurt itself by doing so because the policy has resulted in cutting off the markets for its surplus products.

SALINA JOURNAL,
Salina, Kans., January 27, 1933.

Congressman HAROLD MCGUGIN,
Washington, D. C.

DEAR SIR: I certainly was impressed by the sound position you took on the depreciated currency bill. Your warning to the Republican Party that if they tried to make a tariff question out of a money question they are doomed to failure is not an exaggeration. When you think of the advantages that the special interests have had and compare them with what agriculture has to contend with it makes you boil to think the Republican group would be so damn foolish as to want to involve the party still more along protection lines.

Up until the time agriculture is put on a parity with protected business it is extremly unfair to think of any more tinkering with the tariff, unless it be lowered.

I want to congratulate you upon your courageous stand. I also agree with you that if foreign currency does not advance we may as well recognize the fact that we will have to deflate ours. The moss-back East just does not seem to give a darn what becomes of the Middle West. The northwestern United States, with the advantage the Panama Canal has given it, is in league with the Allegheny East in wanting to improve its condition still further at the expense of the agriculture and central West.

With kindest regards.

Yours very truly,

R. J. LAUBENGAYER,
Publisher The Salina Journal.

FEDERAL GASOLINE TAX

Mr. FULMER. Mr. Speaker, I ask unanimous consent to extend my own remarks.

The SPEAKER. Is there objection?

There was no objection.

Mr. FULMER. Mr. Speaker, on account of the very unfair practice in considering important pieces of legislation under the suspension of rules, the average Member has no opportunity to express himself for or against legislation so considered. For instance, there is only 40 minutes for debate, to be equally divided among those for and against the bill, which makes it rather hard for Members who would like to express themselves, because they are unable to obtain the necessary time.

I voted against the taxation of gasoline when this item was up for consideration in connection with the revenue bill during the last Congress, and I am voting against this bill to-day, which proposes to extend the collecting of these taxes by the Federal Government for another year.

I am opposed to the taxing of gasoline by the Federal Government for several reasons: First, I think there ought to be something left for the States to tax; and, second, most of the States have already taxed gasoline to the extent that a great many people are unable to purchase the same, especially farmers. My State, South Carolina, has a tax on gasoline amounting to 6 cents per gallon. Most of this tax is being used to pay off a very heavy bonded indebtedness, bonds having been issued to build roads in the State. Even at this time, on account of the extra high price of gasoline in the first instance, to say nothing about the 6-cent tax to be added thereon, on account of the serious economic situation existing, especially in South Carolina, the State being largely an agricultural State, it may be possible that the sales of gasoline will be so diminished that even this extremely large amount of gasoline tax will not be sufficient to take care of the bonded indebtedness as planned.

During the debate on this bill something was said about a general sales tax. I voted against the sales tax during the last session of Congress, and I am strongly opposed to a Federal sales tax at this time. I am hoping that we will not be called upon to pass upon a sales tax bill. If we are, I want it understood that I expect to do everything possible to bring about its defeat. This is another tax that can well be left to the States, especially at this time, when most of the States are unable to raise revenue to provide for the proper functioning of the State government.

WAR DEPARTMENT APPROPRIATION BILL

Mr. GIBSON. Mr. Speaker, I ask unanimous consent to extend my own remarks.

The SPEAKER. Is there objection?

There was no objection.

Mr. GIBSON. Mr. Speaker, H. R. 14199, the War Department appropriation bill passed by the House of Representatives on January 24, 1933, contains on page 61, lines 1 to 9, the following proviso:

> None of the funds appropriated in this act shall be used for the purpose of paying any commissioned officer, active or retired, for his salary in computing which any service has been counted other than active commissioned service under a Federal appointment and commissioned service in any of the military or naval forces of the United States, including the National Guard or the Organized Militia while in the service of the Government of the United States.

The effect of this proviso on graduates of the Military Academy is essentially as follows:

Present rank	Year graduated	Per annum reduction in compensation	Additional approximate percentage cut
Colonel	Prior to 1902	None.	
Lieutenant colonel	Prior to 1905	$211.08	3.1
Major	Prior to 1909	320.88	5.0
Do	Prior to 1912	1,132.56	17.8
Do	Prior to 1916	137.52	2.6
Captain	Prior to 1917	None.	

The effects of this provision on officers in the regular service with prior enlisted or National Guard service is very serious, amounting in some cases to over 30 per cent reduction in compensation.

The proviso will also reduce the pay of National Guard and reserve officers who are called into active service annually for training.

Appended hereto is a table covering the pay status of the different classes from 1900 to 1916, inclusive. This table has been worked out with such data as were at hand. There may be some minor corrections, but I think they are substantially correct.

Pay status of Military Academy classes as of July 1, 1933 (including allowances with dependents), under economy act and present allowances

Class	Present grade	Commutation service	Total service	Monthly pay and allowances		Monthly loss	Per cent
				Present	Taber amendment		
1916	Major	16	20	$434.72	$423.26	$11.46	2.6
1915	do	17	21	446.17	423.26	22.91	5.1
1914	do	18	22	446.17	434.72	11.45	2.6
1913	do	19	23	515.74	434.72	81.02	15.7
1912	do	20	24	529.10	434.72	94.38	17.8
1911	do	21	25	529.10	446.17	82.93	15.7
1910	do	22	26	529.10	446.17	82.93	15.7
1909	do	23	27	542.48	515.74	26.74	5.0
1908	Lieutenant colonel	24	28	542.48	529.10	13.38	2.5
1907	do	25	29	542.48	529.10	13.38	2.5
1906	do	26	30	560.07	529.10	30.97	5.3
1905	do	27	31	560.07	542.48	17.59	3.1
1904	do	28	32	560.07	542.48	17.59	3.1
1903	do	29	33	560.07	542.48	17.59	3.1
1902	do	30	34	560.07	560.07		
1901	Colonel	31	35	558.33	558.33		
1900	do	32	36	558.33	558.33		

It will be noted that the percentage of pay losses varies widely with the different classes. Can there be any justification for the imposition of a pay status that works such inequalities?

Mr. HOGG of West Virginia. Mr. Speaker, I ask unanimous consent to extend my own remarks.

The SPEAKER. Is there objection?

There was no objection.

BANKRUPTCY BILL

Mr. HOGG of West Virginia. Mr. Speaker, personally, I am willing to accept the conclusion of the Judiciary Committee with reference to the constitutionality of this measure, although prior to an examination of the report of the chairman and the opinion of the Solicitor General of the United States I entertained grave doubt as to the constitutionality of this proposal. An examination of the authorities obtained from those sources, supplemented by an independent study of the measure since its introduction, has served to overcome some previous doubt. Yet I am not thoroughly convinced as to its validity.

Further, I am receiving communications from people in whose judgment I have great confidence expressing doubt as to the legality of this bill. It is not my intention to burden the membership with the recital of a long list of decisions supporting well-recognized principles. However, I do wish to call attention to the fact that the decisions in both this country and England defining "bankruptcy," as used in the Constitution of the United States, say that these proceedings are for a twofold purpose. First, the liberation of the debtor; and, second, the distribution of his property. Our own courts passing upon this subject have consistently held that insolvency is not a necessary ingredient of bankruptcy. As a matter of fact, under our own bankruptcy act there need not be even an adjudication in order to confer jurisdiction.

REAL PURPOSE OF BILL

The purpose of this bill is to bring relief to individuals and corporations along the same general lines.

Section 74 relates to individuals. Section 75 deals with corporations, including certain political subdivisions of the State. Section 76 deals with railroad corporations, the latter having been expressly excepted from the original bankruptcy act as well as from the subsequent amendments.

Section 74, dealing with individuals, very plainly provides that the petitioner referred to as a "debtor" may be given

"an extension of time" in which to pay his debts, and as to corporations, the bankruptcy court under certain conditions is given the right to alter the obligations of creditors, secured or unsecured.

Section 76 provides, in so far as it relates to railroads, the approval of plans of reorganization which in effect call upon the creditors to accept certain new obligations in lieu of the ones which they now hold. It is therefore apparent that in all of these instances, dealing with these various types of debtors, the underlying idea and plan are to afford to them additional time within which to pay their obligations.

It is quite apparent that in carrying into effect the provisions with reference to corporations, especially those engaged in transportation, the most complicated types of corporate organization and financing are involved. My sympathy is primarily involved in that portion of the bill extending aid to individuals all over the country threatened with loss of farms and loss of homes. These difficulties have reached shocking proportions and are of such serious nature as to warrant my support of this measure regardless of the complications involved in the sections dealing with corporations.

Incidentally, most of the communications which I have received with reference to this measure have dealt with the corporate sections. Complaint has been lodged on the ground of potential fraud that may be perpetrated in programs or reorganization. This may be true. We can only assume that courts will interpret this amendment the same as they are enjoined to enforce the existing act—upon equitable principles. The most serious question that arises in my mind is as to the ability of the courts to handle such an enormous amount of business that will evidently be thrown upon them. As to the amount, no one knows. That likewise is a question for future solution. We are not to lose sight that this measure is purely one of an emergency nature. Certainly, no one can feel that this country will remain in such depths as we now find ourselves, and for this reason we are justified in taking steps and adopting measures for recovery that might not be countenanced were we dealing with normal problems in normal times.

MINOR AMENDMENTS

I appreciate the care with which the committee has drafted this bill. At the same time there are some few details which I believe should be clarified. Under the bankruptcy act an order of reference is never made until after adjudication. Section 74 of this bill provides that before adjudication is made a debtor in an involuntary proceeding may file his petition seeking either a composition of an extension of time within which to pay his debts. It will be observed that this petition must be filed with the judge who in the event the petition complies with the act under paragraphs B and C after notice may appoint a receiver or custodian. Further, the judge calls the first meeting of the creditors. Paragraph G provides for the confirmation of the proposal of composition or extension. Then we find paragraph O providing for the payment to the referee of a minimum fee of $10 "upon the entry of order of confirmation." I specifically desire to call attention to the fact that the petition is filed with the judge, and paragraph O apparently places confirmation in his control. In the fact of this situation paragraph C provides for the payment of a confirmation fee to the referee. The bill is therefore indefinite as to when the case reaches the jurisdiction of the referee. It is quite apparent that the act contemplates action by the referee because provision is made for the appointment of one such referee in each county.

On pages 22 and 23 wrong numbers are assigned to the last two separate sections. They should be carried as separate paragraphs under section 75.

Reference is also made to page 29, dealing with railroad corporations. Provision is made for the appointment of six—

> Special referees who may also perform all the functions and exercise all the powers of referees in bankruptcy, who shall be appointed by the President of the United States. * * * Authority is herewith granted for the appointment of such special referees and such additional special referees as may be required.

This raises two questions: First, the provision is ambiguous as to the number; second, is this not an undue interference between two distinct branches of government? The general bankruptcy law makes provision for the appointment of referees by the respective judges of the district courts. This bill creates a special class of referees independent of the appointments made by judges of district courts, but at the same time clothed with all the powers and duties of the referees provided for in the original act. While I have not personally examined this question in the limited time available since the introduction of the measure, at the same time I feel the manner of these appointments merits some consideration.

Under the present act even before adjudication a person can file with the court an offer of composition. If it appears that a majority of the creditors have assented to this composition, the court can approve it in spite of objection from the minority. In this specific instance we have a full and complete exercise of jurisdiction by the bankruptcy court, even in the absence of adjudication. It would therefore seem, as provided in the present bill, that the court has jurisdiction to hear the petition or answer of the debtor without reference to adjudication. Further, the filing of a petition for an extension of time, by way of precedent, is perfectly proper even in the absence of insolvency.

As I have previously stated, the writers upon the subject as well as all the authorities say that the purpose of a bankruptcy proceeding is to liberate the debtor and also to distribute his property. On this fundamental principle, therefore, we are confronted with a more serious aspect as to the soundness of the present measure. When a debtor merely requests an extension of time, he fulfills neither of these requirements and seeks to obtain neither of these ends. In the absence of precedent in this country and in England, we would hesitate to say that an application or petition for a mere extension of time within which to pay could be considered within the realm of bankruptcy. On principle it could not be classed as bankruptcy, because it did not provide for a distribution of property.

The case of Canada So. R. Co. v. Gebhardt ((1883), 109 U. S. 527), referred to in the committee report by way of dictum from the Supreme Court of the United States, throws considerable light upon this subject. In that case the company had been incorporated under the laws of Canada for the purpose of building and operating a railroad between the Detroit and the Niagara Rivers. In 1871, as part of the program of financing, the company issued bonds totaling $8,703,000 secured by a mortgage on its property. In 1873, apparently unable to meet its obligations on these bonds, the company requested the holders to refund their interest coupons falling due on January 1, 1874, by converting them into new bonds falling due in 1877, and by so doing in effect extend the time of payment. This was assented to by some. In 1875 a bond issue of $2,044,000 was made upon security of a second mortgage. Subsequently the company again found itself unable to meet its obligations and submitted to the bondholders and the stockholders of "a scheme of arrangement" contemplating the issuance for $14,000,000 in bonds payable in 33 years with the interest guaranteed for 20 years by the New York Central and Hudson River Railroad Co. The 1871 bonds were to be exchanged dollar for dollar. The scheme was approved by 108,132 of the 150,000 outstanding shares of stock, by the holders of $7,332,000 of the $8,703,000 of the bonds of 1871; by $1,598,000 of the $2,029,000 of the outstanding second-mortgage bonds.

Upon the presentation of these facts the Canadian Parliament passed the "Canada Southern arrangement act of 1878," declaring the new bonds be a first charge on the property, and that the scheme be deemed to have been assented to by all the holders of the original first-mortgage bonds.

The plaintiff, who as an American citizen holding certain of the 1871 bonds and not assenting to the arrangement, brought suit in the United States against the company upon the past-due coupons and on certain unpaid extension bonds. The defendant pleaded the enactment of the Canada Southern arrangement act of 1878.

In reality the only point before the court was the availability of this act as a defense to the action in this country. The Supreme Court of the United States held that since the act was valid in Canada, under whose law the corporation was chartered and doing business, it should be recognized in this country under the principle of comity. However, by way of dictum, the court made some very pertinent observations of material importance on the constitutionality of the bill now under consideration. On page 532 of the opinion Mr. Chief Justice Waite observed that there was—

No constitutional provision in Canada against the passage of laws impairing the obligations of contracts, and the Parliament of Canada had, in 1878, the legislative authority over the corporation and the general subjects of bankruptcy and insolvency in that jurisdiction.

The court further says on page 535:

In the absence of statutory authority or some provision of the instrument which establishes the trust, nothing can be done by a majority, however large, which will bind a minority without their consent. Hence it seems to be eminently proper that where the legislative power exists some statutory power should be made for binding a minority in a reasonable way by the will of the majority; and unless, as is the case in the States of the United States, the passage of the laws impairing obligation of contracts is forbidden, we see no good reason why such provision may not be made in respect to existing as well as prospective obligations.

The nature of securities of this class are such that the right of the legislative supervision for the good of all, unless restrained by some constitutional provision, seems almost necessarily to form one of their ingredients; and when the insolvency is threatened and the interests of the public, as well as creditors, are embroiled by the financial embarrassments of the corporation, a reasonable "scheme of arrangement" may, in our opinion, as well be legalized as are original "composition in bankruptcy." In fact, such "arrangement acts" are a species of bankruptcy acts.

Nor do such Government regulations deprive a person of his property without due process of law. They simply require each individual to so conduct himself for the general good as not unnecessarily to injure another.

MEASURE ENTITLED TO LIBERAL CONSTRUCTION

Again without burdening the membership with the citation of authorities further than to refer to the recent edition of Cooley on Constitutional Limitations, I wish to call attention to a principle of constitutional interpretation. It has always been said that the courts in interpreting the Constitution will constantly bear in mind changed conditions. A shifting idea and comprehensiveness of commerce is a striking illustration. Little did the framers of the Constitution conceive that a century after its adoption Congress would proceed to use the commerce clause as a basis of jurisdiction for the enactment of such a measure as the Mann Act. The courts to-day in interpreting the laws of bankruptcy will take into consideration the changed economic conditions with a world-wide depression and its attendant chaos. They will take judicial notice of the unprecedented commercial failures and the purpose of the present measure to stop distressing and enforced liquidation.

Congress in dealing with the subject of bankruptcy has the inherent right to do any and all incidental things to completely carry into effect the purposes of the act and to seek the end contemplated in this constitutional provision. As has been pointed out in the report of the committee as well also as the opinion of the Solicitor General, the power of Congress in the field of bankruptcy legislation is almost unlimited and in this broad field can legislate in almost any manner with reference to people "who are unable to pay their debts." Certainly there is little difference between people who are unable to pay their debts and those who are unable to meet their obligations as they mature. The two classes are identical, and it seems to me that the description of the people to be benefited by the present amendment is such as to clearly embrace them within the provisions of the Constitution relating to "bankruptcies."

It might be asserted that relief could come from other sources. Some might advocate the expansion of credits. Others, inflation of the currency; remonetization of silver; increase in the tariff. All of these are earnestly advanced as a solution for the present economic ills, yet no one can guarantee that the adoption of any one of these policies will stop the disastrous course of liquidation. It is a matter of speculation and will require time to prove. We can not wait for the testing of theories. We must act affirmatively, and it is my opinion that the passage of this bill furnishes one of the speediest possible methods to stop the continued downward trend of economic conditions. It is a program worthy of trial and one which in no possibility could be attended by any pronounced danger.

For the purposes of comparing the present bill with similar English legislation we here set forth a portion of the English railway companies act, passed August 20, 1867, and found in volume 2, English Statutes, 1867, at page 1332.

ARRANGEMENTS

6. Where a company are unable to meet their engagements with their creditors the directors may prepare a scheme of arrangement between the company and their creditors (with or without provisions for settling and defining any rights of shareholders of the company as among themselves, and for raising, if necessary, additional share and loan capital, or either of them), and may file the same in the court of chancery in England or in Ireland, according to the situation of the principal office of the company, with a declaration in writing under the common seal of the company to the effect that the company are unable to meet their engagements with their creditors, and with an affidavit of the truth of such declaration made by the chairman of the board of directors and by the other directors, or the major part in number of them, to the best of their respective judgment and belief.

7. After the filing of the scheme, the court may, on the application of the company on summons or motion in a summary way, restrain any action against the company on such terms as the court thinks fit.

8. Notice of the filing of the scheme shall be published in the Gazette.

9. After such publication of notice no execution, attachment, or other process against the property of the company shall be available without leave of the court to be obtained on summons or motion in a summary way.

10. The scheme shall be deemed to be assented to by the holders of mortgages or bonds issued under the authority of the company's special acts when it is assented to in writing by three-fourths in value of the holders of such mortgages or bonds, and shall be deemed to be assented to by the holders of debenture stock of the company when it is assented to in writing by three-fourths in value of the holders of such stock.

11. Where any rent charge or other payment is charged on receipts of or is payable by the company in consideration of the purchase of the undertaking of another company, the scheme shall be deemed to be assented to by the holders of such rent charge or other payment when it is assented to in writing by three-fourths in value of such holders.

12. The scheme shall be deemed to be assented to by the guaranteed or preference shareholders of the company when it is assented to in writing as follows: If there is only one class of guaranteed or preference shareholders, then by three-fourths in value of that class, and if there are more classes of guaranteed or preference shareholders than one, then by three-fourths in value of each such class.

13. The scheme shall be deemed to be assented to by the ordinary shareholders of the company when it is assented to at an extraordinary general meeting of the company specially called for that purpose.

14. Where the company are lessees of a railway the scheme shall be deemed to be assented to by the leasing company when it is assented to as follows:

In writing by three-fourths in value of the holders of mortgages, bonds, and debenture stock of the leasing company.

If there is only one class of guaranteed or preference shareholders of the leasing company, then in writing by three-fourths in value of that class, and if there are more classes of guaranteed or preference shareholders in the leasing company than one, then in writing by three-fourths in value of each such class.

By the ordinary shareholders of the leasing company at an extraordinary general meeting of that company specially called for that purpose.

15. Provided that the assent to the scheme of any class of holders of mortgages, bonds, or debenture stock, or of any class of holders of a rent charge or other payment as aforesaid, or of any class of guaranteed or preference shareholders, or of a leasing company, shall not be requisite in case the scheme does not prejudicially affect any right or interest of such class or company.

16. If at any time within three months after the filing of the scheme or within such extended time as the court from time to time thinks fit to allow, the directors of the company consider the scheme to be assented to as by this act required, they may apply to the court by petition in a summary way for confirmation of the scheme.

Notice of any such application, when intended, shall be published in the Gazette.

17. After hearing the directors and any creditors, shareholders, or other parties whom the court thinks entitled to be heard on the application, the court, if satisfied that the scheme has been within three months after the filing of it, or such extended time, if any, as the court has allowed, assented to as required by this act, and that no sufficient objection to the scheme has been established, may confirm the scheme.

18. The scheme when confirmed shall be enrolled in the court, and thenceforth the same shall be binding and effectual to all intents, and the provisions thereof shall, against and in favor of the company and all parties assenting thereto or bound thereby, have the like effect as if they had been enacted by Parliament.

19. Notice of the confirmation and enrollment of the scheme shall be published in the Gazette.

20. The company shall at all times keep at their principal office printed copies of the scheme, when confirmed and enrolled, and shall sell such copies to all persons desiring to buy the same at a reasonable price, not exceeding sixpence for each copy.

If the company fail to comply with the provision, they shall be liable to a penalty not exceeding 20 pounds, and to a further penalty not exceeding 5 pounds for every day during which such failure continues after the first penalty is incurred, which penalties shall be recovered and applied as penalties under the railways clauses consolidation act, 1845, are recoverable and applicable.

Mr. Chief Justice Waite in the Canada Southern case specifically cites a number of instances in England where the effect of these "schemes of arrangement" were nothing more than a compulsory extension of time allotted to debtors within which to meet their obligations. The organic law of England and the United States in this matter can be considered as identical. Although the expression of the Supreme Court of this country on this point is mere dictum, nevertheless, fortified as it is by English precedent, there is no reason to doubt but that this rule would be followed in any concrete case. Upon this basis I am content to consider this dictum as of binding force in this country. The ultimate effect of that decision was to compel creditors to grant to debtors an extension of time within which to meet their obligations without reference to any contractual relations upon which these obligations were founded.

We can use this principle of law as a precedent for the validity of three sections involved in the present bill. If it is proper to accord to railroad organization both in this country and in England extensions of time within which to meet their obligations, on the same principle we can give the same right to individuals and other corporations. It is true that in England they have mentioned a distinction between securities and stocks of quasi-public corporations and those of another character. This distinction was briefly referred to in the Canada Southern case. It is scarcely felt, however, that this is a sufficient reason for discrimination in the operation of the present act. Relying upon the expressions in that case I think it perfectly proper to consider that Congress in legislating upon the subject of bankruptcy is empowered from every standpoint to accept the principle and to compel creditors to grant to debtors extension of time within which "to meet obligations." In communications I have received there has existed some sort of hazy idea that Congress was without power to pass any legislation which would impair vested rights. It is true that Congress can not violate the "due process of law" clause of the fourteenth amendment, but consideration of this measure does not involve the "due process" clause. Again some sort of hazy idea has been advanced that Congress can not interfere with the obligation of a contract. Again this is unfounded because there is no such inhibition upon Congress impairing the obligation of a contract.

This is a restriction placed only upon the several States selling property free from encumbrances, done in almost all bankruptcy cases, although impairing the obligation of a contract, is permissible. Nor is such a procedure the taking of property without due process of law or in violation of other constitutional rights. In this connection see In re National Grain Corporation (1926—C. C. A. 2 Cir., 9 Fed. 2 ed. 802).

As indicating the attitude of the Supreme Court of the United States on this point of restrictions we quote the following from the case of Mitchell *v.* Clark (1884—110 U. S. 633, 29 L. ed. 279).

It is unnecessary to say that it interferes with the validity of contracts, for no provision of the Constitution prohibits Congress from doing this, as it does the States; and where the question of the power of Congress arises, as in the Legal Tender cases, and in bankruptcy cases, it does not depend upon the incidental effect of this exercise on contracts, but on the exercise of the power itself.

The Circuit Court of Appeals, Second Circuit, In re Franklin Brewing Co. in 1918 (249 Fed. 333) very aptly observes that bankruptcy courts have long been possessed with authority to impair the obligation of contracts. On this point the court says:

Congress, in the exercise of its constitutional right to establish systems of bankruptcy, may, and indeed always does, impair the obligation of contracts.

There are countless other expressions to the same effect. No one has ever seriously questioned the right of a bankruptcy court to sell property free and clear of existing liens. In every such case the court by its act impairs the obligations of a contract.

MAY HAMPER FUTURE FINANCING

In our zeal to protect the borrower from the evil effects of enforced liquidation and in our efforts to obtain for him a further extension of time within which to meet his obligations, we must not lose sight of the effect of this legislation upon his future efforts to obtain additional financing. We must consider the effect that this legislation will have upon those from whom the present debtor may subsequently endeavor to obtain funds. The effect of the present measure is to enable the debtor to override his original financing contract. If he has in the past obtained money upon a promise to repay within a definite period and now by virtue of this statute is able to extend that contract period, will that same creditor in the future be inclined to invest his money in this type of security? What will be his inclination to lend his money to a type of creditor who by a petition to court can override the original contract of repayment? The creditor with this type of security will never know the exact date of repayment. His attempt to enforce collection through orderly process of court is faced with not only the possibility but a very pronounced probability of his debtor, through the intervening agency of the Federal court, overriding this original contract of repayment. I mention this feature because of its possible future effect on personal financing especially with reference to loans secured by real estate.

In spite of the huge sums of money which are loaned upon farm property through Government agencies, at the same time we can not overlook the other staggering sums which are loaned by individuals. Will not these individuals in the future under such a proposed change in the bankruptcy act withhold their money from this type of loan and further invest in types of tax-free securities which have already exerted such an influence in drying up ordinary sources of commercial investment?

I do not make this observation as an objection or reason for opposition to the bill. This is a matter that can be subsequently adjusted. The real and vital question for solution to-day is immediate relief from many foreclosures and enforced liquidations. I believe this bill will help to accomplish that purpose. It certainly is the groundwork upon which to rear some such program designed as beneficial not only for debtors but likewise for creditors. It will stop per force of law the continuance of the wholesale foreclosures and liquidations from which very little is realized for creditors and through which property values generally are further decreased. This legislative principle is startling but essential.

PROGRESS IN DEFLATION

Mr. AMLIE. Mr. Speaker, I ask unanimous consent to extend my remarks and to include therein a single newspaper clipping of one paragraph.

The SPEAKER. Is there objection?

There was no objection.

Mr. AMLIE. Mr. Speaker, since this depression began it has become a custom for all governmental agencies and public servants from the President down to report all symptoms that might indicate that we were making progress in working our way out of this depression by following a deflationary course—that is to say, by following a policy of laissez faire.

The goal which the economists who advocate this policy have set for us is a point of equilibrium near the bottom where wages, commodity prices and capitalization will be at a point of balance one with the other. When this point has been reached, they argue, business activity will be resumed and we will gradually move back to "normalcy." It is a goal that is theoretically possible of attainment, provided the human misery and suffering that are engendered by the process do not cause a major explosion.

The sponsors of this policy are proceeding upon the theory that the victims of unemployment are possessed of a capacity to endure hardship and starvation that is well-nigh inexhaustible. It is my desire to bring to these self-styled "sound economists" a word of encouragement and hope. Not only is the capacity of these poor wretches to endure punishment well-nigh inexhaustible, but in the process of suffering they tend to work out arrangements which serve to make life more endurable and their capacity to withstand suffering and distress even greater.

Former Chief of Police of the District of Columbia Gen. Pelham D. Glassford, who has been studying the plight of the hundreds of thousands of unemployed young men who are aimlessly drifting about the country, states that they are working out a code of mutual self-helpfulness which makes their plight far more endurable than might otherwise be the case.

Last fall I spent several days in certain parts of the city of Chicago where the unemployed tend to congregate. These men, if they can still be called men, are merely shells of their former selves—mere human husks. They can be more accurately described in the words of Gorky as "creatures that once were men."

But despite this fact, they are developing a code of ethics which serves to make their life more endurable. They are very considerate of one another in the bread lines and do not crowd. Several times I noticed a passer-by throw a cigar butt in the gutter. A number of these men would immediately start walking in the direction of the discarded cigar butt, in the meanwhile looking about furtively to see who else might be bent on the same mission. They did not walk rapidly or rush. When it became apparent to these men moving in the direction of the discarded butt that one of their number was nearer than the others, they would withdraw in his favor and permit him to pick it up without further contesting his right. In this way it will be seen that the unemployed in scavenging for food are building a code of ethics similar in many respects to the code of ethics which governs the members of the legal and medical professions in dealing with each other.

I have been moved to make these remarks in view of the fact that others have observed the situation and been impressed in the same way that I have been. In an article by Edmund Wilson in the New Republic for February 1, 1933, there occurs the following account of life among the unemployed in Chicago:

> There is not a garbage dump in Chicago which is not diligently haunted by the hungry. Last summer, in the hot weather, when the smell was sickening and the flies were thick, there were a hundred people a day coming to one of the dumps, falling on the heap of refuse as soon as the truck had pulled out, and digging in it with sticks and hands.
>
> A private incinerator at Thirty-fifth and LaSalle Streets, which disposes of the garbage from restaurants and hotels, has been regularly visited by people in groups of as many as 20 at a time, who pounce upon anything that looks edible before it is thrown into the furnace. The women complained to investigators that the men took an unfair advantage by jumping on the truck before it was unloaded; but a code had finally been established by which the same people would always come at the same time of day, so as to give everybody a chance.
>
> One widow who used to do housework and laundry, but now had no work at all, fed herself and her 14-year-old son on garbage. Before she picked up the meat she would always take off her glasses so that she could not see the maggots; but it sometimes made the boy so sick to look at it and smell it that he couldn't bring himself to eat it. He weighed only 82 pounds and was badly undernourished.

SENATE BILLS REFERRED

A bill and joint resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 4412. An act to provide for the safer and more effective use of the assets of Federal reserve banks and of national banking assoications, to regulate interbank control, to prevent the undue diversion of funds into speculative operations, and for other purposes; to the Committee on Banking and Currency.

S. J. Res. 243. Joint resolution authorizing the President of the United States to extend a welcome to the Pan American Medical Association which holds its convention in the United States in March, 1933; to the Committee on Foreign Affairs.

BILL PRESENTED TO THE PRESIDENT

Mr. PARSONS, from the Committee on Enrolled Bills, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H. R. 14436. An act making appropriations to supply urgent deficiencies in certain appropriations for the fiscal year ending June 30, 1933, and prior fiscal years, to provide supplemental appropriations for the fiscal year ending June 30, 1933, and for other purposes.

ADJOURNMENT

Mr. SUMNERS of Texas. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 53 minutes p. m.) the House adjourned until to-morrow, Tuesday, January 31, 1933, at 12 o'clock noon.

COMMITTEE HEARINGS

Tentative list of committee hearings scheduled for Tuesday, January 31, 1933, as reported to the floor leader:

INTERSTATE AND FOREIGN COMMERCE

(10 a. m.)

H. R. 11675, Federal power act.

BANKING AND CURRENCY

(10.30 a. m.)

Hearing on Federal land bank bill (2-year moratorium).

FOREIGN AFFAIRS

(10.30 a. m.)

Hearing, expenses of International Air Conference.

DISTRICT OF COLUMBIA—SUBCOMMITTEE ON PUBLIC UTILITIES

(10.30 a. m.)

Hearings on H. R. 13753, merger of gas companies.

Hearings on H. R. 13349, to confer jurisdiction on Court of Claims to determine claim of Alexandria, Mount Vernon, Washington Railway Co.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

895. A letter from the chairman of the Joint Committee on Internal Revenue Taxation, transmitting a report by the Joint Committee on Internal Revenue Taxation covering refunds and credits of internal-revenue taxes for the calendar year 1931 (H. Doc. No. 535); to the Committee on Ways and Means and ordered to be printed.

896. A communication from the President of the United States, transmitting a draft of a proposed provision pertaining to an existing appropriation for the Department of State, making the unexpended balance of the appropriation for the International Radiotelegraphic Conference, Madrid, Spain, available for any North American radio conference or conferences growing out of the Madrid conference (H. Doc. No. 536); to the Committee on Appropriations and ordered to be printed.

897. A letter from the president of the Chesapeake & Potomac Telephone Co., transmitting a comparative general balance sheet of the Chesapeake & Potomac Telephone Co. for the year 1932; to the Committee on the District of Columbia.

898. A letter from the Chesapeake & Potomac Telephone Co., transmitting a report of the Chesapeake & Potomac

Telephone Co. to the Congress of the United States for the year 1932, as required by law; to the Committee on the District of Columbia.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. COLTON: Committee on the Public Lands. S. 3475. An act to amend section 5 of the act approved July 10, 1890 (28 Stat. 664), relating to the admission into the Union of the State of Wyoming; with an amendment (Rept. No. 1940). Referred to the Committee of the Whole House on the state of the Union.

Mr. STEVENSON: Committee on Banking and Currency. H. R. 13855. A bill to amend section 5219 of the Revised Statutes, as amended; without amendment (Rept. No. 1941). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. PITTENGER: Committee on Claims. H. R. 5457. A bill for the relief of M. R. Welty; with amendment (Rept. No. 1942). Referred to the Committee of the Whole House.

Mr. PITTENGER: Committee on Claims. H. R. 8402. A bill for the relief of certain disbursing officers of the Army of the United States and for the settlement of individual claims approved by the War Department; with amendment (Rept. No. 1943). Referred to the Committee of the Whole House.

Mr. BLACK: Committee on Claims. H. R. 8729. A bill for the relief of John Ball, of Walla Walla, Wash.; with amendment (Rept. No. 1944). Referred to the Committee of the Whole House.

Mr. MILLER: Committee on Claims. H. R. 9907. A bill for the relief of S. A. Rourke; with amendment (Rept. No. 1945). Referred to the Committee of the Whole House.

Mr. PITTENGER: Committee on Claims. H. R. 10166. A bill authorizing adjustment of the claim of Frank Spector; with amendment (Rept. No. 1946). Referred to the Committee of the Whole House.

Mr. PITTENGER: Committee on Claims. H. R. 14326. A bill for the relief of Eleanor Wright and William Wright, minor children of Donnie Wright, deceased; without amendment (Rept. No. 1947). Referred to the Committee of the Whole House.

Mr. MARTIN of Oregon: Committee on War Claims. S. J. Res. 197. Joint resolution conferring jurisdiction upon the Court of Claims to render findings of fact in the claim of P. F. Gormley Co.; with amendment (Rept. No. 1948). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. SMITH of West Virginia: A bill (H. R. 14499) to amend section 113 of the Judicial Code, as amended (U. S. C., title 28, sec. 194); to the Committee on the Judiciary.

By Mr. GUYER: A bill (H. R. 14500) to extend the time for completing the construction of a bridge across the Missouri River at or near Kansas City, Kans.; to the Committee on Interstate and Foreign Commerce.

By Mr. RAYBURN: A bill (H. R. 14501) to establish the Federal communications and power commission, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mrs. NORTON: A bill (H. R. 14502) to regulate the practice of professional engineering; creating a registration board for professional engineers of the District of Columbia, defining its powers and duties; providing penalties, and for other purposes; to the Committee on the District of Columbia.

Also, a bill (H. R. 14503) to relieve destitution in the District of Columbia; to the Committee on Banking and Currency.

By Mr. KETCHAM: A bill (H. R. 14504) to meet the existing emergency in the agricultural industry, to provide for the reduction of the interest on certain existing farm mortgages, to amend and supplement the Federal farm loan act; to the Committee on Banking and Currency.

By Mr. BRITTEN: A bill (H. R. 14505) for the repeal of the drastic so-called Jones 5 and 10 law; to the Committee on the Judiciary.

By Mr. STEVENSON: Resolution (H. Res. 367) authorizing the printing of the Rules and Manual of the House of Representatives for the Seventy-third Congress; to the Committee on Printing.

By Mr. McREYNOLDS: Joint resolution (H. J. Res. 580) to prohibit the exportation of arms or munitions of war from the United States under certain conditions; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 3 of Rule XXII, memorials were presented and referred as follows:

Memorial of the Legislature of the State of Wisconsin, memorializing Congress to give protection to American producers of wood pulp against unfair competition resulting from the depreciation of foreign currencies; to the Committee on Ways and Means.

Memorial of the Legislature of the State of Nebraska, favoring sound inflation of currency, discontinuance of appropriation for the development of inland waterways, and favoring the speedy passage of a bill providing for the liquidation and refinancing of farm mortgages and farm indebtedness at a reduced rate of interest through the Federal farm loan system; to the Committee on Banking and Currency.

Memorial of the Legislature of the State of Utah, memorializing Congress to support or initiate a movement to stabilize the monetary and credit bases so as to improve world commodity prices; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BUCKBEE: A bill (H. R. 14506) for the relief of Milton T. Cornish; to the Committee on Claims.

By Mr. COOPER of Ohio: A bill (H. R. 14507) for the relief of Charles Augustus McGarvey; to the Committee on Military Affairs.

By Mr. EATON of New Jersey: A bill (H. R. 14508) for the relief of William Sulem; to the Committee on Claims.

By Mr. MOBLEY: A bill (H. R. 14509) for the relief of Andrew Emmett Pope; to the Committee on Naval Affairs.

By Mr. REID of Illinois: A bill (H. R. 14510) for the relief of Arthur E. Mills; to the Committee on Claims.

By Mr. ROGERS: A bill (H. R. 14511) for the relief of Wilson G. Bingham; to the Committee on Military Affairs.

By Mr. WELCH: A bill (H. R. 14512) conferring upon the United States District Court for the Northern District of California, southern division, jurisdiction of the claim of Minnie C. de Back against the Alaska Railroad; to the Committee on Claims.

By Mr. YATES: A bill (H. R. 14513) granting a pension to Andrew J. J. Cornelius; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14514) granting a pension to Sarah E. Linder; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

10026. By Mr. ALDRICH: Petition of Ralph H. Field, George E. Murray, Edward J. Hogan, and 20 other citizens of the State of Rhode Island, protesting the order of the Administrator of Veterans' Affairs for review of all disability-allowance awards; to the Committee on World War Veterans' Legislation.

10027. By Mr. BOHN: Petition of citizens of Detour, Mich., favoring the stop-alien-representation amendment to the United States Constitution; to the Committee on the Judiciary.

10028. By Mr. DAVENPORT: Petition of Rev. N. A. Darling and 110 other citizens of Oneida County, N. Y., favoring the so-called stop-alien-representation amendment; to the Committee on the Judiciary.

10029. By Mr. DELANEY: Memorial of the Senate and House of Representatives of the State of Oregon, urging that foreign goods be stopped from coming into the United States at the expense of the closing of our factories, and that the distress of our citizens be permanently relieved by returning them to work at suitable rates of pay; to the Committee on Ways and Means.

10030. Also, petition of the memorial and executive committee of the United Spanish War Veterans of Brooklyn, N. Y., urging the inclusion in the Navy Department appropriation bill of $600,000 to be used in the training of the Naval Militia; to the Committee on Appropriations.

10031. Also, petition of the Geo. E. Sherman Co. (Inc.), of Brooklyn, N. Y., protesting against the amendment relating to oils and fats in House bill 13991; to the Committee on Agriculture.

10032. By Mr. FITZPATRICK: Petition of the Bronx Chamber of Commerce, favoring the restoration of first-class postal rates to 2 cents an ounce; to the Committee on Ways and Means.

10033. By Mr. GARBER: Petition of the Oregon State Legislature, urging immediate legislative action to stop foreign goods coming into this country at the expense of the closing of our factories and the unemployment of our people, and that the distress of our citizens be permanently relieved by returning them to work at rates of pay and under working hours which will help bring about prosperity in the United States; to the Committee on Ways and Means.

10034. Also, petition of the Miami Beach Chamber of Commerce, Miami Beach, Fla., urging enactment of House bill 11642; to the Committee on Claims.

10035. Also, resolutions adopted at joint meeting of Foreign Trade Club of North Texas and foreign relations committee, Dallas Chamber of Commerce, vigorously protesting against any curtailment of the activity of the Dallas district office of the Bureau of Foreign and Domestic Commerce, and indorsing the Dallas office as an essential service organization to the exporters and shippers of this territory; to the Committee on Interstate and Foreign Commerce.

10036. Also, petition of J. P. Anderson, Logan, Okla., insisting upon the imperative necessity for enacting legislation to stop farm-mortgage foreclosures; to the Committee on Banking and Currency.

10037. Also, petition of the Senate of the State of Oregon, urging payment of the soldiers' bonus; to the Committee on Ways and Means.

10038. Also, petition of the Legislature of the State of California, urging enactment of legislation restoring the public lands within the external boundaries of naval petroleum reserve No. 2, as now constituted, to the public domain of the United States, and transferring the jurisdiction over and the administration thereof and of all leases thereof to the Secretary of the Interior, and revoking and repealing any and all Executive orders and acts of Congress creating or confirming the creation of said naval petroleum reserve No. 2; to the Committee on Expenditures in the Executive Departments.

10039. Also, petition of L. C. Fish, Helena, Okla., urging enactment of legislation to refinance the farm-mortgage indebtedness of the country; to the Committee on Banking and Currency.

10040. Also, petition of the Woman's Christian Temperance Union of Claremore, Okla., urging continued support of the dry cause; to the Committee on the Judiciary.

10041. Also, petition of the board of directors of the Enid Chamber of Commerce, indorsing Garber bill, H. R. 14343, to repeal the tax on bank checks, and H. R. 14344, to restore the 2-cent rate of postage on first-class mail matter, and letter from T. T. Eason, president, Eason Oil Co., Enid, Okla., indorsing H. R. 14343 and H. R. 14344; to the Committee on Ways and Means.

10042. Also, petition urging the enactment of railway pension bills, S. 4646 and H. R. 9891; to the Committee on Interstate and Foreign Commerce.

10043. By Mr. HANCOCK of New York: Petition of Alfred G. White and other residents of Onondaga County, N. Y., favoring the stop-alien-representation amendment to the Constitution; to the Committee on the Judiciary.

10044. By Mr. LAMBERTSON: Petition of the Topeka Central Woman's Christian Temperance Union, Topeka, Kans., signed by its president, Anna B. Fisher, and its secretary, Mrs. E. E. Wiede, favoring the improvement of the motion-picture industry; to the Committee on Interstate and Foreign Commerce.

10045. Also, petition of the Woman's Christian Temperance Union of Denison, signed by its president, Mrs. W. O. Fergerson, and its secretary, Mrs. S. C. Tharp, of Denison, Kans., favoring the improvement of the motion-picture industry; to the Committee on Interstate and Foreign Commerce.

10046. By Mr. LUDLOW: Petition of citizens of Indianapolis, Ind., urging opposition to the legalization of beer or modification or repeal of the eighteenth amendment; to the Committee on the Judiciary.

10047. By Mr. McFADDEN: Petition of the Thirty-seventh Legislative Assembly of the State of Oregon, Senate Joint Memorial No. 1, to stop foreign goods coming into the United States and thereby help the factories and unemployment situation in the United States; to the Committee on Ways and Means.

10048. Also, petition of the Thirty-seventh Legislative Assembly of the State of Oregon, Senate Memorial No. 1, favoring the immediate payment of the soldiers' bonus; to the Committee on Ways and Means.

10049. By Mr. RUDD: Memorial of the Legislature of the State of Oregon, favoring immediate payment of the soldiers' bonus; to the Committee on Ways and Means.

10050. Also, memorial of the Legislature of the State of Oregon, favoring certain legislation in connection with the antidumping act; to the Committee on Ways and Means.

10051. By Mr. SANDERS of New York: Petition of citizens of Monroe County, N. Y., opposing any reduction in the enlisted strength of the United States Marine Corps; to the Committee on Appropriations.

10052. By Mr. SPENCE: Petition of William Cummings and others, of Covington; Nell McInerney, of Ludlow; Jack J. Flesch, of Latonia; Alice Chappius, of Cold Springs; August T. Schiffen, jr., of Fort Mitchell; Joseph Moran and others, of Bellevue; Lucille Palmer and others, of Newport; and B. E. Kettler, of Fort Thomas, all of the State of Kentucky, requesting the valuation of the gold ounce, etc.; to the Committee on Coinage, Weights, and Measures.

10053. By the SPEAKER: Petition of L. F. Harris, requesting an investigation of the official conduct of United States District Judge William Bondy; to the Committee on the Judiciary.

SENATE

TUESDAY, JANUARY 31, 1933

(Legislative day of Tuesday, January 10, 1933)

The Senate met at 12 o'clock meridian, on the expiration of the recess.

The VICE PRESIDENT. The Senate will receive a message from the House of Representatives.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Chaffee, one of its clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 14359. An act to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the

United States," approved July 1, 1898, and acts amendatory thereof and supplementary thereto; and

H. R. 14416. An act to make the Federal gasoline tax effective until June 30, 1934.

READING OF WASHINGTON'S FAREWELL ADDRESS

The VICE PRESIDENT. Pursuant to the order of the Senate of January 24, 1901, the Chair designates the Senator from Illinois [Mr. GLENN] to read Washington's Farewell Address on February 22 next.

CALL OF THE ROLL

Mr. BINGHAM obtained the floor.

Mr. FESS. Mr. President, will the Senator yield to me to make the point of no quorum?

Mr. BINGHAM. I yield to the Senator for that purpose.

Mr. FESS. I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Dale	Kendrick	Sheppard
Austin	Davis	Keyes	Shipstead
Bankhead	Dickinson	King	Shortridge
Barbour	Dill	La Follette	Smith
Barkley	Fess	Lewis	Smoot
Bingham	Fletcher	Logan	Steiwer
Black	Frazier	Long	Stephens
Blaine	George	McGill	Swanson
Borah	Glass	McKellar	Thomas, Idaho
Bratton	Glenn	McNary	Thomas, Okla.
Brookhart	Goldsborough	Metcalf	Townsend
Broussard	Gore	Moses	Trammell
Bulkley	Grammer	Neely	Tydings
Bulow	Hale	Norris	Vandenberg
Byrnes	Harrison	Nye	Wagner
Capper	Hastings	Oddie	Walcott
Caraway	Hatfield	Pittman	Walsh, Mass.
Carey	Hawes	Reed	Walsh, Mont.
Connally	Hayden	Reynolds	Watson
Coolidge	Hebert	Robinson, Ark.	Wheeler
Copeland	Howell	Robinson, Ind.	White
Costigan	Hull	Russell	
Couzens	Johnson	Schall	
Cutting	Kean	Schuyler	

Mr. FESS. Mr. President, I desire to announce that the Senator from Missouri [Mr. PATTERSON] is necessarily absent because of a death in his family.

I also desire to announce that the Senator from South Dakota [Mr. NORBECK] is detained in the Committee on Banking and Currency.

The VICE PRESIDENT. Ninety-three Senators have answered to their names. A quorum is present. The Senator from Connecticut [Mr. BINGHAM] has the floor.

DISTRIBUTION OF GOVERNMENT-OWNED COTTON—CONFERENCE REPORT

Mr. KING. Mr. President, the Senator from Connecticut has yielded to me for a moment. Some time ago H. R. 13607, to authorize the distribution of Government-owned cotton to the National Red Cross and other organizations for the relief of distress, passed the House and came to the Senate. Several amendments were made to the bill and it was passed and subsequently a conference had between the two Houses. The conferees reported back to the Senate accepting the position of the House and repudiating the action of the Senate. The conference report, during my temporary absence from the Chamber, was called up and adopted. I subsequently and on the same day submitted a motion to reconsider the vote, and that motion is now pending. I desire to proceed with the consideration of the motion.

I thank the Senator from Connecticut for yielding.

Mr. BINGHAM. Mr. President, I understand the Senator from Utah has now moved to reconsider the vote whereby the conference report was adopted. In opposition to the motion I would like to state one or two facts from the Red Cross. On the authority of Judge Payne, chairman of the Red Cross, it was stated on January 28 that the duty imposed upon the Red Cross of distributing clothing from 500,000 bales of cotton to needy people of the United States has been carried out as economically and as effectively as possible. He stated further:

We have purchased to January 20, 1933, chiefly from manufacturers, 56,850,664 yards of cotton cloth and 2,038,643 dozens of finished garments.

The Senator from Utah stated yesterday that a large part of the cotton which had been originally assigned to that organization under the bill last year had not been used. In reply to that may I quote from the testimony of Judge Payne before the House committee:

Mr. PURNELL. What percentage of the requests for cloth have you been able to meet?

Mr. PAYNE. That is a difficult question, because we estimate that the 500,000 bales that we have had to distribute would only meet a little over 20 per cent of the demand; so that we send to the chapters first the cloth for making the clothing and then the garments which they ordered specifically, and leave it to the chapters to distribute to the most needy.

Mr. PURNELL. Then you still have needs in each community unsatisfied?

Mr. PAYNE. Oh, yes.

Mr. PURNELL. How far will this 329,000 bales go toward satisfying the demand?

That is, the amount in the bill now before us.

Mr. PAYNE. Well, there will still be a very large demand.

Mr. PURNELL. As much as 50 per cent?

Mr. PAYNE. We have discussed that, and according to the best estimate that we can make on the facts which are presented by the reports of the chapters and which come to us otherwise, we think the need would require 2,000,000 bales.

In another place in the testimony before the House committee Judge Payne stated that at that time, and the date was December 13 of last year, they had actually used up by commitments all the 500,000 bales except 33,000 bales. They were drawing it from time to time so that at the present time they have nothing to distribute.

The need is very great, and I trust there will be no delay in discussing the matter. I was not one of the conferees, but the Senator from South Carolina [Mr. SMITH], who was in charge of the conference, is here. I trust the matter may be disposed of speedily and that the motion of the Senator from Utah will not prevail.

Mr. McKELLAR. Mr. President, before the Senator from Connecticut takes his seat I desire to ask him a question.

The VICE PRESIDENT. Does the Senator from Connecticut yield to the Senator from Tennessee?

Mr. BINGHAM. I yield.

Mr. McKELLAR. How much money will go to the Farm Board under the conference report?

Mr. BINGHAM. Will the Senator address his question to the Senator from South Carolina, who was in charge of the bill in conference? I may say to the Senator that my only interest in the matter is to secure this cotton for bedding and clothing for the unfortunate during the winter. I have no interest whatever in the Farm Board, and took no part whatever in the drafting of the bill nor in its consideration in conference. I only ask that we get the matter settled promptly.

Mr. McKELLAR. I am in entire harmony with the Senator's position in that. I think we ought to get the bill through at the earliest possible moment, but I am not in favor of this appropriation going into the hands of the Farm Board. It is as to that point that I desire to ask my friend from South Carolina the question, How much will go to the Farm Board under the conference report?

Mr. SMITH. Mr. President, the conference report provides for the payment of the amount the Farm Board borrowed on this cotton plus the overhead. That was accepted rather than the Senate provision, that it would be paid for at the market price. Under the provision accepted there will be paid the amount of money the Farm Board had borrowed on this cotton or obligated themselves for, plus the overhead to date; and under those terms I do not know whether, as a matter of fact, the Farm Board will receive anything or not. It seems to me that under the terms of the bill they will be likely to lose the difference between the price paid for the cotton to individual producers who turned it over to them and the liens and other charges against it.

Mr. McKELLAR. They will lose that, anyway.

Mr. SMITH. They will.

Mr. McKELLAR. Suppose they sold it on the market today, that loss would accrue to them, of course.

Mr. SMITH. Of course.

Mr. McKELLAR. Why should the Government step in now and appropriate money for their benefit to that extent?

Mr. SMITH. As I understand, it is just returning to them or obligating to give them what they have borrowed on this cotton and what the overhead amounts to up to date.

Mr. McKELLAR. Last year we specifically provided that that should not be done. I do not just understand how the Senate conferees were willing to adopt a different plan this year. Last year we provided for the market price, and in the Senate this year we simply adopted the same provision we adopted last year. The conferees have changed that, and have arranged it so that the Farm Board will be held harmless against any loss on this cotton. I think that is unfair and unjust to those of us who desire to give this cotton to charity. In other words, apparently, the Farm Board has undertaken to force the Congress to appropriate for their losses because we want to use this cotton for charitable purposes.

Mr. SMITH. I think the Senator, perhaps, is mistaken. I think the only thing the bill now provides is that the Farm Board shall be reimbursed or be allowed to credit itself only with the actual money they borrowed from the banks or those who loaned them the money, plus the overhead, which includes storage, interest, insurance, and so forth.

Mr. McKELLAR. If we are willing to pay for that there is no reason why that should not be done, but they are asking not only for that but they say, "If you want this cotton you must pay all we owe on it, all the charges on it, and in addition to that you must pay what we have lost on it."

Mr. SMITH. I do not think that is correct.

Mr. McKELLAR. That is exactly what the conference report means. We will have the figures here in just a moment; the Senator from Utah [Mr. KING] will present them.

Mr. TYDINGS. Mr. President, may I ask the Senator a question?

The VICE PRESIDENT. Does the Senator from Tennessee still retain the floor?

Mr. McKELLAR. No; I yield the floor.

The VICE PRESIDENT. The Senator from South Carolina is recognized.

Mr. TYDINGS. Will the Senator from South Carolina yield?

Mr. SMITH. I yield.

Mr. TYDINGS. I understand that we are loaning to communities that need assistance from the Federal Government large sums of money. Is it not possible with these large sums of money to acquire the very materials which the bill now before us would give to distressed communities for a sum of money approximating that which it would cost the Government under the Senator's proposal?

Mr. SMITH. Mr. President, as I said in the committee when this matter was being considered, I think, from the standpoint of the Government, it would have been cheaper and more sensible for us to have appropriated money and gone into the market and bought the cotton at the market price; but, no matter what line we follow, the Government stands to lose the amount of money invested in this cotton, whether we take it out of the Farm Board or whether we go on the market and buy it, because the funds of the Farm Board are Government money, and Government money is required if we go and buy the cotton. When the question arises as to the difference between paying the Farm Board the market price for the cotton and the amount of money they borrowed plus overhead and interest—not the value of the cotton, but the amount they had borrowed on it, the amount they had obligated themselves to outside parties for the purpose of carrying the cotton, the interest and storage charges that had accrued, the latter, in my opinion, would be less than the market price.

Mr. TYDINGS. Mr. President——

The VICE PRESIDENT. Does the Senator from South Carolina yield further to the Senator from Maryland?

Mr. SMITH. I yield the floor.

Mr. TYDINGS. I think that one of the troubles about relief is that there is no well-considered, ordered campaign for relief. First, we appropriate money and then we supplement that with wheat, and then we supplement it with cotton. It looks to me as if there were no coordination or business policy back of the relief program.

I am not criticizing the particular motion which is pending nor the motive which prompts it, but I think now is the time that we should formulate some general relief policy and not have these hodgepodge measures going through here without the consideration they ought to have.

Mr. KING obtained the floor.

Mr. FLETCHER. Mr. President, may I interrupt the Senator?

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Florida?

Mr. KING. I yield.

Mr. FLETCHER. I should like to inquire whether the amount loaned on this cotton exceeds the market price?

Mr. KING. I will answer that question in a few moments.

Mr. President, some Senators may not be fully advised as to the matter in controversy in connection with the matter now before us. The objection to the conference report does not relate to the question of whether a small appropriation should be made for the purchasing of cotton to aid those in distress. I might add, however, that it would be far better, as indicated by the Senator from South Carolina, to appropriate directly from the Treasury such sums as we conceive to be proper and then purchase either the cotton or buy the clothing into which it is designed the cotton shall be manufactured and make distribution of that to those who are in distress than to follow the plan presented in the House bill.

Some Senators may be under the impression that the opposition to the conference report is directed against the provision of the House bill which authorizes the use of 350,000 bales of cotton for the purpose of manufacturing clothing for distribution to the needy. The bill as it passed the House contains a provision that 350,000 bales of cotton now owned by the Farm Board or its agent, the Cotton Stabilization Corporation, but against which there are liens of a considerable sum, shall be delivered to the Red Cross to be used by it in obtaining clothing for distribution to the needy throughout the United States. That bill further provided that the money to pay these charges shall be taken from the Treasury of the United States. In other words, the bill appropriated or authorized the appropriation of approximately ten or eleven million dollars to pay charges and liens against cotton owned by the Farm Board or its agent in order that the cotton might be used by the Red Cross to exchange for clothing. When the bill came to the Senate, the Senator from Tennessee offered an amendment, which was modified, under the terms of which the money should come out of the revolving fund of the Farm Board and not out of the Treasury of the United States.

It is true, as my friend has just stated, that the United States appropriated the money expended and to be expended by the Farm Board, but I insisted, as did the Senate, that the money required to pay these charges and liens against the cotton should be taken from the revolving fund of the Farm Board and not from the Treasury of the United States.

Mr. President, the figures to which reference was made——

Mr. SHORTRIDGE. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from California?

Mr. KING. I yield.

Mr. SHORTRIDGE. Is there a considerable sum in the revolving fund for that purpose?

Mr. KING. I will come to that, if the Senator will pardon me, but I will say now categorically, yes.

Mr. TYDINGS. Does the Senator intend to offer an amendment to carry that out?

Mr. KING. A motion to reconsider is pending, and at this stage an amendment is not in order.

Mr. President, I have obtained this morning from the Treasury of the United States figures showing that there is in the Treasury of the United States to the credit of the Farm Board $28,680,938. This sum is "earmarked" and is a part of the $400,000,000 appropriated to the Farm Board. I am opposed to now appropriating ten or eleven million dollars from the Treasury of the United States to pay the debts of the Farm Board or its agent when it has $28,680,000 plus to its credit in the Treasury of the United States.

The Farm Board loaned to the Stabilization Corporation a sufficient sum to purchase a large quantity of cotton, a portion of which is the 350,000 bales referred to in this bill before us. It took security, notes, and collateral from the Stabilization Corporation for the money which was loaned for the purchase of this cotton. The Stabilization Corporation, after purchasing the cotton, incurred obligations in part due to the enormous salaries of officers and employees of the corporation, the president of which received $75,000 a year, but which has been reduced, I understand, to $50,000; and to pay for the purchase of additional cotton. At any rate the Stabilization Corporation, which is a creature of the Farm Board, borrowed upon the 350,000 bales of cotton—and it also borrowed upon all the cotton which it purchased—as I am advised, a sum amounting to $8,750,000. In addition, as a representative of the Farm Board told me, there are various charges amounting to $520,000, which constitute a lien upon the cotton. In addition, it will require $1,400,000 to pay for the carrying charges and delivery of the cotton.

Mr. BANKHEAD. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Alabama?

Mr. KING. I will yield in a moment. The aggregate, therefore, charged against this cotton is $10,670,000. Those are the liens and charges against this cotton which I insist shall be paid by the Farm Board out of the $28,000,000 plus which it has in the Treasury.

The Senate adopted this view and so amended the bill, but the conference committee promptly rejected the Senate's views and declared that the liens and charges should be paid by the United States, and that additional taxes shall be levied upon the people to meet the same.

Mr. BANKHEAD. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Alabama?

Mr. KING. I yield.

Mr. BANKHEAD. I should like to know, if the Senator has figured it, what the cotton cost, per pound, under the conference report.

Mr. KING. That is not material, as I see the question. I do not know what it did cost per pound.

Mr. BANKHEAD. It is very material when we consider whether that is the best way to get the cotton, or to go out in the market and buy the cotton.

Mr. KING. In that sense, yes; there are those who believe it would be better for the taxpayers and for those who grow cotton to appropriate enough to purchase the clothing which will be obtained by the Red Cross by using the 350,000 bales of cotton than to adopt the plan provided in the bill before us. It is claimed that four or five million dollars would purchase as much clothing as the Red Cross will obtain by the use of the cotton provided for in this bill, and that such course would stimulate the market to the advantage of the cotton producers. The charges against the cotton to date amount to at least $25 per bale. What they will be at the time of delivery no one can tell, but it is figured that they will amount to $1,400,000.

Mr. BANKHEAD. What is the total cost?

Mr. KING. The total liens and charges against this cotton to-day amount to $10,670,000.

Mr. BANKHEAD. May I ask whether any other payments are required under this conference report besides the liens?

Mr. KING. I think not.

Mr. BANKHEAD. How many bales of cotton are there?

Mr. KING. Three hundred and fifty thousand. The issue before us is very narrow; and I appeal to the Senator from Connecticut [Mr. BINGHAM], who is asking for economy, not to dip into the Treasury of the United States in its depleted condition, and take out approximately $11,000,000, to be used in paying debts of the Farm Board and its agents, thus adding to the stupendous appropriation of $500,000,000 which the Farm Board has already received, when it has $28,000,000 plus in the Treasury of the United States today from which the payment should be made.

Mr. SWANSON. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Virginia?

Mr. KING. I yield to the Senator.

Mr. SWANSON. As I understand, if we take out of the Treasury and turn over to the Farm Board the amount necessary to pay for this 350,000 bales of cotton, that will be added to their fund with which they conduct operations; whereas if we require the Farm Board to furnish the cotton out of this $28,000,000 it has on hand, it will discontinue the operations of the Farm Board to that extent.

Mr. KING. Exactly.

Mr. SWANSON. And the only object of this procedure is to have another conference, to see if we can not stop the operations of the Farm Board to that extent. That is the issue; is it not?

Mr. KING. I think the Senator, with his usual clarity of expression and keenness of perception, has indicated the principal point at issue in the matter. The real question is, Shall the view of the House and the Senator from Connecticut [Mr. BINGHAM] prevail—shall we tax the taxpayers of the United States $11,000,000 more in order to give it to the Farm Board, when the Farm Board, after expending more than $300,000,000 plus, much of which was lost and wasted, still has $28,000,000 to waste or expend. I insist, the Senator from Tennessee [Mr. MCKELLAR] insists, and the Senate insisted, that the tax burdens of the people should not be added to by compelling them to pay the $11,000,000 required to discharge the liens referred to, but that the Farm Board should meet the existing obligations.

Mr. WALSH of Massachusetts. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Massachusetts?

Mr. KING. I yield to the Senator.

Mr. WALSH of Massachusetts. I desire to make an inquiry about another phase of this matter.

Yesterday evening I was in conference with the chairman of the Stabilization Corporation. I was seeking to arrange for the storage of some of this cotton in New England, so that it should be more easily available to the cotton mills. He informed me—and I desire the Senator's opinion about it—that if this bill was enacted the Stabilization Corporation would be out of the cotton business; that there would be no more cotton for them to handle or dispose of. The reason of my inquiry is to find out whether the Senator is in accord with that sentiment; and if so, why should we not abolish the Stabilization Corporation?

Mr. KING. Mr. President, if the obtaining of this 350,000 bales of cotton will result in the stabilization cotton organization having no more cotton to dispose of, we can accomplish the same result by adhering to the Senate amendment. I regret that I have not made myself clear.

Mr. MCKELLAR. Mr. President——

Mr. WALSH of Massachusetts. I did not want to discuss the Senate amendment. What I wanted to bring out was whether or not this bill was leading in the direction of getting us out of the cotton business as a Government function.

Mr. KING. Of course, Mr. President, if we take money out of the Treasury of the United States and go out and

buy cotton of the Stabilization Corporation with liens upon it amounting to $11,000,000, then to that extent we get the Stabilization Corporation out of the cotton business and the Farm Board out of the cotton business; but we are doing it at the expense of the taxpayers of the United States. We have already taxed them $500,000,000. The Farm Board has squandered it all but $28,000,000, which is in cash and in the Treasury. I am insisting that we take the $11,000,000 out of the $28,000,000 that is left of the original $500,000,000 and pay these charges, and then the cotton will be delivered to the Red Cross just the same as if the House bill prevailed.

Mr. WALSH of Massachusetts. I understand that; but what I am trying to ascertain is, Is there a possibility now, with these bales of cotton being passed over to the Red Cross, of getting the Stabilization Corporation out of the cotton business for all time?

Mr. KING. It may require legislation. We ought to abolish the Farm Board; and with the abolition of the Farm Board the activities of the Stabilization Corporation and the Wheat Corporation would soon come to an end.

Mr. McKELLAR and Mr. SHORTRIDGE addressed the Chair.

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Tennessee?

Mr. KING. I yield to the Senator from Tennessee. Then I will yield to the Senator from California.

Mr. McKELLAR. If the Senator will allow me, I will answer the question which the Senator from Massachusetts has just asked.

The Stabilization Corporation, according to its last report, has 1,300,000 bales of cotton. We appropriated last summer 500,000 bales of cotton to be used by the Red Cross. That reduced the amount to 800,000 bales. To take away this 350,000 bales will leave 450,000 bales of the stabilization cotton still in existence, unless within the last few weeks the Stabilization Corporation has disposed of some of it.

Mr. WALSH of Massachusetts. That is not in accordance with the information given me.

Mr. McKELLAR. That is in accordance with the facts.

Mr. WALSH of Massachusetts. The information given me was that this would take all of the cotton which the Stabilization Corporation controls.

Mr. SMITH. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from South Carolina?

Mr. KING. I yield to the Senator from South Carolina.

Mr. SMITH. In addition to the cotton that has been allocated to the Red Cross, the Stabilization Corporation has been liquidating its holdings in the market; and that, in addition to what has been donated or allocated, whatever we may call it, to the Red Cross, has brought them down to where they practically are ready to close up the stabilization activities and go out of business.

Mr. WALSH of Massachusetts. I am glad to have that information. That is in conformity with the information given me, namely, that when this cotton is passed over to the Red Cross they will be ready to go out of business.

Mr. SMITH. Yes.

Mr. KING. There is no doubt that the activities of the Stabilization Corporation in dealing with cotton have demoralized and disturbed the market, and the quantity which it has held over the heads of those who have cotton to sell has had a most depressing effect. I am now asking that we disagree to the conference report and send the matter back to conference, so that the views of the Senate, unanimously expressed, may be further considered. I can not help but believe that a further conference will lead to the acceptance of the views of the Senate, and thus save the taxpayers at least ten or eleven millions of dollars. A conference could be had and within a day or so a report submitted which would, it is to be hoped, be of advantage to the people of the United States, and provide for the cotton in question to be delivered to the Red Cross.

Mr. ROBINSON of Arkansas. Mr. President, may I ask the Senator from Utah a question?

Mr. KING. I yield to the Senator from Arkansas.

Mr. ROBINSON of Arkansas. The Senator has just stated that if the conference report be not agreed to, an arrangement will be readily and promptly made that will obviate the payment to the Federal Farm Board of this $12,000,000, or approximately that amount. I wonder if the Senator intended the Senate to understand that he is assured that a conference agreement can be made with such an arrangement.

Mr. KING. Mr. President, perhaps I spoke with an assurance which may not be justified; but in view of the platform declarations that we have made respecting the Farm Board and its abolition, and in view of our platform declarations in favor of economy, and in view of the difficulties we are encountering now to balance the Budget, it seemed to me that the conferees would immediately agree upon the Senate bill and require the Farm Board to discharge the loans and charges referred to, thus saving the taxpayers approximately $11,000,000.

Mr. ROBINSON of Arkansas. The gist of the Senator's statement as I quoted it is a controlling consideration, as I see it. I should not like to vote to reconsider, and recommit this bill to conference, unless some assurance can be given that a different result may be anticipated. In other words, if this cotton is to be made available for purposes of the Red Cross, it ought to be done as promptly as practicable.

Mr. SMITH. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from South Carolina?

Mr. KING. I promised to yield first to the Senator from California [Mr. SHORTRIDGE]. Then I will yield to the Senator from South Carolina.

Mr. SHORTRIDGE. Mr. President, the question put by the Senator from Arkansas, and the responses made, have cleared up in my mind what I intended to have developed. As I understand the statement of the Senator from Utah, the Farm Board now has available funds to meet this requirement.

Mr. KING. Yes; $28,680,000 plus in the Treasury.

Mr. SHORTRIDGE. Exactly; but that amount must be devoted to removing the liens that are now resting on the cotton in question.

Mr. KING. I insist that that shall be done, whereas the House bill says that we shall take it out of the Treasury of the United States.

Mr. SHORTRIDGE. I understand the Senator. In other words, who has the cotton now?

Mr. KING. The Stabilization Corporation, an agent of the Farm Board.

Mr. SHORTRIDGE. And there is a lien amounting to how much?

Mr. KING. Approximately $10,670,000 lien for costs and charges.

Mr. SHORTRIDGE. Precisely. The end in view is to get this cotton into the hands of the needy?

Mr. KING. Yes; into the hands of the Red Cross, so that they may make contracts for the purpose of obtaining clothing to distribute to the needy.

Mr. SHORTRIDGE. Precisely. In order to accomplish that end this lien must be removed, and the Senator's contention is that the Farm Board should devote this money for that purpose?

Mr. KING. To be sure; instead of taxing the people of the United States $11,000,000, when the Farm Board have the money, and they may soon expend it, as they have most of the $500,000,000 placed in their hands by the United States.

Mr. SHORTRIDGE. Whether they have or not, I wished merely to have that point made clear; and it is now clear to me.

Mr. McKELLAR. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Tennessee?

Mr. KING. I yield to the Senator from Tennessee.

Mr. McKELLAR. In order to see if we can not bring about a ready adjustment of this matter, I am going to ask the Senator from South Carolina, who has the report in charge, if he will not take this bill back to conference and see if he can not work it out there along the lines that have been suggested here this morning. I hope he can. We want to take up the other bill, and we want to get rid of this matter. It is very necessary.

Mr. SMITH. Mr. President, I want to say that this is one time that a matter was more or less thrust upon me. There seems to be an impression abroad that I know more about cotton and the cotton business than most persons; and God knows if that is true, the rest of the Senators ought to be ashamed of themselves.

The situation is just this: The capital of the Farm Board now in actual money is about $28,000,000. I do not know what obligations they have which may take part or all of that; I am not advised. I do not know whether that amount of money is net to carry on with, outside of the operating expenses. It does not make a particle of difference whether we make provision for the difference between the market price and the obligations of the Farm Board, it is Government money. Suppose to-morrow the Farm Board were to go out of business and there was $28,000,000 net; that would be turned into the Treasury, and if this bill were to pass in the form in which it now is, $11,000,000 of that Government money would have to go to furnish the fund made necessary by this measure.

Whether there are commitments against the $28,000,000 I do not know; I do not know what obligations the Farm Board may have outstanding against it. The question is whether we are going to require that the $11,000,000 shall come out of this Government fund which we voted, or whether we are going to make a separate appropriation and leave the $11,000,000 to the credit of the Farm Board. That is the only thing involved. In either event it will come out of money collected through taxes paid by the people of the country.

If it is the opinion of the Senate that the Farm Board is going to lose or squander the $28,000,000——

Mr. KING. We had better get our hands on a part of it soon.

Mr. SMITH. Then the question is how quickly we can salvage some of it. I am not in a position to know about that fund. To me it looked like trying to find the difference between tweedledum and tweedledee. The Government will have to pay it anyway.

Mr. SWANSON. Mr. President, will the Senator yield to me?

Mr. KING. I yield.

Mr. SWANSON. As I understand the proposition, $28,000,000 in the Treasury to-day is to the credit of the Farm Board.

Mr. KING. That is right; it is in law segregated as much as if it were in the Senator's possession.

Mr. SWANSON. As I understand the statement of the Treasury, if this $11,000,000 is appropriated out of the Treasury we shall have to raise money through taxes to furnish that amount.

Mr. KING. Absolutely.

Mr. SWANSON. The only difference is that while the $28,000,000 has been raised, if we take $11,000,000, there will be only $17,000,000 left; but if $11,000,000 is taken out of the Treasury, we shall have to furnish money to put in its place.

Mr. KING. Absolutely.

Mr. SHORTRIDGE. Mr. President, may I ask a question?

Mr. KING. Let me answer what the Senator from South Carolina has suggested, and then I will yield to the Senator.

I may say to my friend from South Carolina that his argument is ingenious but frank. The fallacy of it is that he assumes that the $28,000,000 plus which is in the Treasury of the United States for the Farm Board is available as an asset of the Federal Government. In my opinion, it is not, but is earmarked and belongs to the Farm Board just as the gold which France had at one time in the banks of the United States was earmarked. It was in the vaults of banks, but it was French gold, which could be withdrawn at any time.

While we are debating to-day, the Farm Board may issue warrants and withdraw it. That is possible. If they took it out of the Treasury for any purpose, just or unjust, then we would be confronted with a fait accompli, and probably would have to make an appropriation out of the Treasury and tax the already overburdened people of the United States to raise this $11,000,000 which ought to be paid by the Farm Board.

I now yield to the Senator from California.

Mr. SHORTRIDGE. I was about to ask the Senator this question: What are the outstanding present obligations of the Farm Board?

Mr. KING. I can not answer that, Mr. President. They contend, I am advised—and it is hearsay—that they have assets of the value of one or two hundred million dollars; and, in addition to that, they have the $28,000,000 plus in the Treasury. As I am advised the board contends that those assets consist of property, real and personal, of notes, mortgages, and various forms of security. At any rate, the Farm Board confesses that it lost between two and three hundred million dollars in its operations. It has $28,000,000 plus in the Treasury. It claims that it has assets worth one hundred or two hundred million dollars, and now the effort is to saddle upon the taxpayers of the United States the burden of raising $11,000,000.

Mr. BYRNES. Mr. President, will the Senator yield to me?

Mr. KING. I yield.

Mr. BYRNES. I will ask the Senator whether it is a correct statement of the case to say that $28,000,000 is in the Treasury to the credit of the Farm Board. There is no evidence that they have committed themselves to lend that amount to any of the cooperatives.

Mr. KING. No.

Mr. BYRNES. Then the only question is whether the $11,000,000 necessary to pay the interest and charges upon this cotton shall come as an additional appropriation from the Treasury or out of the Farm Board fund?

Mr. KING. That is the only question.

Mr. BYRNES. Is this correct, too, that if this measure shall go back to conference then the question will be whether the conferees will deny to the people of the United States, who need it, the clothing, which has been referred to on this floor, rather than reduce by $11,000,000 the Farm Board's fund, now amounting to $28,000,000?

Mr. KING. The Senator has stated the proposition in a few words.

Mr. BYRNES. And in voting, the question is whether we shall vote to reduce the Farm Board fund by $11,000,000 or deny to the American people who are in want an opportunity to receive the blankets and clothes which might be accorded them?

Mr. KING. I invite the attention of the Senator from Connecticut and my Democratic friends to an article appearing in this morning's paper containing a statement by the President of the United States, in which he warns the Congress and the people of the country that the appropriations contemplated exceed the Budget estimates. He states:

> The appropriation bills for the next fiscal year for the State, Justice, Commerce, and Labor Departments, together with the independent offices bill, have now been reported out from the House Appropriations Committee.
>
> The President recommended total appropriations for these services of $1,058,741,556, including permanent appropriations amounting to $81,104,553, or $977,637,003, excluding permanent appropriations.
>
> The House committee recommended $1,106,172,818, excluding permanent appropriations, or $128,535,815 increase over the President's recommendations. To this should be added $1,268,480 for deferments which will be required in the fiscal year, making a total increase for these services of $129,804,295.
>
> Since the statement of January 20, which showed on the same basis net increases of about $35,000,000 for the Departments of Agriculture, Interior, Post Office, Treasury, and War, further action by the House on the War Department bill has modified this figure to about $33,500,000.

The totals of the increases over the President's recommendations to date are therefore $163,319,642, and if finally adopted by the Congress will make an increase in the estimated deficit by that amount.

I do not quote these figures as indicating the infallibility of the President, because figures which have come from the White House and from the Treasury Department have not always been accurate. Congress, and the committees of Congress, relying upon them, have been led into serious mistakes. Nevertheless, the warning of the President is timely, and I appeal to Democrats, as well as to Republicans, that upon an issue of economy, reduction of taxes, relieving the American people from their burdens, there ought not to be any division.

Mr. BINGHAM. Mr. President, will the Senator yield to me?

Mr. KING. I yield.

Mr. BINGHAM. It is my understanding that the large amount of money to which the Senator refers, which has been reported by the House committee, is recommended chiefly because of the fact that no effort has been made to change the law regarding benefits to veterans of the World War for disabilities not received in line of duty and not directly attributable to the war, the President having recommended in his message a change in the law which would save about $127,000,000. The fact that the change has not been made necessitates an appropriation in the independent offices bill which causes this very great increase in appropriations over what the President hoped might take place.

Mr. KING. Mr. President, I did not quote from the President for the purpose of indicating the accuracy of the figures which he submitted. I did think, however, that his admonition to Congress and to the country at this time was entirely proper. Of course, I may not comment upon the situation at the other end of the Capitol, but my observations here in this body indicate that we approach with a great deal of timidity the question of reducing the burdens of taxation, and of reducing appropriations; I hope that more admonitions will come, not from the President alone, but from members of the Committee on Appropriations, that unless economies are effectuated, there will be a large deficit which will be passed on to the next administration.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield?

Mr. KING. I yield.

Mr. ROBINSON of Arkansas. I am wondering whether it is possible to accomplish the saving of some time by an arrangement to let the vote by which the conference report was agreed to be reconsidered and the bill go back to conference, and see if a different result can be accomplished in the conference.

Mr. WALSH of Massachusetts. Mr. President, could a stipulation be included in the agreement that the bill be reported back within a day or two?

Mr. ROBINSON of Arkansas. It would be my desire that as prompt action as possible should be had. I do not think we could bind the conferees, particularly those of the other body, to report within a given time.

My thought is this: We are getting near the end of the session. We have spent hours debating this subject already, and I fear will spend hours more. It seems to me that if the arrangement I am now suggesting can be made, we will know, when the bill comes back in a day or two, whether it is possible to reach an agreement which can be quickly worked out in legislation.

I feel that we ought to get action on these matters, and I am going to make the request for unanimous consent in the hope that it will be agreed to, and with the understanding that the bill shall be brought to a final conclusion as speedily as possible.

Mr. WALSH of Massachusetts. Mr. President, may I state that I hope the Senator from Connecticut and the Senator from South Carolina will agree, because it is my opinion that if a vote is taken the bill will be recommitted anyway; and this course will save time, and we shall get speedy action. The Senator from Utah assures us that he will have the bill returned very promptly.

Mr. KING. As far as I have any influence, of course.

Mr. McNARY. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Oregon?

Mr. KING. I yield.

Mr. McNARY. As one of the conferees I have no objection to that procedure if it is agreeable to the Senator from Connecticut [Mr. BINGHAM]. I do not know what can be accomplished. The able Senator from South Carolina [Mr. SMITH] worked very diligently on this matter, more actively than any of the other conferees. He had the time and the disposition and knew the subject matter. So far as I am concerned as one of the conferees, if the order shall be obtained I shall try to arrange for a conference at the earliest possible moment. I appreciate the necessity for expedition in the matter.

The VICE PRESIDENT. Let the Chair state that the report having been acted upon by the House, the bill would have to go back to the House and a new conference agreed upon.

Mr. ROBINSON of Arkansas. We could ask for a further conference.

The VICE PRESIDENT. The Senate could disagree to the report and insist on its amendments.

Mr. ROBINSON of Arkansas. Mr. President, I ask unanimous consent that the motion to reconsider be agreed to, that the report be disagreed to, that the Senate further insist upon its amendments and ask a further conference with the House, and that the Chair appoint the conferees on the part of the Senate.

Mr. McNARY. Mr. President, may I have the attention of the Senator from South Carolina? Does that proposal meet with his approval?

Mr. ROBINSON of Arkansas. May I make one additional statement first? I appreciate the spirit of the Senator from Connecticut and the Senator from South Carolina and the Senator from Oregon, as well as the attitude of the Senator from Utah. We must find some way to bring matters of this nature to a prompt conclusion. I feel that we are liable to go on debating the subject all day unless we do, and there is no necessity and no justification for prolonging the discussion.

I am not committing myself to a vote to recommit the bill, but I am committing myself to the proposition that we ought to save all the time we can. It is generous of the Senators who handled the bill in conference to make that concession, and I shall certainly stand by them if they feel constrained to reach the same conclusion that is reflected in the present conference report.

Mr. McNARY. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Oregon?

Mr. KING. I yield.

Mr. McNARY. There is no question about the position of the Senator from Arkansas. We are all in accord in that respect. I am not sure that there would be any change in the attitude of the conferees if the matter goes back to conference. I think we should vote to expedite the consideration of the matter now. I think the quickest way to handle it is to dispose of the question now, without further debate, whether we shall adopt or reject the conference report. In my opinion, the conference report would be adopted. On going back to conference, I am not sure whether we can accomplish anything different or not. I am willing to go back if that is the will of the Senate.

Mr. SMITH. Mr. President, will the Senator yield?

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from South Carolina?

Mr. KING. I yield.

Mr. SMITH. I have no predilection in the matter. I am here to do what the majority of the Senate sees fit to do; but the question is going to be presented, either in conference or on the floor of the Senate, as to whether we shall take out of the Treasury an additional $11,000,000 or whether we shall take it out of the Farm Board. That is the clear-cut issue now. I have no guaranty that the Senate will take either one of the two, or which one of the two we

will take. I am perfectly willing to go back and discuss it with the conferees on the part of the House. But the question, then, is going to be whether or not the money is to be taken out of the Treasury or taken out of the Farm Board. It seems to me we can settle that right now by a vote.

Mr. ROBINSON of Arkansas. Then let us vote.

Mr. SMITH. We would then know the sentiment of the body and which of the two alternatives we will take.

Mr. ROBINSON of Arkansas. Mr. President——

The VICE PRESIDENT. Does the Senator from Utah yield further to the Senator from Arkansas?

Mr. KING. I yield.

Mr. ROBINSON of Arkansas. If we can reach a vote, I have no objection, but, on the contrary, I would be delighted to take it. I ask the Senator from South Carolina how we are going to reach a vote right now with the Senator from Utah occupying the floor and the Senator from Oklahoma [Mr. GORE] waiting to take the floor and other Senators ready to carry on the debate?

Mr. SMITH. May I ask the Senator from Arkansas, if we are going to filibuster——

Mr. ROBINSON of Arkansas. Oh, I was not talking about a filibuster. I am trying to save time.

Mr. SMITH. So am I.

Mr. ROBINSON of Arkansas. I submit my request for unanimous consent.

The VICE PRESIDENT. Is there objection to the unanimous-consent request of the Senator from Arkansas?

Mr. BINGHAM. Mr. President——

Mr. KING. I yield to the Senator from Connecticut.

Mr. BINGHAM. I agree with the Senator from Oregon [Mr. MCNARY] that the quickest way to expedite the whole matter is to get a vote on it. I appeal to those who have debated it now for the last hour that they rest their case on the debate and let us come to a vote. If there is anything to be gained by agreeing to a reconsideration of the vote, I, for one, would have no objection to it, but it seems to me the Senator from Oregon is entirely correct that the likelihood of our getting favorable action in the conference would be greatly increased if we had a vote of the Senate denying or refusing to accept the decision of the conference. In the interest of saving time in the long run, since the debate is fresh in our minds, and if Senators will be willing to rest their case now instead of unduly prolonging the debate, it seems to me that that would be the best way to instruct the conferees. I hope we may have a vote on acceptance or rejection without further delay.

The VICE PRESIDENT. The Senator from Arkansas has submitted a unanimous-consent request. Is there objection? The Chair hears none, and it is so ordered. The Chair appoints the same conferees—the Senator from Oregon [Mr. MCNARY], the Senator from Nebraska [Mr. NORRIS], and the Senator from South Carolina [Mr. SMITH].

Mr. GORE. Mr. President, I am in entire sympathy with the wish of the Senator from Arkansas [Mr. ROBINSON] to expedite the business of the Senate. There are, however, certain facts which I desire to insert in the RECORD at this point for the enlightenment of the Senate and the guidance of the conferees.

Mr. President, I hold in my hand a letter from a cotton concern in the city of New York, McCampbell & Co. They are dealers in cotton goods. That fact does not appear upon the circular letter which I hold in my hand. It is a circular letter sent to the local agents of the Red Cross throughout the country. I assume from its tone and tenor that it was sent to each and every local Red Cross agent throughout the United States. It solicits those agents to write their Congressmen and to write their Senators urging the passage of the bill. It urges the Red Cross agents to be charitable, to communicate with their Senators and Congressmen advising them as to their duty in the premises. I wish to have the letter read to the Senate.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the clerk will read, as requested.

The legislative clerk read as follows:

NEW YORK, *January 20, 1933.*

DEAR FRIENDS: If your chapter could use, as Judge Payne recently testified, a great many more garments and additional cloth such as have been distributed to you by us and other manufacturers as a result of the first allotment of Farm Board cotton, it is suggested that you get in touch immediately with both of your Senators and your Representative in Congress, urging immediate action on the bill now pending to provide the remaining Stabilization Corporation's cotton.

There is every evidence that this bill will be passed, and National Red Cross headquarters will eventually be able to arrange for additional distribution of cloth and garments to you; but temporarily at least action by both branches of Congress is being held up. Word from you at this time would undoubtedly focus the attention of the men in Washington on the importance of immediate action.

In addition to writing your own Senators and your Representative, it is suggested that you also write a word of encouragement to the Hon. H. P. FULMER, Member of Congress, who sponsored the original bill and is back of the present legislation.

In writing you in this way the writer is doing so not at the suggestion of Red Cross headquarters but as an individual interested in seeing that the American Red Cross is put in a position to continue the excellent work which it has been doing in providing the needy with clothing.

Yours very truly,

RAYMOND H. STORM,
MCCAMPBELL & CO.

Mr. GORE. Mr. President, this cotton company avow a disinterested desire to see that the people of the country shall have their wants ministered to through the agency of the Red Cross, concealing the fact that they are dealers in cotton goods. That letter is pure propaganda. It is not written in the interest of charity nor in the interest of the suffering people of the country. I may say that I heard suggestions on the floor of the Senate but yesterday that the bill would stimulate employment on the part of operatives in cotton factories. Is that disinterested charity?

But, Mr. President, the anxiety on the part of this concern was superfluous and unwarranted. Their activities were unnecessary. No urge is required to speed legislation of this sort. We have set our feet in this path and there is no turning. The brakes are out of order and the pending bill illustrates the evil character and the evil tendency of such legislation and of such a policy. The measure passed in the last session to distribute cotton goods, limited the bounties of the Government to cloth and clothing. Mark the word "clothing." The pending bill, as might have been expected, goes a step farther. It includes bedding. No one should be surprised. It would be surprising if it were otherwise. The Senate, in order not to be behind, was not content with the word "bedding," but added, out of a superabundance of caution, "quilts and comforts." That was the point which divided the conferees. The Senate conferees finally yielded upon full assurance upon the part of the House conferees that "bedding" included quilts and comforts. So that point is settled.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER (Mr. DICKINSON in the chair). Does the Senator from Oklahoma yield to the Senator from Massachusetts?

Mr. GORE. I am glad to yield.

Mr. WALSH of Massachusetts. I am interested in the Senator's statement, because I have received epistles from my State calling attention to the extent to which they are suffering from the cold and asking that similar action be taken in the furnishing of coal by the several governments to that taken by the Government in the furnishing of cotton clothing and bedding.

Mr. GORE. I would suggest that the Senator advise his constituents to be patient and bide their time. Coal will follow in its train. The next bill that comes will probably include umbrellas and horse collars. [Laughter.]

Mr. WALSH of Massachusetts. Does not what the Senator has stated or is asking lead to the conclusion that if we are to proceed sanely and with due regard to the protection of the Federal Government in the future, whatever relief is expended by the Federal Government ought to be in the nature of cash to the local communities to be distributed as they see fit.

Mr. GORE. Either that or work to be required, for either cash, clothing, flour, or any other contribution. I shall touch that point in a moment.

I have no purpose, Mr. President, to delay the consideration of this measure; still less do I have any expectation of defeating such legislation. That would be contrary to all human experience. A year ago I detailed the course of degeneracy in the Roman Republic. I shall not now repeat further than to state that it began not, indeed, with free corn but with the sale of corn at a price less than the market price. The politicians, however, were not content with that. They insisted that even the reduced price was higher than Roman citizens should be required to pay. The price was further reduced. Finally the price was abolished, and corn was distributed free without money and without price. That was followed in the course of time by free corn, free oil, free wine, free shows, everything free except the inhabitants of Rome itself; they lost their character, and they lost their liberties.

Mr. President, it is said that human nature never changes. That may be true; but human nature reacts differently in different environment; human nature reacts quite differently to one state of environment as compared with another. Sometimes I think perhaps a craven or coward might under different environment have been a martyr or a hero. We can not change heredity; that is certain. We can not change the heredity of one individual, much less of an entire generation; but self-reliance and self-respect were the virtues which made this Republic great, and it can not survive their departure.

In my judgment, responding to the question of the Senator from Massachusetts [Mr. WALSH], I have always thought that work should be required in all possible cases where either flour or clothing is distributed. I happened to be in the town of Brownsville, Tex., not long since. The Red Cross there adopted, in the first instance, a policy requiring work in return for clothing and flour. A member of the board, however, a lady there, inspired by supersensitive consideration for the poor, protested that it was unfair for the poor to have to work in order to enjoy the benefactions of their Government. The practice of requiring work was abandoned. Not long since I was in conversation with a gentleman who has charge of the Red Cross work in one of the largest counties of the great State of Pennsylvania. He was a major in the World War. He has his local agents in towns and communities throughout the county. He told me that when carloads of flour came to his town, in the interest of economy and to save the paying out of cash, he had tried to arrange with the unemployed to unload the flour, upon the promise that they would be paid in flour for their services. They refused the task, answering that they would go across the street and obtain their dole from the local Red Cross agent, not only without money and without price but without work.

I have here a letter which I desire to have read. It will only take a moment. I have, also, another letter which I should like to request to have printed in the RECORD bearing upon this policy. I have purposely omitted the name of the writer of the letters, but they are from a Red Cross agent. I do not wish to embarrass him.

The PRESIDING OFFICER. Without objection, the clerk will read, as requested.

The legislative clerk read as follows:

JANUARY 25, 1933.

MY DEAR SIR: I have been connected with the Red Cross in the distribution of flour and clothing here in ——— County since the first shipment was received until the present time.

There is a bill in Congress at the present time to provide the remaining Stabilization Corporation cotton for distribution by the Red Cross.

I wish you to please be against this bill unless the beneficiary renders some service in return for these supplies.

The people who receive these supplies are of that shiftless, worthless class who are on charity in good times as well as bad. They are nonproducers. Ninety per cent of them did not even plant a garden last year or make any effort to be self-supporting. They have assumed the attitude that the Government is going to support them.

I could write several pages and go into details, but I realize that your time is very valuable, so I ask you from my experience to be against the giving away of supplies to the needy and destitute free of charge.

We have to live and learn and rectify our mistakes when we make them, and I tell you this sure is a mistake that should be stopped.

Very truly yours,

——— ———.

P. S.—If you wish details as to my attitude in this matter, I shall be glad to write you at length.

Mr. GORE. Mr. President, I have had that letter read for whatever it may be worth. It is the fruit of experience. Here we have no experience and probably will not need the experience of others. In response to his suggestion I wired requesting the details. The answer to that request I ask to have printed in the RECORD without taking the time of the Senate to have it read.

The PRESIDING OFFICER. Without objection, the letter will be printed in the RECORD.

The letter referred to is as follows:

AMERICAN RED CROSS,
——— COUNTY CHAPTER,
January 28, 1933.

Hon. T. P. GORE,
Washington, D. C.

MY DEAR SENATOR: Supplementing my letter of a few days ago, in which I requested you to be against the free distribution of the Stabilization Corporation's cotton to the "needy and distressed people of the United States," I am glad to give you my experiences as a worker with the Red Cross in the distribution of flour and clothing and yard goods.

This county has been divided into 15 districts, with a district chairman in each district. This chairman perfects an organization to handle this distribution in his territory.

We thought this method would tend to localize the distribution and the chairman and his helpers would be more or less personally acquainted with all the people in his district, and in this way the people who were not entitled to these supplies would be weeded out.

When the first shipment of flour was received last spring, the method of determining the beneficiaries was more or less vague. I shall give you the various experiences that occurred here in ——— because it is typical of all the districts. The territory in the ——— district is composed of ———, ———, ———, and ——— townships.

Four merchants having knowledge of the inhabitants of this district were selected to pass on the applications. A certain day was designated for the distribution of the free flour. When that day came, the town was well filled with people who wanted a sack of that "Red Cross flour." The word quickly spread to see Mr. So-and-so and get an order for a sack of flour. If a man could not get an order from one of the committee, he went to another one, and so on until he got an order. If a man was a customer of the merchant giving the flour orders, he got a sack of flour by telling the merchant he would not trade with him any more unless he gave him that flour. The result of this method was that the flour was given to practically everyone who applied for it, regardless of whether or not they were entitled to it under the act of Congress. Hundreds were turned away when the supply was exhausted.

Just after this first distribution was completed I was appointed by the chamber of commerce to be in charge of the distribution of Government supplies furnished through the Red Cross for the district.

When the next shipment was received, I had five men who were familiar with the inhabitants of the district to act as a board. The method of procedure was to let three people come before this board at one time. Their application blank was filled out and discussed by the board and then voted on. If three or more voted to give flour, it was given.

This method cut out about 60 per cent of the applicants but was unsatisfactory for the reason that the people who were refused flour made bitter remarks about the gentlemen on the board, and in many instances were so bitter that they threatened them bodily harm.

We could not think of a better method, so this same procedure was employed in disbursing the next shipment.

The annual election of Red Cross county officials was held on November 18, 1932, at which time I was elected county chairman.

I gave the matter of distribution serious thought, and I advised all district chairmen to take applications for flour and clothing and then have a secret committee pass on them. This committee was to be composed of persons who knew the people of the district.

The reason for this being a secret committee, the membership known only to the chairmen and the committee members, is occasioned by the fact that the bitter feeling the applicants hold against the committee and the continual stream of people running to the various members was too much of a strain to be under, and it was practically impossible to get qualified men to pass on the applications on account of this condition. By having

the membership secret the applicants who are refused supplies do not know whom to hound and threaten until given the articles.

All of the districts are using this method and are well satisfied with it.

So much for the distribution. Let us now see what the reactions to this free distribution amounted to.

A man named Edwards lived on the farm of one M. M. Watson last year. Mr. Watson encouraged him to plant garden and other vegetables that he could eat. Mr. Watson put up 500 quarts of fruits and vegetables from his part of the rental. Mr. Edwards could not find a market for his part so he let it rot. He made no effort to can or dry his food. It's true he may not have had receptacles to put it into if he canned it; however, he could have dried lots of it, and he could have had several bushels of beans. He could have saved some of his corn and had it ground into corn meal. The fact is that he did nothing to provide himself and family with food until the next crops could be raised. He moved into town and made the remark that the Government and the Red Cross had to feed him and he would see that they did.

Last week a Mr. Fred Forbis, who lives on his mother's farm up by ———, came to see me. They would not give him any flour up there, and people were getting it and he was entitled to it as well as the rest because the Government sent it here for him. This man has five milch cows from which he sells cream. He has four more that will be fresh in the spring. He has several hogs, chickens, three good horses, and a car. He has plenty of feed for all his stock.

You take the class of people of whom Mr. Edwards is a member and you will find them on charity regardless of what the conditions are, either hard or prosperous. The other class are that greedy, grasping kind who want it because it's free.

The free distribution of these supplies has encouraged a certain class of people to feel that the Red Cross is going to feed and clothe them. The result is they are not trying to make their own living.

If this condition continues, it will work numerous hardships upon the property owners and the good people of the community because these people are encouraged to be shiftless and they will not pay their just debts, their landlords are unable to collect rent from them, and if they are living on a farm, they will not produce sufficient crops to pay a small percentage of the taxes on the farm.

We must work to overcome this condition that is beginning to assert itself, so I would suggest that all future supplies be not given free. Why not require a certain amount of labor in return? This labor could be used on the streets and parks of the cities and the highways of the townships. People could be exempted who are unable physically to perform this labor.

If you could see the jealousy and hatred and shiftlessness that this free distribution is engendering, you would insist upon payment for the supplies in some form or other. I have talked to numerous substantial citizens and they are all of the opinion that these free supplies are ruining the people, and the wrong thing to do.

The reason I wrote you in protest of the free distribution was occasioned by a letter I received from McCampbell & Co., which I am inclosing.

I am also inclosing herewith a portion of my correspondence to the various district chairmen that will probably be interesting in regard to this matter.

I wish to thank you for the interest you have manifested in this matter, and I know that your actions regarding it will be for the best interests of the entire people of the Nation.

Very truly yours,

——— ———.

Mr. COPELAND obtained the floor.

Mr. BINGHAM and Mr. WALSH of Massachusetts addressed the Chair.

The PRESIDING OFFICER. Does the Senator from New York yield; and if so, to whom?

Mr. COPELAND. I yield first to the Senator from Connecticut.

Mr. BINGHAM. Mr. President, in reply to what the Senator from Oklahoma said in the beginning of his remarks, I think it is only fair to state that no one makes any profit out of the transaction. The Senator implies that the person writing the letter did so through motives not worthy, as though he were about to make a profit on the transaction. The letter which I hold in my hand from Judge Payne, the head of the Red Cross, states that there is no profit in the transaction, and that those engaged in manufacturing the cloth and the clothing do not profit from it at all. The only advantage to the manufacturers is in permitting them to employ their workers who are now unemployed. That is a natural and worthy motive on their part, Mr. President, and should not receive the kind of innuendo and insinuation which it has just received in the remarks of the Senator from Oklahoma. With many of his remarks and much that he has said I am in entire accord and entire sympathy, as the Senator well knows; but I had hoped that this matter might be concluded without leading to debate. I was assured some half hour ago if we would agree to let it go at once to conference that there would be no further debate on it, but I see that is a mistake.

Mr. GORE. Mr. President, I hope that the parties concerned are deserving to be acquitted of the imputations I made.

INFLATION OF THE CURRENCY

Mr. COPELAND. Mr. President, because of the crowded condition of the calendar, I should not rise to say a word except for the fact that the letter referred to by the Senator from Oklahoma was written by a gentleman living in my city. I do not know the concern with which he is connected. I have no knowledge whatever of what business this gentleman follows, but he is a constituent of mine.

Mr. President, we are going to have all sorts of plans offered here for inflation. We are going to have all sorts of plans offered for changing the value of the currency. We will have others offered designed to change entirely our fiscal policy. To most of these I am in violent opposition, but, Mr. President, there is the human element in this economic situation that the Congress can not afford to disregard.

In my State, the richest and most populous State in the Union, a million families are being cared for through charity, all their expenses paid for by charity. It is not the fault of these families that we have this economic depression. It is not the fault of the hundreds of thousands of unemployed in my State and other States of this Union that they are unemployed. But, if I know at all the spirit of the American people, I know that we do not want people to be hungry or unclothed or unsheltered.

Mr. President, the Senator from Connecticut has already read the letter of Judge Payne, the head of the Red Cross, to show that no profit accrues to the manufacturer by the use of the cotton about which we have been talking this morning. I can quite see that the anxiety of the concern which wrote the letter which was read this morning by the Senator from Oklahoma is not only to keep their men and women employed, to keep them at work without profit to the concern, but in order that there shall not be more unemployed who will have to be taken care of wholly by charity.

Mr. President, no matter what else we do, we can not afford to let the suffering of the American people go to the point that they will be ready to overthrow existing institutions. There is nobody so dangerous as a hungry man or a man whose family is hungry. Whether we enact any sort of legislation seeking to amend our financial laws in some absurd manner, no matter whether we do or do not do those things—and, of course, I hope we will not do so—we can not afford to let people go hungry or cold.

I had not intended to say one word, but I did not care to have the moment pass without a protest against any criticism of any effort on our part to allay the suffering among the citizens of the richest country in the world.

Senators, I can not speak too strongly on this subject. We can not afford to disregard the conditions in this great country of ours. We may consider it as secure as the seven hills of Rome, but it will not be secure if there are hungry and cold and suffering men and women and boys and girls in the United States.

It was on that account that I took this moment to rise to my feet and protest against any criticism of efforts made to better the conditions of those who are now suffering in our country.

Mr. GORE. Mr. President, let me observe that our institutions will not be safe if we pursue a policy which vitiates the character which has made our country great.

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from New York yield to the Senator from Massachusetts?

Mr. COPELAND. I do.

Mr. WALSH of Massachusetts. I agree with the Senator from New York that we should keep in mind, in connection with the problems before us, the possible danger of disturb-

ances in the social order. I think the Senator on other occasions as well as on this occasion has rendered a valuable service in emphasizing that possibility.

I was interested in what the Senator said about inflation of currency, and I take it that he is opposed to most of the many proposals that have been advanced, if not all of them.

Mr. COPELAND. I am.

Mr. WALSH of Massachusetts. I should like to make an inquiry of the Senator, and I am prompted to do this by something that happened yesterday.

The Senator from Georgia [Mr. GEORGE], in a brief statement to the Senate, called attention to the necessity, in readjusting or refinancing farm mortgages, that any proposal must be on the basis of readjusted valuation in the interest of the debtor as well as the creditor. I do not object to that sentiment, but I should like to inquire of the Senator—perhaps he has not given thought to this aspect of the inflation question—if he does not think that an important service that could be rendered to our country, and one that would be more likely to restore business normalcy than anything else, would be, if it were constitutionally possible, some general move or some general edict reducing debts, private and public, in the same proportion to all classes of people. The difficulties that this involves are apparent to all.

The chief obstacle that we are suffering from is the great mass of debts that is weighing all our people down; and as soon as an industry or an individual or a farmer puts his head up, the debts drag him down. Of course, such a proposal is practically impossible of legal accomplishment, but it is one of the aspects of this question that deserves attention.

We know that the process of liquidation is going on slowly. Indeed, too slowly. It is delaying recovery. Many business concerns are trying to liquidate and compromise their debts, but it is an interminable process. It necessarily prolongs the duration of the depression. This is while a general moratorium on all public and private debts is frequently proposed. It seems to me we would see the dawn of a new day if we could find a process constitutional, of course, to reduce all debts horizontally—a proportionate rate that might be conservative and safe. I believe it would lead toward the beginning of a new day, just as the business man and the individual begin a new day and have a new outlook upon life after they have gone into bankruptcy and are released from the burden of debt that has been crushing them and preventing them from making any progress.

Since the Senator from New York is in accord with me in opposition to many of these proposals to inflate the currency, I should like very much to have his views upon the proposition I have just submitted.

Mr. COPELAND. Mr. President, I feel flattered that the Senator should praise any opinion I may hold on this subject.

For myself, I am firmly convinced that there are three things that must be done:

There must be a reduction of debt.

There must be a reduction of carrying charges.

There must be an increase in the circulation.

We do not need more money. We have all the money we need. The problem is to get it in circulation.

Yesterday I was talking with a great builder in New York. He told me of the burden he is now having in taking back these properties, and the burden of the carrying charge, which comes from the high rate of interest. He spoke of the fact that the savings banks in our State have reduced the rate of interest that they pay to their depositors. He said that if the banks would make the same reduction in the rate of interest charged on the mortgages it would help very materially. I have no doubt that that is true. But there must be found some means of readjustment of this terrific burden of debt, some reduction in the carrying charge of those debts.

Mr. WALSH of Massachusetts. Mr. President, may I interrupt a moment?

Mr. COPELAND. I yield.

Mr. WALSH of Massachusetts. All suggestions we have heard relate to reducing debts of particular classes—a class here and a class there. It seems to me the reduction has to be uniform and general.

Mr. COPELAND. Of course it must be uniform. It is not alone the farmer who is suffering.

Mr. WALSH of Massachusetts. We would put the banker and insurance company out of business if we reduced the debt of every mortgage he held and did not go any farther. We must reduce the debt of the banker as well as the debt of the farmer and the debt of the merchant. It seems to me otherwise we are going to have a financial catastrophe.

Mr. COPELAND. I am sure the Senator has been interested in the suggestions made by the Senator from Georgia [Mr. GEORGE] along that line.

Mr. WALSH of Massachusetts. Very much.

Mr. COPELAND. I think they are worthy of study.

Mr. LOGAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from New York yield to the Senator from Kentucky?

Mr. COPELAND. I yield to the Senator.

Mr. LOGAN. I have been very much interested in the suggestion of the distinguished Senator from Massachusetts [Mr. WALSH], apparently approved by the Senator from New York, about reducing debts. I wish some one would indicate to me, however, how existing debts can be reduced by an edict, by law, or in any other way, unless it should be by private agreement. I wonder if there is any man living who believes that human greed will allow the reduction of any debt as long as the debtor is solvent.

I do not understand what Senators mean by reducing debts 10 per cent or 15 per cent. The obligation of a contract certainly can not be impaired by any law that we can pass; and certainly human nature never will consent to reduce any debt that is collectible, or even any rate of interest.

So if the Senator from New York realizes, as I believe, the great truth that debts are the trouble with our country more than anything else, if he has any idea, any plan whereby we may reduce debts, I wish he would tell us what it is. I know that we have a bankruptcy bill coming over here, and that probably is a stagger at it, but in my judgment it is just about as nearly nothing as could be offered. It is like nearly all the other plans that are suggested here; they are not feasible, and most of them are not even sensible; and we just go on from day to day talking, talking about things and not doing anything.

I wonder if the Senator from New York or the Senator from Massachusetts could give to the country, and particularly to a humble Senator from the State of Kentucky, just some glimmer of an idea as to how we are going to do those things. I will stay and listen all the rest of the afternoon if he will.

Mr. COPELAND. The Senator will not need to stay, I am sorry to say. If the Senator from Massachusetts and I had a plan which was clear-cut and definite and acceptable, the United States Mint would cast a gold medal to confer upon us because of our wisdom.

I realize that the Senator from Kentucky is entirely right when he talks about the difficulties associated with this subject. Nevertheless, I assume that at some time, some agency of Congress will attempt to find the solution for the problem; and it must be found. The Senator from Georgia [Mr. GEORGE] is proposing, of course, that it shall be by voluntary agreement between creditor and debtor.

Mr. McKELLAR. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Tennessee will state it.

Mr. McKELLAR. What is before the Senate?

The PRESIDING OFFICER. The unfinished business before the Senate is the modified amendment of the Senator from Tennessee to H. R. 13520.

Mr. McKELLAR. We have been discussing something else all the morning, and I thought we ought to know.

Mr. GORE. Mr. President——

Mr. COPELAND. Mr. President, a parliamentary inquiry. I assume that that amendment is debatable.

The PRESIDING OFFICER. It is.

Mr. COPELAND. I do not think those of us who in the last 10 minutes have discussed the financial condition of the country have been any farther away from the matter under consideration than often happens when our genial friend from Tennessee holds the floor. I realize, however, that we are taking time that might be used for the important bill which he has in mind.

Mr. McKELLAR. Mr. President, this appropriation bill has to be passed at this session, or ought to be passed at this session; and it does seem to me that we ought to get to it and vote on it as soon as possible.

Mr. HATFIELD obtained the floor.

Mr. GORE. Mr. President——

Mr. HATFIELD. I yield to the Senator from Oklahoma.

Mr. GORE. I merely wish to volunteer one observation, and that is that the Senator from New York [Mr. COPELAND] has stated a dilemma. How to avoid both horns of that dilemma is a question that I can not solve, and I have heard no solution suggested.

He remarked that a friend of his on yesterday suggested that if savings banks would reduce the rate of interest on the loans which they make it would be a long step in the right direction. In the same breath the Senator from New York observed that the debts now outstanding in this country ought to be reduced. When we increase the risk of a loan we increase the rate of interest; and when we suggest the possibility of canceling debts we increase the rate of interest, and we do more: We make people hesitant to lend their money at any rate of interest when we hazard the chance of ever recovering not only the interest but the principal itself. That is a dilemma.

CHANGE IN DATE OF INAUGURATION

The VICE PRESIDENT laid before the Senate a letter from the Secretary of State, inclosing a letter from the Governor of Washington, transmitting a certified copy of Senate Joint Resolution No. 3, ratifying the proposed amendment to the Constitution of the United States fixing the commencement of the terms of the President and Vice President and Members of Congress and fixing the time of the assembling of the Congress, which, with the accompanying papers, was ordered to lie on the table and to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
Washington, January 30, 1933.

The Hon. CHARLES CURTIS,
President of the Senate.

DEAR MR. CURTIS: I inclose a letter dated January 24, 1933, addressed to you by Governor Martin, of Washington, transmitting a certified copy of Senate Joint Resolution No. 3, ratifying the proposed amendment to the Constitution of the United States fixing the commencement of the terms of President and Vice President and Members of Congress and fixing the time of the assembling of Congress. The letter, with its inclosures, was referred to me by the White House.

I may state for your information that I have also received a certified copy of Senate Joint Resolution No. 3 from the Governor of Washington.

Sincerely yours,

H. L. STIMSON.

(Inclosures: Letter, Governor Martin, of Washington, to the honorable the President of the United States Senate, with inclosure.)

STATE OF WASHINGTON,
EXECUTIVE DEPARTMENT,
Olympia, January 24, 1933.

To the honorable the PRESIDENT OF THE UNITED STATES SENATE,
Washington, D. C.

DEAR MR. PRESIDENT: It is my pleasure to transmit to you herewith certified copy of Senate Joint Resolution No. 3, as received and filed in the office of the secretary of state of the State of Washington on the 20th day of January, 1933.

Cordially yours,

CLARENCE D. MARTIN,
Governor of Washington.

STATE OF WASHINGTON,
DEPARTMENT OF STATE.

To all to whom these presents shall come:

I, Ernest N. Hutchinson, secretary of state of the State of Washington and custodian of the seal of said State, do hereby certify that the annexed is a true and correct copy of Senate Joint Resolution No. 3, as received and filed in this office on the 20th day of January, 1933.

In testimony whereof I have hereunto set my hand and affixed hereto the seal of the State of Washington. Done at the capitol at Olympia this 20th day of January, A. D. 1933.

[SEAL.]

ERNEST N. HUTCHINSON,
Secretary of State.

By A. M. KITTO,
Assistant Secretary of State.

Senate Joint Resolution 3

Whereas both Houses of the Seventy-second Congress of the United States of America by a constitutional majority of two-thirds thereof propose an amendment to the Constitution of the United States, which is in words and figures as follows, to wit:

"Joint resolution proposing an amendment to the Constitution of the United States

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following amendment to the Constitution be, and hereby is, proposed to the States, to become valid as a part of said Constitution when ratified by the legislatures of the several States as provided in the Constitution:

"'ARTICLE —

"'SECTION 1. The terms of the President and Vice President shall end at noon on the 20th day of January and the terms of Senators and Representatives at noon on the 3d day of January of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

"'SEC. 2. The Congress shall assemble at least once in every year and such meeting shall begin at noon on the 3d day of January, unless they shall by law appoint a different day.

"'SEC. 3. If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice President elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

"'SEC. 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice shall have devolved upon them.

"'SEC. 5. Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

"'SEC. 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.'"

Therefore, be it

Resolved by the Legislature of the State of Washington:

SECTION 1. That said proposed amendment to the Constitution of the United States of America be, and the same is, hereby ratified by the Legislature of the State of Washington.

SEC. 2. That certified copies of this preamble and joint resolution be forwarded by the Governor of the State to the Secretary of State of the United States, to the presiding officer of the United States Senate, and to the Speaker of the House of Representatives of the United States.

Adopted by the senate January 19, 1933.

VICTOR A. MEYERS,
President of the Senate.

Adopted by the house January 19, 1933.

GEO. F. YANTIS,
Speaker of the House.

Filed January 20, 1933, 1.30 p. m.

ERNEST N. HUTCHINSON,
Secretary of State.

DISPOSITION OF CERTAIN LIGHTHOUSE RESERVATIONS

The VICE PRESIDENT laid before the Senate a letter from the Secretary of Commerce, transmitting a proposed draft of legislation authorizing the Secretary of Commerce to dispose of certain lighthouse reservations, and for other purposes, which, with the accompanying papers, was referred to the Committee on Commerce.

REPORT OF THE CAPITAL TRACTION CO.

The VICE PRESIDENT laid before the Senate a letter from the president of the Capital Traction Co., transmitting, pursuant to law, the report of the company, showing receipts and disbursements, etc., for the year ended December 31, 1932, which, with the accompanying report, was referred to the Committee on the District of Columbia.

REPORT OF WASHINGTON GAS LIGHT CO.

The VICE PRESIDENT laid before the Senate a letter from the president of the Washington Gas Light Co., transmitting, pursuant to law, a detailed statement of the business of the company, together with a list of stockholders, for the year ended December 31, 1932, which, with the accompanying papers, was referred to the Committee on the District of Columbia.

REPORT OF THE GEORGETOWN GAS LIGHT CO.

The VICE PRESIDENT laid before the Senate a letter from the vice president of the Georgetown Gas Light Co., transmitting, pursuant to law, a detailed statement of the business of the company, together with a list of stockholders, for the year ended December 31, 1932, which, with the accompanying papers, was referred to the Committee on the District of Columbia.

REPORTS OF THE CHESAPEAKE & POTOMAC TELEPHONE CO.

The VICE PRESIDENT laid before the Senate a letter from the president of the Chesapeake & Potomac Telephone Co., submitting, pursuant to law, a comparative general balance sheet of the company for the year 1932, which, with the accompanying papers, was referred to the Committee on the District of Columbia.

He also laid before the Senate a letter from the president of the Chesapeake & Potomac Telephone Co., submitting, pursuant to law, a complete report of the operations of the company for the year 1932, which, with the accompanying report, was referred to the Committee on the District of Columbia.

PETITIONS AND MEMORIALS

The VICE PRESIDENT laid before the Senate a letter in the nature of a petition from officers and members of the National Organization Masters, Mates and Pilots of America, signed by its secretary, New York City, N. Y., praying for the passage of legislation known as the Costigan and La Follette emergency relief bill, being the bill (S. 5125) to provide for cooperation by the Federal Government with the several States in relieving the hardships and suffering caused by unemployment, and for other purposes, which was ordered to lie on the table.

He also laid before the Senate a resolution adopted by the Board of Commissioners of Salt Lake City, Utah, favoring the passage of legislation to exempt from taxation States, State agencies and publicly owned utilities, which was referred to the Committee on Finance.

He also laid before the Senate a resolution adopted by the Board of Commissioners of Salt Lake City, Utah, favoring the passage of legislation to establish a standard of integrity and sound economy of municipal bond issues and giving to municipalities which meet such standard the same rights enjoyed by national banks to receive currency on the pledge of their bonds, which was referred to the Committee on Finance.

Mr. FESS presented resolutions adopted by local chapters of the Woman's Christian Temperance Union of Ada, Bucyrus, Clarksville, Cumberland, and Kent; the Lillian Stevens Chapter of the Woman's Christian Temperance Union of Cleveland; the Marion County Woman's Christian Temperance Union, of Marion; the Cuyahoga County Woman's Christian Temperance Union, and the Tedrow Christian Bible School, of Wauseon, all in the State of Ohio, remonstrating against the repeal of the eighteenth amendment to the Constitution or the repeal or modification of the national prohibition law, which were ordered to lie on the table.

Mr. WALSH of Massachusetts presented the memorial of Mrs. H. E. Wells and sundry other citizens of Northampton, Mass., remonstrating against increased governmental expenditures, which was referred to the Committee on Appropriations.

He also presented memorials and papers in the nature of memorials of sundry citizens of Boston, Chelmsford, Everett, Lowell, Lynn, Malden, Medford, Melrose, and Tewksbury, all in the State of Massachusetts, remonstrating against the repeal or modification of the national prohibition law, which were ordered to lie on the table.

Mr. CAPPER presented memorials of sundry citizens of Oswego, Wellington, and Winfield, all in the State of Kansas, remonstrating against the repeal of the eighteenth amendment to the Constitution or the modification of the national prohibition law, which were ordered to lie on the table.

He also presented resolutions adopted by the Woman's Christian Temperance Union of Burlington; members of the official board of the Civic Service League and of the official board of the Christian Church, both of Hope; and a resolution adopted at a union Victory Day service of three churches at Jetmore, all in the State of Kansas, protesting against the repeal of the eighteenth amendment to the Constitution or the modification of the national prohibition law, which were ordered to lie on the table.

He also presented resolutions adopted by the Woman's Foreign Missionary Society of Attica; the "What So Ever" Methodist Sunday School Class, of Burlington; members of the Wesleyan Methodist Church of Delphos; the Woman's Home Missionary Society of the Methodist Episcopal Church, the Woman's Foreign Missionary Society of the Methodist Episcopal Church, the United Presbyterian Missionary Society, the United Christian Missionary Society, and the Young Women's Christian Association, all of Stafford; the Ministerial Association of Wellington; and local chapters of the Woman's Christian Temperance Union of Burlington, Denison, Lincoln, Jetmore, Meade, Oakley, and Stafford, all in the State of Kansas, favoring the passage of legislation to regulate and supervise the motion-picture industry, which were ordered to lie on the table.

Mr. COPELAND presented resolutions adopted by the Presbyterian Sunday School, of Hancock, and a meeting celebrating the thirteenth anniversary of prohibition, held in the Baptist Church, both in the State of New York, protesting against the repeal of the eighteenth amendment to the Constitution or the repeal or modification of the national prohibition law, which were ordered to lie on the table.

He also presented a petition of sundry citizens of Rockville Center and vicinity, Long Island, N. Y., favoring the making of adequate appropriations for the War Department, which was referred to the Committee on Appropriations.

He also presented a resolution adopted by the Nassau County Clearing House Association, New York, opposing the publication of loans made by the Reconstruction Finance Corporation, which was referred to the Committee on Banking and Currency.

He also presented a resolution adopted by the Syracuse Society of Architects, of Syracuse, N. Y., favoring the passage of revenue legislation adopting a general sales tax, which was referred to the Committee on Finance.

He also presented a petition of sundry citizens of Cortland, Deansboro, Oriskany Falls, and Solsville, all in the State of New York, praying for the adoption of the so-called stop-alien-representation amendment to the Constitution, which was referred to the Committee on the Judiciary.

He also presented a resolution adopted by the Paul Revere Council, No. 190, Junior Order United American Mechanics, of the Bronx, New York, favoring the passage of legislation to carry out the purpose of the "buy American" movement, which was ordered to lie on the table.

He also presented the petition of the Woman's Home Missionary Society, of Norwich, N. Y., praying for the passage of legislation to regulate and supervise the motion-picture industry, which was ordered to lie on the table.

He also presented the petition of the Woman's Home Missionary Society of the Drew Methodist Episcopal Church of Port Jervis, N. Y., praying for the prompt ratification of the World Court protocols, which was ordered to lie on the table.

He also presented a memorial of sundry citizens of Owego and vicinity, in the State of New York, remonstrating against

the repeal or modification of the national prohibition law, which was ordered to lie on the table.

He also presented resolutions adopted by adult members of the Hancock Baptist Church School and the Home Missionary Society of the Methodist Episcopal Church, both of Hancock, and the Woman's Christian Temperance Union of Norwich, all in the State of New York, protesting against the repeal of the eighteenth amendment to the Constitution or the repeal or modification of the national prohibition law, which were ordered to lie on the table.

Mr. GRAMMER presented a memorial of sundry citizens of King County, Wash., remonstrating against the repeal or modification of the national prohibition law, which was ordered to lie on the table.

He also presented the following joint memorial of the Legislature of the State of Washington, which was referred to the Committee on Finance:

House Joint Memorial 2

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Senate and House of Representatives of the State of Washington, in legislative session assembled, most respectfully present and petition your honorable body as follows:

Whereas the immediate and greatest need of this Nation is to establish a fully employed citizenship, and normally functioning private industry offers the most desirable employment opportunities, and the primary and largest market for American produce and manufactures is found in meeting the wants of the American people, and the necessary employment in supplying these wants belongs first to American workmen; and

Whereas without the free flow of gold, the common medium of international values, the exchange rates of many nations' currencies have, by application of the law of supply and demand, become divorced from the actual values of those currencies as measured in buying power within the bounds of the Nation issuing the currency; and

Whereas depreciated currency is seriously handicapping American industry, and our foreign markets are stifled, and our domestic industries face destruction by increased imports from depreciated-currency nations; and

Whereas the economic life of the State of Washington is derived from basic industries, such as lumber, fish, pulp, wheat, fruits, coal, cement, and their allied industries, and the very existence of capital, industry, employment, wages, and our standards of living are based on the profitable operation of these basic industries; and

Whereas the Nation faces an emergency and the differences in money levels have existed for a long period and have not become adjusted; and

Whereas nations whose currencies are depreciated are able to ship merchandise into the United States, pay the existing tariffs, accept American currency in payment, and to make a greater profit on their merchandise than if sold in their own markets; and

Whereas such importations from more than 40 nations of the world into the United States under the existing depreciated-currency conditions has the effect of not only eliminating all tariff structures but of enabling such merchandise to be sold at such a low price in the markets of the United States as to handicap and paralyze American industry and increase unemployment, and the industries of the United States are facing bankruptcy and destruction; and

Whereas we believe that unless this legislation is immediately passed chaos and ruin threaten the financial and governmental structure of the United States; and

Whereas Congressman SAMUEL B. HILL, of the State of Washington, has introduced in the present session of Congress H. R. 13999, the official title of which is: A bill "To prevent loss of revenue, to provide employment for American labor, and to maintain the industries and agriculture of the United States against the effects of depreciation in foreign currencies"; and

Whereas the delay in enacting this bill into law at the present session of Congress is causing continued and alarming increase in unemployment in our industries, American industry and agriculture are being seriously harmed, and in many instances ruined, by this disastrous new form of competition, which is forcing hundreds of thousands of workmen to sacrifice their jobs; and

Whereas the Government of the United States is being deprived of vast customs revenue under existing conditions; and

Whereas equalization measures must be adopted to preserve American jobs for American workmen: Now, therefore, be it

Resolved, That the Senate and House of Representatives of the State of Washington respectfully urge the present Congress now in session, and the President of the United States, to promptly enact into law H. R. 13999; and be it further

Resolved, That this memorial be immediately transmitted to the proper officers and committees of the United States Senate and House of Representatives, and a copy sent to each of the Representatives and Senators representing the State of Washington in the United States Congress; and be it further

Resolved, That this memorial be immediately forwarded to the legislatures of all the States of the United States, requesting that they pass and present similar memorials to Congress; and

Your memoralists will ever pray.

Passed the house January 18, 1933.

GEO. F. YANTIS,
Speaker of the House.

Passed the senate January 19, 1933.

VICTOR A. MEYERS,
President of the Senate.

REGULATION OF MOTION-PICTURE INDUSTRY

Mr. CAPPER. Mr. President, I present petitions signed by 4,961 citizens of Kansas, asking for the enactment of legislation to regulate and supervise the motion-picture industry, which I ask to have received and to lie on the table. As the petitioners state, the motion pictures have untold power for good or evil in national life and character, and in international relations; also that efforts to elevate the movies through cooperation with the industry do not seem to have been overly successful. I hope the Senate takes early and favorable action on this subject.

The VICE PRESIDENT. The petitions will be received and lie on the table.

REPORTS OF COMMITTEES

Mr. VANDENBERG, from the Committee on Commerce, to which was referred the bill (H. R. 9385) authorizing Roy H. Campbell, Charles H. Brown, G. H. Wilsey, and Dr. H. O. Strosnider, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Des Moines River at or near St. Francisville, Mo., reported it without amendment and submitted a report (No. 1128) thereon.

Mr. SHORTRIDGE, from the Committee on Naval Affairs, to which was referred the bill (S. 5539) authorizing the Secretary of the Navy to grant a perpetual easement of 15 feet in width to Pacific Gas & Electric Co., a California utility corporation, over, across, in, and upon the site of the lighter-than-air base, near Sunnyvale, in the county of Santa Clara, in the State of California, for an existing 20-inch gas main, reported it with amendments and submitted a report (No. 1129) thereon.

He also, from the same committee, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

S. 5498. An act to authorize an increase in the limit of cost of one aircraft carrier (Rept. No. 1131); and

S. 5555. An act to authorize an exchange of lands between the city of San Diego and the United States (Rept. No. 1130).

Mr. GOLDSBOROUGH, from the Committee on Naval Affairs, to which was referred the bill (S. 5214) to correct the naval record of Michael J. Budzinski, reported it with amendments and submitted a report (No. 1132) thereon.

Mr. McNARY, from the Committee on Appropriations, to which was referred the bill (H. R. 13872) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1934, and for other purposes, reported it with amendments and submitted a report (No. 1133) thereon.

SENATOR FROM MINNESOTA

Mr. HEBERT, from the Committee on Privileges and Elections, reported a resolution (S. Res. 343), as follows:

Resolved, That THOMAS D. SCHALL is hereby declared to be a duly elected Senator of the United States from the State of Minnesota for the term of six years, commencing on the 4th day of March, 1931, and is entitled to be seated as such.

The VICE PRESIDENT. The resolution will be placed on the calendar.

THE PURCHASING POWER OF THE DOLLAR

Mr. FLETCHER presented a telegram from A. B. Chitty, president Lewis-Chitty Consolidated, wholesale grocers, of Jacksonville, Fla., which was referred to the Committee on Banking and Currency and ordered to be printed in the RECORD, as follows:

JACKSONVILLE, FLA., *January 30, 1933.*

Senator DUNCAN U. FLETCHER,
Washington, D. C.:

Whether lowering the purchasing power of our dollar would be beneficial or not, I can not say. However, unless dollars buy less than they do now producers and traders will be completely broke in next few months. Honesty and brains that our Congress has should find some way to help our people from the debacle we are in. I have bartered flour for pork, sugar for potatoes, and was able to get ahead—do my community good as a taxpayer. Now there seems to be no money to trade with. Banks have their funds in Government securities and are afraid to loan. People who have cash are afraid to invest. If the Wheeler bill is good bill, pass it. If a small group have gotten control of all money, it's serious. Better not wait for a perfect panacea or the waiting will cause a blowup.

A. B. CHITTY,
President Lewis-Chitty Consolidated, Wholesale Grocers.

LICENSE FEES FOR EDUCATIONAL BROADCASTING STATIONS

Mr. SCHALL. Mr. President, it seems to me that the suggestion made by Doctor Coffman, president of the University of Minnesota, contained in a letter addressed to me concerning exorbitant license fees for educational broadcasting stations, is well taken. I ask that Doctor Coffman's letter be printed in the RECORD and referred to the Committee on Interstate Commerce.

There being no objection, the letter was referred to the Committee on Interstate Commerce and ordered to be printed in the RECORD, as follows:

UNIVERSITY OF MINNESOTA.
Minneapolis, January 27, 1933.

Hon. THOMAS D. SCHALL,
United States Senator, Washington, D. C.

MY DEAR SENATOR SCHALL: May I call your attention to Senator DILL's bill, No. S. 5201, which provides for somewhat heavy license fees for educational broadcasting stations. It is estimated that under this provision a number of radio stations owned by educational institutions will have to pay annual license fees ranging from $300 to $450 each.

It occurs to me that the imposition of such license fees by the Federal Government on State institutions may involve a constitutional question.

We base our objection to it primarily, however, on the ground that radio broadcasting by colleges and universities is an educational function and not a money-making enterprise. The university radio station here broadcasts informative programs on agriculture, economics, politics, behavior problems of children, modern languages, music, etc. We are unable to see why such activities should have imposed upon them burdensome penalties. Many of the educational broadcasting stations will find the payment of this fee a financial hardship, and will probably have to withdraw from the broadcasting field altogether.

We should like to see this provision removed from the bill, and trust that we may count on your influence toward that end. We beg to assure you of our appreciation of anything you may do in that direction.

Cordially yours,

L. D. COFFMAN, *President.*

REFINANCING OF FARM INDEBTEDNESS

Mr. SCHALL. Mr. President, I am in receipt of a letter from a farmer in the vicinity of Fergus Falls who has just had his home foreclosed by the Federal land bank. He writes me asking what Congress is doing to refinance farm indebtedness.

This question is being asked the country over by farmers in distress in like circumstances. I wish I could tell him something that will be done. Certainly it is most imperative that something be done.

The policy laid down by this Congress last spring, when the additional $125,000,000 was appropriated for stock in the Federal land banks, was that leniency should be shown in the granting of extension of time, and that foreclosures were in each instance to be made only where the farmer had himself despaired of the future and had abandoned his place. Such has also been the policy of the administration, and has been so publicly announced many times. Likewise has the Federal Farm Loan Board stated to the country, leading it to believe that every leniency possible has been extended to the farmer in distress. However, letters keep coming in, all to the effect that such is not the actual practice of the different land banks, and stating that on the contrary instead of granting extensions of time they are as a matter of fact foreclosing, sometimes only on a pretext. Their policy is such as to lead one to believe that they actually are anxious to take over farms where the installments paid back on the debt have been the largest and where the equity is the greatest. Surely the practice of the Federal land banks is not consistent with the policy declared both by Congress and by the President, and it should be an easy matter to grant at least this much consideration to the farmer and the people in distress that they are not evicted from farm and home merely to satisfy some ambitious subordinate of the land-bank system desiring to make a record. This is no time for commercial records; on the contrary, is a time for the Government as a matter of self-preservation to grant every possible consideration. Its pride should be not in commercial records, but humanitarian records.

I ask leave to print the letter in the RECORD and that it be appropriately referred.

There being no objection, the letter was referred to the Committee on Banking and Currency and ordered to be printed in the RECORD, as follows:

FERGUS FALLS, MINN.,
Friberg, January 26, 1933.

DEAR SENATOR: Would you kindly inform me what Congress is doing in regards refinancing farm indebtedness? The sheriff was here to-day and foreclosed on my home by the Federal Land Bank, St. Paul, Minn. Is there anything done besides talk?

D. BUDKE.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. TOWNSEND:

A bill (S. 5563) granting an increase of pension to Mary Elizabeth Hall (with accompanying papers); to the Committee on Pensions.

By Mr. COPELAND:

A bill (S. 5564) to extend the times for commencing and completing the construction of a bridge across Hudson River at or near Catskill, Greene County, N. Y., and for other purposes; to the Committee on Commerce.

By Mr. WHEELER:

A bill (S. 5565) granting a pension to John Ransom; to the Committee on Pensions.

By Mr. ODDIE:

A bill (S. 5566) to prohibit the importation of articles from certain countries, and for other purposes; to the Committee on Finance.

By Mr. THOMAS of Oklahoma:

A joint resolution (S. J. Res. 247) to provide protection and relief to farmers by aiding them to conserve and liquefy their mineral rights through recognized and established cooperative agencies engaged in the pooling of mineral rights underlying farm lands; to the Committee on Banking and Currency.

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated below:

H. R. 14359. An act to amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States," approved July 1, 1898, and acts amendatory thereof and supplementary thereto; to the Committee on the Judiciary.

H. R. 14416. An act to make the Federal gasoline tax effective until June 30, 1934; to the Committee on Finance.

HEARINGS BEFORE COMMITTEE ON INTEROCEANIC CANALS

Mr. SCHALL submitted the following resolution (S. Res. 344), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Committee on Interoceanic Canals, or any subcommittee thereof, is authorized, during the Seventy-second Congress, to send for persons, books, and papers, to administer oaths, and to employ a stenographer, at a cost not exceeding 25 cents per 100 words, to report such hearings as may be had in connection with any subject which may be before said committee, the expenses thereof to be paid out of the contingent fund of the Senate; and that the committee, or any subcommittee thereof, may sit during the sessions or recesses of the Senate.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Latta, one of his secretaries.

CURRENCY INFLATION—ARTICLE BY WALTER LIPPMANN

Mr. WALSH of Massachusetts. Mr. President, I suppose there is no subject engaging the public attention so extensively or any subject that is more important at the present time than that of inflation. A good many articles have been put in the RECORD written by various students of that question. I should like to have inserted in the RECORD, in order that we may have all possible information, an article by Mr. Walter Lippmann, entitled, "Which Kind of Inflation." I think it is a valuable contribution to the general discussion of the subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Globe, January 25, 1933.]

WHICH KIND OF INFLATION

The discussion about money and prices would be much less confusing if the advocates of various policies would say clearly what they mean. For, as the argument is now running, the public is led to believe that there is a radical or heretic school which wishes to raise prices by monetary devices, and a conservative, or orthodox, school, which does not wish to raise them. The impression is untrue. If we take the proposals of men like Messrs. BORAH, WHEELER, THOMAS, PATMAN, as representatives of the alleged radicals and the policies of the Federal reserve system, as representative of the alleged conservatives, we find that there is no issue between them as to the desirability of raising prices by monetary action. We find, also, that there is no issue between them on the desirability of expanding the supply of money to raise prices.

What, then, is the issue between them? It is whether the wise and effective policy is to raise prices by inflating currency or by inflating credit. Mr. BORAH and his colleagues wish in one way or another to inflate the currency; that is, to issue more dollar bills. The Federal reserve system has for about nine months been inflating the basis of credit in the hope that bankers and borrowers will use that credit to expand investment in productive enterprises.

Both schools agree that an increase in the supply of money ought to have some effect in raising prices, or, to put it in another way, that an increase in the supply of money is the necessary condition of a rise in prices. They differ in the first instance as to which part of our supply of money to deal with. There are two kinds of money in use. There is the currency which we carry around in our pockets or, perhaps, hide in the mattress. Then there are bank deposits which can be cashed into currency, but are for the most part drawn upon by check. The supply of money consists of currency plus bank deposits. The currency inflationists wish to increase the currency; the credit inflationists wish to increase the bank deposits.

The first question, then, is which part of the money supply it is most desirable to increase. How is that question to be answered? A beginning in answering it can be made by looking to see which part of the supply of money has shrunk during the depression. If Mr. BORAH and his friends will study the figures, they will find that the volume of currency in circulation to-day is about 5.7 billion dollars. They will find that in 1929, at the height of the boom, the value of currency was only 4.8 billions. In other words, we actually have nearly a billion dollars more currency to-day, when we are at the bottom of the depression, than we had when business was humming. If more currency will raise prices, why have prices fallen though we have more currency? Surely it is clear that the volume of currency does not determine the level of prices.

Now look at the other kind of money—at bank credit. Here we see a very different picture. In 1929 the volume of bank credit stood at 58.8 billions. To-day it stands at 46.1 billions. Nearly $13,000,000,000 of bank money have been deflated out of existence at a time when prices have fallen so disastrously. Surely, if there is a connection between the quantity of money and the level of prices the connection must be right here. Bank money has shrunk nearly 25 per cent. Wholesale prices have fallen about 35 per cent. There is some sense in arguing that there is a connection between the two. But there is no sense in saying that prices have fallen 35 per cent because there is not enough currency when, in fact, currency has increased 16 per cent.

The currency inflationists have fixed their attention on the unimportant part of the money supply on the currency which, in 1929, was less than one-twelfth of the whole supply and to-day is about one-tenth. The practical question is: If what you wish to do is to increase the quantity of money is there any point in concentrating on one-tenth part of our money? Why not concentrate attention on the nine-tenths.

Though we still have $46,000,000,000 of bank money, the moment currency inflation started, this bank money would begin to shrink. People would call their loans and convert them into gold or some other thing that they could hoard. Therefore, a currency inflation would either have to go to extreme lengths, such as issuing about $12 for every one now out—or there would be less actual money at the end of it than at the beginning.

This is the basic reason why currency inflation is not worth monkeying with. If you issue a little more currency, say $1,000,000,000 or $2,000,000,000 more, and convince people that that is all you are going to issue, it won't make any appreciable difference in the level of prices. If, on the other hand, you issue great amounts of new currency, the amount which would be necessary to bring the total quantity back to 1929, you will make the currency worthless. For no one in his senses will wish to accept a currency which is going to be expanded ten or twelve times. Since no one will trust the money, no one will lend money to the Government or to anyone else. He knows he will never get it back. The result is that the Government can no longer borrow to cover its deficit. It must, therefore, issue more money. The more it issues the more worthless does the money become.

A currency inflation which would really raise prices would have to be such an enormous inflation that it would be uncontrollable. A currency inflation which was moderate and under strict control would not raise prices.

"AN APPEAL TO CONGRESS—STOP MAKING AMERICA 'THE FINANCIAL MILK COW OF THE WORLD'"

Mr. GRAMMER. Mr. President, hearings are now under way before a committee of the House on measures intended to correct our economic losses to domestic industry, which have been brought about by false values created in foreign countries that have gone off the gold standard. The Pacific Northwest has felt the full force of this upheaval in relative values in connection with every major industry of that area. The practical result of our failure to compensate for currency fluctuations in fixing the values of imported articles has been set down in most graphic form by Mr. William D. Welsh, publisher of the Port Angeles Evening News, Port Angeles, Wash., in an article signed by him in the issue of January 17, 1933. From personal knowledge, I am able to assure the Senate that the portrait he pictures is not overdrawn, and that the situation is in fact more desperate than the article indicates. I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN APPEAL TO CONGRESS—STOP MAKING AMERICA "THE FINANCIAL MILK COW OF THE WORLD"

By William D. Welsh

Gentlemen of the United States Congress: This appeal comes from Port Angeles and the vast Olympic Peninsula of Washington State, where industry, fisheries, mining, farming, shipping, commerce, and labor of a once prosperous people have been trampled underfoot by a devastating and unfair competition from nations operating under depreciated currencies. It is not the selfish appeal of one class of Americans against another, for the conditions prevailing here maintain throughout the forty-eight States of America. It is the fervent cry of suffering legions to their representatives in Congress to pass a depreciated currency-correction measure such as H. R. 13999 before the present session ends and before further human suffering ensues.

Port Angeles is located on the shores of Juan de Fuca Strait, which divides Canada from the United States, and on whose waters the commerce of the North Pacific coast ebbs and flows. Port Angeles is located in the heart of the logging, lumbering, fishing, farming, pulp, and paper producing section of the Olympic Peninsula, and is the gateway to the greatest stand of pulp forests remaining in the United States. Up until some 47 nations followed Great Britain off the gold standard, and the domestic trade of the United States became the golden calf to be worshiped and coddled by debased currency nations, this region was one of the most stable and prosperous in America. Gentlemen, that prosperous condition is now only a memory. Mills are silent. Fisheries in the doldrums. Farming in peril. Mining a thing of the past. Business is virtually at a standstill, and hundreds of men daily appear before charity and indigent relief headquarters for odd jobs and bare subsistence rations.

The principal reason for this situation is the competition which our industries face from countries whose currencies are no longer on the gold standard. By reason of the depreciation of their currencies, these countries enjoy a preference in the markets of the United States ranging from 13 per cent for imports from Canada, 35 per cent to 45 per cent for imports from Scandinavian countries, and 50 per cent to 60 per cent for imports from Japan.

The practical working of this situation is that our salmon canners, for example, marketing their product on a normal basis of 75 cents a dozen are meeting the competition of a closely similar article from Japan at a price of 30 cents to 37½ cents. A similar condition exists in the dairy industry, which faces competition from Canada, Denmark, and New Zealand; the manganese industry, facing Russian competition; the pulp and paper industry, whose competition comes from Canada and the Scandinavian countries; and numerous others.

H. R. 13999 corrects this situation. By the simple expedient of placing a counterveiling duty on imported articles to equal the

debased percentage of the currency, the world dollar is automatically leveled at American customs ports. If the Japanese currency is off 60 per cent on the day a $100,000 cargo lands in America from that nation, the countervailing duty would be $60,000 on the cargo. Should the cargo be landed the United States Treasury benefits $60,000. Should the duty keep the cargo out of the United States, then American factories and American workmen would be given business and employment manufacturing the articles the Japanese cargo sought to displace.

MOUNTAINS OF AMERICAN MANGANESE

Thirty miles west of Port Angeles, millions of tons of manganese ore have been located and staked out in the Olympic Mountain Ranges awaiting the day when Congress halts the flow of Siberian-mined manganese from being dumped onto the American market. This American manganese is so located that gravity chutes can carry it to railroads already constructed. Thousands of tons of manganese were once mined from the Olympic hills and transported by American railroads and American steamers to the steel mills of the East. Russian competition blotted out the industry. Before the soviet invasion American hard-rock miners were working and happy. Tonnage was provided for railroad trains and work for train crews in transporting the ore to tidewater bunkers here. American longshoremen were busy loading it to American steamers bound through the Panama Canal to steel cities of the Atlantic seaboard. All that ended when the Russian bear stepped into the picture. Wild salal obliterates the tunnel entrances now; railroad rails are rusting, tidewater bunkers are empty, and American steamers call no more. You have permitted Soviet Russian mining to prosper and killed an American mining industry, gentlemen.

COAST FISHING FLEET BEING SCUTTLED

One thousand salmon purse seiner and trolling boats, besides numerous halibut boats, of the Washington fishing fleet, operated out of Quillayute and Neah Bay Harbors, 70 miles west and north of Port Angeles during the spring, summer, and fall seasons. For countless years these boats have been manned by hardy, prosperous seamen, all home owners, boat owners, and taxpayers. Under the debased condition of the Japanese yen, imports of Japanese salmon and other fish damaged markets and dropped prices so low this year that poverty rode the waves with the 1932 fishing fleet, gentlemen. For the first time in history Government vessels and charity organizations donated fuel and food to Pacific-coast fishermen. Many of the vessels are now tied up in this harbor, and many of their owners are living off charity. By failing to equalize currency at the customs ports, gentlemen, you have O. K'd Japanese prosperity and scuttled the Pacific coast salmon and halibut and tuna fleets.

PULP AND SAW MILLS CLOSE DOWN

Port Angeles' sawmill, shingle, pulp, and paper industries ordinarily employ 1,200 men, with an equal number in the woods to harvest raw resources to be remanufactured at tidewater here. Because of the devastating competition from Canada, Sweden, Denmark, Norway, and other countries, but one mill of five is now operating, and most of the logging and pulp-mill camps are down. Because of the highly debased currency of foreign lumber and pulp producing regions, importations of pulp and paper to the three Pacific-coast States during 1932 displaced 4,000 American workmen from 250 days' labor. In plain words, 1,000,000 days' labor was lost to American workmen because you are permitting this debased currency competition to continue unchallenged. And, gentlemen, when a pulp and paper mill stops running that does not mean only that her millworkers are out of work. It also means economic stagnation for the pulpwood cutter in the backwoods, the trucker, the train crews, lime-rock quarrymen, sulphur miners, longshoremen, steamer crews, and other workers.

MENACE OF CHEAP FOREIGN BUTTER

Cubes of New Zealand butter landed on the Pacific coast early in January to cast another depreciated currency shadow on a fundamental American industry—dairying. After freight was paid on the 6,000-mile haul, and 14 cents per pound tariff added, the butter sold at San Francisco for only 26 cents per pound—far under the American butter price for that week. The depreciated currency of the shipping nation made that price possible and cast a shadow over dairy herds in America. The same threat comes from Denmark.

Shipments of Canadian cream, butter, and hogs increased heavily in 1932. The United States lost her United Kingdom wheat trade of 1932 because depreciated-currency countries find it profitable to trade with each other. American wheat shipments to the United Kingdom were 50,000,000 bushels under the 1931 mark, while Canada, Australia, and the Argentine zoomed their exports to new high levels. While Japan was menacing the salmon, sardine, and tuna trade of the United States, she also was able to ruin the American market in France, completely capturing the 1932 French fish market while the United States shipped that nation a bare 5 tons of fish. The debased condition of the Japanese yen turned the trick. The United States railroad and passenger steamers are losing millions of dollars in business for the reason that American dollars buy more passage on vessels and railroads of debased-currency nations. And, as if this were not enough, United States travelers spent $640,000,000 in Europe, and United States people sent $131,000,000 in relative remittances to the "old folks at home" during 1932. No wonder they call America "the milk cow of the world."

Lumber was given a $3 tariff protection at the last session of Congress, gentlemen, and to wipe out a great part of the benefit the United States customs legal department declared that large construction timbers, lath, shingles, and railroad ties do not come under the heading of "rough lumber." And these four mill products, gentlemen, form much of the business of western mills.

DEMAND CORRECTIVE LEGISLATION

Because of debased currency competition the Olympic Peninsula and the great Northwest plead for immediate passage of corrective legislation; legislation that will start the wheels of Pacific-coast industry to work within 30 days and take 120,000 men out of State bread lines. While thousands of former pulp-mill workers of this State wait their turn to work a few days for a subsistence ration doled out by a county indigent officer, foreign vessels steam up the Strait of Juan de Fuca before their eyes—carrying Swedish, Newfoundland, Canadian, Norwegian, and German pulp to American markets. Foreign vessels, foreign crews, foreign pulp and paper—and Americans starving.

Hundreds of unemployed shingle workers stand in amazement while trainloads and shiploads of Canadian shingles go by their door to American markets.

Crewless American fisher craft rise and fall in the swells from Japanese steamers bringing great cargoes of salmon and tuna to flood American markets and cast a shadow and a blight over the once great prosperous fishing industry of Washington, Oregon, California, and Alaska.

Gentlemen, the unemployed mill worker in the bread line, the jobless shingle sawyer by the railroad track, the gaunt-bellied fisherman, the cowboy in the saddle, the miner in his shanty, the woodsman in his cabin demand to know why you delay a return of their buying power. They want to know why you permit foreigners to nurse at the breast of America, while her own industrial, farming, mining, and laboring children perish for want of nourishment. They want to know why you fiddle while Rome burns. They demand to know why you talk of beer percentages and Philippine independence 12 years off when they need bread now. They fear that continuation of present conditions may cause the American worker to lose his most priceless heritage—the will to work, the initiative to create and maintain a home, and the independence that made the United States great.

Gentlemen, within 1 mile of where this is written, stand four great sawmills, shingle mills, and pulp and paper mills that in 1929 employed 1,200 men. These mills are idle—gray, smokeless ghosts of a prosperous day existing before a slumbering American leadership "sold them down the river" to an economic foe.

Within three blocks of where this is written, between 700 and 1,000 once well-paid and happy home-owning workmen await their turn for one and two days' work weekly provided by already overburdened taxpayers at $2 per day as a bare subsistence for the unemployed. Within eight blocks of where this is written, a tiny girl fainted from hunger in school one December day, and, when revived by her teacher and asked what was wrong, said: "Teacher, it was brother's turn to eat to-day." What is written in tears and suffering in Port Angeles is written in the same indelible fluid in every city and hamlet in America.

THOUSAND UNEMPLOYED HERE

Gentlemen of Congress, the 1,000 unemployed Americans in Port Angeles, the 120,000 unemployed Americans in Washington State, the 12,000,000 unemployed Americans in the United States are pleading with you to pass legislation immediately correcting the blight caused by foreign competition under depreciated-currency conditions. Some of these men served in the Army, the Navy, and the Marine Corps you sent overseas in 1917 to protect you and yours from a foreign foe. Couldn't you do the same for them now? Thank God, these men do not ask a dole. It isn't a sack of Red Cross flour or a pair of cast-off Army shoes they want. They want their jobs back—the jobs they had before foreigners captured American markets—and they are not quibbling over wages, either.

APPEALING TO CONGRESS

These millions of patriotic and marvelously patient unemployed Americans ask that the people they sent to Congress act immediately for the benefit of those people who sent them to Congress, and not be lulled to lethargy by the siren croon of international bankers, academic internationalists, paid lobbyists, and a handful of selfish American importers. They ask for a fair field and no favor. They ask for a chance for their white alley—a chance at the lathe, the bench, the loom, the fishline, the saw, the ax, the machine—to produce those articles used in American everyday life and now being furnished by foreign workers. They want to spend the golden tide of their earnings to bring prosperity back to the United States of America. Behind these legions of unemployed Americans stand the patient and hopeful women of America and their undernourished and scantily clad children. And many a tearful, expectant American mother turns her face to the bleak bedroom wall and prays that some miracle happens that will provide food for the babe that now stirs beneath her breasts.

Gentlemen of Congress, these are my people and your people. You are in the great city of Washington, where the tax moneys of a burdened people furnish a golden stream to create prosperity in our National Capital. You see no poverty there. The noise of marble chisel and riveting machine about the Capital buildings drowns out the echoes of depression from the balance of America. But it is out there beyond the rim just the same. The writer is out on the firing line, in a representative American maritime city of 10,000 people, of which 5,000 will be dependent upon public charity or the goodness of their neighbors before summer suns can

warm their poorly clad bodies. In the name of these people and the United States they still believe great, this appeal is written. These people can not all personally write, but they are banking on this message reaching your eyes and your hearts. They are banking on you as real Americans to forget for a time the oily arguments of bespatted diplomats from other shores, to banish the buffoonery of beer percentage and the distant freedom for a tiny brown race until the real issue of America is settled—and that issue is passing of the depreciated-currency legislation.

Gentlemen of Congress, the time has come for you to become your brother's keeper. They are your people. And they are on their knees, arms outstretched, asking God for guidance and further patience in their hour of economic travail, and imploring their Congress for an opportunity to earn that for which men and women and children have prayed since the dawn of a Christian civilization—"Give us this day our daily bread."

THE TARIFF AND DEPRECIATED FOREIGN CURRENCIES

Mr. HATFIELD. Mr. President, what I shall have to say this afternoon, I am convinced, deals directly with the subject matter before this body.

When the present tariff act was under consideration I had the pleasure of successfully advocating many of the tariff rates therein incorporated. These rates have partially served to develop the American chemical industry, and to render more and more secure the independence of our country.

At this time, when international relations are under severe stress; when signed agreements of foreign nations seem to substantiate the statement that "treaties are but mere scraps of paper"; when the League of Nations and the Kellogg-Briand pact, both renowned for their impotence, stand discarded in Asiatic domains; it is indeed a pleasure and a high privilege, as an American citizen, to recall my participation in a legislative action that has served so well for the national welfare, and has helped to establish the United States of America as a free and independent people.

In 1914, throughout the breadth and length of this country, we could find no semblance of an organic chemical field. On the other hand, we had a substantial development of inorganic chemical production. In the main, we were wholly dependent at that time upon foreign sources for practically all of our dyes and pharmaceuticals. The shortage of dyes alone, at one time during the World War, threatened the shutdown of the textile industry of this country.

As a Member of the United States Senate I rejoice that those days of 1914 have gone forever, and that progress has reached the point at which we can supply virtually every chemical needed.

I rejoice at the contents of a letter which I recently received from the Chemical Foundation setting forth that to-day we are free from foreign influence for every necessary commodity, with virtually only five exceptions. These five are coffee, tea, tin, rubber, and sisal, and, in my opinion, it need not be absolutely essential within a few years for any one of these five to be imported.

At this point, Mr. President, I desire to have the clerk read, as a part of my remarks, a letter recently received from the American Chemical Foundation which contains an array of facts on our progress that depicts our chemical status at present and paints a future that will be brilliant if untrammeled by interference on the part of foreigners, our international bankers, or a shortsightedness on the part of our National Congress.

The VICE PRESIDENT. Without objection, the clerk will read.

The legislative clerk read as follows:

THE CHEMICAL FOUNDATION,
New York City, January 6, 1933.

Hon. HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.

DEAR SENATOR HATFIELD: The American chemist is delighted to-day to be able to assure the Congress of the United States that they may decide the foreign debt question, or any other foreign question, absolutely free of any dependence on the outside world for any necessity of national life, national health, agriculture, or defense. In these days of criticism, it is a pleasure to assure you that this independence is due to the united efforts of the Congress of the United States, our educational forces, and the support of all the people, with the exception of our international bankers who have been at all times the enemies of American chemistry and have loaned over $200,000,000 of the savings of the American people to foreign competitors in their effort to destroy our progress.

Let us look for a moment at the record:

NEW YORK, *March 6, 1915.*

Hon. WILLIAM J. BRYAN,
Secretary of State, Washington, D. C.

MY DEAR MR. BRYAN: Referring to my letter of yesterday regarding the dyestuff situation, I beg to say that I received the following cable this morning from Germany via Milan: "Latest developments make further shipments dyestuffs impossible." The cable was sent to me by Dr. Adolph Haeuser.

The same man that, as I have shown before, wrote the letters directing what Germany wanted in a tariff policy. He has now been made the head of them all, the president of the Verein zur Wahrung der Interressen der Chemischen Industrie, Deutschlands, which is composed of the various chemical and dyestuff manufacturers of Germany, with headquarters in Berlin, and shows the attitude of German manufacturers of dyestuffs in the present crisis.

It is safe to assume that they will take every precaution and go to any length to prevent their products reaching consumers of enemy countries; and unless some agreement can be reached to have the present condition modified, the manufacturers of this country will suffer as much as those of belligerent countries.

Yours very truly,

H. A. METZ.

* * * * * * *

"Serial No. 432 of March 13, 1915. It is reported to me by Hossenfelder" (German consul general in New York), "telegram No. 4, that the stock of dyes in this country is so small that by a German embargo about 4,000,000 American workmen might be thrown out of employment.

"BERNSTORFF."

* * * * * * *

This was our condition of servitude in 1915. To-day, under the fostering of Congress, we are able to supply 90 per cent of our consumption of dyes on which in 1929 sixteen billions of American production was dependent, and in case our imports were ended our production of dyes would be ample to supply all our needs.

From report of Consul General Hossenfelder to the German Government, to His Excellency the Imperial Chancellor, Doctor von Bethmann-Hollweg, dated New York, March 3, 1916:

"Neither through money nor the granting of credit, nor by any other means, can that critical situation be relieved which has been called forth by the removal of certain articles which are obtainable only in Germany. These articles are chiefly potash, chemicals, and dyestuffs. Potash is desired by agriculture, inclusive of the cotton planters, all the more urgently since even last year sufficient fertilizer could not be brought to the soil. To enumerate the industries which are suffering from the scarcity of German chemicals would lead too far. I may, however, mention that the cry for help which comes from the world of physicians is becoming louder and louder and more and more insistent."

At that time we were dependent upon Europe for many drugs, including salvarsan, the sole remedy for our 10,000,000 syphilitics; luminal, the sole alleviate for epilepsy, etc. To-day we make all our drugs of better quality than are known in the world and at infinitely cheaper prices than we paid the foreigner. For instance, salvarsan before the war sold for about $3.50 an ampule. To-day the highest quality sells for 60 cents an ampule. The importation of drugs is negligible.

March 13, 1926, the Committee on Interstate and Foreign Commerce of the House of Representatives submitted a report on the control by foreign governments of production and exportation of certain raw materials essential to our progress.

"1. That controls of either production or exportation which materially affect prices have been instituted by direct or indirect foreign governmental action as follows: The Government of Great Britain, through direction of its colonial office to its East Indian possessions, over rubber; the Government of the State of Sao Paulo, Brazil, over coffee; the Government of Chile over nitrates and iodine; the Governments of Germany and France over potash; the Government of Egypt over long-staple cotton; the Government of Japan over camphor and at times over silk; and the government of Yucatan, Mexico, over sisal."

To-day the chemist has sprung us loose from all these controls, with the exception of coffee, tea, tin, and sisal:

(1) Potash has been discovered in the Southwestern States in ample quantity to supply the United States. Its ability to compete with the potash from the cartels of Germany and France is only a question of freight rates. The ownership of these beds of potash, however, should be watched by the Government.

(2) Manganese. Mr. Charles H. Herty, jr., son of Dr. Charles H. Herty, has worked out a process whereby our own ores can be used, and thus we become independent of Russia.

(3) Camphor. The Du Pont Co. have just finished their plant, sufficient to supply the needs of the country with synthetic camphor.

(4) Rubber. Synthetic rubber has been perfected by the Du Pont Co., and is being produced in a semiworks plant. Of course, we can not produce rubber to compete at the present price of 4 cents, but a possible recurrence of the Stevenson Act monopoly is at an end. The above committee found that 36 cents was a fair and proper price for the foreign monopoly to exact from our

people. They found that under the Stevenson Act the price reached $1.21 in 1925, and that in 1926 over $600,000,000 above the fair and proper price was extorted from our people by the Government-controlled monopoly. By the discovery of our chemists, we are assured that the price will never again go above 20 cents without meeting the competition of American synthetic rubber, and this limit may well be lowered by the usual progress in lessening chemical costs.

(5) Rayon can readily take the place of silk.

(6) Iodine is now being produced by the Dow Chemical Co. from oil wells. This production can easily, in the case of necessity, be expanded to cover our needs.

(7) The possibility of growing an ample supply of long-staple cotton has been developed under the guidance of our Department of Agriculture.

(8) And now come nitrates from the air. Ten American plants are producing and stand ready to produce the entire necessities of this country in peace and war, for agriculture and for munitions, at a price to equal the costs of the world. The farmer to-day is getting his nitrates for $22 a ton, against $36 a ton to-day paid by the German farmer, and against the former price of $90 during the war and $48 in 1926.

This whole story is set forth in the book I am sending you by Professor Zanetti, which is an unbiased and careful examination of the importance of nitrates in our national life.

It might be added that we have the phosphate rock and the potash and the nitrogen, and we are the only country of the world which has all the necessary ingredients for fertilizers for its soil.

There remain only coffee, tea, and tin. Coffee and tea are not necessities and their synthesis is being worked on by our chemists. For tin there are many substitutes in alloys and other products.

This is an independence possessed by no other country in the world, and it is the object of destruction by world cartels, assisted by our so-called American international bankers.

In addition to the creation of this new independence, chemical education in high school, in college, in graduate school, and research institutions is offering 100 per cent service to our medical profession, to all our industries, and to our national defense.

Two hundred and fifty million dollars have been expended in chemical laboratories in our educational institutions alone.

Our developed chemistry is also able to service the allied sciences of physics, electricity, medicine, etc., as nowhere else in the world. Arithmetic alone of our sciences has been neglected. "Remember, O stranger, arithmetic is the first of the sciences and the mother of safety."

Our schools stop the teaching of arithmetic at the age of 12, and as a nation our people are trying to fight the great battle of life with a child's knowledge of its basic science. Let us develop the teaching of arithmetic through high school and college.

After all we constitute a great village, and peace, contentment, and prosperity wait upon our patriotism, our home contentment, and the ability to mind our own business.

Remember the concluding lines of Oliver Goldsmith's great poem, the Deserted Village:

> "Aid slightest truth, with thy persuasive strain;
> Teach erring man to spurn the rage of gain;
> Teach him that states of native strength possest,
> Though very poor, may still be very blest;
> That trade's proud empire hastes to swift decay,
> As ocean sweeps the labour'd mole away;
> While self-dependent power can time defy,
> As rocks resist the billows and the sky."

May we not add reproach of the Deserted Village to that of the forgotten man.

Wishing you a happy New Year, very truly yours,

FRANCIS P. GARVAN, *President*.

Mr. HATFIELD. Mr. President, the American chemical industry owes a debt of gratitude to the Hon. Francis P. Garvan for his vision and constructive steps for promoting the development and expansion of a most necessary American self-contained chemical industry. As president of the American Chemical Foundation, he has unselfishly devoted, without profit, years of his life to the chemical education of our people and to the chemical stabilization of our American industrial life.

In passing, I want to endorse the comment of a short editorial recently contributed by that well-known American, Mr. Arthur Brisbane.

The "buy American" policy was expressed well long ago by Abraham Lincoln, according to J. P. Annin.

"To a question on tariffs, Abraham Lincoln is said to have replied that he knew very little about the tariff, but that he did know that when we bought steel rails abroad, they had the money and we had the rails, but when we bought steel rails in America, this country had the rails and the money also."

This editorial was at the head of Mr. Brisbane's column, indicating the true Americanism and confidence of the writer in the future of this country.

Mr. President, at this point I wish most heartily to endorse the patriotic appeal which is now being nationally made by the Hon. William Randolph Hearst through his chain of newspapers to the American people.

"Buy American" is the duty of every honest-minded American. If the American people will demand and insist that they be furnished the products of American labor and of American agriculture, we will soon have employment opportunities for millions of our unemployed.

However, Mr. President, our people, especially at this time, with greatly decreased purchasing power, out of necessity, because of the want of employment, seek to secure the greatest quantity for the least expenditure. For that reason it is necessary, if we want to assist our people to respond to the patriotic appeal now being made by Mr. Hearst and his papers, that we speedily enact legislation which will prevent the continued dumping of foreign products into our markets.

The Congress of the United States, after the war-time developments due to the shutting off of foreign chemicals and the license control act after the war, gave protection to the chemical industry.

Mr. President, while the American chemical industry is making possible our industrial and agricultural independence from foreign monopolies, the continuance of this independence lies entirely within the control of the Congress.

By way of illustrating the effect of one particular chemical element in everyday life, let us cite the developments in fixed nitrogen, or that form of nitrogen directly available for plant growth. In 1915 we were solely dependent for our supply of sodium nitrate on imports from Chile. Notwithstanding the many millions of dollars that our Government spent in that period, up to 1920, in the development of nitrates, we were still dependent to a large extent upon importations from Chile. Since that time astounding progress has been made in the establishment and greater growth of an American synthetic-nitrogen industry. As a result of this expansion, to a capacity of nearly 1,000,000 tons per annum, we are now in a position to supply the entire American requirements.

Already shipments of certain forms of fixed nitrogen are coming in from Japan, which has resulted in forcing the closing of one of our plants on the Pacific coast. Unless Congress speedily finds a way to prevent the continued dumping from this source, there is no hope of resuscitating the nitrogen industry on the Pacific coast.

The new iodine industry, a new chemical development, with plants at Los Angeles, Calif., and Shreveport, La., now producing one-fourth of all the iodine used in America, is also threatened by the dumping of foreign-produced iodine into our country.

Mr. President, we are the only nation in the world which permits foreign nations to dominate and control its domestic affairs. We are the only nation in the world which permits international bankers to exploit its people. We are the only creditor nation in the world which permits its debtors to attempt to dominate its domestic affairs and to openly flout the collection of debts honestly due it.

The Chancellor of the Exchequer of Great Britain, only a few days ago in a public statement, said they would appoint representatives of their Government to advise with officials of the United States on the question of war debts on condition that no other subject be discussed. And, Mr. President, Great Britain owes us not only billions of dollars in money but is under an obligation to us which it never can repay in money. I well recall the days of 1914 and 1915, when Great Britain was appealing to her cousins across the Atlantic, first for credit, then for munitions, then for money, then for the manhood of America to save her from the devastating effects of control by the Hun. Our reward is to be told by this representative of Great Britain that unless we submit to the conditions laid down by the debtor our markets will be flooded by the products of Great Britain, made possible by the further depreciation of currencies of that country. Bear in mind if you will, Mr. President, that Great Britain was the country which, through the voluntary depreciation of her currency, made it possible or necessary for other countries to abandon the gold standard. Through the depre-

ciation of her currency Great Britain has lowered the production costs and prices of her exports 30 to 40 per cent.

Mr. President, a year and a half ago our international bankers tried to lead the American people to believe that foreign nations were forced off the gold standard due to the foreign debts owed to America and American citizens. In other words, at that time they attempted to intimidate, yes, to force an American Congress to transfer to the backs of the American people the war costs of the European nations.

Now, Mr. President, from the mouths of the representatives of the English Government, from the public utterances of their leading bankers, we learn the truth as to why England and other foreign nations went off the gold standard. They went off the gold standard for the sole purpose of forcing an American Congress to take action detrimental to the welfare of the American people, and they told us as late as last week that if we have not had enough, they will further add to the destruction of American industries by the further depreciation of their currency.

Mr. President, the English Government and other foreign nations openly admit that their reason for going off the gold standard and debasing their currency was in order to ship the products of foreign labor into the American market at costs which are below the costs of American production, thus destroying our industries.

Depreciated currency, in other words, Mr. President, is a tool or a weapon to force the cancellation of debts owed to America and to transfer these debts to the backs of the already overburdened American taxpayer.

Last Saturday I received a letter from one of the outstanding leaders of American life. I refer to Mr. Matthew Woll, of the American Federation of Labor. At this point, Mr. President, I would like to have the clerk read this letter from Mr. Woll.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the clerk will read, as requested.

Mr. FESS. Mr. President, before the letter is read will the Senator yield to me?

Mr. HATFIELD. Certainly.

Mr. FESS. The depreciation in the currency of Great Britain cheapens labor in that country to the degree that it has depreciated. Therefore the labor cost in anything that Great Britain makes is reduced to that degree, that much lower than we could produce it for even if they would pay the tariff, and therefore that would increase to a great extent their imports to us. Our friends are insisting that as they increase imports they are decreasing our exports, and therefore they want us to take the tariff off in order that we can increase our exports. I would like to know how that would in any degree increase our exports, as the imports from those countries on a depreciated currency are bound to increase?

Mr. HATFIELD. The purchasing power of the American people respecting imports has always been found to be higher when we have a high-tariff rate that protects our industries against importations.

Mr. FESS. That is absolutely correct.

The VICE PRESIDENT. The clerk will read, as requested.

The legislative clerk read as follows:

AMERICA'S WAGE EARNERS' PROTECTIVE CONFERENCE,
New York City, January 27, 1933.

Hon. HENRY D. HATFIELD,
United States Senate, Washington, D. C.

MY DEAR SENATOR HATFIELD: Last spring you delivered an interesting and inspiring address on the floor of the Senate, pointing out very strikingly the serious effects which imports from countries, the currencies of which had depreciated, were having on employment opportunities of American labor.

The conditions which you so well described at that time are to-day very, very much worse, and, it is my hope that you will take it upon yourself to direct the attention of the Congress of the United States to the fact that unless, and until, this condition is corrected, which can be corrected only by national legislation, millions of American workers will continue to be dependent upon either public or private charity.

It should be self-evident that American industries can not reopen and give employment to American workers with foreign producers of competing articles having secured, through the depreciation of their currencies, an automatic reduction in production costs ranging from 15 to 60 per cent.

A year ago, and again yesterday, Government experts referred to this situation as a temporary one. Life itself is temporary, yet we must eat to live, and we must either work or be dependent upon charity, public or private, if there is no work. America's unemployed workers, and there are millions of them, who have been looking in vain for employment opportunities, have paid the penalty in privation of themselves and their families and are being reduced in too many cases to pauperism to regard these conditions as temporary.

The depreciation of foreign currencies has not been followed, as predicted by some economists, by increased wages of foreign workers.

The Department of Commerce, in a circular letter of January 16, 1933, states, "Wages (in Japan) have fallen to a lower level than prevailed in 1931 when the value of the yen was close to par," and Japanese currency has depreciated some 60 per cent.

This is not a political question or a partisan one. We believe that the Congress of the United States is fully cognizant of the national emergency which now exists, and we sincerely trust that our national legislative body will rise above political considerations at this time and provide, as they alone can provide, through proper legislation, employment opportunities for millions of America's workers.

We believe that in the emergency which existed a year ago, and which exists to an alarming extent at this time, there is need for a wide expansion of public works, and this program, if properly carried out, would provide employment for some of our 12,000,000 now unemployed.

In view of the economy wave that now seems rampant throughout our country, there may be considerable opposition to such a program. However, we do not believe there should be any honest opposition to a correction which can alone be made by Congress for the benefit of all Americans.

For your information I am inclosing herewith a clipping from the New York Times showing the landed cost of foreign-made articles in the United States, and the comparative domestic cost of production of similar articles. The facts portrayed in these tables illustrate why millions of America's industrial workers are unable to obtain employment.

In behalf of America's millions of unemployed industrial workers, we look forward to some constructive action on the part of the Congress, and we sincerely hope that you will again aid by directing the attention of the Congress to the devastating effects on employment opportunities to America's workers made possible by the dumping of foreign-made products into our country, at prices which are less than American costs of production.

Hoping you will join in an effort to correct the evils which we have pointed out, and with cordial regards, I am,

Sincerely yours,

MATTHEW WOLL.

Mr. HATFIELD. I send to the desk the clipping from the New York Times, referred to by Mr. Woll, and ask for its insertion in the RECORD at this point.

The VICE PRESIDENT. Without objection, the article will be printed in the RECORD.

The article is as follows:

[From the New York Times, October 15, 1932]

COST OF FOREIGN MANUFACTURES COMPARED WITH OUTLAY TO MAKE THE SAME GOODS HERE

WASHINGTON, October 14.—The following list contains some of the imported articles exhibited to-day by the Commissioner of Customs with the cost of production abroad compared with that in the United States:

	Landed cost in United States currency	Domestic cost of similar article
Black enamel Wellington boots (Japan)	$0.338 per pair	$0.9469 per pair.
Child's all-over rubber boots (Czechoslovakia)	$0.806 per pair	$1.2081 per pair.
All-over rubber boots, men's (Czechoslovakia)	$1.161 per pair	$1.4899 per pair.
All-over rubber boots, boys' (Czechoslovakia)	$0.448 per pair	$0.9290 per pair.
Child's Wellington rubber boots (Czechoslovakia)	$0.356 per pair	$0.9469 per pair.
Men's storm rubbers (Czechoslovakia)	$0.21 per pair	$0.356 per pair.
Women's rubber shoes (Czechoslovakia)	$0.3254 per pair	$0.3591 per pair.
Rubber-soled high-top canvas shoes (Czechoslovakia)	$0.2070 per pair	$0.2905 per pair.
Swimming ring (Japan)	$0.19 each	$0.45 each.

	Landed cost in United States currency	Domestic cost of similar article
Swimming float (Japan)	$0.17 each	$2.46 each.
Rubber animal (Japan)	$1.75 per dozen	$3.96 per dozen.
Beach ball (Japan)	$0.12 each	$1.47 each.
Do	$0.10 each	----- each.
Rubber football (Japan)	$0.07 each	$0.15 each.
Beach ball, 13 inches (Japan)	$0.08 each	$0.27 each.
Rubber animal (Japan)	$3.64 per gross	$14.12 per gross.
Rubber toy (Japan)	$0.84 per dozen	$2.28 per dozen.
Rubber dolls (Japan)	$4.26 per gross	$7.84 per gross.
Rubber sword (Japan)	$1.25 per hundred	$1.60 per hundred.
Water pistols (Japan)	$1.09 per gross	$6.37 per gross.
Black rubber nose blower (Japan)	$0.24 per gross	$1.50 per gross.
Rubber erasers:		
Square (Japan)	$0.29 per gross	$0.72 per gross.
Oblong (Japan)	----do	$0.60 per gross.
Movable celluloid toys—baby's musical ball (Japan)	$20.14 per gross	$33.00 per gross.
5-inch celluloid doll (Japan)	$3.48 per gross	$15.81 per gross.
6-inch celluloid doll (Japan)	$3.24 per gross	$16.08 per gross.
9-inch cerise celluloid combs (Japan)	$11.06 per gross	$25.86 per gross.
7-inch celluloid combs (Japan)	$4.44 per gross	$17.53 per gross.
4 half-inch celluloid combs (Japan)	$4.82 per gross	$14.55 per gross.
Cotton hit-and-miss rag rug, 24 by 36 inches (Japan)	$0.06 each	$0.29 each
Cotton hit-and-miss rag rug, 2 by 3 feet (Japan)	$0.09 each	$0.28 each.
Grass rug, 9 by 12 feet (Japan)	$0.92 each	$8.88 each.
Quart size thermos jugs (Japan)	$0.56 each	$0.79 each.
Pint size thermos jugs (Japan)	$0.32 each	$0.49 each.
Toothbrush (Doctor West style) (Japan)	$9.67 per gross	$15 per gross.
Toothbrush handle, celluloid (Japan)	$3.24 per gross	$4.51 per gross.
Toothbrush (Woolworth's "Dental King") (Japan)	$6.37 per gross	$8.75 per gross.
House lamps (60-watt) (Japan)	$3.12 per hundred	$3.72 per hundred.
Christmas-tree lamps (Japan)	$0.73 per hundred	$2.35 per hundred.
Safety matches (Japan)	$0.27 per gross	$0.51 per gross.
Hairbrushes, natural ebony-white bristles (Japan)	$3.64 per dozen	$7.20 per dozen.
Tennis racquets (Japan)	$0.31 each	$0.90 each.
6-foot folding rule (Czechoslovakia)	$0.79 per dozen	$2.05 per dozen.
Men's leather gloves (England)	$24.89 per dozen pair	$26 per dozen pair.
Knives and forks (England)	$4.81 per set of 6	$7.42 per set of 6.
Lunch plates (Japan)	$1.38 per dozen	$3 per dozen.
Hotel teapot (Japan)	$0.86 per dozen	$3.44 per dozen.
Maple walking stick (Japan)	$1.23 per dozen	$3 per dozen.
Pongee-silk coolie coat (Japan)	$0.68 each	$102 each.
Men's cotton handkerchiefs 17 by 17 inches (Japan)	$0.28 per dozen	$0.36 per dozen.
Men's cotton handkerchiefs 15 by 15 inches (Japan)	$0.18 per dozen	$0.25 per dozen.
Solid imitation-pearl beads, loosely strung (Japan)	$0.04 each	$0.41 each.
34-line self-shank pearl button (Japan)	$16.14 per gross	$24.84 per gross.
Six-inch diagonal cutting pliers (Germany)	$0.153 each	$0.61 each.
Pocketknife (Germany)	$0.707 per dozen	$2.63 per dozen.
Fancy-shaped wrist-watch glasses (Japan)	$1.43 per gross	$5.40 per gross.
Wrist-watch glass blanks, flat (Japan)	$0.41 per gross	$1.25 per gross.

Mr. FESS. Mr. President——

The VICE PRESIDENT. Does the Senator from West Virginia yield to the Senator from Ohio?

Mr. HATFIELD. I yield.

Mr. FESS. There is one expression in the letter of Mr. Woll that ought not to escape the attention of everyone and that is that with the depreciation of currency in Japan, as is true in other countries, wages have not increased. That is always the claim on the part of those who are asking for a depreciated currency, that it will increase the price of the article and they assume it will increase the price of labor. That is never true. As the price of the article increases the price of labor may not go down, but it does not increase with the price of the article. To my mind that is the most commanding point to-day in the clamor for depreciation of currency in our own country.

Mr. HATFIELD. That is very true, and I thank the Senator from Ohio for his observation.

Mr. President, I have not dealt at length, as I might have, with one important phase of this question and that is the loss of revenue brought about through the debasing of foreign currencies. In these days of deficits I presume it is our serious duty to plug up every leak. If that be true, I feel confident that in correcting the present unfair and uncalled-for situation we will add to the revenues of our Government more than $300,000,000 without adding one cent to the living costs of the American people.

I am sending to the desk and will ask to have inserted in the RECORD a table showing the depreciation of foreign currencies of some 20 foreign countries and the estimated increase in revenue had we collected a tax equal to the depreciation of currencies on imports from these countries for the year ending October 31, 1932.

The PRESIDING OFFICER (Mr. FESS in the chair). Without objection, that order will be made.

The table is as follows:

Possible new revenue from depreciated currency imports—year November, 1931, to October, 1932

Country	Per cent depreciation	Amount of annual imports from	Maximum possible new revenue
Denmark	28.2	$1,345,000	$527,000
Finland	35.7	8,763,000	4,863,000
Greece	26.2	9,670,000	3,423,000
Norway	31.2	11,609,000	5,259,000
Portugal	26.2	2,984,000	1,062,000
Sweden	29.8	25,197,000	10,709,000
United Kingdom	27.1	31,049,000	30,069,000
Canada	12.1	190,583,000	26,300,000
Mexico	33.7	38,768,000	19,655,000
Argentina	39.4	17,082,000	11,103,000
Brazil	42.5	86,886,000	64,122,000
Chile	26.6	16,769,000	6,087,000
Ecuador	8.1	2,699,000	238,000
Peru	11.1	3,751,000	469,000
Uruguay	54.9	2,381,000	2,900,000

Total or average	29.2	750,406,000	305,503,000

Mr. HATFIELD. While the table shows an average of only 35 per cent in Japanese currency for the period referred to during recent months, at the present time Japanese currency has depreciated some 60 per cent.

The dumping of goods from nations manufacturing them under depreciated currency, into the United States, is responsible for depriving many millions of American workers of employment. The quotation of prices by the importer serves to fix the price on many articles manufactured in America at a price so much lower than the cost of production in our home industry that it deters the manufacturer from production, notwithstanding that his shelves are

empty, for the reason that he knows he is unable to compete with the products of the nations operating under a depreciated currency basis.

I favor, Mr. President, conserving our home markets for home labor. I have the same conviction as was so ably expressed by that great American, Andrew Jackson, when a member of this body, in addressing the Senate upon a protective-tariff measure then before that body. He said:

> It is time, sir, we should become a little more Americanized, and instead of feeding the paupers of England feed our own people, or else in a short time we will be paupers ourselves.

Mr. President, we have reached the time depicted by that distinguished American in 1828.

Give the industries of this country the assurance of the home market by protecting these products against the products of those nations now off the gold standard, and the American Congress will accomplish two things, in my judgment. First, it will return millions of men to work; second, it will do more to force Europe and Asia back to a sound monetary basis than any international conference can accomplish.

This action will help home industries. They will provide an adequate surplus by restoring their depleted warehouses and by so doing will put thousands of men to work who are now walking the streets and highways seeking the opportunity for earning a living that is denied them. Their unemployment has terminated their purchasing power.

The farmer is the manufacturers' best friend in the way of a consumer; but the farmer can not purchase unless he has a market for his products; and it has long since been demonstrated that the purchasing power of the forty-some million workmen under the American flag represents 80 per cent of his market.

When the American workers receive a standard of wage which is worthy of their hire—and the only way that this can be accomplished and continued is to properly safeguard their employers from the cheap products of other nations—it will assure to the farmer the greatest market in the world.

The axiom in 1929 that appeared editorially in Labor, the official organ of the railway brotherhoods of this country, stands out to-day as true, and should be read by every national legislator. This editorial in part appeared on Washington's birthday in 1930:

> If 90 per cent of our production is consumed at home and only 10 per cent goes abroad, then it is surely nine times as important to stimulate the home market as to stimulate the foreign market.

Mr. President, I send to the desk some telegrams and ask that they be printed at this point. The senders represent industries in every section of the United States, and the telegrams prove conclusively that there is a unanimity of conviction among representatives of labor and industry that prompt action by the Congress of the United States on the subject of depreciated currency will do more to stabilize business and conserve our home markets for our home labor than the performance of any other duty that rests upon this Congress.

The men who sent these telegrams represent industries and the producers of raw material. These latter industries are prostrate to-day for the want of orders.

Mr. President, I ask that the telegrams may be printed as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The telegrams are as follows:

ERIE, PA., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate, Washington, D. C.:

In our opinion the greatest obstacle to recovery in our country is that industry after industry is finding itself unable to compete for domestic business due to imports from countries off the gold standard. It is possible for these foreign countries to quote prices which will cover their costs, give them a profit, and still place goods in this market at prices below domestic manufacturer's cost. We can not urge too strongly necessity for emergency legislation to equalize currency values.

HAMMERMILL PAPER CO.

BANGOR, ME., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Washington, D. C.:

Our vast timberland holdings have shrunken in value to a point where they are to-day more a liability than an asset, and our lumber operations are practically wiped out because of lack demand for pulpwood account situation in pulp and paper industry due importations from countries of depreciated currency and depressing of prices below cost production this country. Real emergency exists. Prompt enactment legislation to equalize currencies and maintain our gold basis necessary to save our situation to restore some measure our values and enable us give employment.

MAINE LUMBERMEN & LAND OWNERS ASSOCIATION.

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

Importations of paper and pulp from countries off the gold standard are becoming a greater menace to our industry and are working hardships not only on manufacturers of pulp and paper but also producers of raw material for them. The great bulk of the pulpwood used in pulp mills is produced by small farmers and is largely their money crop. Relief is urgently needed.

WEST VIRGINIA PULP & PAPER CO.,
THOMAS LUKE, *Vice President.*

WORCESTER, MASS., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Our company is vitally interested in the prosperity of the paper industry of this country. We feel that any legislation that can be passed by our Congress which would offset the advantage that now accrues to foreign paper manufacturers due to depreciated currency would be most beneficial to the paper industry in this country and would be the means of very promptly putting back to work a lot of men now unemployed. We urge upon you most careful consideration to constructive legislation of this kind.

RICE, BARTON & FALES (INC.),
GEORGE SUMNER BARTON,
President.

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

At request of Mr. Luke, president West Virginia Pulp & Paper Co., I am wiring you to urge your support of necessary legislation to deal with importations from countries that have abandoned the gold standard. In 1929 pulp and paper industry employed in mills alone 128,000 employees and in mills and wood operations in excess of 300,000 employees. At present rate of operations, based on hours of employment, these figures can be cut in half. Competition from depreciated-currency countries has not only increased unemployment in pulp and paper industry but has forced industry to reduce hourly wages to its employees. In addition, curtailment in operations of pulp and paper mills has created unemployment in other industries, which brings the total unemployed to about 250,000 workers.

EUSTIS PAINE,
Chairman Paper Committee on Depreciated Currency.

ASHEVILLE, N. C., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate, Washington, D. C.:

Disastrous effects of depreciated foreign currencies on domestic markets for American products are being felt locally. The large pulp and paper industry, upon which our community depends and whose continued operations are of vital importance to all western Carolina, has been forced to make several reductions in wages and in wood prices and is now curtailing operations. Situation impresses us seriously, and we hope that some relief can be obtained by levying surtax on imports or by other means.

CANTON MERCHANTS ASSOCIATION.

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

Impossible to forecast actual reemployment if protection against depreciated-currency countries' imports is voted by Congress. Full reemployment would naturally have to await return of business to normal conditions, but there would be an immediate reemployment to the extent that imports of pulp were curtailed. Cutting of wood by farmers and woodcutters would start in the early spring. The production of paper would unquestionably be greatly stimulated by the improvement in general business and reemployment due to this legislation. If proper legislation is not passed, the unemployment in our industry will continue to increase and wages will be further reduced.

EUSTIS PAINE,
Chairman Paper Committee on Depreciated Currency.

MOSINEE, WIS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate Office Building, Washington, D. C.:

Situation relative depreciated foreign currencies continues to grow increasingly serious. Firmly believe immediate need of emergency legislation to curb the continuous importing of pulp and paper, which is injuring the domestic mills. Trust some way may be found to get immediate action rather than wait for special session.

MARATHON PAPER MILLS CO.

APPLETON, WIS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

We strongly urge that every possible effort be made by the present Congress to pass necessary acts correcting the disastrous effects upon our manufacturers caused by the depreciated currency situation. If many of our industries are to be saved and unemployment relieved prompt action is necessary.

RIVERSIDE PAPER CORPORATION.

BOSTON, MASS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Reductions in price of pulp led by Scandinavian manufacturers and due to advantages given them by depreciated currency will result in closing Champion International Co. pulp mill, Lawrence, Mass., shortly. Expect to purchase pulp supply abroad for manufacture book paper.

CHARLES T. DOLE, *President.*

WORCESTER, MASS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

The depreciation in foreign currencies has had a serious effect on many of the manufacturing industries. Such remedial legislation as Congress may enact will be of particular value to thousands of our working people.

F. B. WASHBURN, *President.*

MACON, GA., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

Industrial committee of Macon Chamber of Commerce urges serious consideration of bill now before Senate affecting clays, paper, and other industries in this section suffering by reason of decrease in value of currency abroad.

JOHN L. MORRIS,
Manager Macon Chamber of Commerce.

EVERETT, WASH., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate, Washington, D. C.:

We urge immediate action on emergency legislation dealing with depreciated currency of foreign countries. Situation extremely serious in our State, and hope you will support this legislation.

EVERETT PULP & PAPER CO.

ROCKLAND, ME., *January 31, 1933.*

United States Senator HENRY D. HATFIELD:

We urge immediate action for the enactment of the tariff equalization bill, which will give much-needed protection for New England industries in competition with goods manufactured in countries now off of the gold standard and with depreciated currency.

ROCKLAND & ROCKPORT LIME CORPORATION,
G. B. WOOD, *President.*

PORT CHESTER, N. Y., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
The Senate, Washington, D. C.:

Enactment of legislation compensating for depreciated currencies of foreign countries is vital to us and to the pulp and paper industry, for which we manufacture Fourdrinier and cylinder wires. The present dumping of foreign wires is gobbling up the cream of our markets. If discontinued, we could increase employment to our workers 50 per cent. We urge favorable and speedy action.

JOSEPH O'NEILL WIRE WORKS.

BELLEVILLE, N. J., *January 31, 1933.*

Senator HENRY D. HATFIELD:

Depreciated currency ruinous to our industry; basic paper trade suffering also. Legislation to rectify this condition necessary to prevent ruin. Urgent action on part of Congress necessary.

EASTWOOD CORPORATION.

BANGOR, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD:
Senate Chamber:

We most strenuously approve the imposition of currency equalization fee on all imports from countries having depreciated currency. The item of pulp and other wood products and fish concern us and our customers vitally.

RICE & MILLER CO.,
Wholesale Hardware.

BANGOR, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD:

Believe State of Maine industries must have protection from imports from countries with debased currencies.

THE BANGOR PUBLISHING CO.,
By FRED D. JORDAN.

RHINELANDER, WIS., *January 31, 1933.*

Hon. H. D. HATFIELD,
Senate Chamber:

All interested in maintenance of American industry, all believing in principle of America for Americans, indorse your championship of measures to offset devastating effect of depreciated foreign currency. Yours is a great constructive nonpartisan act. Heartiest congratulations.

RHINELANDER PAPER CO.,
By FOLKE BECKER.

AUGUSTA, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Agricultural, sardine, and pulpwood interests this State suffering severely from currency advantage now enjoyed by foreign competitors. Appreciate your support of legislation correcting this unfair situation.

F. P. WASHBURN,
Commissioner of Agriculture, Maine.

DEXTER, N. Y., *January 31, 1933.*

Senator HATFIELD,
Senate Office Building:

The appreciated second currency has resulted in closing down 60 per cent of our sulphite production. We are staggering our pay roll to assist our village in Dexter to get through this winter as best they may. The situation in our village, especially the children, is distressing. Unless the foreign currency is taken care of this company will be forced to add over 400 men to the army of unemployed. It is difficult for our workers to understand why, with 12,000,000 citizens idle, nearly two hundred millions worth of pulp and paper should come in from abroad and deprive him of a job. The entire paper and pulp industry of this country is threatened with complete annihilation unless American industry can be placed on an even cost basis with the foreign. This company asks no more.

DEXTER SULPHITE PULP & PAPER CO.

MOSINEE, WIS., *January 31, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Emergency legislation dealing with depreciated currency is of greatest importance to the paper industry. Foreign pulp shipments at prices below local costs have increased from 80,000 tons in 1931, to 172,000 tons in 1932, thus depriving local labor, farmers, and suppliers of possible work. We urge and hope for prompt passing of corrective legislation.

MOSINEE PAPER MILLS CO.,
N. S. STONE.

BANGOR, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Building:

As a fairly large producer of timber, a considerable producer of furs, a small producer of farm products, all in Maine, and of nonferrous metals in Western States, I respectfully urge, through emergency legislation by imposition of currency equalization fee on all imports or otherwise, the protection of American raw products, labor, industry, and transportation from the present additionally serious competition from countries with debased currencies, pending the time when America realizes the necessity of embargoes.

HAVEN SAWYER.

BANGOR, ME., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
Senate Chamber:

We strongly urge that legislation be passed this session imposing currency-equalization fee on all imports from countries off the gold standard. Such legislation is vital to industries essential to this State, such as pulp and paper, fisheries, many others. We believe a grave emergency exists and that immediate relief from present conditions is imperative.

EASTERN TRUST & BANKING CO.,
H. A. LITTLEFIELD, *President.*

APPLETON, WIS., *January 31, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Due to depreciated currencies, we can not manufacture paper and pulp and compete with foreign competition. Extremely im-

perative that we be protected with action taken at once. Your help to save this and all other United States industries is needed.

PATTEN PAPER CO.

BANGOR, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
The Senate:

We urge for salvation of Maine industries and labor currency equalization fee on all imports from countries not on gold basis.

GEORGE E. CRAFTS,
President Bangor Chamber of Commerce.

MILLWOOD, WASH., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Fifteen hundred people dependent on our plant for livelihood to say nothing of benefits to railroads and other contributing services including carload raw materials from Texas and occasionally Georgia employees now working half time or less and under staggered systems could be given full-time work if protected against importations from countries with depreciated currencies as provided in Hill bill.

INLAND EMPIRE PAPER CO.

ROBBINSVILLE, N. C., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Pulpwood market of extreme importance to western North Carolina, being lost account demoralization American pulp market by imports from depreciated currency countries. Emergency legislation necessary to prevent aggravation of prevailing serious situation.

BEMIS LUMBER CO.

BOSTON, MASS., *January 31, 1933.*

Hon. HENRY HATFIELD,
United States Senate:

How can we employ the thousands of woodsmen now idle or continue to run our paper and pulp mills unless Congress stops unfair competition of pulp and paper from depreciated-currency nations?

PENOBSCOT CHEMICAL FIBRE CO.
A. HOLLINGSWORTH, *President.*

PARK FALLS, WIS., *January 31, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Believe it of utmost importance to pass emergency legislation regarding depreciated currencies.

FLAMBEAU PAPER CO.

BANGOR, ME., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
Senate Chamber:

Pulp, paper, fisheries, and many other industries in Maine are in a deplorable condition. Immediate passage of the currency equalization bill will help.

JOHN CASSIDY & SON.

BANGOR, ME., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

I understand you are to speak in favor of the measure imposing currency equalization fee on all imports from countries that have gone off the gold basis. This proposal, from the standpoint of industries located on our line, is most vital, particularly to American paper-manufacturing companies and American fertilizer companies, and consequently to this railroad. The importations of Canadian pulpwood by water, and on which there is no duty, and the importation from Europe of wood pulp have damaged the timberland owners and the railroads in Maine. Until Canada went off the gold basis I have no knowledge of any fertilizer which is used enormously in northern Maine having been brought in from or through Canada last year, and this year large quantities are being brought in again to the detriment of the railroads in Maine, and with very serious loss to the American fertilizer companies. I am sure that the majority of the people in the State of Maine will stand strongly behind this proposal.

PERCY R. TODD,
President Bangor & Aroostook Railroad Co.

BANGOR, ME., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Washington, D. C.:

The immediate passage legislation on depreciated currency imports is most urgent to protect farms, forests, fisheries, industry, and labor of Maine, together with commercial enterprises dependent thereon for their livelihood. Unemployment is increasing rather than decreasing. The immediate cause of this is unmeetable competition from imports from countries off gold basis. There is no one factor that would improve conditions in Maine more than immediate passage of this emergency legislation. The crisis in our State is grave.

CLARENCE C. STETSON, *Chairman.*

HAMILTON, OHIO, *January 30, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

As president of the Champion Coated Paper Company, largest single producers of coated and uncoated papers and soda and sulphite in the world, may I earnestly solicit you to do everything in your power to further the interest of House Bill 13999 which will meet the desperate emergency now confronting American industry and brought about by degradation of foreign currencies which has entirely subverted the purpose and intent of the United States tariff and made it possible for foreign countries which have gone off the gold standard to sell their goods in the United States at less than their cost and still make substantial profits, the American manufacturers being left to pay the ensuing charities and Government taxes. This amounts to a subsidy on foreign manufacture by the United States Government. This company has already been forced to shut down in part its pulp mills in North Carolina and purchase foreign pulp entirely against our will and better judgment. Foreign export capacity is sufficient to furnish all goods required in the United States if not quickly stopped by legislative action as no manufacturer or merchant can individually refrain from foreign purchase and meet his own domestic competition in this neighborhood. The matter amounts to a desperate emergency in increasing unemployment which must be met by Federal aid as local charities and aid are practically exhausted.

ALEXANDER THOMSON,
President the Champion Coated Paper Co.

HAMILTON, OHIO, *January 30, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

As president of the Black Clawson Company, Hamilton, Ohio, largest producers of paper mill machinery in the world, I earnestly solicit you to lend your support to the passage of House bill 13999 to help meet the desperate emergency brought about by the degradation of foreign currencies which enables import competition to ruin our American industries. About 60 per cent of all imports come in duty free and even those items which had tariff protection are now free of duty because of the difference in money standards. This matter amounts to a deperate emergency in this locality and is equivalent to the United States Government's placing a subsidy on foreign manufacture for entry into the United States. This can not fail to increase our unemployment and in turn the expenses of the Federal Government because local charity and aid are exhausted.

HERMAN KUTTER,
President the Black Clawson Co.

GARDINER, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Strongly urge emergency legislation imposing tax on all imports from foreign countries whose currency has been depreciated.

KENNEBEC BOX CO.

GARDINER, ME., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
Care Senate Building:

Consider it most essential that bill be passed to adjust tariffs on basis of depreciated currencies. They are shipping in rubber and leather shoes in many instances at a less price than would have to be paid for the labor alone in this country.

R. P. HAZZARD.

NEW YORK, N. Y., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senator, Washington, D. C.:

I know you are familiar with the problems of the American rubber-footwear industry, due to depreciated currencies, and possible dumping of foreign merchandise on the American market. If we are to keep the thousands of people who are dependent upon us employed we must get some immediate relief or be obliged to add numbers to the already too large list of unemployed in America. Anything you can do to be helpful will be appreciated by all concerned.

T. J. NEEDHAM,
General Manager Footwear, United States Rubber Co.

BROCKTON, MASS., *January 31, 1933.*

Senator HENRY HATFIELD:

As the manufacturer of Walkover shoes, our company believes that action should be taken by Congress to protect America's industry by emergency legislation, effecting an equalization on imports to offset depreciated foreign currency; this move is not political or sectional but will result in better business and less unemployment.

HAROLD C. KEITH,
President Geo. E. Keith Co.

CAMBRIDGE, MASS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
Senate Office Building:

Our factory is completely closed for indefinite period due to influx of foreign canvas and rubber shoes from Japan and Czechoslovakia. Nearly 1,300 people have been laid off and are now un-

employed. Proper regulation of this attack on American employees would result in immediate reemployment of these and thousands of others in the industry.

CAMBRIDGE RUBBER CO.,
WARREN MACPHERSON, *President.*

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

Domestic rubber manufacturing industry has been suffering from ruinous competition of Czechoslovakian and Japanese manufactured footwear. This competition is approaching disastrous proportions this particular time, because domestic producers withholding orders for merchandise to be delivered coming summer unless our manufacturers meet competitive prices which are less than domestic cost of production. Just received information one buyer withholding order for 1,500,000 pairs shoes, which if not given domestic manufacturer will result in shut down factory from four to two days per week. Most essential for welfare of industry and labor employed that Congress immediately enact remedial legislation this session without too much concern respecting slight inequalities that may result. We urge immediate action by Congress.

R. H. GOEBEL,
Secretary, The Rubber Manufacturers Association (Inc.).

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

Approximately 15,000 men employed rubber footwear industry. If Congress does not act this number employees will lose approximately 50 per cent of their present working time. Some factories four days week now will reduce to two days if not entirely closed.

R. H. GOEBEL,
Secretary, The Rubber Manufacturers Association (Inc.).

MALDEN, MASS., *January 31, 1933.*

Senator HENRY HATFIELD,
United States Senate:

Urge immediate action to stop importations Japanese canvas footwear; 700 people have been thrown out of work in our plant alone since January 1. We will have to close altogether if it is not stopped. Japanese shoes are sold at a third of our cost; we can not compete with foreign labor at 20 cents a day.

CONVERSE RUBBER CO.

BOSTON, MASS., *January 31, 1933.*

Senator HENRY HATFIELD,
United States Senate:

With Japanese currency depreciated 48 per cent, how can American rubber footwear mills keep running? How can any American mills keep running which are affected by foreign debased currency?

E. H. CLAPP RUBBER PRODUCTS CO.

WATERTOWN, MASS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
Senate Office Building:

Approximately 4,000,000 pairs of rubber footwear were imported in 1932 at ruinous prices as against half a million pairs in 1931, and practically none in 1930. These 4,000,000 pairs represent approximately 2,400,000 hours of work lost to American workers in 1932; this was the labor loss to workers in our industry alone and fully an equal amount was lost in allied industries supplying us with materials and service. Unless Congress acts favorably, we estimate these figures will be increased at least three times in 1933. I estimate less than 15,000 people remain employed in our total group in United States, at least 10,000 of whom are in grave danger of losing their employment this year unless favorable action is taken.

HOOD RUBBER CO.,
ARTHUR B. NEWHALL.

EAST LIVERPOOL, OHIO, *January 30, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building, Washington, D. C.:

Will you not please give your indorsement on Senate floor and urge legislation that will save this and other industries and their workers from the destructive competition from countries whose currency has depreciated? Senators from Missouri, Kentucky, Tennessee, North Carolina, Georgia, and Florida should be interested on account of large quantities of clays shipped from these States to the potteries.

THE UNITED STATES POTTERS ASSOCIATION,
CHAS. F. GOODWIN, *Secretary-Treasurer.*

NEWELL, W. VA., *January 30, 1933.*

Senator H. D. HATFIELD,
Senate Office Building, Washington, D. C.:

Impossible to exaggerate importance of proper depreciated-currency legislation to the pottery industry. Domestic production continues to steadily diminish in the face of increased importation from Japan and England. Of 17,000 workers in tableware plants, 6,000 entirely idle and balance working less than half time. Many more thousands in allied industries similarly affected.

J. M. WELLS.

MACON, GA., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

We recommend immediate action on emergency legislation dealing with depreciated foreign currencies. This legislation is vitally necessary to our existence and ability to employ laborers or pay them a living wage.

GEORGIA KAOLIN CO.

NORWICH, CONN., *January 30, 1933.*

Senator H. D. HATFIELD,
Senate Office Building, Washington, D. C.:

Urge all possible emphasis on release through depreciated currency legislation. Japanese products being landed west coast as cheap as raw glass blanks can be manufactured our Huntington (W. Va.) factory. These glass blanks represent first steps only in manufacturing of completed vacuum bottles.

AMERICAN THERMOS BOTTLE CO.,
A. E. PAYSON, *President,*
Huntington, W. Va., and Norwich, Conn.

EAST LIVERPOOL, OHIO, *January 30, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building:

Foreign currency depreciation has been detrimental to the working people of America. Legislation correcting this evil will be greatly appreciated by our American pottery workers, because we firmly believe that it will enable our employers to get more business, which will result in work opportunity for the people whom I represent. We pray this help immediately.

JAMES M. DUFFY,
President National Brotherhood of Operative Potters.

MORGANTOWN, W. VA., *January 30, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building:

The glassware industry is with you 100 per cent in demanding protection against competing products imported from low-wage and depreciated-currency countries. The point has been reached where the help of the Government in every reasonable and helpful way is needed before the disintegration of our industrial structures gets out of hand.

GEORGE DOUGHERTY,
President American Glassware Manufacturers.

MOUNDSVILLE, W. VA., *January 31, 1933.*

H. D. HATFIELD,
United States Senate:

The present tariff on handmade glassware under normal conditions does not protect the American glassworkers. By all means something should be done to further protect the industry under present conditions. Approximately 20,000 skilled workers and their families are involved. Many of them unemployed or earning only a pittance.

C. B. ROE,
FOSTORIA GLASS CO.

BOSTON, MASS., *January 30, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building:

Out of 25 merchant blast furnaces competing in 11 Eastern States, 24 furnaces are idle, ordinarily requiring 3,000 men. Correction for the results of depreciated foreign currencies, as applies to imports, is absolutely vital to the existence of our industry.

MYSTIC IRON WORKS,
T. W. KENNEDY, *President.*

BOSTON, MASS., *January 31, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building:

Each ton of pig iron imported displaces labor necessary to produce 2 tons of iron ore, 1.4 tons of coal, one-half ton of limestone, involving the ore miners, coal miners, coke-oven labor, quarry men, furnace men, and railroad men.

MYSTIC IRON WORKS,
T. W. KENNEDY, *President.*

SAN FRANCISCO, CALIF., *January 30, 1933.*

Senator H. D. HATFIELD,
United States Senate Chamber, Washington, D. C.:

A real emergency exists on Pacific coast in canned sardine, salmon, and tuna divisions owing to insurmountable competition from countries of depreciated currencies. Unless Congress gives us proper protection the entire industry can not survive. The Hill bill 13999 seems to offer satisfactory protection. May we not urge your complete and active interest in support of this bill?

F. E. BOOTH CO. (INC.).

SAN FRANCISCO, CALIF., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate, Washington, D. C.:

Real emergency exists on Pacific coast in the fishing industry owing to active competition from countries on depreciated currency. Unless Congress gives prompt protection the entire industry will be badly crippled. Hill bill 13999 seems to offer satisfactory protection, and we respectfully urge your complete and active interest in support of that bill.

ALASKA PACKERS' ASSOCIATION.

EASTPORT, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Unless the sardine packers in Maine get some relief from importations of foreign sardines which are coming into this country at prices much below our cost of production on account of their depreciated currencies the sardine industry, affecting 25,000 people, will be wiped out. Favorable legislation against this unfair competition from Norway and other countries that have abandoned the gold standard would save this critical situation.

E. A. HOLMES PACKING CO.

LUBEC, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Building, Washington, D. C.:

Depreciated currency has almost ruined the sardine business in Maine. There are 36 factories located in 18 towns and cities along the coast employing over 8,500 people direct, and 25,000 people depend on this business for a livelihood. In 1932, owing to the depreciated currency, only 8 firms out of the 23 firms operated, and the pack was only 30 per cent of normal, and only 2,650 people were employed, and only for a short time and at a very low wage, and unless we can have some relief this year it looks as if there would be very little business, if any, done and the sardine business will be a thing of the past.

ATLANTIC SARDINE ASSOCIATION.

SEATTLE, WASH., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

This association, representing practically all American salmon-canning industry, seriously affected by importation canned salmon from depreciated-currency countries, particularly recent importations from Japan, where the yen has depreciated about 60 per cent. Employment in our industry has fallen from about 40,000 to not more than 20,000, and unless this situation is rectified employment will be less than 20,000 during coming packing season. We have favored H. R. 13999, and trust you will use every effort to secure passage this bill or similar one in order relieve our employment situation and remove the threat of disaster to finances of Territory of Alaska, which secure 75 per cent of its revenue from our industry, and to improve business conditions generally on Pacific coast, as many other industries are dependent to large extent upon ours. We are speaking only for our own industry, but you realize, of course, this is not a local issue but one that vitally affects employment in industries all over the country as well as ours.

ASSOCIATION OF PACIFIC FISHERIES.

LUBEC, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Due to the heavy importation of sardines from Norway and other countries off the gold standard, the Maine sardine business is going through a most critical period in its history. If Congress does not take immediate action against goods coming in from depreciated-currency countries the Maine sardine business will be forced out of existence. We urge you to do everything possible toward obtaining the passage of some one of the depreciated-currency bills which are now before Congress.

R. J. PEACOCK CANNING CO.

EASTPORT, ME., *January 30, 1933.*

United States Senator HENRY D. HATFIELD,
Washington D. C.:

Conditions in our city are deplorable due to low tariff of sardines and depreciated currency. Norway packers are delivering sardines in this country at a cost lower than we can produce same for. We would ask you to use every effort to secure depreciated-currency legislation.

MACNICHOL PACKING CO.

EASTPORT, ME., *January 30, 1933.*

United States Senator HENRY D. HATFIELD,
Washington, D. C.:

Due largely to importation of foreign sardines only one factory operated in Eastport last year and that one for short period. Would ask that you give all possible aid to passage of a depreciated currency bill.

J. A. FERRIS,
President Eastport Chamber of Commerce.

LUBEC, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Building, Washington, D. C.:

Please do your utmost to help the sardine business. The depreciated currency has become a very serious menace and unless we can get assistance from Washington it will be impossible to operate our factories. This would cause 8,500 people to be turned out of work. We trust we will not have to face such conditions.

SEABOARD PACKING CO.

LUBEC, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Building, Washington, D. C.:

Under normal conditions we employ 125 people; last year we did not operate, due to the importation of foreign sardines and depreciated currency, and unless relief is immediately forthcoming we can not possibly operate this year. We earnestly beg the Senators to take some action that will protect the industry, as well as our town.

UNION SARDINE CO.

LUBEC, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Building, Washington, D. C.:

Depreciated currency has become a very serious menace to the sardine industry. This industry employs directly 8,500 people. We earnestly ask the Senators to do everything possible to adjust this serious matter.

RAMSDELL PACKING CO.

LUBEC, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Building, Washington, D. C.:

Depreciated currency is becoming a serious matter in this section of the country. We ask you to do all you can to adjust the tariff so that sardines can be packed in competition with foreign countries.

LUBEC CHAMBER OF COMMERCE.

BANGOR, ME., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

Our business is supplying electric light and power to 73 of the principal cities and towns of eastern Maine. Ruinous competition from countries with depreciated currencies has had direct and marked effect in the territory we serve in lessening employment and curtailing of industry. Can not urge too strongly the necessity of prompt relief through enactment of suitable legislation by Congress.

EDWARD M. GRAHAM,
President Bangor Hydro Electric Co.

CINCINNATI, OHIO, *January 31, 1933.*

Hon. HENRY HATFIELD,
United States Senate:

We heartily approve purpose of H. R. 13999 and earnestly urge your favorable consideration.

FRED A. GEIER,
President the Cincinnati Milling Machine Co.

APPLETON, WIS., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Ourselves and our employees suffering seriously from effects of depreciated foreign currency. Condition most serious and relief needed promptly.

WISCONSIN WIRE WORKS.

PARKERSBURG, W. VA., *January 31, 1933.*

Senator H. D. HATFIELD,
Senate Office Building:

Correcting depreciated-currency situation with immediate legislation would help 660 of our organization.

AMES BALDWIN WYOMING SHOVEL CO.,
RICHARD HARTE, *President.*

CLEVELAND, OHIO, *January 30, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Competition from foreign countries on Fourdrinier wires, paragraph 318, seriously affecting the market prices of these goods owing to depreciated currencies, which has greatly reduced protection on this commodity. We strongly urge the necessity of legislation which will provide adequate protection against imports from countries having depreciated currencies.

THE W. S. TYLER CO.

APPLETON, WIS., *January 30, 1933.*

Senator HENRY D. HATFIELD,
United States Senate, Washington, D. C.:

Competition from several countries off the gold standard working a serious injury to our industry. This condition growing

worse. Legislation to enable American industry to survive this menace is imperative and we urge immediate action to meet this depreciated-currency situation.

APPLETON WIRE WORKS (INC.).

BROOKLYN, N. Y., *January 30, 1933.*

Senator HENRY D. HATFIELD,

We respectfully urge your support of necessary legislation on depreciated currency. Feel that it is most vital to American industry.

WM. CABBLE,
Excelsior Wire Manufacturing Co.

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building, Washington, D. C.:

Your splendid work on imports from countries with depreciated currency has our hearty approval. Our factory in Frederick, Md., formerly employing 450 men has been cut down to about 200 men, largely due to imports from countries having cheap currency and cheap labor.

ALFRED MCEWEN,
President Ox Fibre Brush Co. (Inc.).

SOUTH WALPOLE, MASS., *January 31, 1933.*

Senator HATFIELD,
Senate Office Building:

For this company and personally I urge immediate action by Congress on depreciated currency equalization which will give quick relief to industry and consequently increase employment.

PHILLIPS DENNETT,
President Bird Machine Co.

CLEVELAND, OHIO, *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Over one-half of the products imported into the United States are benefiting from the advantage of depreciated foreign currency. Present situation seriously affects wire-cloth industry making paper machine wire cloth. Respectfully ask for your cooperation in correcting a condition that menaces American labor and manufacturers.

THE LINDSAY WIRE WEAVING CO.

NEW YORK, N. Y., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Among articles of domestic manufacture oxide of zinc affords striking example of a domestic product which on account of depreciation in pound sterling value now has inadequate protection from British competition. We are manufacturers of this product. If British oxide of zinc where paid for on the par value of the pound sterling its base price without duty or ocean freight would be about 44 per cent higher than its present price. Its landed price would be 26 per cent higher.

THE NEW JERSEY ZINC CO.,
H. S. WARDNER, *Treasurer.*

PHILADELPHIA, PA., *January 30, 1933.*

Senator H. D. HATFIELD:

Regarding depreciated-currency legislation we advise that competition from countries with depreciated currency has forced the price of ferromanganese below the cost of production here and threatens lower values at present time. This condition not only ruinous to producers of ferromanganese but also prohibits any possible production of manganese ore in the United States. Any tax to equalize currency values should not only apply to finished products from countries with depreciated currency but should also apply to products manufactured in countries still on gold basis where raw materials used are furnished by countries with depreciated currencies.

LAVINO FURNACE CO.

NEW YORK, N. Y., *January 31, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

We would appreciate it if you would lead or support any constructive legislation to deal with importations from countries with depreciated currencies. This is about as important as a tariff for the protection of our industry. At the moment we are not experiencing severe competition from importations, but we are thinking of the future. Within a very few years Japan commenced producing rayon, and we understand is to-day the third largest producing country of rayon in the world, and its competition is now severely felt in the Italian and other European markets. Japan has not as yet exported much, if any, to this country, but even the present tariff would be entirely inadequate to protect us from Japanese imports on account of the depreciated yen.

SAMUEL A. SALVAGE,
President Viscose Co.

DETROIT, MICH., *January 30, 1933.*

Hon. H. D. HATFIELD, *Senator:*

American industry, already suffering from depression, is now facing almost certain ruin due to tremendous importations of cheaply made merchandise entering United States and manufactured in countries by cheap labor paid by depreciated currency, which countries have gone off the gold standard. Unfortunately these nations can now trade between themselves on a depreciated-currency basis, and the gold which we send abroad for this merchandise does not come back to buy the products of our land; thus the farmer, the employer, and the employee are all seriously injured, and we implore you to support legislation that will correct this evil. It is useless to recite in this telegram the enormous variety of products entering our country, which include paper, rubber products, electrical equipment, and I particularly speak in behalf of my fellow manufacturers when I refer to textiles and articles composed partly of textiles, which are innumerable. You can not blame the wife of the unemployed worker for buying a 20-cent pair of shoes for her child made in Japan, if she can secure same at the chain store for her barefooted child; but legislation that will prevent the article from entering this country will provide employment for her husband so that she will have money to buy American-made merchandise created by the hands of her husband or his fellow American workmen.

J. R. MILLAR,
California Cotton Mills Co.

CONSHOHOCKEN, PA., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate, Washington, D. C.:

Imports of iron and steel from countries whose currencies have been depreciated are arriving in increasing quantities and at steadily decreasing prices far below American cost. Action by Congress to restore the effectiveness of and increase revenue from import duties is urgently needed to protect the jobs and welfare of our workmen.

ALAN WOOD STEEL CO.

PITTSBURGH, PA., *January 30, 1933.*

Senator H. D. HATFIELD,
United States Senate Office Building:

Depreciated currency of Great Britain makes impossible American manufacturers of grit and shot covered by paragraph 335, tariff act, competing. Present imported price, including duty three-fourths cent per pound now less than former price without duty and also lower than American costs. All effects of tariff act have been eliminated; this has caused curtailment of American production and employment.

G. H. KANN,
President P. G. H. Crushed Steel Co.

JACKSONVILLE, FLA., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

Understand emergency legislation dealing with depreciated foreign currencies being considered Senate this session. There are many industries in this section and many agricultural products suffering on account present conditions. Almost afraid have waited too long, and a few months more means practical annihilation major portion above-mentioned activities.

WILLIAM L. WILSON,
Chairman Industrial Committee,
Florida State Chamber of Commerce.

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

Present tariff on Portland cement completely nullified by reason of depreciated currencies of foreign manufacturers. American producers, whether of cement or other materials, should not be asked to compete with those foreign countries whose workmen are paid but a fraction of the wage of American workmen and in addition, paid in depreciated currencies as against the gold dollar of America. American workmen lose 125 days' employment for every thousand barrels of cement imported into this country. Importation of this low-priced cement not only demoralizes markets at port of entry but influence extends far back from seaboard. Our industry has operated during the past several years at very heavy financial loss to all manufacturers. Understand bills have been introduced to remedy this situation, and any help you can give looking to their passage will be appreciated.

F. M. COOGAN,
Vice President Alphia Portland Cement Co.

SAN FRANCISCO, CALIF., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Reference inflow cheap goods from countries with depreciated currencies. Account withdrawal Japan from gold standard impossible for Pacific coast cement manufacturers meet their competition Hawaiian Islands; also fish industry Pacific coast facing ruin through Japanese competition. This same situation would also apply electric light bulbs, toys, rubber goods, etc., from Japan and to importation numerous other commodities from European countries off gold standard. Serious emergency exists which threatens entire American industry in our opinion. H. R. 13999, if passed and approved by Senate will meet emergency.

JAMES A. KELLER,
Vice President Pacific Portland Cement Co.

SOUTHBREWER, ME., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building, Washington, D. C.:

Invasion of our domestic market by foreign goods under advantage of currency depreciation is causing widespread loss of employment to labor and untold losses to industry, which is fast drying up. A bad smash is inevitable unless relief comes soon from competition of foreign goods sold at prices below our cost of production. Can not stand the strain much longer. Real emergency exists. Prompt correction of situation through Federal legislation imperative.

STUART B. COPELAND,
Vice President and General Manager
Eastern Manufacturing Co.

CHICAGO, ILL., *January 30, 1933.*

Senator H. D. HATFIELD:

Due to insufficient tariff and depreciated currencies, large quantities of foreign-made water colors have been introduced and are now being used in our American schools. We feel American labor, industry, and capital should be protected and our children should be free from foreign influences in our schools. We solicit your support and the support of Congress to rectify this condition.

BETTER SCHOOLS LEAGUE.

SANDUSKY, OHIO, *January 31, 1933.*

Senator H. D. HATFIELD,
Senate Office Building, Washington, D. C.:

Importations of foreign student and toy water colors have practically compelled us to shut down this department of our business which normally employs about 100 people, and all other American factories are affected in the same way. Greatly appreciate the interest you have manifested in the proper equalization of imports from foreign countries with depreciated currencies, and this is to solicit your continued support and the support of Congress in this vital question at this hour.

C. W. HORD,
Vice President American Crayon Co.

BOSTON, MASS., *January 30, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Employment in wool manufacture in 1932 was about 65 per cent of 1926 rate, the year chosen by Labor Department for comparison, but below normal for wool manufacture. At that time about 200,000 were employed. Unless something is done to overcome advantage importers have because of low landed cost of wool manufactures from countries with depreciated currencies due to appraisal for ad valorem protective duties on foreign value and low foreign costs to importers, the present diminished employment rate will be much reduced.

NATIONAL ASSOCIATION OF WOOL MANUFACTURERS,
WALTER HUMPHREY, *Secretary.*

BOSTON, MASS., *January 30, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

Data of British Board of Trade show great increase in ratio of British exports to imports since Great Britain went off gold standard. American statistics show 221 per cent increase of imports of British wool yarns during eight months of last year. Hope you will promote legislation to compensate for depreciated currencies now as you did so admirably last spring. Association's point of view is set forth in House hearings last May 13 on bills to equalize tariff duties by compensating for depreciated foreign currencies.

NATIONAL ASSOCIATION OF WOOL MANUFACTURERS,
WALTER HUMPHREYS, *Secretary.*

DALLAS, TEX., *January 29, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate, Washington, D. C.:

Lack of adequate tariff seriously handicapping domestic oil and fat producers. Texas farmers sell to cotton oil mills approximately 1,400,000 tons cottonseed annually which produces 420,000,000 pounds cotton oil. A 2-cent per pound effective duty on imported oils would add $6 to the value of each ton of seed sold by Texas farmers, or approximately $8,400,000 annually. Mexico has 2.95 cents per pound effective duty on cotton oil, and consequently cotton oil is selling in Mexico for 6 cents per pound, compared with 2½ cents in Texas and other Southern States. Total crude cottonseed oil produced United States for season 1931–32 was 1,694,000,000 pounds. Two cents effective duty on imported oils would have added $33,000,000 value to the seed.

A. L. WARD.

AUBURN, N. Y., *January 30, 1933.*

Senator H. D. HATFIELD,
Senate Office Building:

Foreign depreciated currency values will ultimately ruin our industry unless protection equal to the depreciated currency plus duty is quickly put into effect.

COLUMBIAN ROPE CO.

MACHIAS, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

The future of Washington County depends on the passage of the depreciated currency bill. May we have your support?

MACHIAS CHAMBER OF COMMERCE.

NEW YORK, N. Y., *January 30, 1933.*

Hon. H. D. HATFIELD,
United States Senate:

If Congress will not do the perfectly obvious things that would restore confidence and by restoring confidence increase business activity and employment, enhance commodity values, and make easier return to gold standard by important European countries, then as a temporary expedient only we favor additional levies on dutiable imports to equalize depreciated foreign currencies with their unfavorable effect on employment here.

GALEY & LORD (INC.)

SAN FRANCISCO, CALIF., *January 30, 1933.*

Hon. H. D. HATFIELD,
Senate Office Building:

Unless very prompt action is taken many of the basic industries of this country will be destroyed as a result of competition from foreign countries off the gold standard which are able to sell in this market at prices below anything possible of attainment in this country. Situation is fast approaching crisis. Many large Pacific coast plants are entirely shut down and employees have become public charges. Many natural resource industries are paralyzed by same competition. In our opinion no possible chance for recovery unless legislation enacted to protect American industry from this ruinous competition and we urge you to support House bill 13999 which we believe meets this emergency.

CROWN ZELLERBACH CORPORATION.

PORTLAND, ME., *January 30, 1933.*

H. D. HATFIELD,
Senator from West Virginia:

Associated Industries extremely interested depreciated currency measure. Help us.

BENJAMIN F. CLEAVES,
Executive Secretary.

SPRINGFIELD, MASS., *January 30, 1933.*

Senator HENRY D. HATFIELD,
Washington, D. C.:

We would most urgently request your support of legislation to overcome depreciated currency. In our opinion this relief is sorely needed before any recovery will be possible.

CHENEY BIGELOW WIRE WORKS.

APPLETON, WIS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Appleton Chamber of Commerce urges emergency legislation that will equalize the effect of depreciated currency. Important industries in this district are facing serious crisis due to foreign competition made possible by inflated currency and the difference in exchange.

KENNETH H. CORBETT,
Secretary Appleton Chamber of Commerce.

SEATTLE, WASH., *January 30, 1933.*

United States Senator HENRY D. HATFIELD,
Senate Office Building:

Because 80,000 workmen in Pacific Northwest are unemployed due to importations from foreign countries with debased currencies, immediate congressional action to relieve this unemployment and stabilize business conditions is urgent. Remedial legislation along lines of Hill bill, House Resolution 13999, imperative to prevent continued and alarming increase in this unemployment. Nations whose currencies are depreciated able to ship merchandise into United States, pay existing tariffs, accept American currency in payment, and make greater profit on their merchandise than if sold in their own markets. This situation presents national issue of great concern to entire country.

SEATTLE CHAMBER OF COMMERCE.

BELOIT, WIS., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

We strongly urge upon you the serious necessity of emergency legislation to compensate for depreciated foreign currencies affecting imports, and we hope this movement will have your support. Believe this one of the most important steps to help relieve unemployment.

E. H. NEESE.

MCINTYRE, GA., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Understand emergency legislation can be had in Senate to regulate depreciated foreign currencies. This legislation is vital to our success and we recommend early passage.

EDGAR BROS. CO.

CANTON, N. C., *January 30, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

Foreign producers aided by depreciated currency are steadily taking more and more of American markets away from American producers with disastrous results on both labor and capital. We are feeling these effects acutely and need emergency legislation to take care of the situation and this legislation must come quickly if further serious chaotic conditions are to be prevented.

REUBEN B. ROBERTSON.

HAMILTON, OHIO, *January 31, 1933.*

Senator HATFIELD:

We are heartily in favor of a law that will protect American labor so that all import from countries that have debased their currencies will pay a surtax equal to the depreciation of currency from par exchange with the United States.

SHULER & BENNINGHOFEN.

JONESPORT, ME., *January 31, 1933.*

Hon. HENRY D. HATFIELD,
United States Senate:

We appreciate your efforts of the depreciated money values bill. Sincerely hope it will pass; future of Washington County depends on it.

JONESPORT CHAMBER OF COMMERCE,
MAXWELL J. KELLEY, *President.*

EAU CLAIRE, WIS., *January 31, 1933.*

Senator HENRY D. HATFIELD,
United States Senate:

We urge you to do all you possibly can for emergency legislation dealing with depreciated currencies.

DELLS PAPER & PULP CO.,
S. R. DAVIS, *President.*

DOWNINGTOWN, PA., *January 31, 1933.*

Senator HATFIELD,
Senate Chamber:

We commend your stand on equalization of important duties to balance effect to depreciated currencies and wish at all cost to keep our own currency sound.

A. H. STANDLEY,
President Downingtown Manufacturing Co.

BOSTON, MASS., *January 31, 1933.*

Senator HENRY D. HATFIELD,
Senate Office Building:

Hope you will make as strong a speech on depreciated currency as you did last spring.

SINCLAIR WEEKS.

PHILADELPHIA, PA., *January 31, 1933.*

Senator HATFIELD,
Senate Office Building:

Highly favor suitable bill equalizing depreciated currency. Vital that American industry have this protection.

PENNSYLVANIA SALT MANUFACTURING CO.

AUGUSTA, ME., *January 31, 1933.*

Senator HENRY D. HATFIELD:

We are in favor of depreciated currency bill.

AUGUSTA CHAMBER OF COMMERCE.

Mr. HATFIELD. Mr. President, having been honored by this body as chairman of its Immigration Committee, I have come in contact with a situation which I do not believe was ever contemplated by the Congress of the United States, and that is that under our present system we give a preference in the American market to the products of Asiatic countries, to whose citizens we deny entry.

This point was brought out clearly before the Tariff Commission yesterday by the statement of Matthew Woll, of the American Federation of Labor. I ask unanimous consent that the clerk may read his statement.

The PRESIDING OFFICER. Without objection, the clerk will read as requested.

The legislative clerk proceeded to read the statement, and was interrupted by

Mr. TYDINGS. Mr. President——

Mr. HATFIELD. I yield to the Senator.

Mr. TYDINGS. I hope the Senator will not think I am discourteous or presumptuous, but I have just made a calculation and find that we have only 27 legislative days left of the present session, and we have not yet passed any of the appropriation bills.

Mr. HATFIELD. That is very true, Mr. President, but we might have accomplished much more in a legislative way if the senior Senator from Maryland had been more considerate of the time of this body at this session and at the last session in 1932.

Mr. TYDINGS. I thank the Senator. I did not intend to attack the Senator, and I may say that I have not filibustered at this session, but have spoken very sparingly.

Mr. HATFIELD. I appreciate the Senator did not intend to attack me, but I have never been guilty, Mr. President, since I have been a Member of this body, of filibustering upon any subject, and the subject that I am discussing to-day is absolutely in harmony with the subject matter of the unfinished business before the Senate.

Mr. TYDINGS. Mr. President, will the Senator let me make a statement. I wish simply——

The PRESIDING OFFICER. Does the Senator from West Virginia yield to the Senator from Maryland?

Mr. HATFIELD. I think I can get along, Mr. President, without any suggestion from the able Senator from Maryland.

Mr. TYDINGS. Will the Senator yield?

Mr. HATFIELD. No; I decline to yield any further.

The PRESIDING OFFICER. The Senator from West Virginia declines to yield.

Mr. HATFIELD. I ask that without further reading, the statement made by Mr. Matthew Woll, vice president of the American Federation of Labor, may be made a part of my remarks and printed in the Record.

Mr. TYDINGS. That is what I was going to suggest, Mr. President.

The PRESIDING OFFICER. Without objection the remainder of the statement will be printed in the RECORD.

The statement of Mr. Woll entire is as follows:

STATEMENT OF MR. MATTHEW WOLL BEFORE THE UNITED STATES TARIFF COMMISSION

The well-established American policy, as pronounced to the American people by the two dominant political parties, is the enactment, establishment, and maintenance of tariff legislation or regulation which will protect the employment opportunities of American workers and which will insure an American market for the products of American workers.

Tariff protection is more necessary in times of depression than when conditions are normal. Generally, American labor costs are higher. In addition, the overhead is also higher. In periods of depression, American costs of production decline more slowly than in foreign countries where labor and overhead costs are both lower.

We believe that tariff rates should be so arranged and adjusted that they provide adequate protection of American-made products at all times and form as well an effective barrier against too rapidly declining commodity values.

At the present time there is ample evidence available (in the files of the United States Tariff Commission) to prove beyond doubt that foreign products are being dumped into the American market at prices which are less than American labor costs of producing of like and similar articles.

American labor believes that American valuation, or, American selling price, as the basis for the establishment of tariff rates, is more easily ascertainable and certainly more American-like than our present system of basing duties on foreign value.

All of the books of the producing or importing concerns are available in our own country. We do not have to humiliate ourselves by asking favors from foreign governments.

There is no valid reason why we should humble ourselves before any alien people in an effort to secure information on which to act pertaining to our own domestic affairs.

We should not, as Americans, be placed in the humiliating position of permitting, let alone granting foreigners the right to control or to interfere in our domestic affairs.

Under our present system of basing ad valorem tariff rates on foreign products we openly and knowingly discriminate against the products of the workers of those countries of Europe who have established wage and working conditions more nearly approximating what may be termed American standards of living.

Under the foreign valuation principle we countervene the established national policy as it pertains to the Asiatic coolie labor.

We have excluded the Asiatics because American labor could not compete with this character of labor in America and retain our standards of living. While we are excluding Asiatics we welcome their products in that we have a tariff policy which favors the products of the Asiatics in preference to all other nationals and at the expense of both American and European workers.

In normal times almost any commodity which is produced in any of the major countries and which is imported into the United States, the product of foreign workers, enters the American market on the following unit basis of value: If from England, $1.50; if from France, Germany, or Belgium, $1.10; if from Czechoslovakia, $1; if from Japan, 60 cents.

For purposes of illustration, let us assume that this article is a bound book containing plates or pictures.

The tariff levied is 15 per cent on foreign value. The duties collected are as follows:

The English product, 22½ cents; the French, German, or Belgian product, 18 cents; the Czechoslovakian product, 15 cents; and the Japanese product, 9 cents.

Under present-day conditions, with many foreign nations having debased their currency value, our tariff duties based on ad valorem values are of no protection whatever to American workers. In fact, we find that orders are now going to Japanese producers of bound books with plates instead of to European producers due entirely to the fact that with Japanese currency debased 60 per cent and with Japanese workers having been forced to accept a substantial reduction in wages during the past year the products of the Japanese workers can be landed here, duty paid, at costs which are far less than any similar book can be produced in America or any of the other foreign countries.

Our tariff policy, as in force at the present time, favors the products of the very people our immigration policy bars from entry into our country. Surely such was never the intent of the Congress of the United States, much less the desire of the American people.

Not only are our present tariff rates ineffective in protecting the employment opportunities of America's wage earners, but foreigners, their production costs and prices being founded on debased currency value, are able to and do deliver manufactured products into the American market which compete with the products of American workers at prices which have forced the closing of thousands of American factories, work shops, and mills.

In support of the foregoing I refer your attention to an industry in which all of the facts are a matter of record and are on file in the office of the United States Tariff Commission. I refer to the decorated table-chinaware industry.

When the present tariff act was enacted the average unit value of imports from Japan, as shown in the table on pages 2–6 of the Report of the United States Tariff Commission on Depreciated Exchange, was 71 cents per dozen pieces. At that time, of imports of these articles from Japan, Japan controlled — per cent of the American market. This same table evidences that the imports for the month of March, 1932, averaged a unit value of 26 cents per dozen pieces.

We will present two exhibits of wooden rollers used in the printing of wall papers, textiles, paper, etc., rollers, the product of German workers. German currency is still on the gold basis. Landed costs in the American market, all duties and other expenses paid, range from 60 per cent to 70 per cent of what similar rollers, the products of American workers, will cost to produce.

Another illustration of the ineffectiveness of our present tariff policy of basing duties on foreign values, which facts are in the possession of the United States Tariff Commission, is in the case of customs duties imposed on imports of shoes produced in Czechoslovakia.

The Congress, upon the request of American labor, in order to protect the employment opportunities of the boot and shoe workers, placed a duty of 20 per cent on imports of shoes. The Czechoslovakian producers were flooding the American market with shoes which were delivered at costs less than American costs of production. At the time this action was taken Czechoslovakian shoes were entered upon an invoice value of $2.60 per pair.

These Czechoslovakian shoes, incidentally, are made expressly for sale in the American market and the producers make this bold and unqualified statement. These shoes have no market abroad. They have no export market, as, in the main, they are sold directly to the representatives of the Czechoslovakian producers in America. Shortly after the Congress had levied this duty of 20 per cent the same shoes, imported from Czechoslovakia, were landed at our customhouses with an invoice value of $1.80.

The officers of the boot and shoe workers union appealed to the Tariff Commission, and the Tariff Commission, acting under the flexible provisions of the tariff act, made an investigation of comparative costs. The investigation resulted in the commission recommending and the President approving increase of the full 50 per cent in duties allowed under the law. Thereafter imports of these shoes paid a duty on the basis of 30 per cent. Following the increase of the duty the same shoes, which had been invoiced at $1.80 a pair, were landed with an invoice value of only $1.40 per pair.

Here then we have a situation where we know that there is no home or foreign or export value. Yet our workers of America are forced to compete with these shoes, entered on a supposedly foreign value.

We claim that this system or the policy involved is not honest or justified. We may claim that the invoice value as entered by the importers is not an honest one. But let the following illustration present its own conclusion. The Czechoslovakian producers, with their own distributing agencies in the United States, can invoice these shoes with the idea of collecting profits on either the manufacturing or the retail end. There is nothing to prevent their doing so and they are free to do as they will and they are not averse to taking every advantage thus presented. It is fair to assume that they will collect the duty on the retail end, as it makes it possible for them to secure entry at a lower cost than if the profits are charged on the foreign end and duties paid here.

We are not interested in the profits of any concern. We are interested very deeply in the employment opportunities of American workers. We recognize quite clearly that American workers will not be given employment opportunities while foreign producers can deliver like or similar products at total delivered costs which are less than the American costs of production.

The establishment of American valuation or American selling price as the basis for ad valorem tariff rates has many other advantages in addition to the protection it affords the employment opportunities of American workers.

It will eliminate the necessity and expense of maintaining Treasury agents in foreign countries; it will eliminate, in great part, the distress and suffering here created through the dumping of foreign products into our markets at prices which are less than American costs of production; it will eliminate costly litigation, as the facts bearing on any importation will easily be ascertainable in our own country; it will eliminate the unnecessary irritation caused in foreign countries through our efforts to secure production costs from peoples who claim that such information is confidential.

It permits of an exact knowledge on the part of Government officials of what portion of any given product is of foreign or domestic production; it will make it possible for Government agents to know what is the value of American products displaced by the entry of foreign products into the American markets; it will eliminate the unsound and unwarrantable statistics issued from time to time by our Commerce and Treasury Departments as to the value of our imports and exports.

American valuation or American selling price will also eliminate the present advantage accruing to those American distributors who, through purchasing agencies in foreign countries, secure entry of their purchases at total costs which are less than is possible for the smaller merchant.

The report of the Tariff Commission with reference to its investigation under section 340, relating to products coming within the scope of paragraphs 27 and 28, shows that more than 50 per cent of the imports were dutiable under American valuation.

American labor has consistently recommended that all tariff rates on the ad valorem basis be levied on American valuation.

The entry of foreign products, which compete with the products of our own workers, are sold ordinarily at but a small fraction less than the American goods.

The importer of foreign products who is interested in the distribution of these foreign-made articles knows in advance what the sales value of these articles is and we know that such sales value is based upon the sales values of like or similar articles, the products of American workers. It is the foreign producer and importer alone who gain by the present arrangement and not the American consumer.

There is no good and sufficient reason why the importer or distributor of these foreign-made articles should be permitted to land these articles at a total cost which is less than the American costs of production.

The only fair and equitable policy to adopt is to have the importers of foreign goods or articles pay duties on the basis of the value of the articles in the American market where they are offered for sale and where they displace the products of American workers.

There is but little sense, as we see it, in closing our gates to the entry of the low-wage-paid workers of Europe and the total exclusion of the Asiatics and at the same time permitting the products of these lesser paid and of those denied entry into our country to land their commodities in our country virtually free of any restrictions.

We appreciate that this commission has been requested by the President to conduct this investigation and report their findings thereon to the Congress.

We are firmly opposed to the continuation of a system wherein foreign manufacturers can dominate and too often control the wage policies of our own American manufacturing concerns.

We have had several surveys made in Europe as to the attitude of European producers toward our tariff policies and the reasons therefor.

Basing our statements on surveys made by our own people and at the expense of the members of the national and international unions affiliated with the American Federation of Labor, we can

state, without the slightest fear of contradiction, that we have ample proof of the influence and the control which European producers have over wage scales and working conditions of workers in our own country by reason of our system of levying ad valorem duties on the basis of foreign valuation.

In a survey made of the French perfume bottle industry we found: "The French workers were told that their employment depended on the ability of the firm (the French employers) to sell the product of the French workers in the American market. As a result wages and working conditions of French workers have been fixed to enable these French companies to undersell the American manufacturers in the American market. The wages paid are about one-third the wages paid to workers in our own country."

Following an exhaustive survey of European industries made only a few years ago by one of the representatives of the American Federation of Labor, he reported to that body, stating in part:

"They are seeking employment, and to secure employment they must secure markets, and the market they seek is that of the United States. We (try to) keep them out of our market with our tariff. Then they ask that they be permitted to come to America to work and we keep them out with our immigration laws; and with these two principles of our Government we are not in conflict when used to protect American industries and American workingmen."

Continuing, this report concludes.

"The European workmen, however, know that one-fifteenth of the wealth of the United States is now invested in Europe and they see our large captains of industries establishing factories in their countries and they expect that within a few years they will be employed in these branch American factories, producing for export to the United States."

It will interest the members of this commission to know, as you probably do know, that many large American concerns have closed large parts of their American plants and are supplying the American trade from branches located in foreign countries. I need hardly refer to the fact that the Eastman Kodak is importing from Germany. The same is true of the American Optical Co. The Singer Sewing Machine Co. was found some years ago to have closed their plants in Elizabeth, N. J. and Bridgeport, Conn., and were importing parts for these machines from their plant in Scotland.

I need not dwell on the activities of Henry Ford. Suffice it to say that we understand that plans are already made for his abandonment of his Ireland plant because the American farmers are refusing to purchase tractors, produced in Ireland, unless Ford reduces his prices and permits the American farmers to secure the benefits which have accrued to Ford through his lower labor cost and the admission of the tractors as farm implements, free of the payment of any duty. Of course, he still imports parts, though in a lesser quantity.

American labor is keenly interested in this investigation, and the report the commission shall make.

We are mindful of the fact that there has been a change in the administration of public affairs; that there has been a change in the political complexion of the Congress. At the same time we also recall very distinctly that both political parties have promised adequate tariff protection to the products of American workers and that a plea for adequate relief is without political bias or prejudice.

We sincerely trust that your report will be favorable to our point of view and that it will be presented to the Congress in the very near future.

Mr. HATFIELD. Mr. President, I had the conviction as early as the latter part of 1931 that the abandonment of the gold standard by various nations would render ineffectual the tariff rates of the Smoot-Hawley tariff law. As a result of my investigation I became so thoroughly convinced that I was right in my convictions that I addressed the Senate of the United States upon the subject on April 1, 1932, from which address I ask that a quotation may be printed in the RECORD without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

The excerpt referred to is as follows:

EFFECTS OF IMPORTS

Mr. President, we find a condition to-day wherein, as a result of the depreciation of foreign currencies in those countries which have gone off the gold standard, prices of their products, importable into the United States, are so low that even tariff rates of more than 100 per cent equivalent ad valorem do not protect from foreign competition some of those commodities produced by the American farmer.

* * * * * * *

I believe, Mr. President, that it is the duty of this body, with conditions prevailing as they do to-day, to provide employment opportunities for American workers; to provide a market in America for the products of the American farmer. The busy hum of machinery in factories in the great plants of America is the only way in which prosperity has been accomplished in our land.

Mr. HATFIELD. There is only one way by which the desirable result indicated can be brought about, and that is by administrative authority, quickly applied, placing a surcharge on imports from countries with depreciated currencies equal to the difference between the depreciation and the former standard. The emergency calls for a simple, readily applied remedy which Congress can authorize.

Mr. President, if there was any doubt in my mind then as to the correctness of my conclusion it has been dispelled. The expressions contained in the telegrams I have presented are conclusive to me that had we dealt with this subject in the first part of the year 1932, instead of our people as a nation sinking deeper in the slough of depression, we would be advancing upward and onward to a stable, industrial, economic, and financial condition. The longer we procrastinate, Mr. President, the more direful will become our situation and the longer it will take us to extricate ourselves from the mire in which we have sunk, with our industries verging on the brink of bankruptcy. I make this statement advisedly. It applies to our transportation companies, to our banking institutions, and to every industrial group under the American flag to-day, whether it be industries manufacturing finished products or those producing raw materials.

I appeal to the Congress of the United States to forget politics, partisanship, and to do that which has always been foremost and uppermost in the minds of the European and Asiatic, namely, the protection of their toilers and the preservation of the fundamental elements necessary to a stable Government, regardless of the effect on others.

Mr. President, America's greatest enemies reside within our own borders. Americans, from our early days, have been pioneers. Our country was established by lovers of freedom.

We have never knowingly engaged in a war of aggression. Our people, through lack of foresight or unwillingness on the part of the Congress to act, have been continually exploited by our financial buccaneers.

Through the foresight of Washington, Jefferson, Hamilton, Madison, Monroe, and others, in the enactment of a protective tariff policy, we have successfully developed from a country dependent for our essential supplies upon Europe to a nation more self-contained than any other nation in the world.

Our people have always had to contend with the evil influence of those avaricious money lenders who know no patriotism, have little, if any, love of country, and are interested solely in the profits which they hope to accumulate.

The present depression has been greatly prolonged because of our laws, which make it possible for foreigners to dump their products into our home market at total landed costs, tariff duties paid, which are less than the American costs of production, thus depriving millions of our American workers of much-needed employment.

When the present tariff act was under consideration representatives of our international banking houses crowded Washington, and I regret to say that they were partially, at least, successful in so shaping the final draft of the tariff act that we find ourselves to-day unable properly to protect the employment opportunities of our workers or the hard-earned savings of those who builded our American industrial plants. It is not often, though, that we find conclusive evidence of our international bankers' deliberately trying to destroy a growing and vitally necessary American industry for the benefit of foreigners.

Mr. President, as one of the many thousands of American physicians administering to the needs of the sick and the injured, I have personally used many pounds of iodine, an antiseptic for which there is no satisfactory substitute. Prior to two years ago, we in America were entirely dependent for our supply of this most necessary medicine upon imports from Chile.

Some two years ago, after years of exhaustive chemical research by chemists under the direction of Dr. William J. Hale, a process was developed for producing American iodine from the products of the oil wells of southern and western

States. This American iodine is identical in all its properties with foreign-made iodine and is so recognized by the medical profession. To-day there is a plant making iodine at Shreveport, La., and also one at Los Angeles, Calif. When this American-made product was first placed on the market the price of iodine for many years had been in excess of $4 per pound. Competition, made possible by this new American industry, forced the selling price of iodine down to less than $2.50 per pound within one year and broke the monopoly formerly maintained by foreigners.

Continued growth of this new American industry not only broke the foreign monopoly and freed America from foreign dependence, but it also apparently threatened the profits of the international banking house which represents the foreign cartel in our own country. This international bank, one of the largest in our country, with its deposits and its resources consisting of moneys and securities left with it by Americans for safe keeping and safe investment, loaned—and I say loaned advisedly—$900,000 on a consignment of 450,000 pounds of Chilean iodine, a year's supply. It will be noted that this loan was made at the rate of $2 per pound at a time when the market price was at least $4 per pound. It is my understanding that when the loan became due, the usual profits of the foreign cartel having dropped substantially due to the competition of the American product, the international banking house disposed of a large quantity of the foreign product at a price which was some 20 per cent less than the market price for iodine then prevailing. I understand that the price at which the bank dumped this foreign product on the American market was not only some 20 per cent below the then prevailing market price, but, so I understand, it was 5 cents per pound less than the $2 per pound which this American bank advanced.

This dumping was probably done with the complete understanding of the American representative of the foreign cartel; but the action—and it is action which counts—was the action of American bankers, using the deposits of Americans in an effort to throttle an American industry.

What was the purpose of this dumping, other than an attempt to throttle an American industry and to permit foreigners further to exploit the American people?

This dumping was not necessary because of forced liquidation, as this American bank is still operating and is paying dividends to its stockholders.

The only purpose of this action, Mr. President, was an effort to throttle and to destroy this new American industry, through which action the bankers might continue to profit by their continued trafficking with the foreign cartel.

In order that it might not be inferred that this is an isolated case, Mr. President, I will cite for the benefit of the skeptics another of the many illustrations which may be cited of the piracy and the exploitation of the American people by some of our international bankers.

During the past 10 years more than $150,000,000 of the American people's money has been invested in Chilean nitrate fields. The American bankers who secured control of this vast sum of American money have been openly conspiring with foreigners for the last few years so to fix the price of nitrates that they might exploit American industries and American farmers through high and exorbitant prices. However, the day of reckoning is near.

Again, through the tireless work of American chemists, the patriotism of those who builded the American Chemical Foundation and the American chemical industry, we are independent of any foreign nitrates, and once again are we a free and an independent people.

The bubble has burst; and it is only a question of a short time when those who invested their hard-earned savings on the advice of American bankers in the securities of the Chilean nitrate fields will find that their investment has been substantially lost.

I need not dwell further on the unscrupulousness of some of our international bankers.

Our honored and able colleague from California [Mr. JOHNSON] has established facts pertaining to the perfidy of some international bankers beyond the peradventure of doubt; and the records of the hearings held before the Senate Finance Committee, I regret to say, portray a sorry picture for future generations of Americans to look back upon.

However, Mr. President, while this is true, there is a darker and more dangerous condition confronting the American chemical industry; and danger there means danger to many other American industries. That is the strong possibility of further dumping on the part of those American bankers who have in storage in this country some 250,000 tons of Chilean nitrates, which sooner or later they will be forced to dump on the American market at such prices as they can secure, to protect the loans which they have made, with American money, to this foreign monopoly.

I am informed from reliable sources—American chemists who have spent years in this investigation—that sodium nitrate will be replaced by a new and more efficient substitute already produced in this country. Yet, Mr. President, as a result of the inadequacy of our antidumping laws, American industry is endangered; and again the chemical industry is threatened, not by foreigners, but by those within the gates of our own country who proudly, at times, at least, dwell upon the glories of America.

According to Associated Press dispatches, the Edwards & Co. Bank, of Santiago, Chile, has recently through court proceedings placed an embargo on 150,000 tons of nitrate stored in northern Chilean ports and belonging to the Cosach, to satisfy a loan of $1,300,000 made to that company. This would indicate a loan of $8.66 per ton in Chile. If this bank should decide to liquidate this loan, it could place that nitrate in an American port substantially below the market price, incur no loss, and even make a profit. This particular amount of nitrate is not considerable, but it serves to illustrate what may have to be faced in the not far distant future.

The Chilean industry's only salvation lies in the destruction of our fixed-nitrogen industry, and we may expect every effort in that direction by outright dumping in our markets.

With the 3,000,000 tons of their stocks shut out from all countries except our own and Egypt, which requires only about 200,000 tons a year, this dumping could proceed long enough to spell disaster to the American industry.

Indicative of what will happen when the American bankers who have invested many millions of dollars in Chilean nitrates seek payment on their investments is the action of the Chilean bank under similar conditions.

The dumping of this mortgaged stock of nitrates on the American market will temporarily destroy our home industry; and yet there is no existing law to protect this industry which means so much to America.

Mr. President, last April I occupied the floor of this Chamber and pleaded with the Members of the Senate for action to protect American workers who were being denied employment, due to the inability of the products of the American factory, mine, and farm to compete with similar articles originating in foreign countries. Over 30 nations to-day are off the gold standard, with currencies depreciated from 15 per cent to as high as 60 per cent; and the delivered duty-paid prices of these articles are far below the domestic cost of production. Furthermore, the offer of goods in American markets at ridiculously low prices is rapidly breaking down our price levels to the point where the wheels of American industry cease to operate.

We are face to face with a national crisis, although apparently a great many of our citizens are still unaware of its purport. We can either submit to this inflow of foreign goods, manufactured in the home of depreciated currencies, or we can stop this inflow by legislation to offset the advantage accruing to foreign producers as a result of their depreciated currencies.

If we fail to act now, we shall be forced later to adopt quotas and embargoes; otherwise, our Nation will be ruined. The question at issue is extremely simple, Mr. President: Shall we preserve the American markets for American labor?

Foreign nations, in self-protection, have been quick to act in this emergency by the adoption of embargoes and quotas.

Uncle Sam, in childlike faith, viewing the citizens of this world as righteously minded toward each other, now again beholds himself as a disillusioned child. The foreign nations have borrowed all they can secure; now they would take away from us our sole remaining asset, our home market. There remains only one thing left to take, and that is our land. As a nation, we have played the part of Nero fiddling as the country burns.

I take off my hat to the wily foreigner who, in debasing his own currency, finds an easy entrance for his products into this country directly over our tariff wall. Last Spring, when I discussed the situation on the floor of the Senate, the inflow was just beginning to materialize and price levels to be destroyed.

I wish to have read at the desk a few paragraphs from a newspaper published in Tokyo, Japan, commenting upon the increased trade Japan is enjoying due to the depreciation of the yen.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the article will be read.

The Chief Clerk read as follows:

[From The Trans-Pacific: A Weekly Review of Far Eastern Political, Social, and Economic Developments]

JAPANESE EXPORT TRADE ENTERING BIGGEST BOOM SINCE HYSTERICAL DAYS OF WORLD WAR ACTIVITY—DECLINE OF YEN, COUPLED WITH FAILURE OF DOMESTIC PURCHASING POWER TO INCREASE PRICES AND WAGES AT HOME, RESPONSIBLE FOR EXPANDING MARKETS IN OVERSEAS COUNTRIES—ALMOST ANY LINE NOW ABLE TO COMPETE

TOKYO, Thursday, December 1, 1932.—Japans' export trade is booming as never since the World War. The full force of the decline of the yen is commencing to be felt. Importers in foreign lands are becoming convinced of the advantage of carrying Japanese lines and are rushing to get Japanese connections. This is the golden age of the Japanese exporter—the golden age of the importers who deal with them.

* * * * * * *

FIELD STILL NEW

The export field is still so new for hundreds of Japanese products that there are profits for everyone on both ends. Throughout the world importers are trying to get in touch with Japanese exporters. Except in the bulk lines it is not important that they get the cheapest Japanese producer, for there is little likelihood that enough Japanese houses will ship their goods into that territory to compete against each other. That is, for the time being. The same rule applies to exporters. They can find good business almost anywhere if they go about getting it in the proper manner.

One fact stands out very sharply from the foreign-trade figures and from the information which flows into The Trans-Pacific. That is that nations formerly supplied by western and central Europe are now turning more and more to Japan for their supplies. This applies along the whole stretch of Southern Asia from Singapore to the Balkans, in the Balkans, Spain, Portugal, all Northern Africa, Australia, New Zealand, and Oceania generally. South and Central America (except Argentina and Brazil) have been a little slow to fall in line, due in large part to the exchange and import control regulations which are in force in most Latin-American countries.

The same kind of thing is now operating to check the expansion of trade in some Balkan countries; but the probabilities seem to be that, with more and more of them defaulting on their foreign obligations and with the necessity of holding up exchange no longer so intense, they will remove these regulations and allow their exchanges to slip to levels which truly reflect their industrial strengths. Many of them have been fighting the losing battle of deflation for years in efforts to pay off debts contracted when the purchasing power of gold was low. Now that they have given up this battle, the course of wisdom would seem to be to stop pegging exchange and to let foreign trade run untrammeled. This is one of the most hopeful possibilities in the world situation. The foreign trader should pray for defaults of such loans, for they are apt to lead to removal of restrictions on international commerce. Removal of these restrictions is apt to lead to world recovery.

Mr. FESS. Mr. President——

The VICE PRESIDENT. Does the Senator from West Virginia yield to the Senator from Ohio?

Mr. HATFIELD. I yield.

Mr. FESS. The Senator is talking on such a live subject now, and its importance is so intensified by the depreciation of the currency of Great Britain, that I want to call his attention to the price of the pound to-day. The reports show that the pound is quoted to-day at $3.39. That is just $1.48 below par, or represents a fall of 30 per cent. So that if Great Britain is producing an article at a cost of $1, and we are producing it at a cost of $1.30, we would have to put a tariff of 30 per cent on that article in order to prevent Great Britain from underselling us. We put the tariff on and she will have to pay the 30 per cent, but she depreciates her currency just 30 per cent, and therefore, even with the tariff, she will be able to compete with us, under the present conditions. With the pound quoted at $3.39, when par is $4.87, with the currency thus depreciated, she could pay the tariff of 30 per cent and still ship into American ports.

Mr. HATFIELD. That is correct, and I thank the Senator for his contribution.

Mr. President, the statement which has just been read from this publication should satisfy any American as to the necessity for immediate action and for legislation which will protect our country from being the dumping ground of the products of the Japanese coolies.

Incidentally, at this point, Mr. President, I desire to call the attention of the Senate to a discussion which took place here only a short time ago. Many Members of this body expressed the sentiment that the people of the Philippines were not sufficiently literate to be able to take care of their people. While the American Congress itself has hesitated, yes, has declined, to pass remedial legislation to protect our workers and our industries from the devastating effects of depreciated currency the Philippine government has acted.

I note that last November the Philippine Legislature, the native government of the Philippines, enacted legislation which placed a tax on the imports into the Philippines from the countries the currencies of which have depreciated, so that the Philippine Islands are not the dumping ground of their neighboring Asiatics.

In order that those who read the RECORD may see for themselves the wisdom displayed by the Philippine Legislature I desire to have printed at this point in my remarks a copy of the action taken by the Philippine Legislature.

The VICE PRESIDENT. Is there objection?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

NINTH PHILIPPINE LEGISLATURE

SECOND SESSION

An act to amend sections 6, 16, 17, and 18 of the act entitled "An act to raise revenue for the Philippine Islands, and for other purposes," approved by the Congress of the United States on August 5, 1909

Be it enacted by the Senate and House of Representatives of the Philippines in legislature assembled and by the authority of the same:

SECTION 1. Section 6 of the act of Congress of the United States of August 5, 1909, entitled "An act to raise revenue for the Philippine Islands, and for other purposes," is hereby amended to read as follows:

"SEC. 6. Payment and liquidation of duties: That the rates of duty established in this act are stated in money of the United States of America, but that payment thereof shall be made in Philippine currency or its equivalent in money of the United States of America on the basis of the liquidated value as herein provided.

"In the liquidation of duty, the currency of the invoice will be reduced to the money of account of the United States upon the basis of the following values of foreign money, any provision of law, regulation, or order to the contrary notwithstanding:

Country	Unit	Value in Philippine currency	Equivalent in United States currency
Argentina	Gold peso	₱1.9296	$0.9648
Australia	Pound sterling	9.7330	4.8665

"Whenever merchandise imported into the Philippine Islands is invoiced in the currency of the United States or of the Philippine Islands, such currency must be converted back into the proper foreign currency at the buying rate of exchange as determined and certified by the Federal Reserve Bank of New York and published by the Secretary of the Treasury of the United States, and then be reconverted into the currency of the United States or of the Philippine Islands at the value of the said foreign currency as hereinabove provided.

"The Governor General, upon recommendation of the Secretary of Finance, may, by proclamation, fix for the purposes of this act the value in Philippine currency, and its equivalent in money of the United States of America, of the value of the currency or currencies of foreign countries when said value is changed or is not covered herein."

SEC. 2. Section 16 of the same act of Congress of August 5, 1909, is hereby amended to read as follows:

"SEC. 16. That all invoices of articles, goods, wares, or merchandise to be imported into the Philippine Islands shall set forth—

"(a) The place where, the date when, and the person by whom the merchandise is sold, or if to be imported otherwise than in pursuance of a purchase, the place from which shipped, the date when, and the person by whom it is shipped;

"(b) The port of entry to which the merchandise is destined and the person to whom the merchandise is sold or shipped;

"(c) A detailed description of the merchandise in tariff terms of this act, including the name by which each item is known, the quantity, grade or quality, true number, mark, weight, or symbol under which sold by the seller or manufacturer, together with the marks and numbers of the packages in which the merchandise is packed;

"(d) The purchase price or true value of each item in the currency of the purchase and in the unit of quantity in which the merchandise is usually bought and sold in the place or country of origin, if the merchandise is shipped in pursuance of a purchase or an agreement to purchase;

"(e) If the merchandise is shipped otherwise than in pursuance of a purchase or an agreement to purchase, the value for each item in the unit of quantity in which the merchandise is usually bought and sold, and in the currency in which the transactions are usually made, or, in the absence of such value, the price which the manufacturer, seller, shipper, or owner would have received, or was willing to receive, for such merchandise if sold in the ordinary course of trade and in the usual wholesale quantities in the country of origin;

"(f) All charges upon the merchandise, itemized by name and amount when known to the seller or shipper; or all charges by name (including commissions, insurance, freight, cases, containers, coverings, and cost of packing) included in invoice prices when the amount for such charges are unknown to the seller or shipper;

"(g) All discounts, rebates, drawbacks, and bounties, separately itemized, allowed upon the exportation of the merchandise; and

"(h) Any other facts deemed necessary to a proper appraisement, examination, and classification of the merchandise that the insular collector of customs may require.

"Every invoice shall be made in quadruplicate and signed by the owner or shipper, if the merchandise has been actually purchased, or by the manufacturer or owner thereof, if the same has been procured otherwise than by purchase, or by the duly authorized agent of such purchaser, manufacturer, or owner."

SEC. 3. Section 17 of the same act of Congress of August 5, 1909, is hereby amended to read as follows:

"SEC. 17. That except in case of personal effects accompanying a passenger as baggage, or arriving within a reasonable time before or after the owner, no importation of any articles, goods, wares, or merchandise, exceeding $100 in dutiable value, shall be admitted to entry without the production of a duly certified invoice of the kinds hereinafter described, or the filing of an affidavit made by the owner, importer, or consignee before the collector of customs, showing why it is impracticable to produce such invoice, together with a bond in an amount to be prescribed by, and with sureties satisfactory to, the collector of customs, for the production of such invoice within a reasonable time to be prescribed by said official. In the absence of such invoice, no entry shall be made upon the aforesaid affidavit unless the same be accompanied by a statement in the form of an invoice, or otherwise, showing the actual cost of such merchandise in the currency of the purchase, if same was purchased, or if obtained otherwise than by purchase, the actual market value or wholesale price thereof at the time of exportation to the Philippine Islands in the principal markets of the country from whence imported and in the currency in which the transactions are usually made. This statement shall be verified by the oath of the owner, importer, consignee, or agent desiring to make the entry, taken before the collector of customs, and it shall be lawful for that official to examine the deponent under oath regarding the source of his knowledge, information, or belief concerning any matter contained in his affidavit, and to require him to produce any correspondence, document, or statement of account in his possession, or under his control, which may assist the customs authorities in ascertaining the actual value of the importation or of any part thereof; and in default of such production when so required, such owner, importer, consignee, or agent shall be thereafter debarred from producing any such correspondence, document, or statement for the purpose of avoiding the imposition of additional duty, penalty, or forfeiture incurred under this or any other act in force in the Philippine Islands, unless he shall show to the satisfaction of the court or the collector of customs, as the case may be, that it was not in his power to produce the same when so demanded; but no articles, goods, wares, or merchandise shall be admitted to entry under the provisions of this section unless the collector of customs shall be satisfied that the failure to produce the required invoice is due to causes beyond the control of the owner, importer, consignee, or agent."

SEC. 4. Section 18 of the same act of Congress of August 5, 1909, is hereby amended to read as follows:

"SEC. 18. That invoices required by the preceding section shall, at or before the shipment of the merchandise, be produced to the consul, vice consul, or commercial agent of the United States of the consular district in which the merchandise was manufactured or purchased, as the case may be, when importation into the Philippine Islands is from a country other than the United States of America, or any Territory or place under the jurisdiction and control of the Government thereof: *Provided*, That the insular collector of customs may, in his discretion, dispense with the requirement for the consular invoices prescribed in this section in case the merchandise for which entry is sought is free of duty under this act, in which event a commercial invoice certified by the purchaser, manufacturer, seller, owner, or agent shall be filed: *And provided further*, That when the importation is from the United States of America, or any Territory or place under the jurisdiction and control of the Government thereof, production shall be to a collector of customs, deputy collector of customs, or United States commissioner.

"Invoices shall have indorsed thereon when produced as above prescribed a declaration signed by the purchaser, manufacturer, seller, owner, or agent setting forth that the invoice is in all respects correct and true and was made at the place from whence the merchandise is exported to the Philippine Islands; that it contains, if the merchandise was obtained by purchase or an agreement to purchase, a true and full statement of the date when, the place where, the person from whom the same was purchased, and the actual cost thereof, and of all charges thereon; and that no discounts, bounties, or drawbacks are contained in the invoice except such as have been actually allowed thereon; and when obtained in any other manner than by purchase, or an agreement to purchase, the actual market value or wholesale price thereof, at the time of exportation to the Philippine Islands, and the principal markets of the country from which exported; that such actual market value is the price at which the merchandise described in the invoice is freely offered for sale to all purchasers in said markets, and that it is the price which the manufacturer, seller, owner, or agent making the declaration would have received and was willing to receive for such merchandise sold in the ordinary course of trade in the usual wholesale quantities, and that it included all charges thereon; that the numbers,

weight, or quantity stated is correct, and that no invoice of the merchandise described differing from the invoice so produced has been or will be furnished to anyone.

"If the merchandise was actually purchased, or shipped otherwise than in pursuance of a purchase or an agreement to purchase, the declaration shall also contain a statement that the amount shown is that which was actually paid, or the price that the shipper would have received, or was willing to receive, for such merchandise, and that the currency stated in such invoice is the currency of the purchase, or in which the transactions are usually made."

SEC. 5. Upon the express or implicit approval of this act by the President of the United States, as provided in the act of Congress approved on August 29, 1916, entitled "An act to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands," the Governor General shall so announce forthwith, by means of a proclamation, and this act shall take effect on the date of such proclamation.

Approved:

_____,
President of the Senate.

_____,
Speaker Pro Tempore of the House of Representatives.

This act, which originated in the Philippine Senate, was finally passed by the same on November 7, 1932.

_____,
Secretary of the Senate.

Finally passed by the House of Representatives on November 7, 1932.

President of the United States.

DECEMBER 17, 1932.

[Item clipped from Commerce Reports, January 7, 1933, page 12]

PHILIPPINE ISLANDS—ANTIDUMPING AND OTHER TARIFF LEGISLATION EFFECTIVE—IMPORT DUTIES ON CERTAIN FOODSTUFFS AND SHOES INCREASED

According to a radiogram from Trade Commissioner E. D. Hester, Manila, the Governor General of the Philippine Islands proclaimed, effective on December 21, four tariff measures recently enacted by the Philippine Legislature and approved by the President, providing for (1) the assessment of ad valorem duties on the basis of the par value of foreign currencies instead of the current exchange value; (2) the imposition of special or dumping duties, under certain conditions, on goods imported from countries other than the United States; (3) the removal of the limitation of a maximum duty of 100 per cent ad valorem, with certain exceptions; and (4) increases in the import duties on meat, lard, and lard substitutes, including peanut oil and eggs. A fifth measure, also promulgated on December 21 and effective 30 days thereafter, or on January 20, 1933, increases the duties on certain boots and shoes.

DEPRECIATED CURRENCY AND "DUMPING" LEGISLATION

The declared purpose of the measure basing ad valorem duties on the par value of foreign currencies is to protect the insular revenue from import duties which have gradually declined, due mainly to the low prices of imported commodities on account of the depreciated currencies in many foreign countries.

For the declared purpose of protecting Philippine industries against "dumping" and to discourage unfair practices or methods in the import trade, the new antidumping act provides—after investigation by a board composed of the insular collector of customs, the collector of internal revenue, and the director of commerce and industry—for the imposition of special duties equal to the difference between the purchase or export price and the foreign home market value, in addition to the ordinary duty, on imports from foreign countries which are proven to be injurious to efficient and economically operated Philippine industries, or which prevent the development of newly established industries, or which restrain or monopolize trade in the Philippine Islands, or involve unfair methods of competition.

[Products of the United States shipped direct to the Philippine Islands under a through bill of lading are admitted duty free in return for corresponding treatment to Philippine goods entering the United States.]

Mr. FLETCHER. Mr. President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. FLETCHER. The Senator will recall that the tariff act of 1922, and also the tariff act of 1930, carried section 338, under the title "Discrimination by foreign countries." My understanding is that that section never has been invoked, that nothing has been done under it. Why has not something been done? In case of discrimination against the United States, the President has authority to raise tariff duties.

Mr. HATFIELD. Mr. President, I am unable to answer the interrogation of the able Senator from Florida, but it is a timely one, and I yield to the able Senator from Utah.

Mr. SMOOT. Mr. President, I do not think the part of the tariff act referred to by the Senator from Florida would apply to England on account of her depreciated pound. We take no notice of the value of the money of any country in establishing tariff rates. They are supposed to apply to all countries alike, and they are not based upon the value of the money of any country. Whatever change may take place, there is no provision in any of our laws that I know of under which we could impose additional duties against any country which has a depreciated currency without legislation. We would have to have legislation before that could be effected.

I might add that we will have to have legislation along such lines or the industries of our country will be ruined, and the sooner we enact the legislation the better it will be for the industries of the United States.

Mr. FLETCHER. Mr. President, section 338 is quite an important provision in the law of 1922 and that of 1930, calling for equality of tariff treatment, and giving the President the power to see to it that we have equality with other nations under the tariff laws. The only two important countries that have ever entered into such agreements have been Germany and Italy, and I believe Bulgaria lately entered into some such agreement. But we have not enforced that provision of the law as to the other countries at all.

Mr. SMOOT. Mr. President, the value of the pound sterling is the same in all countries; therefore it can not be said to be a discrimination against us. Because the currencies are of the same value in all countries, we can not enforce the provision of law as to increased duties against countries whose money has depreciated in value.

Mr. HATFIELD. Mr. President, while this action on the part of the Philippines justifies the action by those on this floor who voted to give the Philippines their independence, the action taken by the Philippine Legislature only followed the action of many foreign governments, namely, France, Germany, Australia, and others.

I ask permission to have included in the RECORD a statement showing the action taken by the various countries.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

ANTIDUMPING LEGISLATION

Argentina: When the competition of foreign products favored by (foreign) legislation, rate of exchange, low wages, forced labor, or any other form of "dumping" is harmful to Argentine production, and consequently, in the opinion of the executive, immediate modification in the customs tariff is desirable, the executive may temporarily apply such new or higher import duties as are proposed by the Minister of Agriculture, subject to their confirmation, reduction, or abolition by the National Congress. (Argentine Executive Decree No. 1033 of August 8, 1931.)

Australia: The Minister of Trade and Customs may impose antidumping duties, after inquiry and report by the tariff board and upon notification in the Government Gazette, specifying the goods to which the duty is to apply, in the following instances:

* * * * * * *

(d) If goods from countries having depreciated exchanges are being sold to Australian importers at export prices which will be detrimental to an Australian industry.

(e) If goods from countries having depreciated exchanges are being sold to Australian importers at export prices less than the fair market values of similar goods in the United Kingdom.

(f) If imported goods are being sold to an importer in Australia which were manufactured wholly or in part from material supplied from any country whose currency has depreciated by comparison with the currency of the country to which the material was supplied, and that the manufactured goods are being sold to an importer in Australia at a price below the price at which the same goods could have been manufactured in the country of manufacture if made from material of such country of manufacture and allowing for a reasonable profit. (Australian industries preservation act of 1921.)

Belgium: (3) To apply maximum or intermediate duties temporarily when national industry is endangered by competition made possible by monetary depreciation in a foreign country.

Czechoslovakia: Under a law enacted June 24, 1920, the Minister of Commerce is given authority to require licenses for imports and exports and to establish the fees for such licenses.

COUNTERVAILING DUTIES

If goods imported into Czechoslovakia from any country menace the national production through unfair competition resulting from special governmental dispositions of any kind, or resulting from depreciated currency, adequate measures shall be taken for the indispensable protection of domestic production, and, in particular, by fixing a special duty or a surtax or by limiting importation.

France: A presidential decree of August 1, 1931, establishes the principles of customs surtaxes to compensate for the advantages accruing to foreign countries whose exchange rates have depreciated and whose goods, expressed in value of the franc, have become cheaper than before, thus creating greater competition with French-made goods.

Germany: A recent emergency decree of the President, effective January 19, 1932, authorizes the Reich Government, in case of urgent economic necessity, to impose "compensatory duties" on individual commodities or groups of articles originating in countries with currencies below gold parity.

Mr. HATFIELD. Mr. President, it may interest some Members of the Senate, incidentally, to know that while Canada is a member of the British Empire and by treaty gives preference in the Canadian markets to the products of Great Britain, Canada, to protect her home industries and the employment opportunities of her own people, took prompt action which placed a tax equivalent to the difference in gold value of English money on imports of England entering into Canada.

I sometimes wonder, Mr. President, why our Nation has been as successful as it has been. We are generally considered a forward-looking people. Yet, as I have pointed out in these remarks, in the case of the nitrogen industry, an industry absolutely necessary for the protection of home and country, we and Egypt are the only countries that permit the importation of foreign-produced nitrogen products without restriction.

To prove my contention that this form of dumping is made possible by the depreciation of foreign currencies and to show its effects upon American industries, I will cite some concrete illustrations, with facts taken from Government records.

The imports of iron and steel products also witness to the destructive effects of low-priced foreign competition. To illustrate:

In 1930, imports of steel bars, valued not over 1½ cents per pound, amounted to 49,562,083 pounds, at a unit price of 1.3 cents per pound. In the fiscal year 1932 imports mounted to 174,415,662 pounds, with the unit price down to eight-tenths of 1 cent per pound.

Imports of hoop-band iron rose from 32,215,295 pounds in 1931, at a unit price of 1.2 cents, to 47,811,531 pounds, with a unit price down to 1 cent per pound.

The last example is in the cost of steel sheets and plates, valued not over 1.5 cents per pound, which jumped from 3,188,993 pounds, with a unit price of 1.3 cents, in 1930, to 24,711,911 pounds, with a unit price of eight-tenths of 1 cent per pound. These figures are all for fiscal years.

The seriousness of the situation is demonstrated by what occurred in 1931, when 370,000 net tons of imported steel caused the loss of a week's work to 237,000 men in the steel industry, and 37,000 coal miners, and the loss in revenue and wages to the railroads of transporting approximately 55,000 cars.

Not only that, Mr. President, but the steel industry has been operating as best it could, taking the industry as a unit, all through the year 1932; and I am reliably informed that during the first quarter's operation of the steel industry as a whole they sustained a net loss of $30,000,000, and that that loss continued through the other quarters until to-day the steel industry of the United States stands a loser because of an effort to operate for the purpose of feeding their employees to the extent of more than $120,000,000.

Mr. President, the people of my State are dependent to a great extent on the success of the American pottery industry. It is interesting to note that for the 8-month period, January to August, of 1932, Japan, with her exports to the United States of 2,237,000 dozen pieces, furnished 84 per cent of our total imports of china tableware; and on decorated earthenware for table use Japan also leads the parade of foreign nations dumping their products into the American market, supplying 49.6 per cent of our total importation.

How imports from countries with a debased currency are destroying opportunities for operation of American plants and employment of American workers may be judged from statistics available through the Treasury Department.

When the tariff act was enacted in 1930 the average unit value of imports of decorated chinaware from Japan was 73 cents per dozen pieces. Imports of these same articles at the present time are being landed at an invoice value of 23 cents per dozen pieces. The Japanese importations in 1930 furnished some 40 per cent of the total American consumption of these articles. American industry and American workers competing with the products invoiced at 73 cents per dozen pieces had a hard time to exist. With these articles landed in our country at an invoice value of some 20 cents per dozen pieces, I do not need to emphasize how impossible it is for American industries to operate or for American workers to obtain employment.

The facts I have just cited, while specifically true of pottery, are likewise true of many other American industries, the products of which are forced to compete in the American market with the products from those countries which have debased their currency.

Another illustration which typifies my contention that the foreign nations now on the gold basis will be driven out of the American market and our market dominated by the products of Japan is the case of toothbrushes. For the first eight months of 1932 we imported from Japan 10,901,000 toothbrushes, which represented 98 per cent of our total importations. Incidentally the unit value of these toothbrushes has decreased some 50 per cent.

These are the toothbrushes that persons who patronize the chain stores have been buying for several years for 10 cents each. American producers have been able, with volume production, to meet some of the competition of the Japanese so long as the American chain stores were satisfied with a reasonable profit. But the American producers can not compete with Japanese toothbrushes having a declared invoice value of less than 2 cents per brush.

Also, during these first eight months of 1931, there were imported from Japan into the United States, when Japan was on the gold standard, some 430,000 pounds of tuna and other fish in oil, valued at $88,000.

For the same period of 1932, with Japanese currency valued in gold at less than one-half its normal value, we imported 2,860,000 pounds at a value of $382,000, an increase in quantity importation of more than 550 per cent, with a decrease in unit value of some 35 per cent.

We imported from Japan 319,000 pounds of cod, haddock, hake, and pollock, valued at $20,000. For the same period in 1932 we imported more than 700,000 pounds of these same fish with a value of approximately the same amount, namely, some $21,000, an increase in quantity importation of more than 120 per cent, and a decrease of unit value of more than 50 per cent.

With reference to importations of fish, it is important to note that we imported from Denmark, another country off the gold standard, for the first eight months of 1931, some 63,000 pounds of cod, haddock, hake, and pollock, with a value of $3,200. For the same period of 1932 we imported from Denmark some 2,400,000 pounds of this same type of fish valued at $55,000. The debasing of the Danish currency permitted these 2,400,000 pounds of fish to be landed in America at about 2 cents a pound. The increase in quantity importations of this fish from Denmark for the eight months of 1932, as compared with the same period of 1931, was 3,700 per cent, and a unit value decrease of 55 per cent.

The first eight months of 1931 we imported from Portugal some 2,967,000 pounds of sardines, with a value of $488,000. For the same period of 1932, with Portuguese currency greatly depreciated in value, we imported 5,947,000 pounds of sardines, valued at $555,000, an increase in quantity importation of more than 100 per cent, with a decrease in unit value of some 44 per cent.

We imported from Norway during the first eight months of 1931, 12,900,000 pounds of sardines, at a value of $1,600,000. For the same period of 1932, with Norwegian currency greatly depreciated in value, we imported 19,600,000 pounds of sardines, at a value of only $1,567,000, an increase in quantity importation of more than 50 per cent and a decrease in unit value of some 48 per cent.

For the first eight months of 1931, when Canadian currency was on a gold basis, we imported, in air-tight containers, from Canada some 93,000 pounds of fish, valued at $11,000. For the same period of 1932 we imported from Canada, with Canadian currency depreciated in value, 4,430,000 pounds of fish, valued at $200,000, an increase in quantity importations of more than 4,600 per cent and a decline in unit value of some 64 per cent.

For the first three or four months of 1932, we imported from Great Britain ten times more cotton velvets and velveteens than we imported for the same period the previous year. While the importations increased more than 1,000 per cent the unit value decreased almost 50 per cent.

Mr. President, these figures explain why the American fish industry of the Atlantic, the Pacific, and our Gulf coast States lies prostrate. They also explain why these men send messages to the Congress of the United States. They also explain why these men directed their messages to me, for the reason, Mr. President, that in April, 1932, I portrayed this picture about what depreciated currency would do to American labor and to American industry.

For the first eight months of 1931 we imported from Great Britain a total of some 14,764,000 pounds of cement, at a value of some $56,000. For the same period in 1932, with English currency depreciated 30 or more per cent in value, we imported 54,866,000 pounds, at a value of $104,000, an increase in quantity of importations of 276 per cent and a decrease in unit value of 50 per cent.

The American cost of producing cement, as shown on page 16 of the report of the United States Tariff Commission, was 31.7 cents per hundredweight, or some 40 per cent more than the value of the cement dumped into our markets.

From Japan we imported for the first eight months of 1931, while she was on a gold basis, 1,074,000 pairs of footwear with fabric uppers, valued at $138,000. For the same period of 1932 we imported from Japan, with Japanese currency greatly depreciated in value, some 2,467,000 pairs of these shoes, at a value of $250,000, an increase in quantity importations of some 130 per cent, and a decrease in unit value of 20 per cent.

Mr. President, the rubber-specialty industry of America to-day is almost out of existence because of depreciated currency products that come here from Japan. Unless the Congress does something, and that, too, in the very near future, to relieve the situation, it means the closing up of this industry in America altogether and the loss of jobs for some 25,000 people who are at the present time employed either part of the time or for the entire time.

During the first eight months of 1931, while Japan was on the gold standard and the yen valued at approximately 50 cents gold, we imported twenty-seven and one-half million metal-filament electric lamps, valued at some $650,000. For the same period of 1932, with Japan off the gold standard and her currency debased to a point where the Japanese yen was worth in gold less than half its value, we imported from Japan more than 73,000,000 of these same metal-filament electric lamps, valued at less than $840,000, an increase in quantity importation of 160 per cent, with a decrease in unit of value of more than 50 per cent.

Mr. President, there are many Members of the Senate who have contended that our importations represent only a small portion of the domestic consumption of the type of articles imported. This is sometimes true. However, it is a well-known fact that foreign producers, offering to deliver comparable articles at prices which are below the American costs of production of similar articles, deprive American industries of those orders which are necessary to keep the wheels of industry going.

Under our present system of basing tariff duties on foreign values, and with countries debasing their currencies, some as high as 60 per cent of their normal gold value, it might interest some Members of the Senate to know the percentage of some of our imports which are coming into our country from the Asiatic countries with currency debased as high as 60 per cent.

For their benefit I have compiled a list of the imports of some commodities and the countries from which these commodities come. It is true that some of these countries, such as France, Czechoslovakia, and Germany, are still on the gold basis, and their currency, at least for the time being, is selling at its normal par value. However, it is my contention, Mr. President, that these countries can not much longer continue to export in competition with the countries which are off the gold standard. As evidence of this fact let me cite the situation in the rubber boot and shoe industry and canvas-top footwear.

Prior to 1930 our imports of rubber-soled footwear with fabric uppers and rubber boots and shoes from Czechoslovakia and Japan were trivial. For the first eight months of 1931 imports of Czechoslovakian-made rubber boots and shoes undersold in the American market the products of Japan. Both countries were then on the gold basis. The imports of these same articles for the first eight months of 1932, with Czechoslovakia on the gold basis and Japan on a depreciated-currency basis, tell a story which to my mind is indicative of what will happen in many other instances unless we can find a way to prevent the dumping of products from nations which have debased their currencies into our home markets.

We imported for the first eight months of 1932, 2,204,970 pairs of rubber-soled footwear, of which Japan supplied 76.09 per cent and Czechoslovakia 22.09 per cent.

In the importation of all rubber-soled boots and shoes I find that Czechoslovakia furnished 71.03 per cent, while Japan supplied 13.07 per cent; and I am informed by representatives of the American rubber boot and shoe industry that to-day these articles, the product of Japan, are underselling in the American market the products of Czechoslovakia to such an extent that while for the first eight months of 1932 these articles, the products of Japan, furnished less than 14 per cent of our imports; that for the first eight months of 1933 our imports of rubber boots and shoes from Japan will represent close to 100 per cent of our importations.

Another illustration worthy of the attention of those interested in textiles is the fact that for the first eight months of 1932 Japan, with her currency depreciated some 60 per cent, furnished 94.02 per cent of our importations of silk handkerchiefs and mufflers.

In the importations of electric lamps for the first eight months for 1932 I find that the importations from Japan represent 99.04 per cent of our total importations.

In the importation of canned tuna fish I find that Japan furnished 83.08 per cent of the importations.

In the importations of some 3,000,000 yards of "hit and miss" rugs I find that Japan furnished the entire amount.

In the importations of crab meat, crab sauce, and crab paste I find that Japan furnished 84.05 per cent, Soviet Russia 14.06 per cent, and Canada less than 1 per cent.

Unemployment is the net result of this influx of foreign goods from countries of depreciated currency, and there is certainly no hope to save the situation so long as we remain duped and in the grasp of the un-American importer.

The sad part of this inrush of foreign selling in our midst is the upheaval of all that is sound and basic for our own development. It is the uprooting of initiative among our citizens.

Those who can sense the evils inherent in this avalanche of foreign goods know full well that intensive liquidation of our securities must soon get under way. Though our citizens have suffered at the hands of international bankers and have seen their securities drop to 25 to 30 per cent of

their former value, they must now be prepared to suffer far more from imported products from countries with debased currency and witness a further drop of almost all securities unless the Congress will act to protect our home markets. If we permit the clever foreigner to continue this inflow for one full year, the victory will be his.

Will another year be required for a hesitant Congress to right the matter, and thus, with two years to the advantage of the foreign nations, can any American organization hope to catch up?

We have the ability and the technique to progress as rapidly and as securely as any nation on earth, but in our form of government there is no security against attacks from without save through a protective-tariff wall. Let us attend to the leaks and assure our citizenry that they have the backing of this Government in every progressive effort. Let us go forward as one man, regardless of political affiliations, and do that which is necessary and which is patriotic to save the industries of this country and to reclaim and underwrite the jobs of Americans who are now looking for employment when there is none to be found.

When such ends shall be attained and American goods shall be everywhere in good supply and at no exorbitant profits, then we shall have peace and happiness; American zeal will pervade the entire country, our citizens will be encouraged in prosecuting every new discovery for the betterment of agriculture and industry and of the Nation as a whole.

Mr. President, I yield to the distinguished Senator from Ohio.

Mr. FESS. Mr. President, I had intended to ask the Senator to yield in order that I might read an editorial by Major McKinley in 1890, but I think I shall ask that it may be printed in the RECORD without reading.

The VICE PRESIDENT. Without objection, it is so ordered.

The editorial is as follows:

[From the Evening Repository]

HISTORY REPEATS ITSELF

Protection was never stronger than it is at this hour. And it will grow in strength and in the hearts of the people. It has won in every contest before the people, from the beginning of the Government.

It is a significant historical fact that whenever there has been a well-defined battle in this country between protection and revenue tariff, protection has triumphed. It will always be so, so long as we have a free ballot.

The elections this year were determined upon a false issue. A conspiracy between importers, many of whom were not even citizens of the United States, and the free-traders of this country, to raise prices and charge it upon the McKinley bill, was successful. But conspiracies are short lived and soon expire. This one has already been laid bare, and the infamy of it will still further appear. Merchants are already advertising, now that the election is over, to sell at even lower prices than before the passage of the McKinley bill. The trick has won this time. The conspiracy has triumphed. But the people who have been duped will not forget. Nor will the friends of protection lower their flag or raise the British flag. The result this year is but history repeating itself. Every great measure for the benefit of the people and the country, passed immediately before an election, has been temporarily disastrous to the party responsible for it.

The proclamation of emancipation, the fourteenth and fifteenth amendments to the Constitution, measures of incalculable value to mankind, measures of justice and right, giant steps for humanity, were followed by disaster, for the time, to the party in power. The great resumption act which brought this country to a sound currency produced disaster to the party in power. So with every great measure which time alone can vindicate. Passion and prejudice, ignorance, and willful misrepresentation are masterful for the hour against any great public law. But the law vindicates itself, and a duped and deceived public reverse their decrees made in the passion of the hour.

So will it be with the tariff law of 1890. Increased prosperity, which is sure to come, will outrun the maligner and vilifier. Reason will be enthroned and none will suffer so much as those who have participated in misguiding a trusting people. Keep up your courage. Strengthen your organizations and be ready for the great battle in Ohio in 1891, and the still greater one in 1892. Home and country will triumph in the end. Their enemies, whether here or abroad, will never be placed in permanent control of the government of Washington, of Lincoln, and of Grant.

REMARKS UPON CONSULTATIONS REPORTED ON THE FOREIGN DEBTS

Mr. LEWIS. Mr. President, while I have not the technical knowledge that would enable me to appreciate in completeness many of the chemical illustrations given by the eminent Senator from West Virginia [Mr. HATFIELD], I am satisfied that all who have heard his immediate discourse recognize the amount of histrionic ability and splendid scientific attainment it has demonstrated. I rise to discuss in a few moments a matter somewhat foreign to his splendid presentation yet a subject which I feel at this time is wholly appropriate.

Mr. President, this honorable body became greatly confused and likewise found itself involved in something of an inextricable embarrassment as the result of a sudden action upon a so-called moratorium. That sudden action was precipitated by telegrams shot forth from the President of the United States in the summer of 1931 addressed to different Members of the Senate who—the Senate then being in recess—were at their respective homes. Feeling that the President was advised wisely, and conscious, as we now are, that he would not intentionally mislead us, his propositions were acceded to, and the Senators found themselves returned to their duties bound by something of an agreement which, in point of honor, estopped them from taking a contrary point of view, even though they found the facts surrounding the subject to be wholly at variance with, if not in contradiction to, what the distinguished President believed—certainly to what he presented.

Mr. President, to-day we are on the eve of repeating that folly. It will be remembered that in his quizzical strange philosophy Shakespeare has the servant express when beholding a young man stranger accompanying his friend, says—

Is this your son, my lord?

Adverting to the manners of the younger, concluded—

It was not seeming to me that such could be.

At this particular moment, sir, it is not seemly that we could repeat the same form of error and take as our offspring this apparent heir as now haunts us. Sir, from this visitation the possibility of error is so evident in great statecraft that I am compelled to make an allusion to it. I do so as early as possible in the discharge of what I feel to be my duty as an American, and, may I add, my obligation to my constituency as a Senator. I am just now handed, by a fellow Senator, two of the influential press with startling announcements. We gather from the immediate press that consultations by an eminent ambassador of one of the great countries which are in debt to the United States have been going on in some nature or other. To be specific, it is stated that the distinguished ambassador had a conference with the President elect of the United States, and it is rumored that it related to some matter touching the international relations of our country and that a message delivered to the President by his excellency the ambassador adverted and related to the international debts, and the proceedings to be held at a meeting that is to be assembled here at Washington ostensibly designated as an ecnomic conference, but which, as I have charged, in its ulterior purposes, is to deal with these international debts.

Mr. President, I am somewhat surprised, if the news from the alert and active representatives of the press is correct. I have been educated, in such opportunity as has been accorded me in public life, both in the House of Representatives, as a humble Member of that body, as a Member of the Senate under the Wilson administration, and as a Member now under the present administration, that a foreign ambassador who has a message to deliver touching affairs of state delivers that message to the Secretary of State, and that the Secretary of State, if the message be one that is to be communicated to the Government, either communicates it to his President or to the Senate committee that has to do with foreign relations.

Mr. President, I can not believe that there really has been the assumption by any ambassador of a foreign country of going over the heads of the Secretary of State, and of the United States Senate, and of making a visit to the President elect of the United States and there taking up the official subject which he presents as the ambassador of his country.

That he would be welcome as a guest, let us know; that as a mere visitor in point of friendship and companionship and communion as an eminent citizen of his country with one who has been chosen as President elect, let us hope that he is ever welcome, and would be ever delighted to make such visits wherever opportunity affords; but, Mr. President, it is not agreeable information to go out to the world that the President elect of the United States has chosen to receive an official message in such form as is understood. It is impossible for me to believe that the proper form and regularity of such transmission have been ignored; that the lessons of international statecraft, embedded in our history, would be disregarded, and the sources which are known officially to be those to which such message should be communicated, flouted.

There is no ambassador of America, credited to Britain, who I assume, sir, would be so bold as to go to Buckingham Palace to relate to His Majesty the King of England—the Emperor of Britain—his insistence upon a viewpoint upon a matter of international government. I would rather assume that if there were a matter of government to be discussed by our representative, he would direct himself to the minister of foreign affairs of the foreign country wherever he, our ambassador, was accredited. It is because I can not accept that an ambassador from any foreign country would violate the precedent so completely established, that I am not willing to feel that our eminent newspaper philosophers and historians have been correctly informed.

But, Mr. President, there is a matter on which I feel I am correctly informed, to which I will in a moment briefly allude. I am anxious not to take, beyond that which his kindly courtesy has yielded to me, the time of the eminent Senator from Pennsylvania, who I understand desires to address the Senate.

Mr. President, all this conversation which we understand is being engaged in respecting something touching the cancellation of the foreign debts or the re-formation of them in one new assignment, looking to their reduction or revision, is, in my opinion, quite beside the real object that is in hand and intended. I am not consoled within my own reflection when I am compelled to feel that the real purpose is being hidden, as the true purpose of action was disguised when the moratorium was asked by the President in the summer, when Congress was not in session—and he, the President likewise, deceived as completely as was this honorable body.

These conversations touching the question of reduction and cancellation of debt, and the assertions we read in the public press from the eminent authorities of these different countries asserting that they will not do this or will not do the other, as to these debts, are all thrown out as decoys. Each one of these countries knows exactly what the principal country that is acting as spokesman intends to do. Each one of these debtor lands understands completely the communion that ultimately and very shortly is to be all aggregated and combined to the purpose and to the end that is the real adventure. What is it?

The joint resolution passed by the House of Representatives in the form of an addendum in the way of an amendment when we ratified the moratorium, the joint resolution passed by the Senate, is clearly in the minds of these eminent statesmen. These forbade a renewal of moratorium or any action taking form of reduction or cancellation of debts. The debtor countries are equally conscious that the American public is in no temper to sacrifice these obligations or to yield them to reduction and to give up the place that they occupy in treaty and international compact. They know the necessity to the American public of having these debts paid, either at the time they are due or as early as possible thereafter.

The real purpose of all of these manipulations is to have all of these countries make the demand, first, for cancellation that shall have the conversational feature and to proceed until it reaches the end by a denial by America. Then will come the suggestion of a revision of the debts directly contrary to the revision that eminent Senators on the opposite side—the Republicans—of the Chamber have well alluded to in splendid and wholly American sentiments. Therefore these debtor lands knowing that the debts will not be revised further than they have been; that, too, in demand must fail. Then will come what is the real purpose sought. It is that under the apparent acknowledgment of defeat the debtors in union will ask and urge for the extension of the present moratorium. That moratorium sought to extend for such length of time as shall give complete season within its action for the recovery on the part of the foreign nation of its own financial situation to a point where it may compete in all trade and finance with success against the United States, by taking advantage of her crippled state arising out of the repeating and continuing of the general moratorium, producing to the United States the loss of funds necessary to balance our Budget, sustain our obligations caused by the failure to collect our debts on which we relied as part basis for full payment of our own debts.

Mr. LONG. Mr. President——

Mr. LEWIS. Does the Senator from Louisiana wish to interrogate me?

Mr. LONG. I wish to ask the Senator a question.

Mr. LEWIS. I yield to the Senator.

Mr. LONG. Does not the Senator think that this international-debt situation may get down to the proposition of whether these countries can live on the interest on what they owe? [Laughter.]

Mr. LEWIS. I feel that I anticipated the eminent Senator from Louisiana in his query when I said that the purpose of the extension was to use the very delay in which they could recover their position because of our crippled state as the result of yielding the new moratorium for the great length of time which they will seek, appearing to be defeated in cancellation, then in revision, and yielding to taking the moratorium.

Mr. President, what I wish to press upon the attention of the Senators who are generous enough to give such patient attention to my views is this:

There is now being circulated throughout the United States of America, particularly to the commercial bodies, the report that if these international debts can be suspended, either through this long moratorium which is anticipated, or in any form of cancellation or revision, the money which otherwise would have been paid to us upon the debts will be expended in America for supplies, and thus enrich the manufacturer or the producer of America to the extent to which these funds may be distributed.

This is an enticing seduction, alluring in its promise, but deceptive in its development. It is an impossibility for these countries to carry out and execute such a promise, however sincere some of the advocates might be or however anxious the part of some of their representatives in desire to fulfill it.

These countries are in no condition to take such a course, either from the attitude as presented by the eminent Senator from Pennsylvania [Mr. REED] a few days past upon the basis of debased currency, or that of the Senator from West Virginia [Mr. HATFIELD], who has just spoken, touching the question of the tariff, or that of the eminent leader of the opposition, the Senator from Indiana [Mr. WATSON], referring only a short while ago to the relationship of armaments, and the possibility of the constant multiplication of debt incurred through these great weapons of death and universal desolation. Therefore, it is hopeless for us to expect that these foreign nations would spend their money with us when their dependencies or their colonies would of course demand that patronage and while their own needs and their own employment exact of them that the money should be expended at home. That fact is all too apparent. We know, from a political point of view, that they would not risk such to grant us the favor. We know, from the attitude of mind and feeling they bear toward us, that they would not extend such commercial courtesy and voluntary graciousness.

Therefore, Mr. President, I rise to say we must not allow to be circulated again throughout the United States the idea

that a great benefit is to come to America if another moratorium shall be given, and the debts suspended, and America be denied her rights, as was inflicted upon us under the honest misapprehension of the distinguished President of the United States, on the one hand, and as represented by him and the belief indulged on the part of the Senators who complied with his request, on the other. We must turn to the American people now to let them know that there is no spirit on the part of the Senate to indulge the hope that such favor could come to them, and they must not be deluded into the thought that it is expected we should yield to it.

Second, sir, and more important: These foreign countries must be told by us, and as frequently as it is convenient and appropriate, that there is no intent on the part of this America to do other than demand, within the proper space of equity and justice, the money that is due the people from whom we borrowed it. We must not lead them to the thought that our silence means that we are again being converted to the theory of a moratorium that shall suspend the debts and encourage the debtors to feel that where they are not even paid they may be forever forgiven.

Mr. REED. Mr. President, will the Senator permit a question?

The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Pennsylvania?

Mr. LEWIS. I yield to the Senator from Pennsylvania at any time.

Mr. REED. If the Senator will permit me to say so, I think he is doing a great public service in calling attention to the perils of the present course.

It has always seemed to me that one of the greatest mistakes ever made by President Wilson was to go in person to the Paris peace conference, and that he lost about half of his bargaining power and his authority over the situation by so going. I am fearful that Mr. Roosevelt is about to make the same mistake.

I should like to have the Senator's opinion on that subject.

Second, if the Senator will permit me to ask two questions at the same time——

Mr. LEWIS. I yield to the Senator fully.

Mr. REED. Second, if Mr. Roosevelt should arrive at some understanding with these foreign countries regarding a reduction of the debt, and if Congress should disagree with him—because there is no partisanship in this; there never has been; we have never made the debt business a political question—if Congress should disagree with Mr. Roosevelt's decision and agreement, nevertheless the moral obligation, which is the only sanction that these debts have, would be gravely weakened by the fact that he had so agreed. I should like the Senator to give us his view of that.

Mr. LEWIS. Mr. President, respecting the very great and acknowledged ability of the eminent Senator from Pennsylvania [Mr. REED] and conscious as I am of his experiences upon these questions, it falling to my pleasure last summer to serve at the same place where I saw his splendid abilities demonstrated in the council of international matters, in France, I first may interest him to let him know that I shall now for the first time in any public sense allude to a matter of which my brother WATSON and other Senators sitting about me who served in the Senate in the Wilson administration have some slight knowledge.

I, in behalf of Senators on this floor who directed me as their messenger, was bold enough and expressed an audacity flaming enough to go to President Wilson at that time occupying the place called "whip"—a fairly decent messengership in behalf of my colleagues—and presented to him from my viewpoint what I felt was a peril, and what those who commissioned me to speak joined me in fearing would develop to be a danger, in his going abroad and acting as his own ambassador.

I may interest my friend, though not to meet his approval, by confiding that I had said to the President, "If your ambassadors succeed"—and I remember I designated as appropriate delegates ex-President Taft in my mind, Senator Root; our candidate for President, Mr. Bryan; and Justice White, of the United States Supreme Court; I assumed these as constituting on all politics—"in making equal representations"—I said to the President," If they succeed, you, Mr. President, will be given due credit. If they fail, you will have done all that has ever been done by your predecessors, and you can not be charged wholly with the failure." But I did not meet with the approval of the distinguished President. He felt that his very presence would suggest to the foreign ambassadors that he was speaking for the American people, and that the American people themselves would be more inclined to ratify that which he did in person than they might that which ambassadors had done.

In this conference, I may say to my eminent friend the able Senator from Pennsylvania, there were some very full allusions to the ambassadors who had served in the matter of the peace of the Spanish-American War and to that which arose afterwards, the controversy as to what they had agreed, and the great dispute that lasted and swung from side to side of this honorable body, and greatly censured by press and clergy for months before a conclusion was finally adopted by the Senate.

I answer, therefore, I very much opposed my distinguished leader, the eminent President of the United States, going abroad on the errand as self-designated ambassador. I boldly put before him—who had been once a teacher of mine while an eminent professor, I an unworthy scholar, at a well-known university not particularly credited by my attendance—I say I sought to present some illustrations in history, but I did not avail in my mission in any instance.

I am compelled to answer that the President himself, when serving abroad, met those particular methods of statesmanship and diplomacy which had been the habit for centuries on the part of these eminent gentlemen serving Europe, unknown to him in practice, and unindulged in in the past by any American who professed truth and honor in his dealings with mankind. In this manner he was both outdone and outwitted by pretenses which he did not expect to be presented to him and to have to meet, but which, in the final end, developed a form that can be described as nothing less than falsity and deception, and as a result of which broke the character and strength of influence of America, and the heart of the now dead President of the United States.

Now I come to the second query.

I can not believe, I will say to my eminent friend, that the newly-to-be-inaugurated President of the United States, Mr. Roosevelt, with the lessons before him while he was Assistant Secretary of the Navy under the Wilson administration, and oftentimes acting as Secretary—with the consciousness of what he saw under the Wilson era, with his own instinctive sense of personal honor, with his knowledge of statecraft, with his sense of obligation to the American people—I can not believe that he would tolerate this gentleman, ambassador from any country, going directly in derogation of the rights and privileges of the Secretary of State and Senate, in the manner which my able friend from Pennsylvania has a right to glean from the public press as having transpired; I will say that if it did occur, the President elect would know that such action would put himself in the position that before he is inaugurated he is assuming to reach a judgment or an action which, ultimately to be approved by this body, would put him where—if not approved, he is discredited; and, if approved by the mere act of our service as a mere voice of messengership without senatorial independence—would place us at a disadvantage and discredit from the American public.

For this reason I can not conceive that our President elect would allow the ambassador of any country to bring to him a message from which he was to act, in conjunction with the ambassador and reaching a conclusion, and allow the ambassador to carry that conclusion to his country, on the theory that of course it will be ratified, accepted, and indorsed by the Senate, to whom he has never communicated anything relating to it, nor himself has been initiated into office, with authority to receive the ambassador on the one hand, or to send the result of the conference to the Senate

on the other. This President Roosevelt would no more allow than would the other Roosevelt.

I answer, yes; if the President elect could so far fall from what I know to be his splendid character, his sense of obligation to the United States and its people, his knowledge of the method of statecraft, and his consciousness of his obligation to the Senate as his colleague of service, and he should do such as to allow an ambassador to talk directly over the heads of the Senate and the Secretary of State to him directly such would be a folly, one he would regret, and one I know he would not commit. Therefore, I answer, that I am satisfied that the rumor which we get from the public press is due to those who possibly assume such in their imagination. Therefore I answer the eminent Senator from Pennsylvania to say that I can not believe it has ever happened.

Now, I conclude, Mr. President, by saying, as I was about to finish, first, I thank the Senator for saying the allusions I was then making received his approval and were being timely brought to America. We must not allow any action by ourselves, either in silence or in active conduct, vocal or physical, to encourage any foreign nation to the thought that we are indulging them in the hope that there will either be the cancellation or the revision of the foreign debts, or that our newly elected President of the United States is receiving any ambassador from any country and giving him encouragement in the form of authority to transmit his message back to his own country which would give encouragement to the violation of all that for which the Senate has ascribed itself in solemn resolution on the one hand, and the House of Representatives by resolution on the other.

We must let the foreign nations, one and all, understand that the United States of America, anxious for complete justice, seeing that no wrong shall be done any country, nevertheless still stands as those who speak for their own people, and will vindicate the claims and demands of America as Americans, and while extending wherever we can whatever may be the form of generosity or kindness to any people in the world, we can not be put in the position of again being deceived by one, tricked by another, or held up before the world as lacking the intelligence that could compete with these eminent ambassadors in the variations of their forms of culture which has been so successful in diplomatic matters in overrunning the United States in respect to its rights, the least of which will not be forgotten. When a conference met in the city of Washington, our honorable representatives surrendered our national defense by giving up not only our equality in the matter of vessels, but the islands upon which the supplies could be afforded the Navy in the hour of our Nation's travail of soul, and we will not again be so beggared in the final result as to suffer again such defeat.

Let us have done with all these pretenses, and, from this body, and from the humble voice of my own, if I may be so bold as to assume an authority in any respect, let it be known that there is not to the President of the United States elect, nor to the President of the United States select, anywhere at any time, granted the privilege to bargain away any of the dignified rights which belong to the Senate or the people of America, and that the present President elect is a statesman of such habits by training, such inheritance by birth as a gentleman; such a scholar of government, and a man so conscious of his fiduciary relations to the American people, that under no condition would he violate these ancient precepts, or in any wise disregard the sweet and solemn duty he has promised in his public addresses to the American people, to consider, first, their welfare, and that all of these dealings, as the Senator from Pennsylvania [Mr. REED] has well said, in a matter that has no partisanship, receiving the joint and conjoint action of this honorable body, will move forward, and we will do complete justice to any foreign nation, but allow no foreign nation of the world to do any wrong or injustice to the United States and its people.

I thank the Senate.

Mr. DAVIS obtained the floor.

Mr. REED. Mr. President, will my colleague yield to me to say just a word in reply to the Senator from Illinois?

Mr. DAVIS. I yield.

Mr. REED. Mr. President, my heart is lighter on hearing what the Senator from Illinois has said.

We on this side have no contact with the President elect. The only information we have of his intentions is that which we get from the newspapers, and I, for one, have been very gravely disturbed by the tenor of the newspaper articles on the subject we have been discussing. They seemed to indicate that Mr. Roosevelt intended to be his own ambassador, intended to put himself in a position of dealing with foreign ambassadors, and dealing in person with them. I felt that that was just such a mistake as President Wilson had made.

I think it was in the Philadelphia Ledger this morning that I saw a dispatch from London saying that Mr. MacDonald, of course, would not attend the forthcoming conference here, that the British cabinet wanted to hold itself free from the negotiations and retain a veto power over any agreement that might be reached here. Think what an advantage that would give them over the position of Mr. Roosevelt if such an agreement were reached.

I am delighted to know that the Senator from Illinois, who has access to Mr. Roosevelt, will lend the weight of his counsel to prevent any such mistake as that.

It is very obvious to me, Mr. President, that the only sanction of these debt obligations is the realization of the moral obligation they have created. We hold no collateral, we never would resort to force to compel collection, we have no way of getting payment of those obligations if the moral compulsion is absent from the debtor country. It is perfectly obvious that were the President or the President elect to make an agreement for reduction of the debts it would not matter in the least what Congress might subsequently do in disapproving the bargain, the sense of moral obligation to pay one penny more than the President of the United States had agreed to accept would be destroyed.

Mr. LEWIS. Mr. President, if the Senator will allow me to invite his recollection, while I join him heartily in the fear of what would follow should our President deal directly or attempt to deal directly with a foreign country or its ambassador, will he not recall that the present President of the United States did receive Premier MacDonald, of Great Britain, here in Washington, and Premier Laval, of France, here in Washington, and deal with them, apparently, out at the summer camp at Rapidan? I do not know what was the matter passing between them. I regret that the ultimate end was nothing, a failure of both conferences, as I see it.

Mr. REED. The Senator could not fairly describe it as "nothing." Mr. Hoover dealt with Mr. MacDonald regarding the then approaching London naval conference, and something did result from that.

Mr. LEWIS. A session of delegates followed from it. A conference of nothing from nothing—ex nihil veni nil.

Mr. REED. I think we were the gainers from that conference.

Mr. LEWIS. On that, of course, we may disagree.

Mr. REED. On that we may disagree. What occurred between Mr. Hoover and Mr. Laval was described in a communiqué that was issued by the two of them, and it amounted to relatively little. However, those are bygones. Even if the Senator were wholly correct in saying that those contacts were a mistake, they have happened. We can not change the past; but we may to some slight degree influence the future.

Mr. President, I have just one word more, and I thank my colleague for his patience in letting me speak in his time.

I was gravely worried by a statement made in the newspapers two or three days ago, which I have not seen denied, that it was Mr. Roosevelt's intention to include in the coming negotiations representatives of those countries which have already defaulted on their obligations. That may mean only that he will exchange one promise that is no good for another that is doubtless no better. I feel certain that, regardless of partisanship here in Congress, the vast majority

of the Congress would certainly disapprove any negotiations for refunding to be carried on with those nations which have discredited their promises by defaulting upon them.

Mr. LEWIS. I may say, if I may be bold enough, that if the President elect of the United States had such idea of so dealing, I am quite satisfied he would send the proposition to the Senate, to be dealt with here, and not undertake it in the manner we gather from the press is assumed. We may trust President-elect Franklin D. Roosevelt.

MINING OF COAL, PHOSPHATE, OIL, ETC., ON THE PUBLIC DOMAIN

Mr. NYE submitted the following report:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 4509) to further amend the act approved February 25, 1920, entitled "An act to promote the mining of coal, phosphate, oil, oil shale, gas, and sodium on the public domain," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its amendment.

GERALD P. NYE,
BRONSON CUTTING,
JOHN B. KENDRICK,
Managers on the part of the Senate.

JOHN M. EVANS,
TOM YON,
DON B. COLTON,
Managers on the part of the House.

Mr. NYE. Mr. President, I ask that the conference report may lie on the table.

Mr. McKELLAR. Mr. President, will not the Senator state just what the report is?

Mr. NYE. Mr. President, the amendment which the House adopted was to a bill dealing with the suspension of payment of acreage rental where operations and production of coal, oil, and gas have been suspended by the Secretary of the Interior in the interest of conservation. The amendment was offered under a misconstruction of what was intended under this proposed legislation, and after the adoption of the amendment in the House, the author of the amendment and the House conferees were glad to recede from the amendment.

The PRESIDING OFFICER. The report will lie on the table.

TREASURY AND POST OFFICE APPROPRIATIONS

The Senate resumed the consideration of the bill (H. R. 13520) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934, and for other purposes.

Mr. DAVIS. Mr. President, the able Senator from California [Mr. JOHNSON] has submitted an amendment to H. R. 13520, which is now the unfinished business before the Senate, and provides that notwithstanding any provision of law the heads of the several executive departments and independent establishments of the Government shall, within the limits of the United States, purchase or contract only for articles of growth, production, or manufacture of the United States. The adoption of this amendment will mean work for our workers. It will help stem the tide of foreign competition and thus prevent further reduction of wages of the American worker.

Wage reductions mean the destruction of our standards of living. Any person who helps or counsels in destroying our buying power strikes at the vitals of citizenship.

As long as we permit competitive products made by cheap labor in foreign lands to control the markets of the United States we destroy our earning and buying power, and thus keep the American worker in the breadlines seeking relief.

Why we permit these competitive imports or products from other lands to be dumped into the United States while our own workmen are in the breadlines is beyond my comprehension. As long as we maintain the American standard of living there is not the slightest hope of America's competing with the cheap labor of Europe and Asia unless we give ample protection to American industry and agriculture.

I know of no loyal citizen who wants to put the American worker and the American business man on the same living standard as the European and Asiatic. Yet every day and every month we are on our way to these European and Asiatic standards. Foreign debased currency has completely demoralized industry and agriculture in the United States. Our workers are in the bread lines, yes, in poverty, while foreign workmen are happily at work because they can dump their products on our shores.

As I see it, the slogan for European and Asiatic workers is, "Put the American worker into the bread lines and let us work!"

We need emergency legislation for a special impost on all imports, equal to the amount of depreciation in the country or origin below the normal dollar of that currency.

Our Government, through contractors, is buying foreign products while our workers our idle. It is bad enough for us to refuse legislation which will bar these products, but when it comes to the Government of the United States' levying a tax on the American people and using that tax money to buy foreign-made products while its own are idle, I have not words to describe my opposition to it.

When we discuss foreign questions the international minded say, "be broad minded," and that we do not want the ill will of Europe and Asia. It is not a question of the ill will of Asia and Europe, it is the question of the ill will of the American people in which I am interested.

Of course, I want pleasant relationships with the rest of the world, but our own house should always be in order. America should attend to her affairs without interfering in any way with the political intricacies of the rest of the world.

William Randolph Hearst has given the power of his great newspapers and magazines to buy American. When we talk buy American, that means protection for American industry, but if we can not cultivate a patriotic spirit to buy American, then, we must increase our tariffs to prevent competitive products from being dumped here so as to set the wheels of American industry in motion.

The Johnson amendment will mean that we will again hear the clang of the hammers, the buzz of the wheels, and the screech of the whistle in American industry. That will be sweet music for the American worker.

The problem of overproduction is world-wide. The American modern machine is now in Europe, manned by foreign workmen at from 50 to 70 per cent lower wages than the American cares to work for. However, if America could keep in mind the thought that we have sufficient machinery to produce steel, coal, textiles, boots, shoes, and so forth, for our normal use in six months' operation.

We have the machinery in our basic industries to furnish the world's needs.

Stabilization—stabilize the products of the machine. We must control the machine or the machine will control us, and if it does poverty will be on the increase. The machine is both the glory and the scandal of our age. It is the glory because it enabled man to create more wealth in 20 years than the world could formerly create in 18 centuries. It is the scandal because after it has created enough wealth to furnish a considerable degree of satisfaction to all, many are left in a condition immensely worse than were the majority of slaves in ancient Greece and Rome, who at least seemed to have had enough to eat and a roof with which to shelter their heads.

We consume more than 90 per cent of what we produce and about 10 per cent of our production is for foreign trade, yet many believe that for our country to be prosperous we must have the 10 per cent and sacrifice a great part of the 90 per cent.

Our foreign competitors with their debased currencies are having one grand time dumping their products into our market. From a reliable source, I am told that foreign governments will not permit some of their factories to close even

though there is no profitable market for their goods because they would much prefer to make up the loss to their factories than to dole out relief to the unemployed.

When their government subsidizes them, their prices are low; they continue to take a nosedive and with it they demoralize and destroy the buying power of our own people.

Population does not mean so much to buying power. Earning power makes buying power. If extremely low wages and populations make for prosperous nations, China, India, and European countries would be the most prosperous in the world.

With the currencies of the world floundering around and their cheap products dumped into our markets, we can not hope for prosperity to return to America until we prevent it. We can not build up a sound business as long as our competitors in foreign lands are permitted to dump their products in our market, made by cheap labor and paid for in cheap currency.

Let us face the truth. If we continue to permit this dumping of foreign products on our shores and permit our taxpayers' money to be used in buying European goods, we will take a nosedive downward to European and Asiatic levels.

Stabilize American business, yes, and give American workers work. We can help to do that by adopting the Johnson amendment.

The problem of machines displacing workers is now and has been the subject of much discussion, whether it be in our Legislative Halls or in the home of the worker. It has been a perplexing problem ever since the use of something which extended the hand.

In an address before the International Federation of Labor Convention, at Cincinnati, I said that "the machine is both the glory and the scandal of the age."

Mr. President, there is something wrong in a society in which men and women of our cities go hungry while the farmers are unable to sell the products of their bursting granaries; in which men go thinly clad while manufacturers are able to produce in a few months, even weeks, garments which King Solomon in all his glory might have envied; in which men sleep under bridges or on park benches while carpenters, bricklayers, and stonemasons are lying idle.

When the textile workers were thrown out of the mills in Manchester, England (in 1812), as the result of the invention of new machinery, Lord Byron made his first and only speech in the House of Lords, in which he took the side of the workers, called the attention of the House of Lords to what must be the ultimate result of the machinization of the industry, and, by inference at least, announced the universality of the dictum proclaimed many centuries before by Him who saw the end from the beginning and who said that institutions were made for man; not man for institutions.

I am somewhat familiar with the reports made by the Bureau of Labor Statistics since its organization; that bureau has served us well, especially in the matter of showing workers displaced by machinery. It was organized on January 1, 1885. The first report of Carroll D. Wright was issued March, 1896. In the body of that report, page 80, he includes a section on Machinery and Overproduction, where through several pages he calls attention to industries and occupations in which 50 per cent of the workers have been displaced and to numerous machines that can perform the labor of from 2 to 10 men.

So pertinent to this subject is that section of Commissioner Wright's report that while I will not take the time to read it I ask that it be inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. FESS in the chair). Without objection, that order will be made.

(See Exhibit A.)

Mr. DAVIS. Subsequent reports of the bureau furnish information from time to time along these facts of industry, particularly the reports on iron and steel and the reports of coal, and so forth.

During the time I had the honor to serve as Secretary of Labor, Mr. Ethelbert Stewart was Commissioner of Labor Statistics. Every dollar that could be spared from other subjects was used to expand the information along these lines, and in my first conference with Commissioner Stewart he emphasized the importance of collecting information on the productivity of labor, as we called it then; on the output per man-hour; on the displacement of men and women by machinery. Pages of this information were published, with but little response from those who should have been interested. Apparently the phraseology of the displacement of men by machinery was too prosaic, too easily understood, and did not suit the day and time when the mental attitude was to speak or think of nothing that was unpleasant.

A little later the term "technological unemployment" was brought forth. It was taken up by Government agencies, and, being a new term, it gained some recognition. In my own public speeches I used this information furnished me by the Bureau of Labor Statistics to call attention to the fact that a bottle-blowing machine had entirely displaced human labor in this occupation. The same thing had occurred in the window-glass industry; and I called attention to the fact that a single brickmaking machine put out 49,000 bricks in one hour, which would mean that operation of the machine for 24 hours would produce 1,176,000 bricks. As a result a brief editorial would occasionally be printed.

But now comes the term "technocracy."

It was discussed in the New Outlook in November, 1932. It was taken up by the Associated Press in a series of articles, six in number, and published in all the evening papers. It has already been made the subject of more editorials, more widespread comment than any similar topic within my memory. We have technocracy on the air, and two important broadcasting systems are devoting to a discussion of it during this month four afternoon periods under the auspices of the National Students' Federation and the American Academy of Arts and Sciences. Our religious leaders have announced they are going to deliver sermons on technocracy. One is startled by the suddenness of this outburst of interest, especially in view of the fact that, as I have indicated, there is hardly a single item in the so-called mass of statistical information emanating from the committee on technocracy that was not formerly collected, compiled, and printed by the Department of Labor.

The Bureau of Labor Statistics recently compiled a digest of the material on technological changes, productivity of labor, and labor displacement that has been printed by that bureau in the last 10 years. I will not take the time to read it, but ask at the conclusion of my remarks that it be inserted in the RECORD as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See Exhibit B.)

Mr. DAVIS. Mr. President, the history of the invention and use of machinery, and the attitude of the workers toward so-called labor-saving machinery, has been a very unpleasant one. It is not true that the ancients had no mechanical sense or genius. Not only was machinery, or what amounts to the same thing—mechanical devices and appliances—used in the mines and in the building of the pyramids of ancient Egypt during the first recognized civilization of mankind, but Hero of Alexandria, Egypt, 130 years before Christ, invented a steam engine, the plans and descriptions of which we still have. The prime purpose of that engine was to pump water and force it through conveying pipes, but war brought an increase in slave labor and slaves became so cheap that it was not profitable to manufacture and use the machine. Julius Cæsar in his war with the Gauls found a reaping machine in use by them for cutting grain. It is described as a machine which cut off the heads of the grain and conveyed them to a platform where they were pulled off and loaded on carts to be carried to the threshing floor. It was propelled by oxen hitched in some way behind the machine, which preceded the oxen in cutting the grain. It was very similar to the old-fashioned "head-

ers" which we all remember. The Gallic wars produced such hordes of slaves that for some time thereafter a slave could be bought in Rome for $5, and it did not pay the farmers to use the new-fangled agricultural implements which they found among the defeated Gauls. Nero had a pipe organ operated by a steam engine something on the plan of that invented by Hero. This was destroyed along with the imperial palace in the great fire of A. D. 64. Labor was so cheap that there was no inducement to invent machinery; and from the time of Hero, 130 years before Christ, there was not even any experimenting with steam so far as we know until Savery's pumping steam machine, invented in A. D. 1698.

Not only did slave labor prevent the development of machinery in former times but recently when Germany, for the purpose of wiping out her own internal debts, inflated her currency until it took over a million marks to pay postage on a post card she thereby reduced the real wages of labor to the point where the most efficient labor-saving machinery in the world had to lie idle in her factories because it was cheaper to produce goods by hand labor than it was to operate the machines.

Then came the Papin engine of 1705, and Newcomen's atmospheric engine of the same year. These were rendered obsolete by the engine of James Watt in 1773, since which time inventions and progress have been continuous and startling along every line.

There can be no question but that the invention of machinery and mechanical processes of production could be and should be to the interest of the human race without any alloy or drawbacks. Unfortunately, the influences in control in every age have had but one thought, which was to produce more at less expense and with less and less human employment. If some human employment has developed as a side line in the production of machinery or in the transportation of goods resulting from a wider use, it has been purely incidental and has been left to take care of itself. Those who invent and those who use labor-saving machinery had no thought of the labor that was saved or the laborer whose efforts were no longer needed. In that way a condition of bad blood has been created in the minds of the working masses toward machinery. They have been perfectly able to see the importance and the utility of the machinery, and have resented only the fact that it was so used as to injure them and theirs because they did not receive their full share of the wealth produced by the machine.

We have a similar instance of a universal mental attitude of antagonism being developed against a perfectly harmless and in fact beautiful thing in the feeling of the early Christians toward Greek and Roman and in fact all pagan art. It was not that the early Christians did not recognize and admire beauty; but all pagan art reflected more or less directly the pagan gods and goddesses or contained some allusion to pagan traditions or legends. The Christians smashed the statue of Venus, not because they were lacking in appreciation of art in marble, but because the figure brought to their minds the whole question of idolatry, which they hated. Every representation suggesting the polytheism of the pagan pantheon aroused their destructive ire. Centuries later when art became Christian, Christians became artists; and Michelangelo's Moses testifies to the same inherent love of the beautiful and the grand in the Christian mind that Appollo of the Belvedere, which the Christians smashed, did to the pagan mind. Pagan art tended to perpetuate paganism and idolatry, and the Christians smashed it wherever found, with utter disregard of its inherent value or beauty. In the early days of the invention of machinery it threw the workers out of their jobs, and they smashed it, utterly regardless of its ultimate usefulness or utility even to themselves.

Mr. President, to start with, let us take the basic thesis of the New York Committee of Engineers. I regret to note that they have exhibited most strikingly the usual carelessness, which characterizes the thinking of the academic man when he gets outside of his immediate field. For instance, in a number of cases they take the figures of the Bureau of Labor Statistics and appropriate them without any acknowledgment, and then they misread the figures themselves. In many instances where the bureau reports that a machine produces 10 per cent more than can be produced by hand labor, the New York Committee of Engineers says ten times as much. Some cases 40 per cent is represented as forty "times." To the extent that the committee does not know the difference between "per cent" and "times" their figures are in many instances wildly exaggerated and extravagantly absurd. On the other hand, of course, so far we have only snapshots of this displacement of man by machinery—examples taken here and there—the legitimate inferences from which, when spread over the entire field produce a reasonable presumption of a situation which if not so serious as these engineers would try to make us believe, is certainly serious enough.

In the case of automobile tires, for instance, between 1914 and 1927, the production of tires increased 673 per cent; the man-hours increased 97 per cent, while the productivity per man-hour increased 292 per cent. Since 1929, especially during 1930 and 1931, the annual output per wage earner was 1,015½ tires as compared with 843 tires per wage earner in 1929 and 822½ tires in 1927. These are the combined figures from 29 of the largest plants of this industry.

As a sample of the snapshots that are coming in from time to time, I have a letter in my hands from an old-time friend who works in the tin mills in Granite City, Ill. The letter is under date of January 10, 1933. It goes on to point out that 10 men now do the work of 70 and the wages paid those 10 men run from $4 to $15 a day. I ask permission to insert that letter in the RECORD at this point.

The VICE PRESIDENT. Without objection, it is so ordered.

The letter referred to is as follows:

DEAR JIM: The time has arrived to note the tin-mill game, for the patent machine and furnace is commencing to force the old timers out of their vocation. I regret to say that I am in this class.

Now, for example, take the new furnace which is on a continuous basis. The roller presses an electric button on the housen which automatically operates the door and forces hot pack down the runway to the standing at his feet which he then finishes. This eliminates the heater and his helper and likewise the patent machine does away with the doubler. Two units of this kind are to be found in Granite City at the present time.

There are two mills constantly roughing down while the other two mills are continually rolling fours and finishing, thus enabling them to turn out at least as much work as they originally did on 10 old-style tin mills and at a far lower wage rate.

You can readily realize it is going to spell taps for many an old timer. Personally I am not going to wait for the fateful squeeze-out as I plan to try and get something along other lines.

Mr. DAVIS. What this letter means, in plain terms, is that 3 of the newer mills in the tin-plate industry now do the work of 10 mills. There are fewer men around one of these 3 mills than there were formerly on any of the 10 mills. Expressed in terms of human labor, it means that 7 men are now doing the work of 70 in the older plants. And understand, that the older plants were not operated by hand labor by any manner or means; they were until a very few years ago considered marvels of inventive machinery; and in these mills, 3 of which are doing the work of 10, 7 men do the work of 70, and thus the merry march goes on. So, while we may regret the fact that the graduate engineers of the University of Columbia do not know the difference between percentage and "times" and they have therefore grossly exaggerated the situation they have attempted to describe, nevertheless with the essential truth of the picture they paint of the displacement of workers by machine, we have no quarrel.

The New York Committee of Engineers who have evolved this new word, technocracy, apparently think they have evolved a new theory of money which is to be based upon units of electrical energy, kilowatt-hours, horsepower, or some other mode of expressing productive force. It is rather amusing to see this theory labeled as "new."

When Robert Dale Owen started his community-life experiment in New Harmony, Ind., in 1825, Mr. Josiah Warren was a member of that community. The settlement soon became more interested in theories than in agriculture, and

Mr. Warren invented the labor money which for some time circulated in New Harmony, Ind., and was very seriously considered by the Knights of Labor in Pennsylvania 50 years afterward. We will not here reproduce Mr. Warren's currency. A copy will be found on page 73 of The Labor Movement—the Problem of To-day, edited by George E. McNeil and printed in 1887. There are the usual flourishes and engraving on this bill, but the printed matter reads as follows: "May 18, 1827, Cincinnati, Ohio." In the center there are the usual pictures of justice and various goddesses, and between them is this motto: "Labor for labor." Then follows "Due to bearer." Then, in heavy type, "Eight hours of labor in shoemaking or 100 pounds of corn," and signed by the treasurer, William Morton.

There has always been a theory among the workers that somehow the basis of that circulating medium of exchange which we call "money" should be based upon the amount of labor required to produce the thing exchanged. To meet this, economists have tried to show that gold really represented its value in actual work, notwithstanding the fact that every practical miner knows that every ounce of gold in the world has cost hundreds of times the amount of its price in human toil and life. I do not care to discuss this phase of it, but simply to show that the theory of money based upon energy is not new; it was developed by and among the workers themselves, the only difference being that the old labor theory of money was based upon human labor, upon man power, and not upon kilowatt-hours. This essential difference between the technocrats' idea of values and the workers' idea of values I will discuss later on.

This committee, which was composed of a group of 36 engineers working in the engineering laboratories of Columbia University, supported and financed by private funds and subscriptions, has issued a report most savagely attacking everything that is or ever has existed in the form of economic or industrial life. Its principal spokesman, Mr. Howard Scott, director of this committee of energy survey, has an article in the January issue of Harper's Magazine, which he calls "Technology Smashes the Price System," with a subhead, "Inquiry into the Nature of our Present Crisis." As we have seen, the facts which he gives have long ago been published by the Department of Labor, and may be generally accepted without argument. Apparently, what he means by "smashes the price system" is that as the result of this same technocratic mind we have developed a system of production in which the cost of the unit of production can not be charged into its price.

Let me illustrate. Originally in this country the farmer tanned the hides of his own cattle which were killed for food. In the fall of the year the cobbler or shoemaker came along and measured the feet of the various members of the family and made the boots and shoes in the home, received his pay, and proceeded to the next family. Here, the cost of production could be charged into the price. There were few tools, and they very inexpensive. It took about two and a half days to make a pair of boots as they were made then, and the shoemaker received $5. The farmer furnished the leather.

Now we have a machine which costs, the more simple one, $10,000, and some of them more than that, upon which a pair of shoes can be made in 36 minutes of one man's time. In a few factories they are made more rapidly than this. It is the claim of the technocrats that while the price of a pair of shoes to-day contains all the apparent items of cost of production plus a profit sometimes, yet the cost of the machinery and the carrying charges of the machinery can not be put into the price, as it must in the nature of things be spread over a vast number of pairs of shoes, and in a considerable length of time the machine becomes obsolete by the invention of a new machine which displaces it before its cost can be recovered. The concrete cause of this is cited by Mr. Scott in the article in question, from which I quote as follows:

> The first Curtis turbine built by General Electric for the Insull interests in Chicago in about 1903 was withdrawn in September, 1909, in perfect working order, and now stands in the General Electric yards as a relic of a bygone age. That obsolete turbine is still being paid for in interest on the bonds sold to buy it.

Mr. Scott continues:

> Since obsolescence retired equipment before it could be paid for there was nothing for it but to borrow again and issue more bonds and mortgages and start paying interest on that, along with the interest on our first borrowings. So higher and higher rose the country's mountain of debt. To make a profit we borrowed; to pay what we borrowed we borrowed more; to make a profit in order to pay off what we had borrowed twice, we then borrowed all over again. A careful examination of the debt figures and the production figures of this country—and these figures have been repeatedly checked and can not be brushed aside—reveals the appalling fact that for years our debts have been increasing at a rate faster than production, and both of them faster than the rate of population!

This is very well stated, and the subject matter was fully covered by Commissioner Carroll D. Wright, of the Bureau of Labor Statistics, in 1886, above referred to. It is a matter of common knowledge that there are bonds now outstanding of the Baltimore & Ohio Railroad issued in 1846 and still carrying interest on money that was used for construction and equipment which has been worn out and replaced four or five times since the date of the bonds. Apparently, the technocrats are particularly disturbed at their new discovery of this old, well-known fact.

Mr. Scott says:

> The industrial debt of this country—bonds, mortgages, bank loans, and all other interest-bearing amortized securities—totals approximately $218,000,000,000. The fixed charges on this debt are equal to over half the present national income.

There may be some question as to the exactness of the extent of the interest-bearing debt in the United States, as other very competent sources estimate that in 1931 this debt was $156,615,000,000. Nevertheless, since this $218,000,000,000 is the only figure to which the committee of 36 can lay any claim of originality, we will let it stand. The committee asserts that 50 per cent of the national income goes to the payment of the fixed charges growing out of this national debt. Other and very much more reliable sources tell us that in 1932, 24 per cent of the national income was absorbed by the national debt. In any event, the situation is bad enough. If, as Doctor Naess estimates, 9.34 per cent of the national income went to pay interest on the debt in 1923 and 24 per cent was required to pay this interest in 1932, not only is this rate startling but the rapidity of the increase is appalling.

Whatever view we take of this matter, however, it is a serious situation, particularly if, as claimed, the debt does not shrink in volume by those same forces which shrink our assets. The national wealth of the United States in 1929 was approximately $400,000,000,000. By the shrinkage in prices and the fading away of face values, that which was 400,000,000,000 in 1929 is now about $290,000,000,000. So it will be seen that if, in the estimating of fixed debt, we accept either the 160,000,000,000 or the committee of technocrats' 218,000,000,000, we are carrying a load that can not, at least in the near future, be charged into price.

The committee seems to emphasize this at a time when various schemes are before Congress to stabilize the purchasing power of the dollar by coupling it up somehow with the index of wholesale prices as issued by the Bureau of Labor Statistics. If we accept the conclusion of this committee of engineers, prices can not be reduced but must go up and be held at a much higher level than they are now.

The only alternative that I can see this committee of technocrats suggest, by inference, at least, is that they want to start with a clean slate. In other words, they want all forms of indebtedness representing the past to be wiped out. They advocate, by inference, the old Hebrew idea of the Year of Jubilee, by which once in 50 years all debts were abolished and all started afresh. I wonder if this does not give us a partial reason for the popularity of this literature and the sudden and widespread interest which enables it to have all avenues of propaganda open to it.

If universal debt repudiation can be made scientific, I am sure its advocates will find a vast array of foreign support right now.

Mr. ROBINSON of Indiana. Mr. President, if I understand the Senator rightly, what he means to say is that any movement for cancellation of debts will have a lot of Euro-

pean support at this moment, when they are repudiating their debts to us.

Mr. DAVIS. It is all right if the Senator wants to put it that way.

Mr. BYRNES. Mr. President, will the Senator yield for a question?

The VICE PRESIDENT. Does the Senator from Pennsylvania yield to the Senator from South Carolina?

Mr. DAVIS. I do.

Mr. BYRNES. I want to ask the Senator from Pennsylvania where the idea of technocracy originated.

Mr. DAVIS. It originated in the minds of a number of engineers who have their headquarters in New York City. If the Senator will wait until I get along a little bit farther, I will discuss that matter with him.

This technocracy is not without its funny side——

Mr. BYRNES. Mr. President, will the Senator from Pennsylvania yield further?

Mr. DAVIS. I yield.

Mr. BYRNES. Do I understand that it originated at Columbia University?

Mr. DAVIS. No. The term "technological unemployment" came from some one whom I do not know to one of our Government departments. The term "technological unemployment" was used in preference to displacement of workers by machinery. Those who used the term "technological unemployment" desired to express the thought that while men were displaced by machinery, new inventions also gave employment. The newspapers and publicity men dubbed the New York engineers "technocrats." They seem to enjoy the name, and now it is to some a new and mystified word.

The subject does have a humorous side. The long-promised interview with a real working man that Will Rogers gave appeared in the New York Times of January 4. Rogers asks the worker what he thinks of technocracy, and the worker replies, "Nothing you can't spell will ever work." The entire alleged interview, unusually keen even for Will Rogers, does reflect the "down-and-outer" point of view. I am not going to read it to the Senate, but ask that it be placed in the RECORD at this point in my remarks.

The VICE PRESIDENT. Without objection, that order will be made.

The matter referred to is as follows:

[From the New York Times of January 4, 1933]

MR. ROGERS GETS THAT NEW YEAR INTERVIEW WITH THE POOR MAN WHICH HE PROMISED

BEVERLY HILLS, CALIF., *January 3.*

To the EDITOR OF THE NEW YORK TIMES:

Hello, mister, was you ever asked to make a New Year's prediction?

Say, I never even been asked to eat on New Year's.

Have you ever been appointed on a commission?

No.

Do you read prominent men's predictions?

No; I never read fiction.

Have you a job?

No; I am on a diet.

What does the New Year hold in store for you?

What New Year? Have they got another one?

Do you think the world leaders can get us out of this?

They might; ignorance got us in.

What do you think of technocracy?

Nothing you can't spell will ever work.

What about the debts?

Well, I hear England paid 90,000,000, but it's only hearsay as far as the unemployed is concerned.

Do you think we will get out of this depression just because we got out of all the others?

Lots of folks drown that's been in the water before.

What will give the unemployed unemployment?

If somebody will throw a monkey wrench into the machinery.

Won't light wines and beer be a big aid to the poor?

They will, if they give 'em away.

Won't 1933 see a change for the better?

I don't think so. We haven't suffered enough; the Lord is repaying us for our foolishness during prosperous days. He is not quite ready to let us out of the dog house yet.

I will haul you down the road if you like.

What's down the road? I've been to both ends. One place is as good as another.

Well, good luck to you.

Yes; that's what my Congressman said.

Yours,

WILL ROGERS.

Mr. DAVIS. The idea of a circulating medium based upon units of electrical energy was, of course, food for the humorists and cartoonists. Phillips, of the Washington Post, after telling us in his own humorous way some of the difficulties that may grow out of the use of such money, says: "But after all, there will be some satisfaction in being able to pay your income tax with 300 volts." The cartoonist Brown, in the Washington Star, intimates that "Technocratic shopping may be confusing," in a cartoon that appeared in the Sunday papers of January 8. The customer is standing with his hands full of various bills, together with a package that he has purchased, and is saying to the shopkeeper, "Sure this change is right?" The shopkeeper, with a look very forcibly portraying his irritation, says, "Certainly. You gave me a 5-unit bill of electric energy. I took out for the pound of cheese and gave you 3 units of water power, 1½ units of daily hen energy, 4 units of windmill energy, ½ unit of steam power, and 13 units of farm hired-man energy. Count 'em."

Here again we are reminded of the criticisms that were made of the labor money. When Josiah Warren moved from New Harmony, Ind., to Thompson Station, L. I., and began the circulation of his labor money in the community which he gathered around him there, Mr. George J. Holyoke, in a labor paper published in the thirties, said:

> Mr. Warren's mode of paying commission was by charging the exchanger for the amount of time expended in effecting his business. The manager had a clock before him; he noted the time of the customer's arrival, and when the transaction was completed charged him for the time consumed in conducting it. It was not the value of the business done, but the time taken in doing it, upon which the charge was made. It might cost more on this plan to buy a bunch of needles than a sack of flour.

This money, which is not to be called money, is nevertheless to be the circulating medium of exchange, the evidence of a property right, which simply shifts its base. It does not alter the function of money, and might just as well, so far as I can see, be called money as to be called anything else, except for the reason that these expert technocrats seem to desire to get away from every word that may make them remember or think of the horrible economic system which produced themselves.

This money is not to be based upon gold, silver, or even on existing property. It is not to be based upon human labor or anything that is; it is to be based upon the electric energy required to produce what is to be produced. That is to say, it is an order for a specific amount of electrical energy to be exerted in the direction the bearer may suggest. If this is not what it means, will the committee of professors of economics and the technocrats of Columbia University please detail some one who can write in understandable English to tell us what it does mean.

The place of man in this money is not quite clear. Man power is pitted against the electric power produced by Muscle Shoals and Niagara Falls, and all is thrown into a jack pot together. It will be noticed that this committee estimates the value of man at one-tenth of a horsepower. It will be noticed also that Commissioner Carroll D. Wright in his report printed in 1886 gives 1-man human energy as the equivalent of one-sixth of a horsepower. The question arises as to whether the American worker is losing physical energy at a rate which prompts me to ask, Is this a part of the New York committee's attempt to standardize wages at a low level, since our committee of engineers assured us that a kilowatt-hour of electric energy never changes, has always been able to produce and will retain an identical ability to produce the same number of shoes as at any date, and apparently regardless of the efficiency of the shoe machinery through which it operates?

I am exceedingly dubious about this reduction of man power from the equivalent of one-sixth of a horsepower to one-tenth of a horsepower, and am wondering whether, if he is to be pitted against Muscle Shoals and Niagara Falls on this basis, his daily wage will not be reduced to a point below the present wages of a Chinaman. Of course, they say there are to be no wages, and I fear that several millions of our population just at this time will fully understand even if they do not approve of what they mean.

Again, just as their new term for money means exactly what the old term for money meant, if anything, so their statement of abolition of wages is left utterly without any explanation which even remotely explains. Whether we call it wages or not, the people must get something, something of food, something of clothes, something of shelter, and they must get it either as reward for their own labor or exertion of some sort or through some contact with or part in the production output of these vast billions of units of electric energy which is to control the world.

We will not quibble about the word "wages" but how are the people to get these products which they need and, when they get them if they get them, will they not perform the same function that is now performed by what we call "wages"? If so, what does it matter what we call it?

Mr. President, in this whole scheme, and all that has been written about it, the consumer as such has never been mentioned, so far as I have discovered, and if so, the reference has been so obscured that we have been unable to find it. The committee of technocrats have overlooked the fact that kilowatt-hours do not wear overcoats, that the horsepower energy of a turbine engine does not eat potatoes or occupy a little cottage on a shady street; that neither Edison nor Steinmetz have invented a machine which will buy and pay cash for the products of machinery, and that such a machine is absolutely essential to this scheme of engineering technocrats, which can see only a world of unlimited energy producing and producing and producing. It might be well enough to suggest to these gentlemen that we are doing enough of that now, that the present problem is one of consuming and consuming and consuming, and of getting into the hands of the human units which alone want, need, or can consume the products of these electrical units in which the human being is to have no share, or at least so little share.

The same confusion of thought, or perhaps one might be justified in saying the attempt at thinking, confronts us when we examine their definition of price. Price is to be abolished. The reason for that is that the system has been unable to charge into price the cost of production which should carry with it a complete amortization of the cost of the machinery of production. That is to say, the competition in machinery, the rapid improvement in machinery, has rendered machines obsolete while they were yet new, and long before they could be paid for out of the returns from the goods which they produced. It must be admitted this is perfectly true under our corporation method of financing manufacturing business.

If a private individual buys a horse and wagon and undertakes to do a draying business for a fee, his horse may live long enough for him to earn his operating expenses, support himself, and create a sinking fund to cover the cost of his horse and wagon and leave him some profit. If however, his horse dies, he has lost his horse, and that is that. He can not continue the cost of the old horse into the price of a new horse, which he must buy, just as when a man has worn out a suit of clothes, it is gone, and he can not by any intelligent sort of bookkeeping add the price of a new suit to what he paid for the old one, and thus figure his present suit has cost him the price of all the suits of clothes he ever had in his life. But that is just what a corporation can do. That is just what the credit system permits anybody to do. A manufacturing corporation buys a new milling machine and issues capital stock or 25-year bonds, we will say, to cover into his capital the cost of this new machine. It greatly augments the efficiency of his plant, increases output, and enables him to enormously expand his sales at a price which covers current expenses, interest on his stocks or bonds, and a small amount for deterioration or sinking fund to replace the cost of the machine, but long before the machine is paid for a new machine is invented which so far excels the one he has that he can no longer control his trade against a competitor who has purchased the new machine. In other words, invention has rendered his machine obsolete. It must be thrown out, sold for old iron, long before it is paid for, but he can not throw out the interest-bearing bonds or capital-stock certificates which represent this obsolete machine.

The debt is a fixed one and is not affected by the destruction of the value of the thing for which it stands. He thus carries over his dead horse into his new outfit, and this repeating itself as frequently as is necessary in these days of rapid changes of mechanical efficiency, pulls after every manufacturer a long and rapidly lengthening chain of unpaid indebtedness for obsolete machines which he can not, it is perfectly true, charge into price.

Machinery is not only rendered obsolete by the invention of new and better machinery but is rendered worthless by its own massiveness. To illustrate, the Owens bottle-blowing machine, which started out as a comparatively small machine, has now been improved and developed until its size and cost of operation is so great that unless a man has an order in hand for at least 100,000 gross of a given size bottle he can not afford to start the machine, and hence numbers of these machines are standing idle to-day, and smaller, much less efficient machines are being operated to supply the orders for a few dozen gross or a few hundred gross of bottles, which come from the smaller customer. In other words, mass production can only be carried on with mass consumption, and since mass production has produced mass unemployment instead of mass consumption, human beings being the only consumer, mass production and its machinery has defeated itself and its purpose by the very fact of ignoring the consumer, just as our committee of engineers has done.

The Glass Workers' Union had an opportunity to buy the Owens machine for the small sum of $25,000. Had the glass workers bought that machine and operated it, and charged the present prices for the wares the machine produced, it would have been practically sufficient to care for those who made a livelihood in the industry and who were displaced by the machine.

Mr. President, consider the railroads, for instance. The new K–1 locomotive which can pull a train of loaded cars a mile long—that is to say, can pull 100 loaded 80-ton cars up a reasonable grade—can not be used economically when the company has but 10 partially loaded 50-ton cars to pull. Suppose it puts its K–1 engine on the train of 10 partially loaded cars; it can not possibly charge into its freight rates its cost of transporting the goods. We are thus dragging, as I said before, a long and ever-lengthening chain of corporate debts for things which no longer exist or are economically unserviceable, and not even the cost of operation, much less the original cost, or the interest and carrying charges on the original cost, can be charged into price. But even assuming that all this debt which represents the "dead hand," and which the committee on technocracy estimates to be $218,000,000,000, and others estimate at $160,000,000,000, no matter how much it is, assuming that it is to be entirely wiped out and we are to have a new start with a clean slate, assuming that money in the sense of Federal bank notes, national-bank currency, or Treasury gold certificates, is to be abolished, and that in the future we are to present a 100-horsepower certificate at a furniture store for a set of dining-room chairs and receive the change in the form of kilowatt-hour certificates on Muscle Shoals, the difference in the bill we present and the change we get back will be the price of the dining-room chairs, no matter what we call it. just as the power certificates which we present will be money, no matter what we call it.

The discussion of the general subject of technocracy has already been taken up in England, and I think we must admit is being discussed over there more understandably, in language much more direct and to the point. Professor Soddy, British economist, has an article in the Daily Mail entitled "Man, Machines, Money, and the Technocrats" in which he agrees substantially with the position we are taking that technocracy means literally "government by technicians." He says:

"I solemnly affirm that our monetary system has cost the British taxpayers an unjust burden, and will continue to do so until it

either breaks democracy or until the people insist on knowing more about money systems than responsible parties think good for them."

Continuing, Mr. Soddy says:

"We are all agreed in advance that technology has rendered the existing social institutions and economic systems both 'obsolete and dangerous' and that the physical needs of the world can be supplied in far greater abundance than at present with a shorter working day and week," the economist wrote.

"However, the assertion that this can be achieved only by abandoning the 'price system' and the substitution of 'energy certificates' is no part to my present conclusions, although something of this kind may be forced upon civilization if the world continues to expand.

"The current idea that because we wasted so much in the World War that it was incumbent on everyone to tighten belts and practice severe economies appeared to me little less than rank blasphemy against the truth. When you deal with life in communities, the things which determine whether they thrive or starve includes three:

"1. The supply of energy.

"2. Inventions and discoveries to utilize energy.

"3. Human fear and diligence to attend it during transformation into wealth.

CALLS FOR STUDY OF MONEY

"Labor in the purely physical sense has suffered emancipation. Modern machinery can do the work of over 1,000,000 laborers working hard for eight hours a day. I believe that if democracy took the trouble to discover what its actual money system is, it would enter a new lease on life."

Referring to machines replacing men, Professor Soddy said that if men were unemployed, it was not because they could not adapt themselves to the more skilled and lighter duties that science imposes, but because of an attempt to recoup the overload on the power station that occurred during the war by partly shutting it down.

"I judge from their proposal to abandon the price system and substitute energy certificates that the technocrats have not quite gone to the bottom of their own system," Professor Soddy concluded. "Few are prepared to believe that it can be as funny as it really is."

Cutting out all of the unnecessarily obscure which the New York Committee of Engineers has injected into their report, it seems to me that all evidence of indebtedness for purchases in the past in the form of railroad and corporation stocks and bonds of whatever form it make take is to be wiped out; we are to have a Reconstruction Finance Corporation which is to meet all debts and indebtedness by abolishing them; we are then to have a currency which will be a demand upon what is practically an inexhaustible source of productive energy, this demand to be in the form of some form of scrip and to be presented in payment of a thing before that thing is made. There will then be no more debt. We are to walk right into a "pay-as-you-enter" civilization.

Again, if this is not what they mean, will they delegate some one who can speak English to arise and tell us what they do mean? Strange to say, everything is to be left to private and corporate interests and initiative, with rights to own, conduct, and control as they will. It is willing to accept—in fact, it assumes—full responsibility for everything except the social and financial consequences and results of itself. These it would shift to the new technocracy, or government of technology by technocrats for technocrats. There are to be no more party lines of protective tariff or free trade; there is to be an entirely new concept of Uncle Sam; there is to be no God, but mass production, and the technocrat society is His prophet. The purpose of government is to take care of the cost of obsolescent machinery which can no longer be charged into price. We are to start with a funded nonpayable debt of $218,000,000,000 to cover the cost of machinery already rendered obsolete by new improved machinery, which in turn is not only to become obsolete but even now in its youth and prime can not charge the cost of itself or even the interest of the cost of itself into price, and hence there must be additional bonds issued to cover the carrying charges, the overhead cost of our miraculous mechanical progress, unless we agree to wipe out this 218,000,000,000 of obligation and enable the technocrats to start even.

I wonder whether the real significance of all this real and present public interest and attention does not lie in the general fact of a consciousness that our whole political, economic, financial, and social system is bankrupt, and a public curiosity as to which of the creditor factions is going to land the receivership; for it must be admitted that there is a general feeling that so far as our present method of doing business is concerned, we have reached the end, and that something is going to happen and that very soon. Whether that something is to be intelligent or whether we are to drift as Europe did from about 700 A. D. to 1400 A. D. groping through a period so manifestly unintelligent as to be unable to control its own problems, a period that justly earned the name of the Dark Ages, or whether we are to take the bit in our teeth at the start and organize public control of the output and the use of the units of electrical energy; perfect some intelligent and tangible method by which we can determine the consumption of agricultural and manufacturing products so as to coordinate the supply with the wants or at least the needs of mankind; so regulate supply and demand or production and human needs that every human being shall have an opportunity and an inducement to earn and secure with his own labor or effort all of those things which he may reasonably need.

In an address which I delivered before the American Federation of Labor at its fifty-second annual convention in Cincinnati, November 22, 1932, I said:

During the depression it was suggested that we have a dictator. We will continue on as an all-American Government under our Constitution.

Normal times—yes, prosperous times—will come to us through the stabilization of industry and agriculture. In our zeal to produce, science has played a very prominent part. Our farmers now make three blades of grass grow where one grew before. It is also harvested with less man power. It is the same in industries. We are building factories now and operating them, not alone without skilled labor, but without man power to handle the material from the time it enters the machine until it comes out a finished product. This means to both agriculture and industry, overproduction.

We claim to be an intelligent democracy. We know what causes this overproduction, and yet we fail to regulate it or find a way to distribute it to the consumer. In other words we have not yet found a remedy. However, we continue to find fault with the system that permits it. Kingdoms, dictatorships, and democracies have been wrestling with this problem of overproduction for centuries, yet we continue on with it.

It is not necessary for me to go into details with you representatives of labor as to how modern machinery has increased production in the United States. However, I might say that we can now produce all the coal, textiles, boots and shoes, steel, and other basic products needed for normal consumption in six months. Authorities inform us that if we return to normal employment to-day, because of modern machinery, we can employ just a little more than half of the unemployed.

It will be difficult to regulate this great industrial machine because it has developed into one of the most complicated and interlocked machines that we have ever known. I want to repeat again that if we regulate production in the United States for normal consumption to five days' work, and still not take into consideration our competitors of other lands, with their competing production, we will be confronted with the same problem again.

Again I said:

In some quarters it has provoked a spirit of pessimism alien to anything seen before in our American history. Some have even begun to query whether we shall ever recover from the blow, while others have been telling us that our only hope lies in abolishing capitalism and setting up a new economic order modeled on abolishing our present system and taking up other economic theories. So far as any of those theories ever being put into practice, we find the people therein suffering from the same difficulty. It seems to me that our present troubles are in a large measure due to failure of the past plan. For pessimism is a disease of the mind, so likewise is optimism that fails to consider causes and consequences. The philosopher who walked with his gaze always directed toward the stars eventually tumbled into a ditch and was badly hurt. Much of our optimism during the past few years, our belief that hard times could not come again, have led us to believe anything that we wanted to believe, even when it was opposed to every economic law that had been discovered in the last 150 years, has been quite as foolish as the wandering of the philosopher who, in order to keep his eyes on the stars, paid no attention to the ground over which he was walking. We have defied economic laws as Ajax who defied the lightning; but we have no more overcome them than the defiance of Ajax rendered harmless the awful thunderbolts of the sky.

A wise man plans, and a wise government should also plan.

The idea of planning has been very much opposed by the economists of the laissez faire school and the school of politicians that follow them. It is feared that the whole laissez

faire theory would be repudiated by the very idea of planning and it is regretfully noted that some of our very finest men personally are so wedded to this theory that they would rather see our whole civilization smashed than to see this doctrine of economics discarded.

They agree with the worker in the shop when you say that our civilization is going to smash, and say, "Let her go, Gallagher," provided we can retain the doctrine of laissez faire as the center and core of whatever civilization is to follow, but it will not be the center and core of whatever civilization is to follow if this one must fail, nor is it going to be permitted to remain the center and core of this one. We will do well to plan as outlined by the able junior Senator from New York [Mr. WAGNER]. Recent visitors to Europe report to me that most of the German workers turn a deaf ear to those who "rail" at the soviet system, and reply that they would rather trust the people who have a plan than trust those who have no plan and are opposed to all planning.

If this so-called technocracy is a challenge, we will meet it, and, so far as the government of technocrats is concerned, I am satisfied that the good, common sense of the American people will not accept it even though they have been, as the newspapers inform, encouraged by such men as Nicholas Murray Butler, president of Columbia University, as well as professors of Harvard University, and practically a solid phalanx of the leading engineers. Might it not be in the consciousness of the people that just as Emerson says:

> Up from the heart of nature rolled
> The burdens of the Bible old.

So up from the heart and mind of the masses of mankind comes the only reason for economic systems, industrial systems, political systems. Let us meet it in the consciousness that institutions must be made for man and not man for institutions, and that we must control them for the continuance of human life and human society.

The political significance of technocracy, while it is quite obviously intentionally left obscure in the article emanating from the committee of engineers, becomes more and more apparent by the very reason of this obscurity. As Emerson says about the parents' attempts to keep secrets from their children—

> We scream into their ears the things we would conceal from them.

So with this commission of technocrats. The loudest things they say are those about which they are silent. Already throughout the country engineering clubs are being formed and initiated into the mysteries of the political significance of technocracy, and in the West the American Technocratic League has already been launched to group these isolated clubs into a political party. A senator in the Legislature of Oklahoma presented a resolution on Monday, January 9, proposing that the chairman of the senate should "appoint an investigating committee to define technocracy and find out what it is all about." Under date of January 7, the Associated Press sent out the following very significant news item which appeared in the Washington Sunday Star of January 8, which I ask may be inserted in the RECORD without reading.

The VICE PRESIDENT. Without objection, it is so ordered.

The article is as follows:

[From the Washington Star, January 8, 1933]

TECHNOCRATS' AIM IS CONTROL BY PEOPLE OF ALL PRODUCTION—LEAGUE FORMED IN DENVER HAS KEYNOTE IN OWNERSHIP RESOURCES AND MACHINES BY PUBLIC

DENVER, January 7.—Ownership and operation by the people of natural resources and the machinery of production and distribution, under the direction of experts, is the keynote of the platform of the American Technocratic League, formed here this week.

Franklin P. Wood, Denver, consulting engineer and acting president of the league, announced the platform to-day, saying he had been deluged with letters from all parts of the country asking for information about the organization.

"We have gone further than the original group of technocrats in New York, who have merely given out a mass of facts and statistics without suggesting any immediate action for reform of existing conditions," said Wood. "The American Technocratic League was founded not merely to talk about conditions but to do something to change them for the better. We have prepared a program or platform to that purpose.

"The platform proposes that constitutional power over finance and currency be exercised by the people as a means of acquiring and controlling the development and operation of natural resources and industry.

"Natural resources and industry of the country would be taken over by constitutional means, by voluntary purchase, by condemnation with compensation, by initiation of publicly owned business, or by other means necessary to promote the general welfare.

"Technocracy will be merely a high-sounding word if it is not applied. The American Technocratic League intends to educate the public so that it can successfully be applied quickly. We believe that the chief reason for criticism of technocracy is that little constructive in the way of change has been suggested."

Mr. DAVIS. Mr. President, naturally the keen political mind of Alfred E. Smith looked through the technical verbiage of the material put out by this committe and first given publication through his own magazine; he saw with his keen eye the political significance of it all, and in the January issue has a very significant editorial. I ask permission at this point to insert a part of the editorial in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The editorial is as follows:

New Outlook is glad to present the story of technocracy. As I indicated in the first issue, this magazine is a forum for public discussion. The editors do not necessarily subscribe to everything that is printed outside of the editorial columns, and we invite discussion and debate. Pursuant to this policy, and in the hope that it will invite further discussion, I am giving here a few comments of my own on technocracy based on reading the articles on this subject in the last two issues.

Every now and then some one discovers a new system which is bound to revolutionize all government and the entire economic system. When the initial excitement dies down, it is always found that changes in these fields are gradual and that we have mistaken new words for new principles.

The thesis of technocracy is that we have developed labor-saving machines so fast that there is less and less work for men; that our output of all kinds of things is increasing beyond public consumption, and that we must have some kind of a new government by scientists and engineers who will plan a nice balance of machine production and human consumption so that everybody will have both necessities and luxuries for his family by working only three or four days a week. In order to accomplish this, the present price and profit system must be abolished and some new motive or reward for work must be set up. Exactly what the new motive and reward is to be does not yet appear, but it is to be something entirely different from what they are aiming at in Soviet Russia. Because of our wealth of natural resources and peculiar geographical location, the North American continent has the best possibilities on earth for the development of the new technological state. I think this is a fair summary of the objects of technocracy.

In order to arrive at the above summary, it has been necessary to wade through a great mass of language which is almost unintelligible to anybody but a doctor of philosophy or an engineer.

Take for instance this question from one of the articles: "The method of arriving at social decisions in a dynamic continent-wide mechanism where the element of change intrudes itself into every national rate of flow of goods or services must be such that the intolerance or precision must be obtained in quantative units peculiar to the rate which is being measured. It follows that this civilization on the North American continent must be operated on a termodynamically balanced load."

Or, for example, the following: "Russia, in its Parthian retreat from capitalism," Scott says, "has scored but a Pyrrhic victory. It mistook the name tag of a phase of the price system for its entirety. It left the tag and took its essential mechanics. A social approach based upon the substitution of a Hegelian dialectic for an Aristotelian dialectic may be an interesting intellectual pastime but of no functional importance, an example of the recrudence of philosophic futility of European tradition."

If the technologists really expect to convert the great mass of people to their views and to persuade them to abandon politicians for engineers, they will have to adopt a language which can be understood by the farmer in the Corn Belt, the steel worker, the miner, and the small shopkeeper as well as the Ph. D. I should not care to guarantee what would happen to the dress shirt of a speaker who used the kind of language I have just quoted before some of the audiences I have known. It might even be difficult to insure his life. After all, it ought to be possible to clothe even the deepest thoughts in simple language.

Another observation which occurs to me is that the technologists are unnecessarily intolerant of existing systems and leaders. It seems to me that nothing much is gained for this new philosophy by denouncing all politicians and statesmen as demogogues and all business men as fools, or by the statement that in the next two years America will witness "a procession of the dumb, the halt, and the blind, stumbling from one futile gesture to another—from the mild buck-passing program of 'share the work' to the antici-

pated probable legislation of rent and private-debt moratoriums, to those twins of finality, the dole and complete inflation." Nor will they hold the attention of thinking people by making extravagant claims without adequate evidence. For example, I read in one of the articles that technocracy "has made invalid every old social, political, and economic postulate now in use. It has rendered political systems useless. It has sounded the death knell of old methods of exchange. It has shelved permanently the necessity for private enterprise and savings. It has made sterile the moral concepts of the virtue of labor. By its pervasive force in changing man's whole outlook upon life, it has opened the way for the greatest release of the so-called human values in history. It has provided the way for the elimination of individual greed and the enjoyment of leisure by everyone." This is a pretty big order which is hardly substantiated by what follows.

The engineers dispose of whole nations in summary fashion. For example, they report that England, with only one energy source left (coal) is going farther and farther down each year and shortly will be just two islands off the coast of Europe, which will be compelled to make a free gift to the colonies of a surplus population of 35,000,000.

It is true that they give some very interesting illustrations to show how fast machines are displacing human labor and how much more we can make with machines than human beings could make before, but even these illustrations raise a great many doubts. We are told, for instance, that a technologist can produce a razor blade with a tungsten carbide edge on a steel wafer base at 20 per cent above the cost of the blade to-day, and that the new blade will last a lifetime or longer. Also, that there is a plant called "ramie," which can be made into suits that will wear seven times as well as wool and several hundred times as well as cotton. Ramie can be made into indestructible paper cheaper than wood pulp, has a luster similar to silk, is stronger wet than dry, takes dyes, and has all kinds of other possibilities. Similarly, we hear that an automobile has been designed with rustless steel and frictionless bearings, which can go over 300,000 miles without repair and will cost only 50 per cent more than present automobiles. At the end of 4 years enough of these cars could be manufactured so that no more automobiles would be needed for the succeeding 50 years. We are told, too, the technologists can produce shoes which will wear two and a half years, and a road-building machine operated by two men which can tear up an old road, lay foundations, and lay pavement 60 feet wide at the rate of 8 miles a day.

These illustrations are interesting, but doubts will occur to the reader. For example, what is holding up the manufacture of the lifelong razor blade, the 2½-year shoe, the 15-year suit, and the 8-mile-a-day paving machine? How long will it take to plant enough ramie to meet the needs of the market, and may it not develop some bug or pest which will eat it up, as the boll weevil eats the cotton and the blister rust ruins our trees? What is going to become of fashions and styles and the normal desire of the average woman to buy new clothes and keep up with the times? Don't we all have a lot of old clothes camphored away which are still intact and uneaten by moths, which we don't wear excepting at masquerades because we are afraid that if we appeared in them in public we would be laughed off the streets? Is the technologist going to abolish little touches of human nature like that? And the automobile that will run over 300,000 miles—is it going to cost 50 per cent more than a Ford or 50 per cent more than a Rolls Royce? If it is the latter, then we need not worry about the early replacement of the present type of cheap cars.

There are plenty of shoes to be bought to-day at $15 a pair which will last for years. I have shoes that are 10 years old myself. The trouble is that the average fellow doesn't have the initial $15. Perhaps, when the price system is abolished, everybody can afford $15 shoes, which perhaps at that time will be the equivalent of a bale of Vermont hay or a mess of Long Island flounders.

When I am told that at the present rate we will have 25,000,000 unemployed in 1934 on account of increase in machine efficiency, without taking into account the depression, I look for considerable proof of such figures, but find none.

In spite of these doubts, I think it is a fine thing that a group of young men should be studying these problems in their laboratories and libraries, that they should be skeptical about present conditions, and that they should have the nerve, independence, and the originality to tackle the great problem of reorganizing the entire Government and the social and economic structure under which we live. Undoubtedly much good will come from a discussion of their plans. They present real problems for statesmen to solve. On the other hand, when it comes to discovering entirely new principles which are going to change human nature overnight, I refuse to get excited, and choose rather to believe that the Bible was right when it said that there is no new thing under the sun. * * *

Mr. DAVIS. The New York Times, on Wednesday, January 4, meets Mr. Smith with a very significant editorial, which I ask to have printed in the RECORD as a part of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

The editorial referred to is as follows:

"AL" ON TECHNOCRACY

Former Governor Smith doesn't receive with proper submissiveness the message of the new rulers of the new world which they have spun out of the cobwebs in their brains. He insists that if the technocrats expect to be listened to, they must use intelligible language. But the philosophy of philosophies is entitled to its own terminology. If it be obscure, that must be because new and powerful thoughts find ordinary words unequal to them. Into blind alleys, over impasses, through intricate mazes, by every means the inspired idea, crowding language, tries to make room for itself. The new world needs a new language.

Himself tolerant after years of experience among men and affairs, Mr. Smith objects to what seems to him intolerance on the part of the technocrats. Why must they arraign all politicians, statesmen, and business men as fools? Well, men to whom has come, after long years revelation of the absolute truth have a right to be impatient with the rest of us. Mr. Smith accuses the founding fathers of technocracy of "making extravagant claims without adequate evidence." The claims are themselves evidence, and the best of evidence, to persons who are not, like Mr. Smith, of too little faith in this latest manifestation, which makes the prophets of the new era of perpetual prosperity in 1929 look like small potatoes. He even expresses disbelief in the beautiful pæan which tells us that technocracy "has made invalid every old social, political, and economic postulate now in use. It has rendered political systems useless. It has sounded the death knell of old methods of exchange. It has shelved permanently the necessity for private enterprise and saving. It has made sterile the moral concept of the virtue of labor. By its pervasive force in changing man's whole outlook upon life it has opened the way for the greatest release of the so-called human values in history. It has provided the way for the elimination of individual greed and the enjoyment of leisure by everybody."

Why is Mr. Smith such a hunker as to doubt this modest recapitulation of the greatness of things done by technocracy? He is even incredulous when the technocrats tell him that, because of the increasing use of the machine, 25,000,000 persons will be out of work in 1934. He would have shown a better spirit if he had admitted that everybody will be out of work by 1940 if technocracy hasn't made a clean sweep of all the old rubbish long before that date. Mr. Smith wants to know "what is holding up" the manufacture of the razor blade that lasts a lifetime, the shoes that are good for two years and a half, the suit of clothes that is as good as new at the end of 15 years. The obvious answer is a conspiracy among manufacturers. He thinks that the women won't consent to wear old clothes. Surely, if greed is going to be knocked out of the human constitution, the desire for novelty, obedience to fashion, and such a trifle as the desire for beauty can be destroyed as easily. The new woman will love old duds.

As an old-world business man Mr. Smith asks the cost—since price has been abolished—of the automobile, technocrat model, that will run 300,000 miles. Doubtless the masters of the new world will be glad to satisfy his curiosity. The distance is nothing to that which will be covered by the literature of technocracy—if it outlasts the year.

Mr. DAVIS. Mr. President, many people, and their number appears to be growing, seem to think that the Government, if it only would, could give them a job. This is one of the delusions that must be guarded against. No government, not even the richest, can perform the impossible. A job is something that some one wants done, and how is the Government going to find out what is and what is not desired by the Smiths, Browns, and Robinsons, who constitute the mass of our population? If governments have failed because they have often done too little, they have failed quite as often because they have tried to do too much.

This means that the Government can not and should not interfere with the employment of individuals for individual purposes. But corporate employment is another sort of employment. It gets its power from the State, and the corporation controls the machine that is the extension of the man's hand. If overproduction reduces employment, then the State would have the right to shorten the hours of labor to prevent it.

We find this more or less true with our foreign competitors who are confronted with the same problem, and who, without reducing the hours of labor, prevent industries from closing down on the ground that it puts upon the State the cost of providing for the unemployed. They insist that industries continue to operate even though there is no sale at a reasonable profit for the factories' production, and make a market wherever they can by dumping or otherwise, because the balance on the wrong side of the ledger of the industry is made up by the government. The government finds this much cheaper than maintaining the unemployed worker.

The worker knows this and in his mind new issues and new ideas as to the functions of government are being formed. The fact is there are now being formed subconsciously in the minds of the American people ideas as to those problems which are nearest the hearts and pocketbooks of the great masses; and if our old political parties do not take up these issues in a constructive and intelligent way, we will find a new political party organized that will do it.

I am not casting any reflection on the issues brought forward by both parties in the last campaign, but we are past the day of using unemployment and the fear of losing one's job as a campaign shibboleth to frighten the people into electing men to office. We are finding out that men do not care so much about party platforms—what they want is a job. The people have the ballot in their hands and are unafraid.

Mr. President, is not this what the laboring man wants to be—a part of society, of industry, of the social whole, and not merely one of its implements? In the future the people will have nothing to do with the fellow who does not know what to do. If constructive thinkers are not forthcoming, the people will do some constructive thinking themselves.

The workers of this country are tired of being frightened by the terrible pictures that can be drawn from the horrible side of our social structure, and which give no hint of how the agencies which produce such conditions can be eliminated from the social structure, and agencies of peace and happiness be put in their stead. They are tired of the artists of the type of Gustave Doré whose marvelously terrible illustrations of the Bible will be remembered—those horrible pictures which made the children afraid to open the Book. And they have decided or will decide that Doréism in politics must go, as through and back of it all they look for a Michelangelo's Moses to represent the real beauty and force and power of the Book and its story, and they will look for this Moses in the bulrushes—not in a university. They will remember that He taught the fishermen on the Lake of Galilee, the carpenters who worked by His side—the dyers and weavers who knelt to learn at His feet.

I know of no scheme of government, no social system ever having been handed down to us from the universities or from the top. Christianity came to us from the bottom. From the manger in Bethlehem it was carried by St. Paul to the slaves in Rome, where it became such a power underground that its influence was sought by those who saw nothing in it but its voting strength, and by their promises it was led astray, it is true, for a time. The Christian slaves and freedmen of Rome—those whom pomp and power looked upon as the rabble and hoipolloi—were induced to vote for Constantine upon his promise to recognize them. Lyman Abbott, former editor of Outlook Magazine, said: "In Constantine Christianity gained the whole world, and lost its own soul." I am sure that the last five words of Doctor Abbott's assertion will not come true; but nevertheless the same compromised Christianity that came up from the masses, shattered the gilded civilization of a pagan past, and wrote somewhat of its political opinions into the constitutional law upon which our Nation rests.

One of the best things, if not the best thing, that Rudyard Kipling ever wrote was—

> The toad beneath the harrow knows
> Exactly where each tooth point goes.
> The butterfly above the road
> Preaches contentment to that toad.

If we want a true social philosophy and true political economy, a practical and constructive platform for a durable political party, we must get it from the masses, and we must stay with and be true to the masses, who know and know that they know, for the record and documentary evidence of their knowledge is in the scars left upon them and engraven in their memory. I say, Mr. President, we are not going to scare the workers of this country by pictures, or even threats of the destruction of a civilization that has been built upon their backs. They realize that whenever a civilization has gone down in the past, it has resulted in mankind coming up at least a little bit. The destruction of every civilization built upon slavery in any form—physical, intellectual, spiritual, or financial—has resulted in a little more freedom, a little more liberty, and a little less slavery. Whenever earthquakes depress or sink a portion of the earth's surface at one place, somewhere else an island is lifted up out of the sea. As individuals we grow impatient, angry, and sometimes even malicious, but mankind can wait—it never gets mad, at least not all over. Time is not of the essence of happiness.

The development of machinery has made the shortening of the hours of human labor imperative. To-day the working men are demanding a 5-day week and some are talking of a 6-hour day—that is to say a 30-hour week. Would to God the manufacturing establishments of our country were now working 30 hours a week or even half of it, and it is rather amusing, to say the least, to hear the manufacturer whose plant is shutdown, and has been for a year, roar most vociferously against the 30-hour week or shortening of the hours of labor. Too few plants are working five days a week at the present time or average six hours a day, to make the instant adoption of this scheme bring us adequate immediate relief from unemployment. As I have stated in public speeches on the authority of the Commissioner of Labor Statistics, there could be twice as much unemployment as there is, and those remaining could produce with our present equipment all the manufactured goods that all could use, and the factories could not even then operate full time. In agriculture this is certainly true in the production of wheat, and it is also true of many other things.

The committee of engineers in launching this report claimed to foresee the time when 3 or even 2 days' work of 6 or even 5 hours each per week will give to every worker all that he needs for the ordinary requirements of life. I hope this is true, but I do not see how it is to be brought about when one considers that they reduce a man to the energy equivalent of one-tenth of a horsepower, and pit him against Muscle Shoals and Niagara Falls, which so far as I can see are still to remain under private ownership and control.

Human beings are directly and indirectly the only consumers of all products, whether mechanical or agricultural, and hence human beings must have the purchasing power which will enable them to procure all the products of machinized industry and agriculture. Certificates of electric productive energy in the hands of men who do not want or can not use the products of that energy will be no more useful than are our gold certificates locked in the vaults of men who do not want anything they can buy with those certificates.

So, Mr. President, I am in favor of leisure; I am in favor of leisure for the masses; in favor of leisure for everybody. Leisure is necessary for culture—for that reading and thinking which have lifted certain classes, and will as easily lift the masses, above the primitive man, and with that culture which comes from leisure will come increased demand for such things as we now have, and for a finer quality of the things we now have. With that increased culture will come a demand for very very many things which even now are undreamed of, and with that universal culture and that unlimited supply of electrical productive energy which the committee tells we have, it may be possible to produce in two short days each week all that our people would care to consume. The difficulty is that we are still left in absolute darkness as to how we are to couple up this miraculous production with this refined and magnified consuming ability.

Mr. President, the "technocrats" are attempting to solve all the problems of the day. Most of us would be very happy if they could settle just one question pending before the Congress of the United States, namely, that of farm relief. However, we are indebted to them for the widespread publicity they have given to the displacement of workers by machinery.

EXHIBIT A

[Excerpt from Report of Commissioner of Labor, March, 1886]

MACHINERY AND OVERPRODUCTION

Machinery—and the word is used in its largest and most comprehensive sense—has been most potent in bringing the mechanically producing nations of the world to their present industrial position, which position constitutes an epoch in their industrial development. The rapid development and adaptation of machinery in all the activities belonging to production and transportation have brought what is commonly called overproduction, so that machinery and overproduction are two causes so closely allied that it is quite difficult to discuss the one without taking the other into consideration. That labor-saving machinery, so called, but which more properly should be called labor-making or labor-assisting machinery, displaces labor temporarily can not successfully be denied. All men of sound minds admit the permanent good effects of machinery; but the permanent good effects of it do not prevent the temporary displacement of labor, which displacement, so far as the labor displaced is concerned, assists in crippling the consuming power of the community. A few illustrations relative to the displacement of labor by the introduction of machinery, if of no value in themselves, are of historic value in preserving the growth of industrial systems and the changes which come with them, and are therefore given in this chapter. It has been very difficult to gather positive information illustrating points so thoroughly apparent; yet the bureau has been able, and from original sources largely, to bring together a mass of facts relating to the temporary displacement of labor and to conditions of industry and of society which would exist without the presence of power machinery. These illustrations show positively the influence of inventions in bringing about industrial depression.

In the manufacture of agricultural implements new machinery during the past 15 or 20 years has, in the opinion of some of the best manufacturers of such implements, displaced fully 50 per cent of the muscular labor formerly employed; as, for instance, hammers and dies have done away with the most particular labor on a plow. The proprietors of an extensive establishment in one of the Western States have furnished the bureau with the following table:

Displacement of muscular labor by machinery in the manufacture of agricultural implements

Department	Number of employees			Proportion
	Required with machinery	That would be required without machinery	Displaced by machinery	
Engine	60	540	480	1 to 9.
Boiler	70	210	140	1 to 3.
Foundry	110	165	55	1 to 1½.
Woodworking	60	300	240	1 to 5.
Setting up	50	50	----------	1 to 1.
Blacksmiths	45	90	45	1 to 2.
Machinists	45	405	360	1 to 9.
Erecting room	35	70	35	1 to 2.
Paint shop	30	30	----------	1 to 1.
Teamsters	10	20	10	1 to 2.
Pattern making	5	40	35	1 to 8.
Draft room	15	150	135	1 to 10.
Tool room	10	10	----------	1 to 1.
Shipping and stock	30	30	----------	1 to 1.
Lumber	10	10	----------	1 to 1.
Bolt and nut	5	5	----------	1 to 1.
Belt	7	14	7	1 to 2.
Watch	3	6	3	1 to 2.
Total	600	2,145	1,545	1 to 3.57.

By this table it is shown that in the establishment cited 600 employees are doing the work which, under former conditions, would have required 2,145 employees, a displacement of 1,545.

In the manufacture of small arms, where 1 man, by manual labor, was formerly able to turn and fit 1 stock for a musket in 1 day of 10 hours, 3 men now, by a division of labor and the use of power machinery, will turn out and fit from 125 to 150 stocks in 10 hours. By this it is seen that 1 man individually turns out and fits the equivalent of 42 to 50 stocks in 10 hours as against 1 stock in the same length of time by manual labor, a displacement of 44 to 49 men in this one operation.

In brick making improved devices displace 10 per cent of the labor, while in manufacturing fire brick 40 per cent has been displaced, and yet in some concerns, in manufacturing various kinds of bricks, no displacement has occurred.

The manufacture of boots and shoes offers some very wonderful facts in this connection. In one large and long-established manufactory in one of the Eastern States the proprietors testify that it would require 500 persons working by hand processes to make as many women's boots and shoes as 100 persons now make with the aid of machinery—a displacement of 80 per cent. In another class of the same industry the number of men required to produce a given quantity of boots and shoes has been reduced one-half. In another locality, and on another quality of boots, being entirely for women's wear, where formerly a first-class workman could turn out six pairs in one week, he will now turn out 18 pairs. A well-known firm, engaged in manufacturing boots and shoes in the West, states that in the grade of goods manufactured by it, it would take 120 persons working by hand to produce the amount of work done in its factory by 60 employees, and the handwork would not compare in workmanship and appearance, as expressed by the concern, by 50 per cent. Goodyear's sewing machine for turned shoes, with one man, will sew 250 pairs in one day. It would require eight men working by hand to sew the same number. By the use of King's heel shaver or trimmer one man will trim 300 pairs of shoes a day, where it formerly took three men to do the same. One man, with the McKay machine, can handle 300 pairs of shoes per day, while, without the machine, he could handle but five pairs in the same time. In nailing on heels, by the use of machinery, one man and a boy can heel 300 pairs of shoes per day. It would require five men to do this by hand. In finishing the bottoms of shoes, one man with a sandpapering machine can handle 300 pairs, while it would require four men to do the same by hand. A large Philadelphia firm, engaged in the manufacture of boys' and children's shoes, states—and the foreman of the establishment corroborates the evidence—that the introduction of new machinery within the past 30 years has displaced about six times the amount of hand labor required, and that the cost of the product has been reduced one-half. On another grade of goods, manufactured in Maine, the facts collected by the agents of the bureau show that one man can now do the work which 20 years ago required 10 men.

The broom industry has felt the influence of machinery, the broom-sewing machine facilitating the work to such extent that each machine displaces three men. One large broom-manufacturing concern in 1879 employed 17 skilled men to manufacture 500 dozen brooms per week. In 1885, with 9 men and the use of machinery, the firm turned out 1,200 dozen brooms weekly. Thus, while the force is reduced in this one establishment nearly one-half, the quantity of brooms sewed is much more than doubled.

In the construction of carriages and wagons, a foreman of 50 years' experience testifies that the length of time it took a given number of skilled workmen, working entirely by hand, to produce a carriage of a certain style and quality was equal to 35 days of 1 man's labor, while now 1 man produces substantially the same style of carriage in 12 days.

In the manufacture of carpets, some of the leading manufacturers in the country, and men of the largest experience, consider that the improvement in machinery in the past 30 years, taking weaving, spinning, and all the processes together, have displaced from ten to twenty times the number of persons now necessary. In spinning alone it would take by the old methods from seventy-five to one hundred times the number of operatives now employed to turn out the same amount of work, while in weaving there would be required at least ten times the present number. A carpet-measuring machine has been invented which brushes and measures the product at the same time. By the use of this device 1 operator will accomplish what formerly required 15 men.

In the manufacture of clothing, where all cutting was formerly done by hand, much of it is now done by the use of dies. In cutting out hats and caps, a man working improved cutters is able to cut out a great many thicknesses at once, and he does six times the amount of work with such a machine as could formerly be done by one man in the old way. The same is true to a certain extent in cutting out garments. On the whole, in an establishment for the manufacture of hats of medium grade, one man does the work now of three formerly, and the product is far superior to that produced in the olden times. In the manufacture of some kinds of hats, especially soft and stiff hats, experienced men consider that there has been a displacement in the proportion of 9 to 1.

The cotton-goods industry offers, perhaps, as striking an illustration as any of the apparent displacement of labor—a Delaware house considering that the displacement has been 17 per cent outside of motive power. By a hand loom a weaver used to weave from 60 to 80 picks per minute in weaving a cloth of good quality, with 20 threads of twist to each one-quarter square. A power loom now weaves 180 picks per minute of the same kind of cloth. Even in power machinery a weaver formerly tended but one loom. Now one weaver minds all the way from 2 to 10 looms, according to the grade of goods. In a large establishment in New Hampshire, improved machinery even within 10 years has reduced muscular labor 50 per cent in the production of the same quality of goods. In another line of goods manufactured in the same State machinery has displaced labor to the amount of one-third the number of operatives formerly required. In the days of the single spindle handwheel one spinner, working 56 hours, could spin 5 hanks of No. 32 twist. In England at the present time, with one pair of self-acting mules, having 2,124 spindles, one spinner, having the assistance of two boys, will produce 55,098 hanks of No. 32 twist in the same time, when the mules are running at the moderate rate of 3 stretches in 45¾ seconds. It is quite generally agreed that there has been a displacement, taking all processes of cotton manufacture into consideration, in the proportion of 3 to 1. The average number of spindles per operative in the cotton mills of this country in 1831 was 25.2. It is now about 72, an increase of 185 per cent. Along with this increase of the number of spindles per operative there has been an increase of product per operative of 145 per cent, so far as spinning is concerned. In the olden time in this country a fair adult hand-loom weaver wove from 42 to 48 yards of common shirting per week. A weaver, tending six power looms in a cotton factory of to-day, would produce 1,500 yards a week.

In the manufacture of flour there has been a displacement of nearly three-fourths of the manual labor necessary to produce the same product.

In the manufacture of furniture from one-half to three-fourths only of the old number of persons is now required.

In the glass industry no particular improvements have been made by which labor has been displaced to any material extent. What improvements have been introduced increase the product in some features slightly, and have improved the quality. In the manufacture of glass jars and some kinds of bottles the introduction of machinery has, however, caused a displacement in the proportion of 6 to 1, and in polishing plate glass there has been a large displacement, and also in the grinding department of plate-glass manufacture.

In leather making, in some grades of morocco, there has been an apparent displacement of perhaps 5 per cent, and in the manufacture of patent leather nearly 50 per cent.

In the lumber business, 12 colaborers with a Bucker machine will dress 12,000 staves. The same number of men, by hand processes, would dress but 2,500. In many departments of lumber manufacturing there has been much displacement of labor.

A saving of about 25 per cent is made in the manufacture of machines and machinery over the hand methods. By the introduction of screw-cutting and boring machines in brass-finishing shops, a given number of hands will secure 40 per cent greater production. A pneumatic molding machine has reduced the number of employees for a given quantity of product.

In the production of metals and metallic goods, long-established firms testify that machinery has decreased manual labor 33⅓ per cent. A great saving has been made in the production of pig iron during the last half century, Pittsburgh producers placing the saving at 20 per cent over the simple country furnace. By the use of improvements and inventions during the past 10 or 15 years in hammers used in the manufacture of steel, there has been a displacement of employees in the proportion of nearly 10 to 1. A first-class journeyman can make from 600 to 1,000 2-pound tin cans per day by hand process. By the use of machinery he can make from 2,000 to 2,500 per day. In making lard pails, a machine is in use by which 1 man with 1 boy as tender, can produce as much as was formerly produced by 10 skilled men. In 1876 certain kinds of tinware were made by the old processes by the gross, a skilled workman making a gross in about one and a half days. By the use of improved machinery the workman can now turn out five times as much produce in the same time. In the manufacture of bread boxes what was done in 1876 by 13 men and women working together is now accomplished by 3 men.

One boy running a planing machine in turning woodwork for musical instruments and materials does the work of 25 men. In the manufacture of sounding boards, 15 men can turn out 5,000 boards per month, or 278 per day, where a good man formerly could make but 4 in a day by the old method.

A mining company in Missouri has 100 miners, getting out 200 tons of coal per day. They have 2 machines, which, with 14 men, mine 40 tons per day. If 100 men without machines get out 200 tons per day, 1 man will get out 2 tons per day, or 52 tons per month. If 14 men with 2 machines get out 40 tons per day, 1 man with machine will get out 2⅞ tons per day, or 74¼ tons per month. Therefore, 1 man with a machine gets out 22⅞ tons per month more than the man without a machine. This, worked out fully, shows that the machine displaces 6 men, on the basis of the employment of 100 miners without machines and 14 miners with machines. In a phosphate mine in South Carolina 10 men accomplish with machinery what 100 men handle without in the same time. In the Hocking Valley mining coal by machines is experimental at present. In one place, however, mining machines, employing about 160 men, produce in a month's work about the same amount of coal that 500 men will produce by hand, working the same number of days.

The oil industry in Pennsylvania has been affected a good deal by inventions. In the early days of petroleum every barrel of the liquid had to be hauled from the wells to the railroads, sometimes a distance of 10 or 15 miles. The railroads then carried it to distant parts of the country or to the seaboard to be refined and shipped abroad, the cost of all this transportation being from $1 to $3 per barrel. All this work is now done by the National Transit Co., controlled by the Standard Oil Co. When a well is completed, the pipe line's agent connects the well in a few minutes with the main line's tanks. The producer or the owner of the well pays nothing for having his oil transported through the pipe lines, but pays 50 cents per day storage for every 1,000 barrels he has in the tanks of the company, and the consumer or refiner pays 20 cents per barrel upon the receipt of the oil for transportation, so far as Pittsburgh and vicinity are concerned, while the receiver for New York and distant places pays something more. Some of the producing territory is quite remote, and 10 barrels per day would be a very liberal average to allow for a team of horses to transport to the railroads. On this basis the pipe lines displace 5,700 teams of horses and double that number of men in handling the oil, the production of the country being placed at 57,000 barrels per day.

It is very difficult to get at the exact displacement of labor in the manufacture of paper, but a machine now used for drying and cutting, run by 4 men and 6 girls, will do the work formerly done by 100 persons, and do it very much better. This is the testimony of one of the leading houses while another states that the apparent displacement by machinery is illustrated by the fact that 6 men can now produce as much per day on a given sample as 100 men could produce in 1800 or an approximate grade. A well-known firm in New Hampshire states that by the aid of machinery it produces three times the quantity, with the same number of employees, that it did 20 years ago. In the manufacture of wall paper the best evidence puts the displacement in the proportion of 100 to 1.

In pottery, in South Carolina, the product is ten times greater by machine processes than by muscular labor; while in the better grades of pottery, as produced in New Jersey, there has been little or no displacement.

In the manufacture of railroad supplies there has been a displacement of 50 per cent of the labor formerly required, while in some features of the manufacture of cars there has been a displacement of three times the labor now employed. This is the testimony of several well-known firms.

There has been a displacement of 50 per cent in the manufacture of rubber boots and shoes.

In the manufacture of saws experienced men consider that there has been a displacement of three men out of five. Ten years ago grinding was done by hand. Now it is done by machinery.

In silk manufacture 40 per cent represents the displacement, according to some authorities, in the general manufacture, while in weaving there has been a displacement of 95 per cent, and in winding of 90 per cent.

A large soap-manufacturing concern very carefully estimates the displacement of labor in its works at 50 per cent.

Tobacco manufacturing now requires in Illinois but one-eighth the former force of laborers to produce a given quantity. There has been a great displacement of labor in the manufacture of cigars but the exact ratio of displacement has not been ascertained.

In making trunks there has been a displacement of perhaps 5 per cent.

In building vessels an approximate idea of the relative labor displacement is given as 4 or 5 to 1—that is, four or five times the amount of labor can be performed to-day by the use of machinery in a given time than could be done under old hand methods.

In making wine in California, a crushing machine has been introduced with which 1 man can crush and stem 80 tons of grapes in a day, this representing an amount of work formerly requiring 8 men. It would require 4 hand crushers, with 2 men at each, to accomplish this amount of work.

In wooden goods one man with a machine does the work formerly done by three men on hand lathes.

In woolen goods, in the carding department, modern machinery has reduced muscular labor 33 per cent; in the spinning department, 50 per cent; and in the weaving department, 25 per cent. This is during the past few years only, while generally improved machinery in spinning and weaving departments together has displaced twenty times the hand labor formerly employed, and in other departments from five to ten times. In some kinds of spinning 100 to 1 represents the displacement, nearly all concerns agreeing that the displacement during the last 10 to 20 years has been 25 per cent. An establishment in Indiana has worked out the displacement of muscular labor by machinery very carefully and in the following ratio: In weaving woolens, 1 machine equals 6 persons; in spinning, 1 machine equals 20 persons; in twisting, 1 machine equals 15 persons; in picking, 1 machine equals 40 persons; and in carding, 1 set of patent carders will turn out more in 1 day than the old carders would in 1 week. Other houses engaged in the manufacture of the same kind of goods give the same figures.

Very many other features of manufacturing might be cited were the facts necessary for the illustration of this topic. In box making, in all the processes of the manufacture of books and newspapers, in jewelry, and, in fact, in nearly every department of production, statements as positive and emphatic as those made for the industries examined might be secured. There are one or two general illustrations, however, of the most striking nature, which may be considered the epitome of the influence of steam and of power machinery.

The mechanical industries of the United States are carried on by steam and water power, representing, in round numbers, 3,500,000 horsepower (a) each horsepower equaling the muscular labor of 6 men; that is to say, if men were employed to furnish the power to carry on the industries of this country, it would require 21,000,000 men, and 21,000,000 men represent a population, according to the ratio of the census of 1880, of 105,000,000. The industries are now carried on by 4,000,000 persons, in round numbers, representing a population of 20,000,000 only. There are in the United States 28,600 locomotives. (b) To do the work of these locomotives upon the existing common roads of the country and the equivalent of that which has been done upon the railroads the past year would require, in round numbers, 54,000,000 horses and 13,500,000 men. The work is now done, so far as men are concerned, by 250,000, representing a population of 1,250,000, while the population required for the number of men necessary to do the work with horses would be 67,500,000. To do the work, then, now accomplished by power and power machinery in our mechanical industries and upon our railroads would require men representing a population of 172,500,000, in addition to the present population of the country of 55,000,000 or a total population, with hand processes and with horsepower, of 227,500,000, which population would be obliged to subsist on present means. In an economic view, the cost to the country would be enormous. The present cost of operating the railroads of the country with steam power is, in round numbers, $502,600,000 per annum, but to carry

on the same amount of work with men and horses would cost the country $11,308,500,000. These illustrations, of course, show the extreme straits to which a country would be brought if it undertook to perform its work in the old way.

The figures are only interesting because a condition represented by them is utterly impossible. They are to a certain extent valuable to show the enormous benefits gained by the people at large through the application of improved motive power. They illustrate, too, the extreme view of the displacement of labor, which, as already remarked, has been positive and, it may well be said to some extent, permanent. Certainly to the men individually involved the displacement has been severe indeed. It is not necessary to show that all the effects of the introduction of power machinery have been to raise the standard of life wherever the introduction has taken place. It is true that in those countries where machinery has been developed to the highest the greatest number of work people are engaged, and that in those countries where machinery has been developed to little or no purpose poverty reigns, ignorance is the prevailing condition, and civilization consequently far in the rear. These statements are simply facts which common observation teaches. They could be easily illustrated by statistics.

The people at large, and especially those who work for wages, have experienced three great elements of progress along with the establishment of the factory system. In wages and in product the position is well illustrated in the cotton industry. The ratio of cost per pound for labor of common cotton cloth for the years 1828 and 1880 was as 6.77 to 3.31, wages for the same dates being as 2.62 to 4.84; the average consumption of cotton, which indicates the standard of life as well as any one item, was per capita of total population for the year 1831, 5.90 pounds, while in 1880 the consumption rose to 13.91 pounds, this being exclusive of exports. In Great Britain in 1883 the consumption, exclusive of exports, was 6.62 pounds per capita, and in 1880, 7.75 pounds. Working time has been decreased on an average of 12 per cent, while luxuries have become necessaries, and to a very large extent placed within the reach of people of small means. All these points are too familiar to require restatement. They are simply used as illustrative; and yet, if the question should be asked, Has the wage worker received his equitable share of the benefits derived from the introduction of machinery? the answer must be, No. In the struggle for industrial supremacy in the great countries devoted to mechanical production it probably has been impossible for him to share equitably in such benefits. That he has shared greatly as a consumer is true. Much of the saving in production through the apparent and temporary displacement of labor has been applied in raising the quality and perfecting the style of the products. His greatest benefit has come through his being a consumer.

In very many instances the adult male has been obliged to work at a reduced wage, because under improved machinery women and children could perform his work, but the net earnings of his family stand at a higher figure than of old. It is also true that while labor has been displaced apparently in many directions and in many industries machinery has brought new occupations, especially to women. In the introduction of the telephone, errand boys to some extent were displaced from their regular work, but the vast army necessary to carry on the telephone system is much larger than any possible displacement. This is true in so many directions that this one illustration suffices. The apparent evils resulting from the introduction of machinery and the consequent subdivision of labor have to a large extent, of course, been offset by advantages gained; but it must stand as a positive statement, which can not successfully be controverted, that this wonderful introduction and extension of power machinery is one of the prime causes, if not the prime cause, of the novel industrial condition in which the manufacturing nations find themselves.

The direct results, so far as the present period is concerned, of this wonderful and rapid extension of power machinery are for the countries involved overproduction, or, to be more correct, bad or injudicious production; that is, that condition of production of things the value of which depends upon immediate consumption, or consumption by that portion of the population of the world already requiring the goods produced. If England, the United States, France, Belgium, and Germany unitedly produce more cotton goods than can be sold to their regular customers or in the world among people that use cotton goods, overproduction exists, and it does not matter that the millions of human beings who do not consume and who do not desire cotton goods are unsupplied. So far as the factories and the operatives of the countries concerned are to be taken into consideration, there exists a positive and emphatic overproduction, and this overproduction could not exist without the introduction of power machinery at a rate greater than the consuming power of the nations involved and of those depending upon them demand; in other words, the overproduction of goods made with the aid of such machinery, and this represents the condition of those countries depending largely upon mechanical industries for their prosperity. Crippled consuming power, ordinarily known as underconsumption, may result from overproduction, producing lower prices, or from other causes not connected with production in the ordinary sense. Some of these features are considered separately.

An influential cause in producing the condition of things recited as to the abnormal increase of machinery and the development of industrial enterprises has been the facility with which stock companies could be organized. In fact, the modern system of carrying on great works by stock companies has done much toward producing in all countries the bad industrial conditions under which the present generation is laboring. Formerly individual capital and individual enterprise constituted the moving power back of industrial development, and only men of considerable means, or two or three such men under copartnership arrangement, could undertake any very great enterprise, such as the building of great factories, the opening of mines, and undertakings in other directions; but now, under the modern system, when old partnership houses and family proprietors are adopting the joint-stock company basis for action, and many men of small means can contribute to the common stock of a great company, the inducement to push undertakings becomes speculative to a large extent. The depositors in savings banks, where such institutions exist, become indirectly associated with the very concerns they often condemn, and depend for their dividends on their deposits upon the welfare of such corporations. Legislatures have in very many, if not all, of the States of the Union greatly facilitated the organization of such companies through the provisions of general laws, while some have been reckless enough to allow such organizations to be created without regard to the actual capital invested or property owned. The result has been an abnormal organization of capital and of interests aimed at the development of the industries of the country. Material, labor, capital have been overconsumed, and to such an extent that overproduction stands for overconsumption.

EXHIBIT B

[From the Monthly Labor Review (November, 1932) of the Bureau of Labor Statistics, United States Department of Labor]

DIGEST OF MATERIAL ON TECHNOLOGICAL CHANGES, PRODUCTIVITY OF LABOR, AND LABOR DISPLACEMENT

The Bureau of Labor Statistics for several years has been making special studies of man-hour productivity of labor as a means of measuring over a period of time the effect upon output of the changes brought about by increased mechanization and use of power in industry, improvements in processes and methods of work, greater managerial ability, standardization of product, elimination of waste, etc. More recently the bureau's studies have emphasized the actual displacement of labor and decreased employment opportunities resulting from the increased per capita output which has attended these various technological changes. Most of the bureau's productivity studies are first-hand investigations of the various industries. Where that method has not been used material gathered from other sources has been analyzed and interpreted by the bureau to furnish additional authentic data on labor productivity in fields which the bureau itself has not entered—for example, the railroad and mining industries.

To bring together in sequence, by industry, the material on productivity and labor displacement published by the bureau, either in bulletin form or in the Labor Review, the following digest is presented. It covers all the industries except agriculture (an article on the mechanization of agriculture as a factor in labor displacement was published in Labor Review, October, 1931, p. 1), which the bureau has thus far treated in any degree, but attempts to give only the essential—sometimes only the spectacular—facts and figures. Reference is made to the publication in which the detailed report may be found. Unless source material is mentioned, the summary is based upon an original survey by the Bureau of Labor Statistics.

AMUSEMENT INDUSTRY

The introduction of sound in moving-picture theaters displaced musicians entirely in small theaters and resulted in about 50 per cent loss of employment among theatrical musicians in general. On the other hand, the number of operators required to run the sound-picture machines increased. Employment data are not obtainable, but the international union holding jurisdiction over moving-picture machine operators grew in membership from 24,342 in 1926 to approximately 32,000 in 1931.

Sound pictures also completed the elimination of the legitimate theater outside the large cities. Stock companies, which in 1929 numbered 140 throughout the country, were reduced to 80 by December 1, 1930. Vaudeville houses as distinct from moving-picture theaters presenting vaudeville performances have practically ceased to exist, except for the very few "burlesque" houses still operating in some large cities.

Radiobroadcasting affords a degree of compensation for displacement in the amusement industry by furnishing employment to musicians and, to a less extent, to individual performers. (Labor Review, August, 1931, p. 1.)

The introduction of sound pictures into the moving-picture theaters of Washington, D. C., was accompanied by substantial increases in the earnings of licensed machine operators, and by the elevation of assistant and apprentice operators to journeyman status. Musicians, however, lost their jobs because of the installation of mechanical musical devices. In the white theaters about 60 per cent and in the colored houses 91 per cent were thus thrown out of employment. Some 30 per cent of these "technological casualties" were reabsorbed into the musical profession on either a full-time or part-time basis. (Labor Review, November, 1931, p. 1.)

AUTOMOBILE INDUSTRY

Increased production, increased efficiency in organization and equipment, and improved practices and methods in automobile manufacture have made striking reductions in the number of man-hours required to produce a finished automobile. For ex-

ample, comparative figures of the average man-hours required per car in representative establishments show reductions between 1912 and 1923 from 4,664 to 813 in one establishment; and from 1,260 to 228 in another. Data applying only to "productive" workers in still another factory (i. e., those actually engaged in the fabrication of the product) give 97 productive man-hours per car in 1918 and 51 in 1923.

Various machines, devices, and practices have contributed to this end. One of the newer types of metal-heating furnace required 3 men instead of 2, but produced as much heat-treated material as 4 of the older furnaces, thus increasing production per man two and two-thirds times. Machine forging instead of drop forging doubled production per man. A special machine for the manufacture of pressed-steel frames, operated by 1 man, produced 6 frames per minute, or 3,600 in 10 hours, an output which by hand methods would require 175 men. One man with a spot-welding machine is equivalent to 8 hand riveters. One man soldering by hand could finish 2 radiators per hour, while by dipping the radiator into a tank of solder he can do 40 per hour. A change from grinding to honing cylinders increased output per man per day of 9 hours from 21 cylinder blocks to 170 (4-cylinder blocks) in one establishment, and from 27 to 225 in another. Automatic lathes used in the production of crank shafts resulted in an increase of 300 per cent in production per man. In the casting of pistons a machine produced an average of 900 moldings per man per day of 8 hours and required only laborers, while the skilled molder and his helper could average only 200 each per day of 8 hours. An automatic machine with 1 attendant drilled 335 pistons per hour, while on the former type of multiple-spindle machine 1 man drilled 150 pistons per hour.

Improved methods and practices and reorganization on the "assembly-line" plan enabled one automobile-body manufacturer to reduce the number of hours required to produce a body from raw materials from 299 hours to 83 hours, without changing the average number of employees.

An automatic enameling machine usually requires about 30 per cent as much labor as would be required by hand dipping for the same production, and changes the process from a skilled to an unskilled operation. Screw machines have accomplished a change, which reaches a ratio of 1,000 to 1 as compared with production under obsolete methods. (Labor Review, October, 1924, p. 1.)

A change in layout in the foundry of an automobile concern to improve core-making methods increased production in the plant 50 per cent. (Labor Review, August, 1928, p. 41. Review of article in Iron Age, May 31, 1928.)

Standardization and better production methods have lessened the amount of bench work necessary in the fitting of automobile parts. Machine-shop bench hands constituted 3.9 per cent of all wage earners in automobile manufacture in 1922 and only 1.2 per cent in 1930. New methods of painting, lacquering, and finishing automobile bodies have caused marked shifts in occupations of workers. The number of letterers, stripers, and final touch-up painters and varnish rubbers have decreased considerably, while lacquer rubbers, metal finishers, paint sprayers, and sanders and rough-stuff rubbers have increased materially. (Labor Review, February, 1932, p. 248.)

Index numbers of man-hour productivity in the automobile industry from 1904 to 1927, based on the year 1914 as 100 were as follows: 1904, 40; 1909, 35; 1919, 141; 1924, 258; 1925, 280; 1926, 320; 1927, 278. (Labor Review, March, 1930, p. 13.)

BUILDING INDUSTRY

Bricklaying

Man-power productivity in bricklaying in straightaway walls varied (in 1923) from 95.7 bricks laid per hour in Indianapolis and 97.7 in Boston to 231.8 in Norfolk and 241 in Birmingham. The number of square yards of plastering (net area) per man per hour ranged from 4.5 in Boston to 7.8 in Philadelphia, but in most cities the net area plastered per man per hour was about 6 square yards. (Labor Review, November, 1924, p. 1.)

Road building and street work

A compressor machine used in road repair and repaving work, driven by a gasoline motor and equipped with air-compressor drills, cutter, spade, sprayer, and blower, is manned by an operator and one or two laborers. The air-compressor drill will, in less than 35 minutes break a hole in an old paving large enough to permit the spade to begin operating; the same work would require three hours of one man's time with a sledge hammer and pick. A power shovel, of 1¼ cubic yards' capacity, will dig up and dump 93 cubic yards of paving per hour, which is the equivalent of the labor of 62 men working one hour with hand shovels.

On a road-building job in which the most modern road-building machinery was used, the average number of cubic yards of concrete mixed and poured per man-hour was 0.943.

A ditch-digging machine operated by one man, preceded by a laborer to clear the way for the machine, will dig 22 cubic yards of trench per man-hour, an output which would require 44 men working by hand. (Labor Review, December, 1931, p. 1.)

Wrecking of buildings

A labor-saving experiment in a building-wrecking operation, involving the use of a portable 5-ton crane equipped with a 1,500-pound "skull cracker," resulted in the dismissal of 38 of the 50 house wreckers employed on the job, as the crane was accomplishing "the work of 100 men at one-eighth of their cost." With one blow the "skull cracker" accomplished as much as two men in an hour and a half. The 12 men retained tore down windows and doors, sorted salvage, etc. (Labor Review, June, 1929, p. 114. From American Builder, August, 1928, p. 92.)

CIGAR AND TOBACCO INDUSTRY

The machine used in making long-filler cigars produces about the same number of cigars as two cigar makers can produce by the hand method. Fifty per cent of the output of long-filler cigars in the United States is produced on these machines. Each machine requires 4 employees—1 filler feeder, 1 binder layer, 1 wrapper layer, and 1 inspector; and the part-time services of a mechanic and an oiler.

Mass production by machinery has changed the industry from small hand plants to large-scale factories, frequently located in small communities instead of in cities as were the hand plants. In 1930, 0.46 per cent of the factories in operation produced 49.8 per cent of all the cigars manufactured. It is estimated that 21,356 employees had been displaced by 1931. (Labor Review, December, 1931, p. 11.)

In tobacco manufacture as a whole production per worker increased 191 per cent between 1899 and 1925, while volume of production increased 168.7 per cent with 7.7 per cent fewer persons employed. (Labor Review, June, 1927, p. 54. Analysis of Census Data.)

COPPER INDUSTRY

A large copper refinery reported a 10 per cent increase in total output over a 9-year period (1918 to 1927), with a reduction in working force, skilled and unskilled, from 578 employees to 233. The number of pounds of copper refined per man per day was 610 in January, 1918, and 1,612 in August, 1927. (Labor Review, November, 1927, p. 30.)

ELECTRIC LIGHT AND POWER INDUSTRY

The unit of output in this industry is the kilowatt-hour, representing the use of 1,000 watts for 1 hour, or the use of 1 watt for 1,000 hours; hence, output per employee is dependent to a large extent upon the demands of consumers, and the employees are not in a position to control output. Expansion of the industry, however, has resulted in an increased output per employee of 260 per cent as between 1902 and 1927. The principal reasons for this greatly increased productivity are (1) increased size and efficiency and improved construction of the generating units, boilers, and auxiliary equipment, resulting in a proportionately smaller number of employees per unit of equipment; and (2) long-distance transmission, mass production from centralized establishments, and the elimination of small local generating plants.

While installations of larger units and of automatic devices, particularly of mechanical coal stokers, have reduced employment opportunities, this displacement has been offset by the labor demand created through the tremendous expansion of the industry and the increase in activities undertaken to give reliable and uninterrupted service. (Labor Review, August, 1932, p. 249.)

FOOD INDUSTRIES

Bread making

The introduction of machinery "has made the work in the bakery comparatively light and easy, has reduced the number of employees required to operate the bakery, especially the number of bench hands or hand bakers, oven men, and helpers, and has greatly increased production."

Mixing machines, with a capacity of 4 barrels of flour, mix a batch of dough in 12 minutes. The time required to bring together the ingredients contained in a batch of dough and place them in the mixer ranges from 1 to 10 minutes, the most frequent time reported being 5 minutes. The highest production per man per hour, all employees considered, was 103 pounds of bread, and the lowest, 48 pounds. The highest production per baker (i. e., mixers, bench hands, machine hands, and oven men) per hour was 427 pounds of bread, and the lowest, 87 pounds.

High production was achieved in a plant mechanized throughout, which employs very few bench hands, no oven men, and machine hands only at the divider and one at the molder. (Labor Review, December, 1923, p. 1.)

Cane-sugar refining

The index of man-hour productivity in cane-sugar refining fell from 100 in 1914 to 78 in 1919, then advanced steadily until 1926, when it reached 140, falling again to 133 in 1927. Maximum total production occurred in 1926, when the index number stood at 164. (Labor Review, March, 1930, p. 16.)

Flour milling

Index numbers of man-hour productivity in the flour-milling industry from 1904 to 1927 (on the basis of 1914 as 100) ranged from a low of 92 in 1909 to a high of 159 in 1927. Production showed slight variation and the index of man-hours worked fell from 105 in 1909 to 64 in 1927. (Labor Review, March, 1930, p. 15.)

Slaughtering and meat packing

The index number of man-hour productivity in slaughtering and meat packing, 1909 to 1927 (on the basis of 1914 as 100) stood at 115 in 1909 and 126 in 1927. The minimum productivity index was 98 in 1919, and the maximum 127 in 1926. As regards total production the maximum was 147, in 1924 (the productivity index for that year was 125); and the minimum was 100 in 1914. The index of man-hours worked reached its lowest point, 89, in 1909; and its highest point, 136, in 1919, the year of the lowest

productivity. In the year of highest productivity (1926) the index of man-hours stood at 110. (Labor Review, March, 1930, p. 9.)

IRON AND STEEL INDUSTRY

In the merchant blast furnace industry, data obtained from selected plants producing pig iron for sale in the open market show that the average output of pig iron per man-hour in the period 1912 to 1914 was 0.141 gross ton; whereas in 1926 the output had risen to more than twice that figure, or 0.296 gross ton. From 1912 to 1926 the average output per stack day increased from 261.4 to 369.1 gross tons.

Factors contributing to the higher productivity of labor in this industry are the substitution of machinery for hand labor, the abandonment of inferior plants, and the change from the 12-hour to the 8-hour day. The extent to which machinery has been introduced is brought out by the fact that during the pre-war years 1911 to 1914, 15 of the 37 plants studied were hand-filled and sand-cast; while in 1926 only 3 out of 49 plants studied were operated in that manner. (U. S. Bureau of Labor Statistics Bulletin No. 474: Productivity of Labor in Merchant Blast Furnaces, 1928.)

Index numbers of production of blast furnaces in the period from 1850 to 1920 (using 1850 as 100) show that the index of output per man had increased from 100 in 1850 to 3,244 in 1919, or 3,144 per cent. Expressed in long tons, the output increased from 25 tons per man per year in 1850 to 811 tons in 1919. (Labor Review, July, 1922, p. 6.)

Productivity indexes for blast furnaces for the period 1899 to 1925, based on the year 1909 as 100, are as follows: 1899, 55; 1904, 74; 1914, 126; 1919, 120; and 1923, 194. For steel works and rolling mills, the indexes are: 1899, 61; 1904, 68; 1914, 96; 1919, 97; and 1923, 132. The indexes for both blast furnaces and steel works and rolling mills combined were: 1899, 60; 1904, 69; 1914, 100; 1919, 100; 1923, 139; and 1925, 159. (Labor Review, December, 1926, p. 31.)

Man-hour productivity in the blast-furnace industry, as indicated by data covering plants producing 95.8 per cent of the total blast-furnace output in the United States in 1929, is directly influenced by the size of the plant, the degree of mechanization, the kind of ore handled, the character of the labor force, and the wages paid. In the plants paying the highest wages the man-hour productivity was eleven times as great as in the lowest-wage plants. Plants with the smallest average horsepower showed the smallest average output per plant and the smallest output per man-hour (0.387 ton), whereas the plants with the largest horsepower showed the largest output per plant and per man-hour (0.759 ton). The average output per man-hour for the entire industry, all States considered, was 0.589 ton. The highest average output per man-hour, by States, was 0.920 ton in Indiana, where 524 wage earners in 3 establishments produced an average output per establishment of 1,425,920 long tons of pig iron in 1929. In Alabama, the lowest productivity State (0.351 ton per man-hour), 240 wage earners in 10 establishments produced an average output per establishment of 270,592 long tons. (Labor Review, August, 1932, p. 260. Based on 1929 Census of Manufactures.)

The growth of the iron and steel industry is indicated by the following figures based on census data: The per cent of increase from 1899 to 1925, in physical volume of production, was 204.4; in number of persons engaged, 145.8; in primary horsepower, 307.5; and in production per person engaged, 23.9. "Number of persons engaged," however, includes proprietors, executives, clerical force, etc., as well as direct labor. (Labor Review, June, 1927, p. 54.)

Index numbers of man-hour productivity for the period from 1899 to 1927, using 1914 as 100, are: Blast furnaces, 44 in 1899, 80 in 1909, 85 in 1919, and 203 in 1927; steel works and rolling mills, 63 in 1899, 104 in 1909, 96 in 1919, and 146 in 1927. (Labor Review, March, 1930, p. 2.)

Productivity of labor in the sheet department of the iron and steel industry showed a steady gain in average output per man-hour from 1925 to 1929, except in the annealing operations. For bar shearing, the increase was from 1.893 net tons per man-hour in 1925 to 2.200 in 1929, or 16 per cent; for cold rolling, from 1.159 to 1.480 net tons, or 12 per cent; for sheet pickling, from 0.702 to 0.857 ton, or 12 per cent; and for hot rolling, from 0.072 to 0.077 ton, or 7 per cent. In the annealing department the gain in output per man-hour was more than offset by the increased labor time required to meet the increasing demand for full-finished sheets of deep-drawing quality.

Among the factors affecting productivity are the substitution of machinery for labor, better-designed machinery, improvement in management, working conditions, etc. In general, however, the real gain in labor productivity due to improvement in technology and management was obscured by the increase in labor time required in the production of high-grade sheets for use in the manufacture of automobile bodies, electric refrigerators, and metal furniture. (Labor Review, January, 1932, p. 19.)

Output per man-hour in one steel plant shows the following per cent of increase in 1926 over 1902: In ore unloading, 706.7; in blast furnaces, 277.3; in Bessemer ingots, 99.8; in all open-hearth ingots, 66.0; and in the rail mill, 120.1. "The average man in a modern iron and steel plant is producing from one and a half to eight times as much as he did 25 years ago." (Labor Review, December, 1927, p. 61. Quoting Theodore W. Robinson, of the Illinois Steel Co.)

Modern methods of molding have "obviated much of the molder's skill, as well as many hours of labor." Under former processes "it took the molder * * * and his helper a week to make the largest radial drill bases. * * * At the present time the same type of base is made in one day by a molder and a helper." (Labor Review, March, 1927, p. 23.)

In 1925 an increase of 44 per cent in the number of workers over the number employed in 1850 increased the output of pig iron 7,178 per cent above that produced in 1850. Production per man increased 4,928 per cent. "Stated differently, the number of wage earners in blast furnaces in 1850 was 882 per million of population. In 1921, which, however, was a slump year, there were 173 wage earners in this industry per million of population." (Labor Review, June, 1928, p. 29.)

LEATHER INDUSTRY

Index numbers of man-hour productivity in the leather industry for specified years, on the basis of 1914 as 100 are: 1899, 93; 1909, 92; 1919, 102; 1921, 130; 1923, 138; and 1927, 141. During the same period the index numbers of man-hours ranged from 92 in 1899 and 117 in 1919 to 86 in 1927, with a minimum of 80 in 1921; while production increased from an index of 86 in 1899 to 134 in 1923. The production index in 1927 was 121. (Labor Review, March, 1930, p. 8.)

Between 1923 and 1931 quantity output per hour in the leather industry increased materially. This increase ranged, in the various branches, from a little over 4 per cent in the manufacture of sheepskins to more than 27 per cent in the manufacture of side leather. For the whole industry the increase was approximately 15 per cent.

Technological development has not been an important factor in the industry, and skilled hand labor is still a requisite. Most of the machines now in use in tanneries had been introduced in much their present form at least 30 or 40 years ago, hence mechanization has played only a small part in increasing output. The principal cause of the increase has been the improved management of labor and the accompanying taking up of slack in the expenditure of the time of the labor force. The estimated displacement between 1923 and 1931 due to greater efficiency was 6,685 workers. (Labor Review, September, 1932, p. 1.)

LUMBER INDUSTRY

The number of man-hours (all employees) required per 1,000 board feet of lumber produced ranged from 20.15 in Georgia to 8.54 in Oregon, and averaged 12.71 for 22 States. These sawmill operations began with the log in the pond and ended with the lumber stacked in the yards or loaded on cars. (Labor Review, January, 1923, p. 1.)

Index numbers showing production of lumber per person engaged in the industry, based on census data and using 1919 as 100 are: 1899, 121.7; 1904, 125.3; 1909, 120.6; 1921, 108.1; 1923, 111.3; and 1925, 120.7. (Labor Review, June, 1927, p. 54.)

Data regarding man-hour rates of production for the lumber and timber products industry in California, Oregon, and Washington in 1929 were collected by the Bureau of the Census in its biennial census of manufactures for that year. The study was confined to large mills, as only establishments which reported products valued at $100,000 or more were covered by the Census Bureau.

The measure of physical output in the lumber industry is a thousand board-feet. Efficiency, as measured by man-hour productivity, depends largely upon the extent of mechanization. In fact, the most reliable indicator of efficiency in this industry is horsepower per wage earner employed, the increase in productivity with increase in horsepower per wage earner being appreciable. Thus, Oregon, where the average horsepower per wage earner was 7.1, ranked highest in productivity, showing an average output of lumber, in thousand board-feet, of 0.062 per man-hour. The lowest output per man-hour was 0.035 in California, where the average horsepower per wage earner was 5.5. Washington, while showing a somewhat lower average horsepower per wage earner employed than California (5.2), had a higher productivity rate (0.052 per man-hour). These figures apply to mills which did their own logging. The average output of lumber (in thousand board-feet) per man-hour in mills which bought their logs was 0.084 in California, 0.129 in Oregon, and 0.131 in Washington. (Labor Review, October, 1932, p. 818. Based on data supplied by the Bureau of the Census from the Census of Manufactures for 1929.)

MINING INDUSTRY

Coal mining

Technological changes: In 1926, 1.8 per cent of the total production of all bituminous mines in the United States was mechanically loaded according to the weekly coal report of the United States Bureau of Mines for the week of April 21, 1928. In some States, however, a considerable part of the output was loaded by machine. In Wyoming, for example, 17.6 per cent of the State output was loaded mechanically. In Indiana 13 mines making extensive use of loading devices handled 89.4 per cent of their output mechanically. (U. S. Bureau of Labor Statistics Bul. No. 491: Handbook of labor statistics, 1929 edition, p. 640.)

In 1930, the percentage of bituminous output loaded by machine had increased to 5.2, as shown by the bituminous coal tables of the Bureau of Mines for 1930. Wyoming had increased its mechanical loading to 41.5 per cent of its deep-mined output, while Alabama, which in 1926 applied mechanical loading to only 0.5 per cent of its output, had advanced to 1.4 per cent in 1930. "The high-wage-rate fields of the Rocky Mountains and the Middle West lead in the proportion of output produced by mechanical mining." (Labor Review, March, 1932, p. 558.)

The average output per man per day in coal mining in 1929 ranged from 1.43 tons in North Carolina to 10.34 tons in North Dakota, and averaged 5.63 tons for all States for underground

workers; the average output on the basis of all employees (underground and surface) ranged from 1.25 tons in North Carolina to 7.90 in Montana, and averaged 4.85 for all States combined.

The productivity of the coal getter is determined largely by the extent to which machinery is employed. In North Carolina, the low-productivity area, 39 per cent was mined by hand, 61 per cent was shot off the solid; no machines were used. In Montana 49.9 per cent of the output was machine cut, but 35.8 per cent was from strip mines; only 0.3 per cent was mined by hand.

Taking the industry as a whole, the percentage of coal cut by machine in 1929 was 75.4 per cent, as against 50.7 per cent in 1913 and 73.8 per cent in 1928. Machine cutting, however, is only part of the story. The use of mechanical loaders increased 75.6 per cent for the entire country between 1928 and 1929: 161.8 per cent in Illinois, 57.9 per cent in the bituminous fields of Pennsylvania, 35.8 per cent in Kentucky, and 23.2 per cent in West Virginia.

Mechanization of coal mines is responsible for most of the increase in output during the past 40 years. The output in the bituminous coal fields of the United States per man per day, all employees considered, was 2.56 tons in 1890, or an average of 579 tons per man per year. In 1929 the average output for the entire country, all employees considered, was 4.85 tons per day, or 1,064 tons per year. In the anthracite field the increase was from 1.85 tons per man per day, or 369 tons per year, in 1890, to 2.17 tons per day, or 487 tons a year, in 1929. At the same time working hours per day decreased from an average of 10 hours in 1890 to 8 hours in 1929. (Labor Review, December, 1930, p. 37. Based on data and reports of the U. S. Bureau of Mines.)

Bituminous coals of all grades are now produced from strip mines, and the per cent of total bituminous output produced by these mines increased from 0.6 in 1915 to 4.0 per cent in 1928, and "no immediate limit to the expansion of stripping is seen." More than one-third of the output is stripped by electrical equipment, with which the average output per man per day was 13 tons in 1928. In the Rosebud field of Montana an average of 48 tons of coal per man per day was mined from strip mines. The time required to produce a ton of coal was 0.65 man-hour in strip mines and 1.75 man-hours in deep mines. (Labor Review, July, 1931, p. 85. Review of U. S. Bureau of Mines, Economic Paper No. 11.)

Labor productivity: Data covering 9,817 pick miners in 118 mines throughout the United States for a 2-week pay-roll period in 1919 show the productivity of hand labor in bituminous mines. The average output per miner for all coal fields was 6.8 tons per day of eight hours; the minimum output was 2.6 tons in a 22-inch seam in a Missouri mine; and the maximum, 12.9 tons in a 6-foot seam in Pennsylvania. (Labor Review, February, 1921, p. 1.)

The lowest productivity rate in mining coal in Illinois in the 11-year period, 1918–1928, was in 1922, when the average output per man per day was 4.8 tons. The highest rate, 6.9 tons per man per day, was achieved in 1926. In 1922, 98,681 men employed in 1,133 mines produced an average of 472,215 tons per day, while in 1926, 77,732 men in 921 mines averaged 532,925 tons per day. (Labor Review, October, 1929, p. 59. From Forty-seventh Illinois Coal Report.)

The man-hours required to produce 1 ton of bituminous coal show a steady decrease from 2.472 in 1911 to 1.668 in 1929. Productivity in anthracite mining does not vary markedly; the time required to produce a ton of anthracite was 3.754 man-hours in 1911 and 3.694 in 1929. This does not represent a maximum and minimum productivity rate, as was the case of the 1911 and 1929 rates in bituminous mining; the highest number of man-hours required to produce 1 ton of anthracite (4.362) occurred in 1914; and the minimum (3.465) in 1922. (Labor Review, April, 1931, p. 79. Abstract of U. S. Bureau of Mines, Report of Investigations No. 3082, January, 1931.)

Anthracite workers employed underground were producing 2.63 tons per day worked in 1930 as compared with 2.75 tons in 1911. In bituminous coal mining, on the other hand, the output per day of underground workers increased 39.9 per cent between 1911 and 1930, from 4.01 tons to 5.61 tons. High productivity rates in 1930 were found in Wyoming (7.4 tons) where 48.6 per cent of the total output was loaded mechanically; Montana (7.16 tons) where 62.6 per cent was so loaded; and in Illinois (6.57 tons) where 48.3 per cent was thus loaded. (Labor Review, February, 1932, p. 292. Based on reports of U. S. Bureau of Mines.)

PRINTING AND PUBLISHING INDUSTRY

Government Printing Office

Increased efficiency and the improvement of equipment enabled the Government Printing Office to produce, in the 6-year period, 1921–1926, with 340 fewer employees, $8,000,000 more work than was turned out in the preceding 6-year period, 1915–1920. The printing division set 30,495,400 more ems of type in 1926 than in 1925; at the same time 140 fewer operators were employed and overtime was decreased 1,328 hours. The estimate is made that 1,200 compositors would be required to set by hand the quantity of type set annually by the 377 machines in the Government Printing Office. (Labor Review, April, 1927, p. 28. Based on annual report of Public Printer for year 1926.)

Newspaper printing

High-speed machinery is the outstanding characteristic of the mechanical production of newspapers. While most of the inventions and improved equipment introduced since 1896 have been designed primarily to shorten the interval between receipt of news and its distribution to the public in newspaper form, the improvements have also affected labor productivity.

Composition by the hand method of 1896 on 4 present-day newspaper pages would require 40 employees working 10 hours. In 1916, 26 employees working 8 hours and using both machine and hand methods would have produced the same output, while the same job in 1926 required 21 employees working 7 hours.

Stereotyping consists of two separate operations—the molding of matrices and the casting of plates. The number of plates cast depends upon the number of presses to be operated and the numerical size of the edition to be run off. As circulation increases, more plates are necessary. Man-hour productivity is less important than clock time in the stereotyping department of a large daily paper. A decrease from 1916 to 1926 of 50 per cent (from 8 minutes to 4 minutes) in the actual time required to mold the matrix from the type and deliver the first plate to the press room was accompanied by a loss of 6 per cent in man-hour output of all employees engaged in stereotyping.

Comparative figures relative to output on the hand press and the early rotary press show that in 1896, 25 employees were required to print and fold 10,000 copies of a 4-page paper in 10 hours by hand methods, while 3 employees working on the rotary press of that period produced the same unit in 1 hour. In 1916 it required 1.79 man-hours to produce 10,000 copies of a 4-page section, while in 1926 the same output took 1.66 man-hours.

In 1896, before stereotyping was introduced, composition by the hand method, presswork on hand presses, and folding by hand 10,000 copies of a 4-page newspaper involved an average of 635 man-hours. In 1926 the same number of copies of a printed and folded 4-page newspaper, requiring the combined processes of composition, stereotyping, and presswork, required an average of 174.4 man-hours, an increase of 264 per cent in output per man-hour. Thus, where 71 employees were required for 9 hours by the hand method in 1896, only 25 employees for 7 hours were necessary under machine production in 1926. Productivity per unit of measurement (i. e. 10,000 copies of a 4-page paper) in one establishment was: Composition, 204.3 man-hours in 1916, and 145.2 man-hours in 1926; stereotyping, 8.9 man-hours in 1916, and 10.6 man-hours in 1926; presswork, 1.8 man-hours in 1916, and 1.7 man-hours in 1926. The total man-hours involved in all three processes had been lowered 26.8 per cent.

While technological changes tend to displace labor, such has not been the result in the newspaper business. Improved facilities and the enormous increase in output made possible by power machinery have so expanded the market and enlarged the business that the demand for labor has increased greatly. One daily journal published 26,000 copies of a 4-page, 6-column paper in 1852, with "40 compositors and a handful of pressmen, fly boys, and other labor." In 1926 the mechanical staff alone employed by the same paper numbered 1,700, of whom 325 were compositors. Daily production of a paper averaging sixty-two 8-column pages (including daily and Sunday issues) amounted to 390,000 copies. (U. S. Bureau of Labor Statistics Bul. No. 475: Productivity of labor in newspaper printing.)

Transmission of news

More telegraphers engaged in the transmission of news have in the past 15 years been largely superseded by operators of the printer telegraph (teletype). This instrument is operated very much like a typewriter, and not only sends messages but prints them upon receiving machines, thus eliminating the telegrapher at the receiving end, because reception is automatic. The sending machine in teletype operation can transmit to as many receiving machines as its circuit carries. The speed of the printer is about twice that of the Morse operator.

Because of the growth of press associations, chain newspapers, and news-feature syndicates, all of which call for large sending organizations, the number of Morse operators engaged in newspaper work increased from 1,114 in 1915 to 1,549 in 1922. After the latter year the adoption of the printer telegraph (teletype), which had been introduced in 1915, grew rapidly. By 1931 only 586 Morse operators were employed by the principal news organizations. Teletype operators, on the other hand, who had numbered only 11 in news work in 1915, had increased to 335 in 1931. If Morse operators were required to render service equivalent in speed and sustained effort to that now possible with the teletype, 3,737 telegraphers would be necessary to do the work now done by 243 printers (i. e., 335 operators reduced to an equivalent full-time basis). "Expressed in another way, the productivity of the operator of the printer telegraph is more than fifteen times as great as the productivity of the Morse operator in this particular field." Fewer than 40 Morse telegraphers employed by press associations were retained as printer operators. (Labor Review, April, 1932, p. 753.)

Commercial printing

The installation of automatic feeders on printing presses and the introduction of self-feeding presses was not important up to 1913. In the 16 years following 1913, however, the increase was so rapid that two-thirds of all new installations of presses in commercial printing were mechanically fed. A study of two winter periods, 1923–24 and 1928–29, shows that notwithstanding this technical change the number of men employed in commercial press rooms increased more than the number of presses. In 1924 an average of 99.2 men were employed per 100 presses, while in 1929 the average was 100.7 men per 100 presses. Further data suggest a pronounced change in occupation if not in employment. Between 1924 and 1929 pressmen gained 4.6 men per 100 presses, while the assistants (feeders) show a net loss of 3.2 men per 100 presses—11.4 hand feeders lost and 8.2 automatic-feeder operators gained per 100 presses. In some cases employers are reducing the

number of presses a pressman is required to attend, so that he may also operate the feeding machine; this, of course, means fewer feeders and more pressmen, and consequently more skilled labor. (Labor Review, February, 1931, p. 78. Review of study in American Economic Review, September, 1930, pp. 442–466.)

SHOE INDUSTRY

The time required to make 100 pairs of shoes by the hand methods of 1863 was 1,831 hours, 40 minutes; by the hand and machine methods of 1895 it was 236 hours, 6 minutes; by the machine methods of 1916 it was 142.7 hours; and by the machine methods of 1923 it was 106.9 hours.

"The modern factory of to-day, with its power-driven machinery, can turn out 75,000 pairs [of shoes] every workday in the year." (U. S. Bureau of Labor Statistics Bul. No. 360: Time and labor cost in manufacturing 100 pairs of shoes.)

Man-hour productivity in the boot and shoe industry increased 24 per cent between 1914 and 1927 and 8 per cent between 1925 and 1927. (Labor Review, March, 1930, p. 1.)

STONE, CLAY, AND GLASS INDUSTRIES

Index numbers of growth of stone, clay, and glass products from 1899 to 1925, based on census data and using 1919 as 100, show an increase in physical volume of production from 67.3 in 1899 to 179.1 in 1925, or 166.1 per cent. Production per person engaged increased 58.1 per cent from 1899 to 1925 (from an index of 98.4 to 155.6), while the number of persons engaged in the industry increased 68.3 per cent. The number of persons engaged in the industry increased 15.1 per cent from 1919 to 1925, while in the same period production per person engaged increased 55.6 per cent and total production increased 79.1 per cent. (Labor Review, June, 1927, p. 54.)

Brickmaking

The time required in 1924 per 1,000 bricks in the stiff-mud process was 6.82 man-hours, in soft-mud process 8.74 hours, and in the dry-clay process 10.81 hours.

A large, efficiently organized plant equipped with the best improved machinery produced 249 bricks per man-hour, or 1,000 bricks in 4.02 hours; while a small, inadequately equipped plant not well organized or operated produced 56 bricks per man-hour, and required 17.73 man-hours to turn out 1,000 bricks. (United States Bureau of Labor Statistics Bulletin No. 356: Productivity Costs in the Common-Brick Industry, 1924.)

A brick-making machine can make 49,000 bricks per hour and has a potential labor displacement of 80 per cent. (Labor Review, July, 1924, p. 4.)

Glass manufacture

In no other industry has the introduction of machinery had a more dramatic effect upon labor productivity than in the glass industry. Comparative data on productivity and labor costs in hand and machine production for each of the five branches into which the glass industry is divided—i. e., bottles and jars, pressed ware, blown ware, window glass, and plate glass—were shown by a study of the glass industry made by the United States Bureau of Labor Statistics. The following examples indicate what has taken place in this industry:

A hand shop, consisting of three skilled workers (a gatherer, a blower, and a finisher) and four helpers, produced on the average 3.75 gross of 4-ounce prescription ovals in an hour. The 1925 average output of the most up-to-date Owens automatic machine was 69.754 gross of 4-ounce prescription ovals per hour. The average output of the hand shop was 0.536 gross per man per hour, while with the automatic machine the average was 22.028 gross per man per hour, or more than forty-one times as much as in the hand process.

The average output of table tumblers per man per hour in hand manufacture, using the side-lever press, was 31 pieces. An automatic machine with an automatic conveyor produced 380.71 pieces of the same article per man per hour, or more than 12 men could produce in an hour on the hand press.

An automatic machine produced 1,703.59 electric-light bulbs per man per hour, which is over thirty-one times as many as could be produced in the same time by the hand process. An automatic sheet-drawing machine will produce window glass at two and one-half times the rate of production of the hand process.

In the course of the 25 years (1899 to 1925) in which the change from hand manufacture to semiautomatic and then to automatic machine production took place, the number of establishments in the glass industry decreased 12.7 per cent, while the number of wage earners increased 31.3 per cent and the average number of wage earners per establishment increased 50.3 per cent. Under hand manufacture, the glass industry operated almost wholly on a small-unit basis, but with the introduction of machinery that condition changed entirely. Large-scale production has converted the industry into a well-integrated one, with large plants representing large capital investment.

The most pronounced change in the industry has been in the character of the labor force. Hand production called for highly specialized skill and a long apprenticeship, and the common labor necessary was done in large part by children. Under machine production the workers are mechanics and machine operators, and child labor has been wholly eliminated. (U. S. Bureau of Labor Statistics Bul. No. 441: Productivity of Labor in the Glass Industry, 1927.)

In 1925 the comparative output of plate glass per employee in the United States was 9,698 square feet, as against 4,430 square feet in Belgium. (Labor Review, June, 1927, p. 116. Based on report of U. S. Tariff Commission.)

Pottery manufacture

In the manufacture of semivitreous ware, productivity is expressed in crew-hours rather than in man-hours. The average production of 7-inch plain-edged plates, based on data for 58 crews, was 28.1 dozen plates per crew-hour, the crew consisting of a jigger man, a batter-out, a mold runner, and a finisher, and a clay carrier for part of the time. The maximum production, reached by five crews, was 32 to 36 dozen; and the minimum production, averaging less than 20 dozen plates per crew-hour, was reported for two crews. The average production of saucers by 48 crews similarly constituted was 42.8 dozen per crew per hour; one crew attained a maximum production of 50 to 52 dozen; the two crews with the lowest production turned out between 32 and 36 dozen saucers per crew per hour. Crews making teacups consisted of a jigger man, a baller, and a mold runner, and a clay carrier part of the time. Data for 42 crews showed an average production of 53 dozen cups per crew-hour; the maximum production was 68.8 dozen (one crew) and the minimum 32 to 34 dozen. (U. S. Bureau of Labor Statistics Bul. No. 439: Handbook of Labor Statistics, 1924–1926, p. 542.)

Since the war the successful introduction of a casting process in the manufacture of certain hollow ware has eliminated the skilled hand worker in the sanitary branch of the industry. After three weeks' training an unskilled worker using this process can cast more pieces in a day than a skilled craftsman can make by the hand method. (Labor Review, November, 1927, p. 43. Review of article in Journal of Political Economy, August, 1927, pp. 522–542.)

Data on productivity of labor in an English pottery show a maximum output of 192 plates per crew per hour. A crew consists of one jigger man and a mold runner and a finisher, both of whom are women. (Labor Review, December, 1926, p. 114.)

Productivity figures in the pottery industry in Germany are based upon output per man instead of per crew. Working alone and doing his own finishing, a jigger man will make three thousand 7-inch plates or 4,800 saucers in a 48-hour week. A jigger man and a spreader working together can turn out 7,800 saucers in a 48-hour week. A jigger man working alone can in a week make 3,300 cups and finish the edges. One person working alone will cast and place handles at the rate of 3,300 cups per week. (Labor Review, December, 1926, p. 129.)

TELEPHONE AND TELEGRAPH INDUSTRY

Telephone

The complete substitution of the dial telephone system for the manual system will apparently decrease employment opportunities for operators by about two-thirds. In 1921 dial telephones formed 2.7 per cent of the total number in the Bell system. The number of operators in the Bell system was 118,470, and they handled an average of 1,260,619,367 calls (local and toll combined) per month, or 10,641 per operator. In 1930, 31.9 per cent of the total number of telephones in the Bell system were dial operated, and 143,979 operators were employed. They handled an average of 2,270,756,065 calls per month, or 15,771 per operator, an increase of 48.2 per cent over the operator productivity of 1921.

If the number of connections demanded in 1930 had been made manually on the basis of the output per operator prevailing in 1921, 69,421 additional operators would have been needed. Hence the lost employment opportunities represented by actual installations is 32.5 per cent. With the extension of the dial program, however, the per cent of loss of employment opportunities will not keep pace with the per cent of automatic installations, because operators will still be needed for special services, long-distance connections, etc. (Labor Review, February, 1932, p. 235.)

Telegraph

Commercial telegraphy: The printer telegraph has reduced the proportion of Morse telegraphers in commercial telegraph offices to 21.5 per cent of all operators. By 1931 printer circuits accounted for nearly 90 per cent of all commercial-message handlings of one large company. In the principal telegraph offices the productivity of printer operators average about twice that of Morse operators, with a resulting technological displacement of about 50 per cent. This means not only the elimination of the skilled Morse telegrapher but the substitution of women for men. The training required to operate a printer telegraph is practically the same as for operating a typewriter, and any good typist can operate a teletype.

At the end of June, 1931, in all of the commercial telegraph offices of the major companies, there were 3,678 Morse manual operators, constituting 21.5 per cent of the total number of operators employed. Of these 3,678 Morse operators, 83.9 per cent were men. Multiplex printer operators numbered 5,127, or 30.1 per cent of the total number of operators. Women comprised 83.6 per cent of the multiplex printer operators. The largest single group was the simplex printer operators, who numbered 8,249 and represented almost half (48.4 per cent) of the total number employed. Of these, 66.6 per cent were women. In 1931 women constituted 60.8 per cent of the total of all classes combined, while in 1902, when the Morse system was used exclusively, only 22.3 per cent of the operators were women.

One leading telegraph company instituted training schools to give Morse operators the opportunity to learn the simplex method of telegraphy. At the end of July, 1931, as a result of that policy, 31.2 per cent of the total number of simplex operators employed in functional offices were former Morse operators. Of the male simplex operators so employed 58.8 per cent had changed from the Morse to the new system. (Labor Review, March, 1932, p. 501.)

Ticker telegraphy: The new high-speed ticker for handling stock-market quotations is a most remarkable labor-saving mechanism. For example, on a given day, with 17 operators, it automatically printed the New York Stock Exchange quotations on 8,623 stock tickers in 43 States and Territories and in Canada, with circuits in 377 cities. The 17 operators also handled the transmission of bond quotations, which were automatically recorded on 928 bond tickers.

In 1890 some 395 tickers were in daily use in the financial district of New York City, employing 8 operators and 12 other employees. In 1930 the number of tickers had increased to 3,812, the number of operators to 17, and the total number of employees to 157. Taking 1890 as the base, or 100, the index of changes in output per operator ranged from 100 in 1890 to 1,695 in 1930, practically a 1,600 per cent increase, while the productivity of all employees combined ranged from 100 in 1890 to 459 in 1930, more than a 350 per cent increase. Taking 1920 as the base, or 100, the index of productivity of operators more than tripled, ranging from 100 in 1920 to 311 in 1930, while the index for all employees ranged from 100 in 1920 to 145 in 1930. On the basis of 1890 productivity, 288 operators instead of 17 would be required for the output of 1930; on the basis of 1920 productivity, 53 operators would be required for the output of 1930.

Actual displacement, however, exceeds hypothetical displacement. Outside of a few great centers, particularly the financial district of New York, both the transmission and reception of market quotations were formerly handled by Morse telegraphers who served newspapers and brokers' offices. This service has now been almost entirely eliminated by the use of tickers and teletype service. Reception in many brokers' offices is now handled by the "teleregister," a device which automatically displays market changes in customers' offices, and by a magnified and illuminated projection of the moving ticker tape on a screen. By 1931 teleregisters had been installed in more than 200 brokers' offices as far west as Chicago, with remoter installations planned, all handled by a single operating center in New York City. The extent of displacements as a result of these various technological changes can not be measured statistically, but in the aggregate it is very large. (Labor Review, June, 1932, p. 1269.)

Private-wire systems: Private-wire systems include private telephone exchanges, railroad wires, leased wire circuits of news agencies, the lines of brokers and investment bankers, networks used for transmitting radio programs, and wires used for interior communication in industrial establishments, institutions, etc. Private branch exchange telephones, while increasing in number, have continued in practically the same ratio to the total number of telephones in the Bell system since 1921, constituting about 19 per cent of the total. In large cities the proportion of private branch exchanges is much larger than for the entire country. The number of operators required to handle private branch exchange business was estimated by telephone officials in 1931 at 135,000 for exchanges connected with the Bell system, and at 145,000 for the entire country. Information on the extent of transition from manual to dial operation in private exchanges is not readily available, but it has not been so material as in the public exchanges. Private telephone employment has thus provided opportunities for telephone operators displaced by the machine in the wider field of public service. With the progressive extension of automatic operation to private exchanges, however, those opportunities will necessarily shrink. (Labor Review, July, 1932, p. 9.)

Railroad telegraphy

News transmission

See under Printing and Publishing.

TEXTILE INDUSTRY

Census data indicating the growth of the manufacture of textiles and their products show the following percentages of increases from 1899 to 1925: In physical volume of production, 96.5; number of persons engaged, 63.5; primary horsepower, 190.4; and production per person engaged, 20.2 per cent. (Labor Review, June, 1927, p. 54.)

Ribbons

A comparison of average output per man per hour in ribbon weaving in two selected periods in 1920 (February and April), between which a reduction in working hours had occurred, shows that 1.25 yards of 4½-inch satin taffeta ribbon were produced per man-hour in February, and 1.4 yards in April; 1.023 yards of 7-inch satin ribbon in February and 1.043 in April; and 1.137 yards of 5¼-inch taffeta in February and 1.095 in April. (Labor Review, July, 1922, p. 9.)

Cotton

A comparative study of labor productivity covering one mill manufacturing gray cloths, for a specified pay-roll period in 1911, 1916, and 1925, showed that the output of yarn for the entire process was 10.08 pounds per man-hour in 1911, 10.57 pounds in 1916, and 11.59 pounds in 1925. In spinning only, the productivity per man-hour for these three years was 45.09 pounds, 43.12 pounds, and 48.60 pounds. Productivity of weavers per man-hour, expressed in pounds, was 13.65 in 1911, 16.53 in 1916, and 24.49 in 1925. The output of cloth (entire process) was 7.95 pounds per man-hour in 1911, 8.26 pounds in 1916, and 10.31 pounds in 1925. Productivity per man-hour in the cloth finishing department, expressed in pounds, was 56.62 in 1911, 74.63 in 1916, and 63.40 in 1925; expressed in yards it was 135.47 in 1911, 192.38 in 1916, and 158.14 in 1925.

Productive labor in this study included supervisory employees (overseers and superintendents), machinists, engineers and firemen, carpenters, electricians, watchmen, and any others necessary to plant operation, as well as textile operatives.

The general increase in man-hour productivity during the 15-year period was due in great measure to the installation of modern equipment or labor-saving devices. To a considerable extent, also, it was due to better organization of the plant and more efficient management of the work. Changes and improvement in equipment in the spinning department between 1911 and 1916 called for additional workers. While apparently the personnel of that department was increased by 29 between 1911 and 1916 and by a few more between 1916 and 1925, the number of full-time workers shows an increase of only 3 between 1911 and 1916, and a reduction of 13 between 1916 and 1925. This decrease was due to the elimination of spare hands.

The introduction of automatic looms in the weaving department resulted in displacing 26 full-time weavers between 1911 and 1916, although 150 more looms were in operation in 1916 than in 1911. Further increases in the number of looms between 1916 and 1925 reduced the number of full-time weavers from 188 to 150, and one loom fixer was dropped, but with the addition of workers in maintenance operations the actual reduction of the weave-room force was 24. Improved inspection methods resulted in an increase of 11 in the cloth-inspection force between 1916 and 1925, but other workers were dropped, making a net increase of 7 in the finishing department. (Labor Review, September, 1926, p. 7.)

Data on man-hour production of cotton sheeting of standard grade (40-inch width, 47 picks to the inch) in the same establishment from 1838 to 1925, as given in a study made by the research department of the Women's Educational and Industrial Union of Boston, show the following changes: 1838, 0.98 pound; 1850, 1.21 pounds; 1876, 2.25 pounds; 1890, 3.31 pounds; 1910, 5.00 pounds; 1919, 4.98 pounds; and 1925, 7.53 pounds.

The increase of 88 per cent in productivity in 1876 over 1850 followed technical improvements in the industry, the most notable of which were the change from throstle to ring spinning and the introduction of multiple-loom operation resulting from the invention of the first stop-motion device. The next period of marked increase in productivity was 1919 to 1925, showing a 111 per cent increase in 1925 over 1919. During this period a new, up-to-date mill was erected, equipped with the most modern machinery and planned by efficiency engineers to eliminate unnecessary processes and to coordinate movements of material and workers.

In 1910, 302 weavers were employed in the weave room; in 1925 there were 66 weavers, 47 weavers' helpers, and 34 workers in new occupations created by the power looms. The work of the weavers in 1925 consisted entirely in watching the passage of the cloth through the looms and tying broken ends. The shuttles were threaded by the weavers' helpers. The average number of workers employed in the mill was 35.5 per cent lower in 1925 than in 1919, and the output per man per hour was 19.9 per cent higher. (Labor Review, October, 1926, p. 21.)

Woolen and worsted

A large proportion of the woolen and worsted manufacturing plants in the United States perform all the processes of manufacture from the wool in the grease to the completed cloth packed ready for shipment. In the European countries the work is much more specialized. Some plants are spinning mills only, some weave only, and some do dyeing and finishing only. Only a small proportion of the establishments carry out all the processes of cloth production. The automatic loom is quite generally used in American worsted mills, but has been adopted to a very limited extent in Europe, the actual number of such looms being very small.

A comparison in the man-hour production in the woolen and worsted manufacturing establishments of the United States with the man-hour production of selected sample fabrics of identical loom analysis in similar establishments in foreign countries shows the following:

Sample 1: Total time required per yard—American mill, 0.8547 hour; English mill, 1.4473 hours. The American weaver tended six looms set at a speed of 120 picks per minute; the English weaver tended two looms of the same speed.

Sample 7: Total time required per yard—American mill, 0.9788 hour; English mill, 1.4510 hours; German mill, 1.6277 hours. The American weaver tended six looms and the German weaver two looms with a speed of 120 picks per minute; the English weaver tended two looms of 130-pick speed. The number of yards produced per loom per week of 48 hours was 109.5 in the United States, 118 in England, and 93 in Germany.

Sample 12: Total time required per yard—American mill, 0.5683 hour; English mill, 0.9988 hour; French mill, 0.9885 hour. The French and English weavers each tended only one loom, geared to 96 picks per minute. The American weaver ran two looms operating at 100 picks per minute.

The time consumed in dressing and weaving 1 yard of 54-inch broadcloth was 0.5100 man-hour in the American mill, 0.5630 man-hour in the English mill, and 0.8800 hour in the German mill. The American ran two looms at 112 picks per minute and produced 124 yards per loom in a 48-hour week. The English and German weavers tended only one loom each, of 80-pick speed, producing in a 48-hour week 140 yards per loom in the English mill and 98 yards per loom in the German mill. (Labor Review, September, 1928, p. 1.)

TRANSPORTATION

Railroads

Labor productivity: Considering all employees engaged in railroad work—executives, officials, professional men, clerks, and all employees doing railroad work of whatever nature—96.03 tons of freight and 8.08 passengers were moved a distance of 1 mile per man-hour in 1924, as compared with 94.21 tons of freight and 7.82 passengers in 1923, and 88.62 tons of freight and 8.37 passengers in 1922. Eliminating all employees except those actually engaged in transportation, 293.27 tons of freight and 24.67 passengers were transported 1 mile per man-hour in 1924, as compared with 290.36 tons of freight and 24.12 passengers in 1923, and 267.68 tons of freight and 25.29 passengers in 1922. Continuing the process of elimination, road freight employees actually handling the trains moved 1,070.05 ton-miles of freight per man-hour in 1924, 993.55 ton-miles in 1923, and 971.19 in 1922. Road passenger employees produced 305.69 passenger-miles per man-hour in 1924, 316.20 in 1923, and 304.63 in 1922. (Labor Review, April, 1926, p. 72. Based on data compiled by Interstate Commerce Commission.)

Interstate Commerce Commission reports for January, 1926, showed that the average amount of coal shoveled by railroad firemen in road service was as follows: Freight firemen in the eastern district, 7.6 tons per average day (263.7 pounds per locomotive-mile); and in the southern district, 7.8 tons per day (270.3 pounds per locomotive-mile); passenger firemen in the eastern district, 7.3 tons per day (114.8 pounds per locomotive-mile); and in the southern district, 7.5 tons per day, or 119 pounds per locomotive-mile. (Labor Review, June, 1926, p. 74.)

The development in the size and power of locomotive engines during the last two decades has brought about an increase in the labor and the productivity of firemen. Estimates based on Interstate Commerce Commission statistics indicate that from 1903 to 1925 gross ton-miles per train-hour increased 135 per cent, and from 1921 to 1926 they increased 39 per cent. (Labor Review, September, 1927, p. 35.)

The productive output of railroad labor has increased about 40 per cent since 1915 and about 150 per cent since 1890. (Labor Review, March, 1927, p. 1.)

Technological changes: Automatic signals are rapidly displacing watchmen and gatemen at highway crossings. The per cent of displacement ranges from about 50 per cent where combined manual and automatic control is used to 100 per cent where control is wholly automatic. The estimated number of employment opportunities lost through the installation of automatic signal devices and elimination of grade crossings up to 1930 is 44,343. Grade crossings guarded by watchmen operating gates or hand signals constituted 53.7 per cent of the total number of protected crossings in 1924 and 38.7 per cent in 1930. Automatically controlled crossings constituted 61.3 per cent of all protected grade crossings in 1930. The average number of gatemen and flagmen actually on duty at crossings dropped from 23,007 in 1924 to 19,835 in 1930. Specific examples show reduction of staff from 111 to 57; from 27 to 9, etc., after installation of automatic devices in given areas. (Labor Review, April, 1932, p. 759.)

Telephones, printer telegraphs, automatic block-signal systems, interlocking machines, and centralized traffic-control systems used in the movement of trains are rapidly eliminating the telegraph formerly used to transmit train orders, and are thus displacing Morse operators. Printer-telegraph machines used in handling freight-yard traffic are displacing not only Morse telegraph operators but messengers. Information relating to train movements and orders, formerly furnished to the dispatching service by telegraphers and telephoners, now comes through moving lights on a miniature railway system or by an automatic graph which provides a permanent record. Employment in the train-movement group known as telegraphers, telephoners, and towermen declined from 27,226 in 1921 to 18,185 at the close of 1931, a decline of 33.2 per cent. Messengers and office assistants, who were affected by the use of the telephone and teletype on local and intraoffice circuits, dropped from 6,819 in 1921 to 4,642 at the end of 1931, or 31.9 per cent. The decline in employment level between 1921 and 1931 of the entire group of railroad employees classed as communications group, which has been most definitely affected by the technological changes under discussion, was 24.2 per cent.

A centralized traffic-control installation governing 43 miles of single and 19 miles of double track took over the handling of 131 signals and switches and dispensed with 16 operators. A centralized traffic-control machine installed in an interlocking tower regulated traffic on 30.3 miles of single track and displaced 7 telegraphers; in a similar instance involving 33.7 miles of road 11 operators were released. Where train orders are transmitted by teletype there may be no numerical displacement, but typists take the place of skilled Morse operators. Telephony in railroading is passing from manual to automatic operation through the dial system. (Labor Review, May, 1932, p. 1017.)

Water

The number of persons employed on American vessels, as shown by the fifth census of water transportation taken by the United States Bureau of the Census in 1926, increased from 178,593 in 1916 to 204,393 in 1926, or 14.4 per cent. Two-thirds of the total number were engaged in the freight and passenger service in 1926. In that year the number of passengers per employee had increased 26 per cent over the number for 1916, and 51.7 per cent more freight was handled per employee, a very substantial increase in productivity for the decade. (Labor Review, July, 1929, p. 82.)

British statistics show a decrease in the total number of employees necessary to operate a given tonnage of shipping, from 2,132 per 100,000 net tons in 1911 to 2,084 in 1926. These figures also show an interesting shift in distribution. The number of persons employed in both deck and engine departments decreased between 1911 and 1926, while the steward's department and "other employees" increased materially. "The decrease in the number of persons employed in the engine room may be attributed partly to the increased use of fuel oil by steamships and partly to the increased employment of motor vessels." The increase in the group of "other employees" may be accounted for by the large growth in the luxury type of passenger vessels, this group thus including wireless operators, and musicians, entertainers, and persons in similar occupations connected with social activities on such liners. (Labor Review, November, 1927, p. 30. Based on British census of seamen.)

Longshore labor: A study of longshore labor efficiency at the port of New York by the National Adjustment Commission covering the years 1914, 1919, and 1920 gives the amount of general cargo loaded per man-hour as 0.91 ton in 1914, 0.44 ton in 1919, and 0.52 ton in 1920. Bureau of Labor Statistics figures (based on data from United States Shipping Board) give output in loading and discharging operations of representative ships of the Emergency Fleet Corporation at seven specified ports for 1922. The amount of general cargo loaded per man-hour varied from 0.60 ton at the port of Boston to 1.70 tons at Seattle, with a total of 1.23 tons for all ports. The amount handled per man-hour in discharging ranged from 0.69 ton at Baltimore to 1.14 tons at Norfolk, with a total of 0.87 ton for all ports. (Labor Review, February, 1924, p. 109.)

By the installation of platform trucks in longshore operations 5 trucks manned only by drivers can now do the work done by a crew of 16 men formerly used to work 2 bulkheads. Transferring a crated automobile a couple of hundred feet, which formerly required 10 to 15 men and sometimes required 20 to 30 minutes, can now be done in a few minutes of one man's time, without physical effort, by using a power truck. (Labor Review, October, 1926, p. 32. Quoting Harold J. Payne, in the Pacific Marine Review, August, 1926, p. 366.)

The findings of a Bureau of Labor Statistics field study of productivity of labor in loading and discharging ship cargoes in foreign, intercoastal, and coastwise trade in the major American ports were in part as follows:

In discharging foreign cargo the average productivity per man-hour is shown to vary from 0.57 long ton for the big passenger liners in New York to 1.85 long tons in the oriental trade of Portland, Oreg. In the intercoastal trade, productivity per man-hour varies from 0.53 short ton in Charleston to 1.32 short tons in Mobile; and in the coastwise trade from 0.51 long ton in Galveston to 1.54 short ton in Los Angeles.

In loading foreign-trade cargo the productivity per man-hour varies from 0.50 long ton for Charleston, S. C., to 1.45 long tons for Mobile. In the intercoastal trade the variations in loading are from 0.53 short ton per man-hour in Boston to 1.28 short tons in Portland, Oreg. In the coastwise trade the loading productivity per man-hour varies from 0.69 short ton in Charleston to 1.51 short tons in Seattle and Galveston.

Productivity rates vary widely as between ships with maximum and those with minimum efficiency. For example, in discharging cargo in intercoastal trade in Seattle the range is from 2.38 long tons to 0.77 long ton per man-hour.

Pier and ship equipment are of primary importance in determining efficiency of the port and productivity of longshore labor. The speed of the winches, or "ship's gear," and their location with relation to the hatchways very largely determine productivity in handling a ship's cargo. In this respect the intercoastal liners, as a group, are better equipped than are the foreign-trade ships, as their winches are more powerful and efficient Some winches on the west coast, particularly those used in discharging raw sugar at San Francisco, are capable of handling 150 or more loads per hour, while 40 to 50 loads per hour is fairly representative of the capacity of the majority of winches found on foreign-trade vessels. The intercoastal winches are not only more efficient in handling cargo, but they require a smaller gang than is needed for the average winch.

Equipment other than ship's gear must be used to move cargo between the shed and the apron of the pier, and still other devices must be used for piling cargo. The common 2-wheel hand truck is still used on many piers to handle cargo between the shed and the apron of the pier. It is, however, rapidly being replaced by power platform trucks on the more modern docks. Portable conveyors are also used in several instances. Hand processes for piling cargo are used to some extent, particularly in handling raw sugar, but most ports use some sort of mechanical device for stacking, with resulting large reductions in the cost of that process. Cargo stowage is still hand labor, and should be regarded as skilled labor, as it requires experience and judgment to insure the safety both of the cargo and of the ship in passage. With the exception of an occasional application of gravity rollers and dollies, practically no device of any kind is used to facilitate transfer of individual pieces of cargo from the center of the hatch to their place of stowage, which may be some 30 to 50 feet from the center of the hatch.

Special equipment is provided at some piers for discharging individual commodities in which the pier specializes. In handling bananas, for instance, pocket belt conveyors are generally used. In New Orleans and Mobile these conveyors constitute permanent

equipment of the banana piers. Before the conveyor system was introduced in the port of New York, in 1925, the average productivity for 66 ships handled by one line was 12.42 stems of bananas per man-hour. In 1928 with the conveyor system in operation, the average productivity for 97 ships handled by the same concern was 18.37 stems per man-hour, an increase of nearly 50 per cent in man-hour output. Improved equipment and processes used in discharging raw sugar have increased productivity in one instance from 14.1 Cuban bags per man-hour with a gang of 29 longshoremen in 1923 to 27.1 bags per man-hour with a gang of 22 men in 1928. (U. S. Bureau of Labor Statistics Bul. No. 550: Cargo handling and longshore labor conditions, 1931.)

UNITED STATES GOVERNMENT

Postal Service

Efficiency in the handling of mails by the United States Postal Service has been promoted in recent years both by mechanization and by improved administrative methods. Mechanical tables, canceling and postmarking machines, automatic conveyors, and automotive transportation are among the mechanical devices which have been instituted to expedite the handling and distribution of both letter and package mail.

The index of productivity in the Postal Service increased from a base of 100 in 1908 to 171.8 in 1930, declining, because of falling off in business, to 163.4 in 1931. The index of total volume of output handled rose from 100 in 1908 to 265.2 in 1930, and fell to 249.4 in 1931.

Estimating output on the basis of 1908 efficiency, at which time the average output per employee was 82,086 units, 196,623 more employees would have been required to handle the peak load of 1930 than were actually employed, and in 1931 the employment of an additional 171,739 workers would have been necessary. Thus, the per cent of employment opportunities lost through greater efficiency in the Postal Service increased from 9.2 per cent in 1910 to 40.2 in 1926 and 41.8 in 1930. The decrease in the amount of postal business brought the figure for 1931 below that of 1926, or to 38.8 per cent. (Labor Review, October, 1932, p. 745.)

INCREASE IN LABOR PRODUCTIVITY, 1898 TO 1927

Computations of the increase in total productivity and in output per worker during the 30 years from 1898 to 1927 in the principal branches of American industry are contained in the annual report of the Secretary of Commerce for the fiscal year ended June 30, 1928. The table presented below shows indexes of gain in efficiency of industry and is compiled from the data contained in the report of the Secretary. This table, which even in years covered by census statistics necessarily involves a considerable resort to estimation, nevertheless shows within a reasonable margin the true tendency of American industry since the beginning of the century and in the years immediately following the close of the World War.

Indexes of gain in efficiency of industry [1]

[Data for manufactures refer to 1899, 1919, and 1927. Other data are averages for the periods 1898–1900, 1918–1920, and 1926–27]

Industry	Number of workers		Indexes on base 1898–1900=100			Value of output, 1898–1900, used for weighting
	1898–1900	1926–27	Number of workers	Quantitative output	Output per worker	
Agriculture	10,700,000	10,500,000	98	155	157	$3,500,000,000
Mining	600,000	1,050,000	176	379	215	600,000,000
Manufactures	5,300,000	9,880,000	186½	279	149½	4,830,000,000
Rail transportation	975,000	1,865,000	191½	308	161	1,300,000,000
Total or average	17,575,000	23,295,000	132.5	246 208½	185½ 157	10,230,000,000

Industry	Number of workers		Indexes on base 1918–1920=100			Value of output, 1918–1920, used for weighting
	1918–1920	1926–27	Number of workers	Quantitative output	Output per worker	
Agriculture	11,300,000	10,500,000	93	118	127	$15,700,000,000
Mining	1,050,000	1,050,000	100	138	138	3,175,000,000
Manufactures	10,675,000	9,725,000	91	130½	143	24,750,000,000
Rail transportation	2,035,000	1,865,000	91½	102½	112	4,725,000,000
Total or average	25,060,000	23,140,000	[2] 92.3	[3] 124 [4] 123	134½ 133	48,350,000,000

[1] Given in U. S. Bureau of Labor Statistics, Bul. No. 491, p. 619.
[2] Actual change in number of workers.
[3] Weighted by value.
[4] Weighted by workers.

OUTPUT PER EMPLOYEE IN MANUFACTURING INDUSTRIES, 1919 TO 1925

Upon completion of the 1925 Census of Manufactures, the United States Department of Commerce compiled a table showing, by census years from 1899 to 1925 and by principal industries, index numbers of the total number of persons engaged in manufacturing industries and of the physical volume of production. This table is reproduced below, the only change being the addition of the line showing "production per person engaged" in each industry group, these figures having been computed by the Bureau of Labor Statistics from the basic data given in the original statement. In comparing these figures with somewhat similar ones published in studies by the Bureau of Labor Statistics, it is to be noted that these figures relate to all "persons employed" and not merely to wage earners, and thus include office and supervisory employees.

Index numbers showing growth of manufactures, by industrial groups, 1899 to 1925 [1]

[The data for "All industries" given in this table for number of persons engaged and primary horsepower are based upon complete census totals, but those for the individual groups are derived from figures covering only those industries directly represented in the index; i. e., those industries for which statistics are available showing the physical volume of output of their principal products. Such industries comprise about 50 per cent of all industries, as measured by number of persons engaged, primary horsepower, or value added by manufacture, but among the several groups this proportion varies from about 20 per cent for paper and printing to practically 100 per cent for tobacco products. Although the index is probably a reliable measure of changes in output for manufactures as a whole and for a number of individual groups, yet for a few groups, owing to limitations of data, the index is not typical of the entire groups represented. For this reason the three sets of data have been made to cover the same industries in each group, and are to that extent comparable]

Industry group	Index numbers (1919=100)								Per cent of increase 1899–1925
	1925	1923	1921	1919	1914	1909	1904	1899	
All industries:									
Physical volume of production	128.6	122.1	79.3	100.0	78.1	73.5	56.4	46.2	172.4
Number of persons engaged	91.4	96.2	77.3	100.0	76.4	71.0	57.5	48.9	86.9
Primary horsepower	121.8	112.8	-------	100.0	76.0	63.3	45.7	34.2	256.1
Production per person engaged	140.7	126.9	102.6	100.0	102.2	103.5	98.1	94.5	49.0
Food and kindred products:									
Physical volume of production	116.4	111.6	93.5	100.0	80.8	74.8	65.1	53.0	119.6
Number of persons engaged	81.3	83.5	76.1	100.0	71.1	62.7	53.8	49.2	65.2
Primary horsepower	115.8	107.6	-------	100.0	81.5	70.4	60.7	49.1	135.8
Production per person engaged	143.2	133.7	122.9	100.0	113.6	119.3	121.0	107.7	33.0
Textiles and their products:									
Physical volume of production	119.3	122.9	96.8	100.0	96.8	91.9	71.9	60.7	96.5
Number of persons engaged	104.5	111.1	95.0	100.0	89.3	85.2	71.7	63.9	63.5
Primary horsepower	126.6	116.7	-------	100.0	83.7	70.0	53.9	43.6	190.4
Production per person engaged	114.2	110.6	101.9	100.0	108.4	107.9	100.3	95.0	20.2

GROWTH IN USE OF POWER EQUIPMENT IN THE UNITED STATES, 1849 TO 1923

The substitution of mechanical for hand power is, of course, the main factor responsible for the very great increase in the productivity of American industry. A study published by the United States Geological Survey attempts to measure, as precisely as existing statistics permit, the development of power equipment over a period of years in each of the major fields of industrial activity. The following table, taken from the study referred to, shows the equipment utilized per wage earner, in different activity groups, for the same years. It will be seen that during the 25 years from 1899 to 1923, the horsepower equipment utilized per wage earner increased from 1.40 to 3.76 in manufactures, from 3.36 to 6.52 in mines and quarries, and from 2.32 to 4.74 in agriculture.

Horsepower of prime movers utilized per wage earner in different activities and groups, 1849 to 1923[1]

HORSEPOWER

Mr. HALE. Mr. President, I ask unanimous consent that when the Senate concludes its business to-day, it recess until 12 o'clock noon to-morrow.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

Mr. HALE. Mr. President, I offer the following unanimous-consent agreement and ask that the clerk may read it.

The VICE PRESIDENT. The clerk will read, as requested.

The legislative clerk read as follows:

Ordered, by unanimous consent, That after the hour of 5.30 o'clock p. m. to-day, no Senator shall speak more than once or longer than 15 minutes upon the pending bill, H. R. 13520, or any amendment or motion relating thereto.

The VICE PRESIDENT. Is there objection?

Mr. CONNALLY. Mr. President, does that mean we can not talk on anything either relating to the bill or any other subject?

The VICE PRESIDENT. Not longer than 15 minutes.

Mr. JOHNSON. Mr. President, may I ask the Senator from Maine if it is his purpose to take a recess if the unanimous-consent agreement be entered into?

Mr. HALE. If an agreement can be reached by unanimous consent I shall be willing to recess until to-morrow.

Mr. JOHNSON. One other query: The proposal provides a 15-minute limitation on the bill and 15 minutes on any amendment thereto?

Mr. HALE. That is correct.

Mr. JOHNSON. I have no objection.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

EMERGENCY LEGISLATIVE PROGRAM OF FARM ORGANIZATIONS

Mr. CONNALLY. Mr. President, I ask unanimous consent that there may be printed in the RECORD a radio address of Edward A. O'Neal, president of the Farm Bureau Federation, delivered on January 14 on the subject of Emergency Legislative Program of Farm Organizations.

The VICE PRESIDENT. Without objection, it is so ordered.

The address is as follows:

The condition of agriculture in the Nation is so desperate that we must have immediate relief. Too long has Congress dilly-dallied with half-way measures which do not go to the heart of the trouble and which merely postpone the evil day. We must go to the root of our trouble with direct methods that will get results and start our Nation back on the road to prosperity.

The first step is to restore the purchasing power of agriculture. Eighty million of our people are without adequate purchasing power because of the terrible plight of agriculture. In 1919, the purchasing power of agriculture amounted to $16,000,000,000 and the total farm property was valued at $78,000,000,000.

What a different picture to-day! The annual total income of agriculture has dropped more than $10,000,000,000. This means a total annual loss to agriculture exceeding the total European war debt owed to us. The value of farm property has dropped more than $20,000,000,000 since 1919. The agricultural income has dropped more than $6,500,000,000 since 1929 and is now less than one-half the 1929 figures.

The average level of farm prices in 1919 was 209 per cent of pre-war level. In 1929 it was 138 per cent; now it is 52 per cent. This is what he gets when he sells. When he goes to buy he pays 106 per cent of pre-war prices. There is no equality in this.

In the face of this enormous decline in income, farmers are staggering under enormous burdens of taxes and debts with a total farm tax level two and one-half times the pre-war amount and a farm-mortgage debt three times the pre-war level. Furthermore, agriculture has had to absorb a heavy burden of taking care of the unemployed.

Is it any wonder in the face of such conditions as these that ten to thirteen million people in the cities are unemployed? That factories and mills are closed or working only on a part-time basis and business in general stagnating?

It is the task of our national leadership to stop the paralyzing forces of deflation that have been going on for the past several years and readjust our economic margin so that it can function in a normal way.

I am hopeful that we will not have to wait much longer for effective relief. The people of the Nation have spoken in no uncertain terms, demanding such relief. We farm leaders are doing everything in our power to speed effective action. Immediately following the last annual meeting of the American Farm Bureau Federation I hastened to Washington, accompanied by Secretary Winder and several members of our legislative committee, to secure action upon our program. I called together leaders of all the national farm organizations and the principal cooperative associations to confer together and agree, if possible, upon a joint program for the rehabilitation of agriculture. A representative of the President elect sat in with us during our deliberations, and we were assured that if the farm leaders could agree upon a program for agriculture the President elect would support that program. This in itself augurs well for a new day for American agriculture.

At the conference of farm leaders held in Washington December 12–15, an agricultural-relief measure was unanimously agreed upon. We also agreed upon an emergency credit program and a monetary program. I want to tell you briefly about these emergency measures for which we are fighting. The next morning, after the farm leaders had agreed upon the program, the House Committee on Agriculture, at the call of Chairman JONES, of Texas, met to hear these proposals. The committee, after study and consideration of this program, reported it favorably to the House, with some modifications. The House leadership cleared the way for prompt consideration by the House, with the result that the bill, with some modifications, was passed by a vote of 203 to 151—just 30 days to a day from the date the farm leaders met to work out a plan.

The opposition was led by the minority party in the House. The bill was supported by 139 Democrats, 63 Republicans, and 1 Farmer-Labor; and opposed by 101 Republicans and 50 Democrats.

The enactment of the plan into law now depends upon the Senate and the President of the United States.

I can not understand how Representatives from agricultural districts can vote against the farmer and vote just as the big packers and millers and cotton spinners would like to have them vote. Neither can I understand how any Representative from a cotton-growing district can vote against placing a tariff on jute and jute products, as was proposed in the bill, to protect our cotton industry against the importation of this cheap material from India.

Organized agriculture won another great victory when it succeeded in putting in this bill a provision for a tariff of 5 cents per pound on the vegetable, animal, and marine oils that displace our butter, our beef fats, and cottonseed oil. This is the first time this proposal has ever been approved by either House of Congress.

I want to warn you against a whispering campaign that is going on here against our bill to the effect that this is a bad bill because it is such a new proposal and the farmers do not know anything about it. I think all agree with me that it is high time we had something new besides foreclosures, ruinous prices, tax sales, and inadequate incomes to buy the necessities of life. I think the country generally is tired of the theory that we must maintain the status quo or the country will go to ruin. A lot of us who are close to actual conditions realize all too well that the country is perilously near to that condition already as a result of maintaining the status quo, and that something radically different must be done without further delay.

I want to tell you briefly just what this bill proposes to do for agriculture and let you be the judge of whether it is a good bill or not for this emergency.

Primarily, it is to restore prices of seven of the great basic agricultural commodities of the country—wheat, cotton, hogs, dairy products, tobacco, peanuts, and rice. It is not a bill to fix prices, as our opponents have said. It does not provide for any agricultural commodity's being bought and sold at a fixed price. The farmer will continue to sell in the same markets, through the same marketing machinery, and at price levels established by the same factors as at present. But the legislation does provide that over and above the price received by the farmer through existing marketing channels he will receive a premium which, together with the price received for his products, will be sufficient to give the farmer a fair return for what he produces—a return that will give a fair exchange value for the commodity—a return that will place agricultural commodities upon a parity with industrial commodities.

How is that fair return determined? In the pre-war period, agricultural prices bore a much more favorable relation to industrial prices than since the war. Those relationships were established over a long period, undisturbed by unsettled world-wide economic disturbances and discriminations against agriculture such as have grown up or multiplied since the war. In the pre-war period, the average price to the farmer, for instance, for wheat was approximately 88 cents a bushel, cotton 12 cents a pound, hogs 7 cents a pound, tobacco 10 cents a pound, rice 90 cents a bushel, peanuts 3½ cents a pound, and butterfat 28 cents a pound. Since that time prices for such commodities have declined to lower and lower levels. To-day, as a result, wheat, for instance, has suffered a loss since the pre-war period of approximately 65 per cent of its purchasing power, cotton 53 per cent of its purchasing power, hogs 59 per cent of their purchasing power, tobacco 19 per cent of its purchasing power. Under the bill passed by the House of Representatives, the commodities covered by the measure will again have their pre-war purchasing power or exchange value when the bill is fully in operation.

On the 1933 crops a premium will be paid for cotton, wheat, tobacco, hogs, dairy products, peanuts, and rice, in an amount so that added to the average price that the farmers receive locally throughout the country, the farmer will be receiving for his commodity an amount sufficient to buy as much to-day as he bought in the pre-war period. And should the general price level for the things the farmer buys remain the same during the next marketing season as it is to-day the farmer would, under the bill, be receiving on the portion of his crop consumed domestically, for instance for his wheat, 93 cents a bushel; for his cotton, 12½ cents a pound; for his hogs, $7.38 a hundredweight; for his

tobacco, 14½ cents a pound; for his rice, 92 cents a bushel; for his butterfat, 26 or 28 cents a pound—less in each case a small deduction for administrative expenses. Thereby the farmer's products will be placed on a parity with industrial products, and the price for agricultural commodities will again bear the same relation to the price for industrial commodities as they bore during the pre-war period.

I ask, which of you wheat farmers would rather take 93 cents per bushel for wheat than 30 cents? Which of you cotton farmers would rather take 12½ cents per pound for cotton than 5 cents per pound? Which of you tobacco growers would rather have 14½ cents per pound instead of 8 cents per pound? Which of you hog producers would prefer $7 per hundred to $3? All who would prefer existing prices to those assured under the terms of this bill naturally can classify themselves as being against the bill.

The legislation passed by the House of Representatives, if enacted into law, will place in the hands of the farmer during the next year about a billion dollars additional purchasing power—a billion dollars with which to pay his debts, buy new farm equipment and supplies, and maintain his family.

The measure also provides for relief not only on 1933 crops but also for the period commencing 30 days after the passage of the bill, and running up to the commencement of the 1933 marketing season for the particular commodity. During this initial period, in order to place the plan into effect gradually with a minimum of disturbance, the benefits paid to the farmer will be about one-half of the disparity existing between agricultural and industrial prices. During this initial period the farmer will receive a premium that, coupled with the price he receives from the sale of his products, will give him a total return on the portion of his crop consumed domestically in the case of cotton of 9 cents a pound, in the case of wheat 75 cents a bushel, in the case of hogs $5 per hundredweight, in the case of rice 75 cents a bushel, in the case of peanuts 3 cents per pound, and in the case of butterfat 26 cents a pound. This premium during the initial period will benefit the farmer who now has his commodity on hand. In the case of crops like wheat and cotton, the premium during the initial period will benefit that farmer who has a carry-over from his 1932 production. The carry-over in the hands of the farmer or his cooperative association, but not in the case of anyone else, may be marketed, and upon marketing the farmer will receive the initial period premiums.

In return for the benefits on the 1933 crops of wheat, cotton, tobacco, peanuts, and rice, and in return for the benefits payable upon hogs at all times, the farmer must do his part in meeting the present situation as to agricultural surpluses. The farmer must reduce his 1933 crop acreage 20 per cent; he must reduce his hog tonnage 20 per cent if he is to receive the benefits.

There is no compulsion on the farmer to make this reduction, except that if he, through selfish interests, feels that he would rather play a lone hand than cooperate with his neighbors, then he is not entitled to the benefits. He need not reduce his acreage or his hog tonnage unless he feels it in his interest to do so, but by the same token, if he fails to do so, he must be content with the market price for his commodity and will not receive any premium. In the case of dairy products, no reductions are required for dairy products which are not to-day on a surplus basis; and in the case of carry-over of wheat, cotton, tobacco, rice, and peanuts, marketing during the initial period, no reduction in acreage need be shown, for obviously those crops were planted before the legislation came into effect. Similarly, no reduction of acreage is required of wheat of this winter's planting, for that acreage was set out before the bill comes into effect; and further, the condition of winter wheat is so poor—the worst in many years—that as a result it is unlikely that there will be any surplus produced.

By these various control measures for acreage and tonnage reduction, it is felt that the farmer will be doing his part toward making the plan workable, toward eliminating abnormal surpluses for the future, and toward cutting down surpluses now on hand. By making such reductions, the farmer will be aiding the Government in making effective this plan for the restoration of parity between the price levels for agricultural and industrial commodities.

Most of the commodities covered by the legislation are produced in amounts in excess of the needs of domestic consumption. The resulting surpluses place the commodity on an export basis and subject in large measure the whole production of the commodity to world price levels. The farmer is entitled to a parity price for all his commodity consumed domestically, but not for that portion of his production that is a surplus over and above domestic needs. Therefore, under the terms of the bill, the farmer will receive the premiums provided on only that portion of his commodity that he produces for domestic consumption. The portion so needed will be proclaimed by the Secretary of Agriculture on the basis of past domestic consumption.

Using wheat, cotton, and hogs as illustrations, the farmer will receive premiums on approximately 70 per cent of his wheat, 40 per cent of his cotton, and 90 per cent of his hogs. In the case of dairy farmers, premiums will be paid on 80 per cent of their butterfat. The remainder of the farmer's production will, under the bill, be sold, as now, at the prevailing market levels and will not receive the benefit of any premiums. Thereby, the farmer will receive a fair return on his production for the domestic market, but on his production for the world market he will, as now, receive only the prevailing market price.

How does the bill operate to bring these benefits to agriculture? The plan is not nearly so complicated as its enemies would have you believe. All the farmer has to do is submit his evidence in the form of a statement at the time of the delivery of his product, showing that he has reduced his production 20 per cent below the amount for the corresponding period last year. This entitles him to receive adjustment certificates, which will pay him the difference between current market prices and the fair exchange values specified in the bill. He will get these certificates on the percentage of his production which can be consumed domestically. The money with which to pay these certificates is collected by levying a tax upon the first processing of the commodity, to be collected by the Government from the processors.

Enemies of the measure are trying to discredit it by calling it a sales tax. They are trying to frighten consumer opposition by expressing horror at what they term a sales tax on the necessities of life. It is not a sales tax since it lacks one of the essentials of such a tax: This is not a charge laid on people to pay the expenses of government: not at all. It is merely a device for converting a bad distribution of income which has arisen in the last few years; to take us back—in price relationships—to where we were a few years ago when all of us were well off.

During the last session of Congress the sales tax was advocated for the purpose of balancing the Budget. It would apply to everything that the farmer or the laborer purchased. It took into no account that fundamental principle of taxation, ability to pay. Rich and poor paid alike on all they purchased, although the income of the wealthy man might be a thousand times that of the income of the farmer. The sales tax proposed in the last session of Congress was a tax that unduly burdened the farmer and was unduly favorable to industry. It compelled the farmer to take an unfair share of the burden of balancing the Budget. But the tax imposed by the present bill has no such results. It is not a tax to balance the Budget. It is a tax the benefits of which all go in the first instance to the farmer. It is a tax which is a part of the machinery to relieve the present economic distress in agriculture and in all the Nation. It is a tax which will place additional purchasing power in the farmer's hands, and every dollar of it will be transferred by the farmer back to the cities and result in increased employment and stimulation of business and an increased purchasing power for labor. This tax is for the benefit of the very people in this Nation against whom the general sales tax of last session was an unfair discrimination.

I hope that the consumers living in the cities and towns of our country will not be deceived by the propaganda of the packers, the millers, and other middlemen. Why are these middlemen so solicitous for the welfare of the consumer all at once? Since when have they reformed their tactics and assumed the rôle of public benefactors? I want to warn every consumer not to be deceived by such tactics. Don't forget that it is these very agencies between the farmer and the consumer that are taking the great share of the consumer's dollar; it is they who are making the consumer's burden heavy. If they have the welfare of the consumer so much at heart, why have they failed to reduce the margin between the farmer and the consumer proportionately to the reduction in farm prices? To-day the margin between the price of live hogs and the retail price of the products of a hog are greater than they were in 1929, despite the fact that the price of live hogs has dropped from $9.86 per hundred to less than $3 per hundred?

The farmer sells his corn for eight cents a bushel in Iowa and corn meal is sold in this city for $2.80 a bushel and corn flakes, $8.96 a bushel. The Iowa farmer gets about $3.50 per hundred for hogs, but the products made from that amount retail for $10.00, or a margin of $6.50 between the producer and consumer—twice as much for distribution as for production. To-day the price of hogs is 4 cents a pound lower than in 1913, but the price of ham is higher by 7 cents a pound. In regard to wheat and bread, it requires a fluctuation of $2.50 a barrel in the price of flour before there can be a reflection of a cent either in reduction or increase in the selling price of a loaf of bread, according to the testimony a few years ago of an attorney for the American Bakers Association. It takes 4½ bushels of wheat to make a barrel of flour. In other words, the price of wheat must change 55½ cents per bushel before it would influence the price of bread in the slightest. The proposed bill would raise the farm price of wheat about 60 cents and therefore should not raise the price of bread.

Let us not forget that every consumer is in the last analysis a producer of something—goods, labor, or services. When rural America representing nearly one-half of the buying power of the Nation loses her buying power, it means that the factories and mills in the cities and towns close down, that people in the cities are thrown out of work, that doctors and nurses can not collect their bills, that railroads and public utilities suffer heavy losses in volume of business. The proposed bill equalizes to some extent the returns of the farmers and the middlemen. The consumer has much more at stake in restoring the buying power of agriculture than it has in continuing the swollen profits of a comparatively small group of middlemen.

And, finally, I want to warn our farmers against the propaganda the middlemen are sending out to prejudice farmers against the bill. I am sorry to say that some of your representatives here in Congress—some from agricultural districts—have already been deceived and are fighting the battles of the packers, the millers, and the cotton gamblers. These middlemen are trying to get the farmers to believe that they will pay these adjustment charges.

Now let us see how consistent their arguments are: They tell the consumer that it is an iniquitous bill, because, they say, the tax will all be passed on to the consumer. They tell the farmer

that the consumer will refuse to pay the tax and, therefore, that it will be passed back to the farmer. Obviously it can not be paid both by the farmer and the customer. It is plain that a deliberate effort is under way to frighten both the consumer and the producer, so that the agencies in between the farmer and consumer can continue to exploit both to their own advantage.

Our emergency credit program is also getting under way. I have already appeared before the Senate Banking and Currency Committee and presented the results of a 2-year study made by our national rural credits committee, as well as additional proposals of an emergency character developed at the recent national conference of farm leaders. Further hearings will likely be held in the near future.

We believe we have formulated a program that will be immediately helpful to thousands of farmers who are in danger of losing their homes and all their property through ruthless foreclosures and forced settlements of debts.

First, we propose to establish under the sanction of law a debt-conciliation commission in every county in the United States to provide a cheap and fair method for the prompt adjustment of debts of good farmers, where a voluntary, but binding, agreement can be reached between debtor and creditor through the intervention of this commission. Many cases can be settled on this voluntary basis. Others will require further action.

To enable the Federal land banks to help others who can not be helped by this voluntary procedure, we propose several measures.

First, there should be an emergency loan fund for the use of the Federal land banks to refinance farmers by getting their debts scaled down to a workable basis and issuing a new mortgage at a lower rate of interest and amortized over a long period of time. In some cases a second mortgage, chattel mortgage, and crop mortgage may be necessary to care for the balance of the debt.

Second, the Federal land banks should be strengthened through the immediate purchase of $100,000,000 worth of nonvoting stock or reserves by the United States Treasury, to be repaid out of new stock subscribed by farmer-borrowers. This action would help the banks to take over any sound first mortgage from any individual creditor that found it necessary to liquidate and refinance it at lower interest rates and for a longer period of time, thereby enabling the farmer to save his home from foreclosure and give him a more liberal basis of settlement.

We propose also that the Reconstruction Finance Corporation buy immediately $160,000,000 worth of outstanding 5 per cent Federal land-bank bonds so that these can be retired and replaced by bonds at a lower interest rate; also $134,000,000 worth of 4¾ per cent Federal land-bank bonds for a similar purpose, and that the Reconstruction Finance Corporation buy such additional bonds as necessary to provide funds for new, sound first mortgages on farms approved by the Federal land banks.

Further, the Treasury should purchase additional nonvoting stock—probably about $50,000,000 this year—to provide funds so that the Federal land banks can grant extensions of both principal and interest to worthy borrowers who have a reasonable chance to pay back at the end of the mortgage period, instead of within five years, as now required.

Finally, we recommend the liquidation of the joint-stock land banks, the canceling of their charters, and the repeal of that part of the farm loan act. This liquidation should be done by the Federal Farm Loan Board and should be carried out in such a way as to protect the interests of the farmer-borrowers and the bondholders.

Such, in outline, are the recommendations which we propose to meet the present debt emergency of agriculture. Congress must not delay action on this matter longer. The interests of the creditors as well as the debtors are at stake. Foreclosures, under present conditions, sacrifice needlessly the interests of both. Both parties promised effective relief in the recent campaign. Now is the time to fulfill these pledges; next session will be too late to help many of those who are now in distress.

My friends, this is the emergency program we are fighting for this session. There are other fundamental measures in our long-time program which must receive attention later. But meanwhile we must have emergency relief. Agriculture and the Nation can wait no longer without grave disaster to our country.

PROBLEMS CONFRONTING THE DEMOCRATIC PARTY

Mr. BRATTON. Mr. President, on the 28th instant the junior Senator from South Carolina [Mr. BYRNES] delivered over the Columbia Broadcasting System a very interesting, informative, and illuminating address on the subject of Problems Confronting the Democratic Party. I ask unanimous consent to have the address printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The address is as follows:

No Democrat can contemplate the transfer on March 4 next of the control of the Government of the United States to the Democratic Party without being overwhelmed by a sense of responsibility. I doubt if, in time of peace, any party has ever come into control of the Government under conditions comparable with those now existing. At home and abroad there exists among the people unparalleled unrest. The people stagger under the burden of public and private debts.

The cost of government, Federal, State, county, and municipal, totals approximately $12,000,000,000, which is four times as much as the cost of government in 1913.

The bonded indebtedness of States, counties, and municipalities has reached the enormous sum of $8,690,668,000, with an annual interest charge of more than $400,000,000.

Farmers of America in 1930 had a mortgage indebtedness amounting to $9,241,390,000. The interest upon this amount, plus the taxes due to State and subdivisions, make the fixed charges on the farm almost equal the income of the farm at existing price levels, and leaves to the farmer little income with which to meet the cost of production and provide the necessities of life for himself and his family.

High tariff duties levied by the Fordney Act and the Smoot-Hawley Act, have resulted in retaliation abroad, and the artificial barriers to trade thus created, combined with the economic conditions abroad, have contributed to the destruction of our foreign trade. Our industries have become practically dependent upon the domestic market, and the present low prices of agricultural products and unemployment have destroyed that market. Fifty per cent of our people, dependent upon agriculture, have, as a result of prevailing prices for agricultural products, been deprived of their purchasing power.

In the streets of the cities the army of the unemployed continues to increase, and from every State there comes to the Federal Government demands for financial relief for the destitute and the hungry.

In the banking world from January 1, 1929, to January 21, 1933, a total of 5,891 banks closed their doors. These banks had total deposits of $4,597,000,000. The percentage recovered by the depositors it is impossible to estimate, but the amount has been so small that it is fair to say that in the loss of this four and a half billion dollars the capital of millions of people has been absolutely wiped out.

As the people, reduced to the economic plight which these figures indicate, turn with hope to the new administration, it is but fair to consider for a few moments the condition of the actual machinery of government, the control of which is about to be assumed by the Democratic Party.

The Democrats will come into control of a Treasury which on January 25, 1933, had a deficit of $1,260,550,466. This deficit has accumulated since July 1, 1932, and it means that each day your Government is spending $6,000,000 more than its income. No individual can continue for an indefinite period spending more than his income, and that which no individual can do no government can do.

In addition to this, the public debt has increased until your Government on December 31, 1932, owed $20,805,556,791, an increase in the last two years of $4,779,469,704. The annual interest upon this debt has reached the staggering sum of $696,632,000, which sum must annually be taken from the people in taxes.

With the assumption of power, the Democratic Party will also be confronted with a serious transportation problem. The development of American industry is due in great part to the marvelous railroad facilities of the Nation. In recent years the Congress has generously contributed funds to the development of a national highway system which, in turn, has inspired the development of truck and bus transportation. In like manner, the Congress has been contributing the money of the taxpayers to the development of waterways and encouraging barge transportation. It is now urged upon the Congress that it is essential to maintain railroad facilities and, as the competition which has been encouraged in great measure by the generosity of the Congress cripples the railroads of the Nation, the Government is endeavoring through the Reconstruction Finance Corporation to lend the money of the taxpayers to the railroads, in order that they may continue to meet the demands of American industry and agriculture.

The man in the street now realizes the seriousness of this railroad problem. He knows that a loss to the railroads is not a loss to the high-salaried officials but is a loss to the people who own railroad bonds—the insurance companies, the trust companies, the widows and orphans, whose funds have been invested in railroad securities. He knows, too, that to the extent to which these railroad bonds depreciate in value, to that extent there may be a loss to the trust company in which he has deposited his savings or to the insurance company in which he has purchased a policy for the protection of his wife and children in case of his death. He wants this problem solved by men whose minds are free of prejudice and who can do justice to all interests involved.

The foreign relations of the Government are in a condition as deplorable as our domestic affairs. It is the experience of individuals that whenever you lend money to your friends you lose those friends. There is nothing so provocative of controversy between friends as a debt. When your friend defaults and you demand payment you arouse his resentment. When he refuses to pay you he arouses your resentment. This is as true of governments as it is of individuals. To-day it is useless for us to deny the existence of ill feeling between the governments and the people of Europe and the Government and the people of the United States growing out of these international debts. When an individual refuses to pay his debt his creditor has a tribunal to which he can resort to secure judgment for the amount of the debt, and machinery for collection of the judgment. But whenever a government refuses to pay your Government there is no tribunal to

which your Government can resort for the collection of the amount of the obligation.

Thoughtful people long since have reached the conclusion that the reduction of military armaments is essential in order to permit the reduction of governmental expenses and to promote the cause of peace. However, we know that the limitation of armaments will progress only to the extent that a feeling of security exists among the peoples of the world. Notwithstanding the efforts that have been made by the present administration to bring about a reduction of armaments, world conditions have been such that little actual progress has been made. Impelled by fear, the people of all nations continue to make sacrifices in order to increase military armaments.

Time does not permit a more detailed statement of the almost insurmountable difficulties and the overwhelming problems confronting your Government, the solution of which must be sought by the new administration. Attention, however, should be called to the fact that in the existing emergency the Government has been forced to enter new fields of activities, from which activities it must withdraw at the earliest possible date after the passing of the emergency.

The Government has entered into the banking business. The money it is lending through the Reconstruction Finance Corporation comes not from depositors and investors but comes from the taxpayers of the Nation. The Government is taxing one citizen to secure money to lend another citizen. If your Government taxes you to lend money to me, it must in justice to you force payment by me. When a man defaults in payment of a debt due to a bank and the bank forecloses, the debtor resents it, but no harm is done to society. However, a different situation is presented when the Government forecloses the mortgage upon his farm or forces liquidation of the corporation in which he has money invested. The debtor forgets that the money he has borrowed is the money of his neighbors. He regards it as Government money. He recalls the sacrifices made by himself or by his son in the World War. The foreclosure that he expects from a bank he does not expect from his Government, and when the Government forecloses, from that moment you have in that man not a patriotic citizen but a potential enemy. This and other emergency activities have given to the people a new conception of government and has caused men and women to look to the Congress and to the Government for the settlement of many problems which no Congress and no Government can ever settle.

The immensity of the problem confronting us is enough to depress any thoughtful person. There is much that government can not do. However, there is much that it can do.

The Democratic Party must have a definite program. In that program there must first be an honest effort to balance the Budget. It can never be done with exactness. Expenditures must be reduced and if, in order to balance the Budget, it is necessary to levy additional taxes, then taxes must be levied. With a balanced Budget, there can be a refinancing of our public debt. Eight billion dollars of bonds are callable during 1933. If we refinance these bonds at a lower rate of interest, which is possible, approximately $175,000,000 in interest will annually be saved to the taxpayers.

If by balancing the Budget we can avoid the issuance of short-term notes, it will help industry. To-day the banks are refusing to lend to industry because the Government is borrowing and the banks naturally prefer the safety which comes from lending money to the Government, instead of to individuals. When the Government ceases to issue short-term notes, it will provide an incentive to banks to lend idle funds for legitimate enterprise.

The corner stone of any program for Budget balancing is the reduction of expenditures. All legislative bodies are collectively in favor of economy and individually in favor of extravagance. Most citizens are in favor of economy, provided you do not economize upon the particular project in which they are interested or which they deem helpful to the community in which they reside. From my experience on the Appropriations Committees of the House and of the Senate, I assert there can be no reorganization of government involving a material reduction of expenses unless absolute power is given to the President, not only to consolidate bureaus, but to abolish bureaus. The nearest earthly approach to immortality is a bureau of the Federal Government. Any effort to curtail its activities or abolish it will arouse nation-wide propaganda in opposition to the curtailment of its activities and the reduction of expenditures. The only hope of remedying this condition rests in a President who has the courage and patriotism to act, and in an aroused public sentiment that will cause the Congress to refrain from disapproving his action. After all, the high cost of government is due to the demands of the people. The people must come to realize that government has no money except that which is taken from their own pockets; that Uncle Sam is not a Santa Claus and the Treasury is not a Christmas tree; that the efficiency of a Representative in Congress should be measured not by his ability to secure funds from the Treasury, but by his ability to defeat the efforts of those who seek to secure funds from the Treasury.

It is the duty of every man to support the Government of the United States, but it is not the duty of the Government to support every man in the United States. However, it is the duty of the Government to give to every man the opportunity, without interference from government, or competition with government, to support himself and his family.

Machinery must be provided whereby there can be an adjustment of the mortgage indebtedness of the farmer to the land banks, insurance companies, and other mortgage creditors. It means liquidation on the part of the creditor. To-day there is not a man holding a bond of an industrial enterprise who does not know that he has sustained a loss on that bond. The holder of a farm mortgage must likewise realize that he has a loss on his mortgage debt. He may as well take that loss now and readjust the debt. Through the Federal land-bank system or through a corporation created for the purpose this adjustment machinery can be provided. If the land banks or insurance companies to-day foreclose these mortgages, they can find no purchaser for the farms that come into their possession. They have no desire to enter into the unprofitable business of farming. If by agreement these land-mortgage debts can be scaled down to a point where the farms can be operated with some hope of profit at existing price levels, then the Federal land bank or a corporation can pay this amount to the creditor and a new mortgage can be executed by the farmer to the land bank or to the corporation created by the Government for the amount paid to the creditors, providing for amortization over a period of years. The land banks and insurance companies can in this way take their losses and liquidate their loans; the farmer will remain upon the land and will be placed in a position where with reduced fixed charges he will have some hope of making a living and paying his reduced debt. The settlement of this question will do more than all else to restore hope to that great element of our population upon whom all men agree our prosperity depends.

There must be a final settlement of our foreign debt situation. Under the pledge of the Democratic platform there can be no cancellation. However, there can be an agreement as to how that debt shall be paid, whether solely in gold or partly in gold and partly in commodities that do not compete with American-produced commodities. And there must be a determined effort to bring about in international conference an agreement to reduce tariff duties and thereby remove the artificial barriers which are daily increasing and which will continue to prevent a return to normal conditions. Nations of the world have been, and are now, engaged in a race to see which can levy the highest tariff duties and exclude all foreign commodities. No nation can live unto itself.

The only hope of a return to normal conditions must depend upon the restoration of trade relations between the nations of the world. Not only are European governments indebted to the American Government, but European citizens and corporations are indebted to American citizens. These debts can be discharged only with gold, with commodities sold in the United States, or by services rendered. They have little gold and we now deny them the right to render service or to sell commodities. Our Government led the world in levying prohibitive duties. It must now lead in bringing about an agreement not only to discontinue any further increase in duties, but to reduce existing duties. It must be done simultaneously. If this be not done, we will continue to rely upon domestic consumption. Surplus production in this and in every nation, will cause a continuance of low prices, and a continuation of unemployment. It will likewise cause increasing demands for governments to purchase surplus commodities and other valorization proposals.

These things can not be accomplished at once. There will necessarily be a slow return to anything approaching normal conditions. In the meantime, emergency measures must be adopted. The next President, humane and sympathetic, will not permit the Government to deny relief to the unfortunate and the destitute. But this is temporary relief. We must look toward the permanent solution of these grave problems. In solving them, men who serve in public life must act as soldiers in time of war. Just as a soldier in time of war is willing to sacrifice his life for the good of his country, so must a man in public life to-day be willing to sacrifice his political life in order to do that which may be temporarily unpopular but which he knows is for the good of the American people.

The people of the Nation expect the Democratic Party to demonstrate its capacity to administer the affairs of the Government. There is such a thing as "party responsibility," and that responsibility can be discharged only by the individual Democratic Senator and Congressman being willing to sacrifice his personal views in order to redeem the pledges of his party. The Democratic platform should be the political creed of every Democrat, and, forgetting all personal ambitions, Democrats in and out of public life should determine to cooperate with the next President of the United States in justifying the confidence placed in our party by the people of the Nation.

Of one thing the people of this country may rest assured. The next President will come into that office with a definite program and for the accomplishment of that program will make a courageous fight. In this crisis in the affairs of the Nation all men and women, regardless of their party affiliation, should be willing to give to him and to his party a fair opportunity to do all that Government can possibly do to hasten the return of prosperity and happiness to the American people.

EFFECTS OF CURRENCY DEPRECIATION ON DOMESTIC INDUSTRY

Mr. DICKINSON. Mr. President, I have recently received a very interesting letter on the subject of the debasement of the currency and effect of depreciation of foreign currencies on American industry. Recently a gentleman made an in-

vestigation in the city of Des Moines, Iowa, with reference to the selling prices of various articles made in foreign countries. I think the data are well worth while, and I ask to have his letter inserted in the RECORD.

There being no objection, the letter was ordered to be inserted in the RECORD, as follows:

DES MOINES, IOWA, *January 25, 1933.*

Hon. L. J. DICKINSON,
United States Senate, Washington, D. C.

DEAR SENATOR: You will be interested in a check-up on five Des Moines stores, showing the variety and volume of imported articles swamping the Middle West, which, due to the difference in money values, have broken through the tariff walls and are competing in a death struggle with American workmen.

I found in one store that practically all of the tableware, all pottery and woodenware displayed comes from Japan. I found that beautiful dinner sets, complete, were laid down in Des Moines from Japan for $10 a set and were retailed at $37.50. My attention was called to a letter from an importer, which said in part: "You are urged to place your orders now. * * * The Japanese potteries are booked up almost a year ahead. * * * You are permitted to buy at the present extremely low prices because of the prevailing low value of the Japanese yen," etc. I found linens, draperies, shoes, shoe strings, table decorations, silver-plated cream and sugar sets, potted artificial flowers, bill folds, knives, leather goods, canned beef, etc. The other day I wrote you about office supplies. I find that staplers from Germany which are sold for $2.50 are laid down in this country for 60 cents, and staples that are sold at 40 cents the box are laid down at 5 cents. I also found certain fancy candies from Belgium sold in metal cigarette cases.

You will find attached to this sheet a list of smaller articles together with the countries of origin and the selling prices. I could not get the prices paid for these articles, but am told that they are purchased at prices from 50 per cent to 75 per cent below what they can be bought for in the United States factories. In the case of a pocket knife, selling for 75 cents, I learned that it was laid down from Germany for 12 cents.

This investigation required just two hours. A complete check-up would without doubt disclose hundreds of other items. The pottery, chinaware, and woodenware items are startingly bad.

Yours very truly,

L. W. AINSWORTH.

TREASURY AND POST OFFICE APPROPRIATIONS

The Senate resumed the consideration of the bill (H. R. 13520) making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1934 and for other purposes.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Tennessee.

Mr. REED. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. REED. I notice that the economy sections of the Treasury and Post Office bill apparently constitute but a single amendment, and, therefore, under the unanimous-consent agreement recently entered into, a limitation of 15 minutes of debate on those sections would apply; that is, a Senator would have 15 minutes, if he wished it, to discuss the entire economy amendment to this bill. Am I correct in that?

The VICE PRESIDENT. Each Senator may have 15 minutes on the amendment and 15 minutes on the bill.

Mr. REED. If a Senator were to move to amend the economy amendment in any respect, would that motion entitle him to 15 minutes' debate on the proposed amendment?

The VICE PRESIDENT. It would entitle him to 15 minutes on the proposed amendment.

CORRESPONDENCE ON CURRENCY INFLATION

Mr. REED. Mr. President, in common with all other Senators I have been receiving an enormous volume of mail with regard to the proposal to "revalue the gold ounce" and other proposals to inflate the currency. I have six clerks who are working very long hours every day in an effort to keep up with our correspondence, and they simply can not do more work than they are doing now. So I take this means of stating in the RECORD that it is my intention to send to those correspondents a copy of a speech which I made on January 24 on the subject of currency inflation.

Mr. WALSH of Massachusetts. Mr. President, I assume that the Senator's correspondence is of the same general character that all of us are receiving as a result of a radio talk on this subject by a well-known clergyman.

Mr. REED. Yes. Largely, these statements are provoked by that.

Mr. WALSH of Massachusetts. I also am receiving extensive correspondence of the same character, and am confronted with the same difficulty the Senator experiences in not being able to answer those letters. This is the first time I have been obliged to resort to this means of acknowledging a large volume of correspondence.

Mr. REED. I hope our correspondents will not consider it a rudeness on our part, but it is physically and humanly impossible to respond to such a volume of correspondence in any other fashion.

RECESS

Mr. ODDIE. Mr. President, as an agreement has been reached limiting debate on amendments to the pending bill and on the bill itself, which agreement I very thoroughly approve, it is unnecessary to ask for a night session. I feel now that the bill will be given prompt consideration and will be acted on soon.

In view of that fact, Mr. President, I move that the Senate now take a recess until 12 o'clock noon to-morrow.

The VICE PRESIDENT. The question is on the motion of the Senator from Nevada.

The motion was agreed to; and (at 5 o'clock and 32 minutes p. m.) the Senate, under the order previously entered, took a recess until to-morrow, Wednesday, February 1, 1933, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate January 31 (legislative day of January 10), 1933

POSTMASTERS

ALABAMA

John T. Haertel to be postmaster at Citronelle, Ala., in place of J. T. Haertel. Incumbent's commission expires February 28, 1933.

John W. Johnson to be postmaster at Langdale, Ala., in place of J. W. Johnson. Incumbent's commission expires February 28, 1933.

Cora T. Culverhouse to be postmaster at Speigner, Ala. Office became presidential July 1, 1932.

James McDonald to be postmaster at Winfield, Ala., in place of James McDonald. Incumbent's commission expires February 28, 1933.

CALIFORNIA

Grove K. Ketchum to be postmaster at Burbank, Calif., in place of G. K. Ketchum. Incumbent's commission expires February 28, 1933.

Pliny M. Arnold to be postmaster at Carlsbad, Calif., in place of P. M. Arnold. Incumbent's commission expires February 28, 1933.

Charles H. Quantock to be postmaster at Loma Linda, Calif., in place of C. H. Quantock. Incumbent's commission expires February 28, 1933.

John A. Scott to be postmaster at Porterville, Calif., in place of J. A. Scott. Incumbent's commission expires February 28, 1933.

Claude C. Hayes to be postmaster at Salida, Calif., in place of C. C. Hayes. Incumbent's commission expires February 28, 1933.

COLORADO

Cornelia C. Coleman to be postmaster at La Veta, Colo., in place of C. C. Coleman. Incumbent's commission expires February 25, 1933.

ILLINOIS

Charles Voorhees to be postmaster at Bradley, Ill., in place of Charles Voorhees. Incumbent's commission expires February 28, 1933.

Raymond J. Murphy to be postmaster at De Land, Ill., in place of R. J. Murphy. Incumbent's commission expires February 11, 1933.

Frank M. Allen to be postmaster at Hillview, Ill., in place of F. M. Allen. Incumbent's commission expires February 28, 1933.

Robert F. Sexton to be postmaster at Kansas, Ill., in place of R. F. Sexton. Incumbent's commission expires February 28, 1933.

Harold R. Kerchner to be postmaster at Walnut, Ill., in place of H. R. Kerchner. Incumbent's commission expires February 28, 1933.

Arden S. Coryell to be postmaster at West Union, Ill., in place of A. S. Coryell. Incumbent's commission expires February 28, 1933.

Don A. Spurr to be postmaster at Wilmington, Ill., in place of D. A. Spurr. Incumbent's commission expires February 14, 1933.

INDIANA

William Endicott to be postmaster at Crawfordsville, Ind., in place of William Endicott. Incumbent's commission expires February 28, 1933.

Walter M. Skinner to be postmaster at Fulton, Ind., in place of W. M. Skinner. Incumbent's commission expired January 19, 1933.

Elmer S. Applegate to be postmaster at Paragon, Ind., in place of E. S. Applegate. Incumbent's commission expires February 18, 1933.

Orville E. Steward to be postmaster at Rossville, Ind., in place of O. E. Steward. Incumbent's commission expires February 18, 1933.

IOWA

Marie O. Jones to be postmaster at Bussey, Iowa, in place of M. O. Jones. Incumbent's commission expires February 28, 1933.

Millie L. Hoffman to be postmaster at Central City, Iowa, in place of M. L. Hoffman. Incumbent's commission expires February 28, 1933.

Clara Bentzinger to be postmaster at Donnellson, Iowa, in place of Clara Bentzinger. Incumbent's commission expires February 28, 1933.

John M. Wright to be postmaster at Eldon, Iowa, in place of J. M. Wright. Incumbent's commission expires February 28, 1933.

Orwin W. Masching to be postmaster at Exira, Iowa, in place of O. W. Masching. Incumbent's commission expires February 28, 1933.

WITHDRAWAL

Executive nomination withdrawn from the Senate January 31 (legislative day of January 10), 1933

POSTMASTER

James J. Mateer to be postmaster at Rosslyn, in the State of Virginia.

HOUSE OF REPRESENTATIVES

TUESDAY, JANUARY 31, 1933

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

We wait, Almighty God, in most reverent recognition of Thy eternal Fatherhood. To be denied of this privilege is to miss the finest law of conduct, the master impulse of the best life, and the surest ground of the largest hope. Through

prayer and discipline and endeavor may we attain those strong qualities of soul, of which we caught the first glimpse at our mothers' knee. Endow us with power to thoroughly realize the great value of wise thinking and to be deeply affected by justice, sacrifice, and pity. Oh, let these palpitate in our daily experiences. Be very near us to-day full of sympathy, ignoring our failures, whispering peace into our breasts, and strengthening us in all things, and Thine shall be the glory forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Craven, its principal clerk, announced that the Senate had agreed to the amendments of the House to bills of the Senate of the following titles:

S. 284. An act for the relief of William B. Thompson; and

S. 3147. An act for the relief of Anna Pokorny.

The message also announced that the Senate disagrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 13607) entitled "An act to authorize the distribution of Government-owned cotton to the American National Red Cross and other organizations for relief of distress," further insists upon its amendments to the said bill, disagreed to by the House, requests a further conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. McNARY, Mr. NORRIS, and Mr. SMITH to be the conferees on the part of the Senate.

SUPPLEMENTAL REPORTS ON VARIOUS CLAIMS BILLS

Mr. BLACK. Mr. Speaker, on behalf of the Committee on Claims, I ask unanimous consent to file supplemental reports on the following bills:

H. R. 657. A bill for the relief of Peter Bess;

H. R. 913. A bill for the relief of Charles W. Sumner;

H. R. 1567. A bill to reimburse Dominic Fracapane for injuries sustained in an accident with a Government-owned motor truck;

H. R. 2810. A bill for the relief of William Sheldon;

H. R. 3694. A bill for the relief of Ada B. (Gould) Gollan;

H. R. 3905. A bill for the relief of Maj. L. D. Worsham;

H. R. 3928. A bill for the relief of Addie I. Tryon and Lorin H. Tryon;

H. R. 7757. A bill for the relief of Mary B. Hines;

H. R. 8216. A bill for the relief of the First National Bank of Junction City, Ark.;

H. R. 8513. A bill for the relief of Benjamin Stern, and Melville A. Stern and Benjamin Stern, as executors under the last will and testament of Louis Stern, deceased, and Arthur H. Hahlo, as executor under the last will and testament of Isaac Stern, deceased, all of New York City, N. Y., for compensation and in settlement of their damages and loss sustained by virtue of a lease, in writing, dated September 12, 1919, between the said parties and the United States of America, by Daniel C. Roper, Commissioner of Internal Revenue.

H. R. 9338. A bill authorizing the Court of Claims to hear and determine the claim of Central Romana (Inc.), and to render judgment for just compensation;

H. R. 9476. A bill for the relief of the Merchants & Farmers Bank, Junction City, Ark.;

S. 1421. An act for the relief of Little Rock College, Little Rock, Ark.; and

S. 3438. An Act authorizing adjustment of the claim of Lindley Nurseries (Inc.).

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

APPROPRIATIONS BELOW BUDGET

Mr. BLANTON. Mr. Speaker, this morning's press carries the statement from the President that the appropriation bills thus far passed by and reported to the House aggregate an increase of $163,000,000 above his Budget estimates.

Some one has misinformed the President. He is mistaken in such assertion. The appropriations carried in all of the appropriation bills thus far passed by the House, and thus far reported to the House, are below the President's Budget estimates in the sum of $66,877,908.02, and these figures take in consideration the amendments which the House inserted in said bills carrying $2,703,203, but for which the said bills as reported to the House by the Committee on Appropriations would have saved $69,581,111.02 below the amounts President Hoover requested Congress in his Budget to appropriate for the various departments of government.

I have had the clerk of the Committee on Appropriations prepare an authentic statement, correct in every particular, showing the exact amount of appropriations carried in each one of the appropriation bills thus far reported to the House, and the Budget estimates for each of such bills which the President asked Congress to appropriate, and I have such official statement here, and I ask unanimous consent to insert that statement in connection with my remarks.

The SPEAKER. Is there objection?

There was no objection.

Comparison of appropriation bills as reported to the House with the Budget estimates

First deficiency (vetoed):	
Budget estimates	$43,706,708.99
Bill	31,421,520.57
Reduction	12,285,188.42
Treasury and Post Office:	
Budget estimates	994,328,901.00
Bill	961,416,597.00
Reduction	32,912,304.00
War Department:	
Budget estimates	352,530,145.00
Bill	345,833,532.00
Reduction	6,696,613.00
Interior Department:	
Budget estimates	46,083,929.00
Bill	43,172,904.00
Reduction	2,911,025.00
Agriculture:	
Budget estimates	108,061,793.00
Bill	100,228,077.00
Reduction	7,833,716.00
Independent offices:	
Budget estimates	1,004,548,301.00
Bill	1,002,890,779.00
Reduction	1,657,522.00
Four departments (State, Justice, Commerce, Labor):	
Budget estimates	108,566,781.60
Bill	103,282,039.00
Reduction	5,284,742.60
Total reduction	69,581,111.02
Deduct net amount added by House to bills which have passed the House	2,703,203.00
Total net decrease below Budget estimates	66,877,908.02

QUESTION OF PERSONAL PRIVILEGE

Mr. McFADDEN. Mr. Speaker, I rise to a question of personal privilege.

The SPEAKER. The gentleman will state it.

Mr. McFADDEN. Mr. Speaker, it is a rule of the House of Representatives, which rule rests upon the Constitution of the United States, that a Representative may not be assailed when he acts in his representative capacity.

Mr. Speaker, I have been assailed and charges have been made against me, as a Representative, which are false and defamatory.

On December 13, 1932, I impeached Herbert Hoover, President of the United States, for high crimes and misdemean-

ors. No action was taken on my charge of impeachment. The resolution which accompanied it was tabled.

On December 14, 1932, the Wichita Beacon published an editorial article, a part of which reads as follows:

This fellow McFADDEN, Pennsylvania Congressman, continues to expose himself as a nuisance of the first magnitude. President Hoover has plenty of trouble. He has made mistakes and would be the last to deny errors of judgment that have preyed heavily upon him.

McFADDEN's resolution looking to the impeachment of President Hoover, introduced Tuesday in the House, was an insult to Congress and an affront to the American people. It is to the credit of the House that it was overwhelmingly voted down.

On December 14, 1932, the Press Democrat published an editorial article, a part of which reads as follows:

M'FADDEN IS HAYWIRE AGAIN

Resolutions presented in the House yesterday by Representative McFADDEN, of Pennsylvania, proposing the impeachment of President Hoover, look from this distance like a bid for notoriety. McFADDEN, a Republican insurgent, has been nagging at Hoover ever since his election.

There is perhaps some foundation for at least a part of the long list of charges which McFADDEN brought against the President as the basis for his impeachment resolution. McFADDEN had no hope of carrying his impeachment proceedings through. He ought to know that such a proposal is untimely and would be rejected by any group of sound-minded citizens.

President Hoover has less than two months to serve. He probably has fallen short of the expectations of a great many citizens. The November election results testify to that. But there are few if any citizens who believe the President has been guilty of "high crimes and misdemeanors," as charged by McFADDEN.

On December 14, 1932, the Miles City Daily Star published a leading article, a part of which reads as follows:

Representative McFADDEN, Republican, of Pennsylvania, on Tuesday earned the title of carrying the largest individual cargo of sour grapes in the history of Congress.

Mr. UNDERHILL. Mr. Speaker, I rise to a point of order.

The SPEAKER. The gentleman will state it.

Mr. UNDERHILL. I make the point of order that the gentleman has gone beyond the point of personal privilege, and is now indulging in dilatory tactics, which affect the procedure of the House; and I ask for a ruling by the Chair.

The SPEAKER. The gentleman from Pennsylvania [Mr. McFADDEN] is undertaking to state to the Chair the question of personal privilege.

Mr. UNDERHILL. But the gentleman has done so. He has done this on other occasions.

The SPEAKER. But the gentleman has not completed his statement of his question of personal privilege, as the Chair understands it. Has the gentleman stated his question of personal privilege?

Mr. McFADDEN. I have not, Mr. Speaker.

The SPEAKER. The Chair must hear the question of personal privilege.

Mr. DYER. But, Mr. Speaker, the gentleman might read a thousand newspaper clippings, and in the meantime stop public business.

The SPEAKER. The Chair understands the gentleman from Pennsylvania is basing his claim of personal privilege on newspaper articles appearing in different newspapers in the United States. The gentleman is undertaking to quote these newspaper comments.

Mr. DYER. But, can he quote all of them?

The SPEAKER. The gentleman from Pennsylvania will proceed.

Mr. DYER. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. DYER. Would the gentleman from Pennsylvania be permitted to quote the comments of all newspapers in the United States upon his action in the House in trying to impeach the President? Must we sit here and listen to that again and again, and allow the gentleman to interrupt public business?

The SPEAKER. In response to the parliamentary inquiry, the Chair will state that the gentleman from Pennsylvania [Mr. McFADDEN] has a right to state the question of personal privilege, whether it is contained in one newspaper article or 10 newspaper articles. Further answering the parliamentary inquiry, the Chair will state that no Member of the House is compelled to remain in the Chamber and listen.

Mr. STAFFORD. But we must have a quorum, Mr. Speaker.

Mr. McFADDEN. Mr. Speaker, there is apparently an organized attempt to discourage any efforts on my part——

The SPEAKER. The gentleman will proceed with his question of personal privilege.

Mr. McFADDEN (reading):

They spoiled on his stomach. He attempted to vomit the nasty unassimilated mess in the pit of the lower House in a deposit of impeachment charges against the President of the United States. It is an everlasting stain on the escutcheon of the Democratic Party that seven of its Members followed the lead of this would-be despoiler of presidential character.

Three hundred and sixty-one of McFADDEN's colleagues registered their resentment against the unfair accusation. The motion to impeach was tabled pronto upon the lead of the Democratic dean of the House [POU] of North Carolina, with only 8 opposition votes.

Look at the list, BLANTON of Texas; GRIFFITH and BLACK of New York; PATMAN of Texas; ROMJUE of Missouri; SWEENEY of Ohio; HANCOCK of North Carolina, and beside them stands McFADDEN.

The SPEAKER. The gentleman will suspend for a moment. The gentleman has stated sufficient to indicate that he has a question of personal privilege. It occurs to the Chair, however, that if several questions of personal privilege were permitted to be raised at various times based on articles appearing in newspapers in the United States that may reflect upon the gentleman from Pennsylvania in his representative capacity, the business of the House would be seriously impeded. The Chair is not aware of any precedent which would permit a Member of the House to rise to a second question of personal privilege where the material upon which he bases his second question is substantially the same as that used in the first instance. Now the question is, Shall the House set the precedent or shall the Chair set the precedent that a Member of the House can not rise the second time to a question of personal privilege when that question is based upon substantially the same material used in raising the first question of personal privilege? It is a question that the Chair would rather have the House pass upon.

The gentleman from Massachusetts [Mr. UNDERHILL] has made the point of order that it is dilatory. The Chair would not care to say that it was dilatory, but the Chair would like to submit the question to the House.

Mr. STAFFORD. Mr. Speaker, will the Chair indulge me a moment?

The SPEAKER. The Chair will be pleased to hear the gentleman.

Mr. STAFFORD. Could the question that is uppermost in the Speaker's mind be brought to a test of the House by raising the question of consideration?

The SPEAKER. There is nothing before the House for consideration, the Chair may say to the gentleman from Wisconsin.

Mr. STAFFORD. I intended to raise the question of consideration as soon as the gentleman presented his question of personal privilege.

Mr. BANKHEAD. Mr. Speaker, it is apparent that it is the intention of the Chair to submit this question to the House, and in order that all Members of the House who are going to vote on it may fully have presented to them the parliamentary question, I make the point of no quorum.

The SPEAKER. Evidently there is not a quorum present.

CALL OF THE HOUSE

Mr. BANKHEAD. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 153]

Abernethy	Bloom	Busby	Carter, Wyo.
Andrews, N. Y.	Brand, Ga.	Byrns	Cavicchia
Arentz	Buckbee	Cable	Chapman
Barbour	Burch	Cannon	Chase

Chiperfield	Goldsborough	Kurtz	Shott
Cochran, Pa.	Goodwin	Lankford, Ga.	Shreve
Cooke	Green	Larsen	Smith, Idaho
Corning	Hancock, N. Y.	Lewis	Snell
Cox	Hare	Lindsay	Stewart
Culkin	Harlan	McGugin	Strong, Pa.
Curry	Holaday	Manlove	Sullivan, N. Y.
Davenport	Hopkins	Nelson, Wis.	Sullivan, Pa.
Davis, Tenn.	Hornor	Oliver, Ala.	Taylor, Colo.
Dominick	Hull, William E.	Oliver, N. Y.	Tierney
Doutrich	Igoe	Pratt, Harcourt J.	Tinkham
Erk	James	Pratt, Ruth	Underwood
Freeman	Johnson, Ill.	Rich	Weaver
Fulbright	Johnson, Wash.	Romjue	Woodruff
Gilbert	Kelly, Ill.	Schuetz	Wyant
Golder	Knutson	Shannon	

The SPEAKER. Three hundred and forty-six Members have answered to their names. A quorum is present.

On motion of Mr. RAINEY, further proceedings under the call were dispensed with.

Mr. McFADDEN. Mr. Speaker, it is my present understanding that to-morrow when the House convenes and the independent offices appropriation bill is taken up, the gentleman from Virginia [Mr. WOODRUM], in charge of the bill, will yield to me the hour I would have under the question of personal privilege here. Under these circumstances, Mr. Speaker, I withdraw the question of privilege.

Mr. CLARKE of New York. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. CLARKE of New York. Are we to continue having these questions brought up?

The SPEAKER. That is not a parliamentary inquiry, because the Chair does not know what is going to happen in the future.

Let the Chair make a statement on this matter. The Chair wishes to read into the RECORD a question which the House very properly must consider if continued effort is made to raise the question of personal privilege based upon the same premise. The Chair had the Parliamentarian write it out:

> Is the gentleman from Pennsylvania permitted, under the practice of the House, to raise a question of personal privilege the second time on substantially the same issue used by him in raising a former question of personal privilege?

If the House will permit the Chair to make a further statement he will state his views. Probably a hundred newspapers in the United States have attacked the gentleman from Pennsylvania for his effort to impeach the President of the United States. This is the only forum a Member of the House has to reply to newspaper criticism, or other criticism, and the House heretofore has been very jealous of this privilege. The Chair is very jealous of it and wishes to preserve it as far as possible. At the same time it seems to the Chair that it would be absurd to permit a Member, who has been attacked by a hundred newspapers to have a hundred different hours on the question of personal privilege in the House of Representatives. That is the reason the Chair raised the question with the gentleman from Pennsylvania, in view of the fact the gentleman had already defended himself on the charge lodged against him by several newspapers of the United States as to his actions in his representative capacity in an effort to impeach the President.

The Chair is very glad the gentleman has withdrawn the question of personal privilege, because the Chair thought it was proper to submit the question to the House of Representatives, for the Chair knows of no precedents in the premises.

Let the Chair say in that connection it does seem to the Chair that the gentleman from Pennsylvania is entitled to address the House, in view of his long service in the House, and also in view of the fact he has been reelected to the next Congress.

Mr. LAGUARDIA. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. LAGUARDIA. In reference to the statement of the Speaker, may I ask if anything transpiring to-day in any way changes the rule or custom on questions of personal privilege?

The SPEAKER. None whatever, because the gentleman from Pennsylvania has withdrawn his question of personal privilege. The Chair has merely stated his views in the matter.

COMMITTEE MEETING

Mr. McCLINTIC of Oklahoma. Mr. Speaker, I ask unanimous consent to address the House for one minute to make an announcement.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. McCLINTIC of Oklahoma. Mr. Speaker, I desire to announce to the Members of the House that the committee that has been working on proposed legislation to aid distressed mortgagors will meet to-night in the rooms of the Committee on the Judiciary in the House Office Building at 7.30. All interested in this subject are invited to be present.

INDEPENDENT OFFICES APPROPRIATION BILL, 1934

Mr. WOODRUM. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 14458) making appropriations for the Executive Office and sundry independent executive bureaus, boards, commissions, and offices for the fiscal year ending June 30, 1934, and for other purposes. Pending that, Mr. Speaker, I ask unanimous consent that general debate may continue through the day, the time to be equally divided between the gentleman from Washington and myself.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 14458, with Mr. RAYBURN in the chair.

The Clerk read the title of the bill.

Mr. WOODRUM. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. WOODRUM. Mr. Chairman, I yield myself one hour.

Mr. Chairman, the independent offices appropriation bill, bringing the committee recommendations for 1934, is in the sum of $1,002,890,779. This is $21,395,262 less than the appropriations for the same activities for 1933, and $1,657,522 less than the Budget estimates for 1934.

I have a very interesting compilation which I shall insert in the RECORD. Mr. Chairman, at this time I ask unanimous consent to extend my remarks by including therein several tabulations and short references to the reports and hearings.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WOODRUM. Mr. Chairman, I believe the membership of this House will bear witness that I do not impose on its time. I do not get in the well of this House and make a speech to hear the sound of my voice, and the only reason I am here to-day is to try to bring you information about an appropriation bill that covers 25 per cent of the total Federal Budget. You ought to be interested in knowing something about this, and I am going to take it for granted that you are, and I ask your kind cooperation during the time I shall have to consume.

This bill carries the appropriations for the so-called independent establishments of the Government. There are some twenty-seven of these bureaus and commissions.

While the total amount of the bill is over $1,000,000,000, yet the total amount for all of these independent establishments is only $56,000,000, and I am very pleased to be able to direct your attention to the facts which show that for these 27 independent establishments of the Government the Congress has reduced the appropriations in the last two years 16.7 per cent; that is to say, the appropriations for these independent establishments in dollars and cents is $11,425,926 less than the actual money appropriated in 1932, or 16.7 per cent. The following study is of interest:

Statement showing, by establishments, the amounts carried in the independent offices appropriation bill for 1934 as compared with the amounts appropriated for corresponding items in 1932 and 1933, showing the decreases or increases in the bill for 1934 as compared with the Budget estimate for 1934 and with the appropriations for 1933, and the cumulative decreases or increases in the bill for 1934 as compared with the appropriations for 1932 [1]

	1932 appropriation	1933 appropriation	1934 Budget estimate	Recommended in bill for 1934	Increase (+) or decrease (−), bill compared with 1933 appropriation	Increase (+) or decrease (−), bill compared with 1932 appropriation	Increase (+) or decrease (−), bill compared with 1934 Budget estimates
Executive Office	$550,880	$392,000	$378,498	$428,498	+$36,498	−$122,382	+$50,000

United States Geographic Board	10,678	9,678	9,778	9,778	+100	−900	
U. S. Shipping Board	2,406,000	360,000	3,202,744	3,202,744	+2,842,744	+796,744	
Civil Service retirement and disability fund	20,850,000	20,850,000	20,850,000	20,850,000			
Total, above items	68,328,071	54,887,041	58,559,667	56,902,145	+2,015,104	−11,425,926	−1,657,522
Veterans' Administration (military services)	1,115,067,467	927,949,000	945,988,634	945,988,634	+18,039,634	−169,078,833	
Grand total	1,183,395,538	982,836,041	1,004,548,301	1,002,890,779	+20,054,738	−180,504,759	−1,657,522

[1] From this table have been omitted appropriations for 1932 and 1933 for items occurring in those years which do not recur in 1934, as follows: For 1932, Federal Farm Board, revolving fund, $100,000,000; George Washington Bicentennial Commission, $563,195; Housing Corporation, $15,000; National Capital Park and Planning Commission, $4,000,000; Puerto Rican Hurricane Relief Commission, $1,000,000; Reconstruction Finance Corporation, $500,000,000; and Ship Construction Loan fund, $35,000,000. For 1933, Chicago World's Fair, $1,000,000; Distribution of wheat and cotton to Red Cross, $40,000,000; Federal Home Loan Bank Board, $250,000; and George Washington Bicentennial Commission, $200,000.

[2] Including for each of the years given the amount appropriated for the Personnel Classification Board.

[3] Including for each of the years given the amount appropriated for the Radio Division of the Department of Commerce.

[4] Reappropriated.

Of course, when you figure the appropriations for veterans' activities, the gross amount of the bill will probably show an increase, taking out nonrecurring items, and this brings up a very interesting question. When we consider the problem of reducing the cost of government, about which we are hearing so much and about which so many of us are interested, the total Federal Budget for 1933, in round figures, was $4,000,000,000. These figures, I am sure, are familiar to all Members of the House. Interest on the sinking fund, the public debt, cost of Veterans' Administration, and the Army and the Navy, in round figures, take $3,000,000,000 of that amount. The public-works program, which every Member of the House, I am sure, feel is necessary in these days of stress as a relief activity, takes another one-half billion dollars, leaving $500,000,000 wherein you may put into effect your economy in government, unless you are willing to cut the Army and the Navy and the veterans.

So if you would wipe out entirely the whole civil government, Congress, and the Senate, and all of their salaries and all of their expenses, and all of these independent establishments, and wipe the slate clean, you would only have reduced the cost of government 12½ per cent. In other words, you have only a leeway of something like one-half billion dollars, or one-eighth of your Budget wherein you can put into effect economies in government.

So I think when this committee brings you a bill which in two years has reduced the cost of these so-called independent establishments by 16.7 per cent, and at the same time has not interfered with necessary functions of government, this is an accomplishment of which the Congress itself may feel proud.

At this time I want to pay my respects to colleagues on the subcommittee for their untiring efforts and their interest in assisting in the work of this subcommittee, and to the clerk of our subcommittee and the clerk of the committee, Mr. Shields.

Particularly do I want to call attention to the fact that three of my colleagues on the subcommittee, the gentleman from New Hampshire [Mr. WASON], the gentleman from Washington [Mr. SUMMERS], and the gentleman from Georgia [Mr. WRIGHT], who will not be with us in the next session of Congress. I am sure their kind cooperation, their cordial friendship, their patient and patriotic service will be missed by this body, and that each and every one of them can go home to his constituency happy in the thought that while a Member of this House and this committee he has contributed to the welfare and advancement of his country. [Applause.]

Undoubtedly, it is the prime function of the Congress to reduce the cost of government. I am in hearty sympathy with the idea that the keystone in the arch of economic solidarity is a balanced Federal Budget, but I do not believe we will be able in these appropriation bills in this Congress or in any other Congress to make the drastic reductions that some of us in our wild moments of enthusiasm have promised to make, without seriously crippling necessary functions of government.

I want to say this to the committee. This subcommittee has given to the items in this bill the very best thought and consideration of which it is capable. We have cut to the bone wherever we thought we could do so. In many places we have followed the Budget recommendations, but we believed it to be not only our duty to have an economical Government, but to have an efficient Government, and that it is just as much the duty of the Congress to provide sufficient funds for necessary functions of government as it is to try to find and eliminate wasteful and useless expenditures. With this thought in mind we have approached the items set out in this bill.

As I have said there are 27 separate establishments. I am going through the report rapidly, paying attention only where cuts have been made where Members may be inter-

ested, and I shall be glad to answer any question my colleagues may propound so far as I am able.

The Arlington Bridge Commission is given the amount the Budget recommended. That is enough to carry the project through the next fiscal year, eliminating a good many items in the project, but doing nothing but what is absolutely necessary to be done and cutting from the list all items that have not been begun or contracted for.

The estimate for the Civil Service Commission in 1934 was $1,374,470. That amount is practically allowed the Civil Service Commission. The committee did not cut that item this year. But may I bring to your attention the fact that since 1931 the appropriation for the commission has been cut 25 per cent? The suggestion has been made by some of my colleagues that inasmuch as practically few examinations are being held by the commission that you ought to make a more drastic cut in the appropriation.

I find on inquiry that during 1931, 42 per cent of the appropriation for the Civil Service Commission was devoted to examinations, while the 1934 estimates only provided for 23 per cent, showing their appropriations have been cut 25 per cent, and that that cut has been applied to that portion of their activity which relates to the examination of applicants for Federal positions.

Permit me to say that on investigation you will find that the commission has had placed on it by Congress and the organic law many functions besides the one we think of, the function of examining applicants for Federal positions.

The Federal Board for Vocational Education has been given the appropriation estimated for by the Bureau of the Budget, and in the report and the hearings you will find a full statement of the administration of that activity.

The Federal Farm Board is mentioned on page 8 of the report. Gentlemen will recall that last year we had an interesting discussion and consideration of this appropriation for the Federal Farm Board. The Budget estimate was $1,880,000. The House cut it to a million dollars. The Senate cut it to $800,000, at which figure it was left by the conferees.

The committee this year allows the Federal Farm Board $500,000, limiting its activities to the 1st of January, 1934. That was done after careful thought, study, and consideration, believing, as the committee did, that with the advent of the new administration a study would be made of the question and some definite program outlined which would determine the future of this activity.

And so we give it an appropriation for half the fiscal year an amount estimated by the Bureau of the Budget.

The Federal Power Commission is given the Budget estimate of $235,373, and may I direct attention to one independent establishment of the Government that more than pays for itself, and I think that is worth considering and making special mention of. The total expenses of the Federal Power Commission since its organization have been $2,304,999.64, but there has been covered into the United States Treasury in fees authorized and collected by this commission $3,110,954.16, or a net profit to Uncle Sam of more than $805,954.52; and may I say in this connection there are a great many activities of the Government which I think could very properly charge a small service fee to the people who get the benefit of its activities, and in a great measure in that way pay for the cost of that particular activity. The Bureau of Standards, under the economy act, is now charging for a great many services that in the past were rendered gratis. The charge does not amount to much to the particular individual who avails himself of the service, and they are usually willing and glad to pay it, yet in the aggregate it cuts down the cost of running that establishment a great deal.

The Budget estimate for the Federal Trade Commission was for $1,109,550. The committee made a very drastic cut in this appropriation. We cut it to $510,000, or a cut of $599,550. I shall pause for a moment here to say a word in explanation of that. Gentlemen will recall that last year we earmarked $300,000 of the Federal Trade Commission's appropriation in order to compel the commission to complete the utility and chain-store investigations that at that time had been running for several years, and running into thousands of dollars. We were advised in our hearings by the Federal Trade Commission that at the end of this fiscal year they will have completed the public utility investigation and the chain-store investigation. The utility investigation will have cost the Government something like $2,000,000 and the chain store investigation something under a million dollars.

Large and numerous volumes of reports have been published by the commission giving information collected and charted in these investigations. The Federal Trade Commission then, inasmuch as it would complete these two major investigations by the end of the fiscal year, passed a resolution to initiate of its own motion three new investigations—first, an investigation into the financial practices of corporations; second, the effect of antitrust acts with relation to the petroleum, natural gas, coal, and lumber industries; and, third, the effect on business and the general public of quantity discounts, selling below cost, reciprocity in dealing, brand advertisements, guarantee against decline, and wholesale and retail price stabilization. They carried in their estimates for 1934 appropriations $288,134 for the fiscal year to begin those new investigations. Your committee did not believe that the time was opportune for the Federal Trade Commission or any other commission of the Government to begin new investigations, unless it was shown by the most convincing evidence that there was a pressing and urgent need for that kind of investigation. We believe that with the advent of a new administration, that new administration ought to have the duty and responsibility of saying what public funds should be spent for that purpose and whether there were a need to initiate such investigations. Therefore it took out of this appropriation that $288,134 and practically an additional amount, feeling that perhaps the Federal Trade Commission could operate during these strenuous times on a greatly reduced personnel and Federal Budget. A number of Members have expressed interest and some concern about this drastic cut in the Federal Trade Commission. Personally I am very frank to say that I think we cut it pretty deep. I think we were entirely justified in taking out sums estimated for new investigations; but I shall be very glad, and I am sure the members of the subcommittee will be very glad, to have the judgment of the committee when it comes to consider this, as to whether or not this activity has been unnecessarily and unduly hampered in providing for its financial needs.

Next I come to the Interstate Commerce Commission. The committee will recall that last year we took about one million and a half dollars away from the Interstate Commerce Commission. The appropriation this year is practically the same as last year, and gentlemen will find in the report a very comprehensive and detailed statement of the activities of the Interstate Commerce Commission and the various branches of that commission.

Mr. MAY. Mr. Chairman, will the gentleman yield for a question?

Mr. WOODRUM. Yes.

Mr. MAY. I am particularly interested in one feature of the activities of the Interstate Commerce Commission for a certain reason and should like to state that and ask the gentleman to give us his judgment upon it. That is the branch relating to land appraisals to which has been allotted $2,313,542 on page 27 of the bill. While the cut on the whole appropriation is only around $10,000, as I understand it, I believe there ought to be more money transferred from some other activity of the commission to this particular activity for this reason. It will be recalled that in the Senate there is a bill pending by Senator BLAINE which shows that by reason of the efficiency of this particular department of the Interstate Commerce Commission, the Government was able to save about $7,000,000 on a post-office site valuation in New York City, and approximately $5,000,000 on one in Chicago. I think these two instances of actual savings to the Government in another department of its activities ought to weigh heavily with this committee

and the House in the matter of apportioning to the proper department these appropriations, and I merely make that as a suggestion, and I should like to have the chairman of the committee give consideration to it.

Mr. WOODRUM. In the first place, when the Congress first considered the transportation act providing for this valuation of the property of common carriers, my recollection is that the Senator from Wisconsin, the late Senator Robert M. La Follette, said it would probably cost $2,000,000 to make this valuation. The Government has already expended about $44,000,000, and the railroads probably three times that amount.

The law provides for two classes of examinations to be made of properties of common carriers by the Interstate Commerce Commission. First, a primary valuation; that is the original valuation of their properties. That valuation has practically been completed. A great deal of work was done on it. But the law also provides that in order that the Interstate Commerce Commission may have current information necessary to pass on the rights of carriers for rate-making purposes and for the purpose of issuing securities it must police those accounts and keep their valuations current; that they may not rely upon statements that may be filed by the railroads as to the differentials in their valuations, but that the Interstate Commerce Commission itself shall send its experts there to examine their books and reports and make other appraisements. That is what it does.

The cut in the valuation department last year was made because of the very urgent recommendation that is now before the Congress from the Committee on Interstate and Foreign Commerce, which recommended the retroactive repeal of the recapture clause of the transportation act, and the belief that this would ultimately be done. The Congress felt last year, following the recommendation of its committee, that pending the determination of that question no more money should be spent on this recapture work than was absolutely necessary to keep it current. So with that in mind the committee this year brings in an appropriation providing for merely enough organization—but we think an adequate organization—to take care of that work.

Mr. MAY. Will the gentleman yield further for a question?

Mr. WOODRUM. I yield.

Mr. MAY. I appreciate the courtesy and the splendid explanation which the gentleman has made, and I am entirely in sympathy with the efforts of the committee to economize in every direction; but has the gentleman given any thought to the idea that the Government has advanced, through the Reconstruction Finance Corporation, many, many millions of dollars to the railroads, and that those railroads in receiverships are now to be reappraised for that particular purpose?

Mr. WOODRUM. I may say to the gentleman from Kentucky that the committee did not understand the Interstate Commerce Commission felt they had been greatly handicapped in this appropriation. I think when a department is pretty well satisfied, the Congress can feel it is making adequate provision for that activity. The Interstate Commerce Commission, I think, will be well pleased if Congress gives them the amount of money that has been estimated by the Bureau of the Budget.

Mr. MAY. I agree with that; but my thought was that if we could take from some other department in the commission and give to this department a little more money, it would be a good change to make, and I thought we might be considering that as we go along.

Mr. WOODRUM. Now, Mr. Chairman, we come to another activity that I want to say a word about, and that is the National Advisory Committee for Aeronautics, a committee set up during the war time for the purpose of making scientific research and study of problems relating to aviation. This committee is composed of eminent scientists. Doctor Ames, of Johns Hopkins University, is chairman of the committee. Colonel Lindbergh is a member of the committee. Some 10 or 12 or 15 other eminent aviators and scientists are members of that committee. The members serve without pay, and they meet periodically in an effort to study and solve problems relating to aviation, especially in the Army, the Navy, and Marine Corps air services of the Government. It is interesting to note that we are able to put our hands on definite accomplishments of this organization that can be translated into dollars and cents.

This branch of the Government has only a relatively small appropriation, and it is really preeminent in the world. We are told that no nation has laboratories and research agencies comparable to the United States in this regard. Their appropriation this year is $821,000. It is $45,030 under the Budget estimates. After going over the matter, we felt they could stand that much cut. It is probably $300,000 under what it was two years ago.

I shall place in the RECORD information showing definite discoveries and the solving of definite problems by this committee which would save to the Government approximately $5,000,000 a year in its aviation program if put into effect. Some of them are being put into effect rapidly. It is a fascinating study. Our subcommittee looks forward each year to having this group of people come before us and discuss these problems, because it is a fascinating study.

I think, Mr. Chairman, I shall ask unanimous consent to further extend my remarks by inserting in the RECORD a short analysis of the activities of the National Advisory Committee for Aeronautics.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

Mr. STAFFORD. Is that manuscript to which the gentleman refers embodied in the hearings?

Mr. WOODRUM. No, sir; it is not in the hearings.

There was no objection.

Mr. WOODRUM. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

ECONOMIC VALUE OF THE NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS

Fundamental scientific research in aeronautics is conducted by the National Advisory Committee for Aeronautics in one central Government laboratory at Langley Field, Va. Many of the researches have led to material improvements in the safety of aircraft. The economic value of greater safety, being indeterminate, is not included in this statement. Other researches have led to valuable improvements in performance of military and civil aircraft. Although superior performance is vital for military purposes, the economic value of superiority as such in time of war is indeterminate and is not included.

In the 18 years since its establishment, the committee's expenditures have averaged less than $500,000 annually. The results of investigations completed during recent years, when applied to airplanes equal in number to those in use during the fiscal year 1932, will make possible annual savings in money alone considerably in excess of the total cost of the committee's work for 18 years.

The following half dozen examples show possible savings amounting to over $10,000,000 annually:

	Annual possible savings
N. A. C. A. cowling	$5,299,300
N. A. C. A. engine-propeller location	1,998,300
Use of 2-stroke-cycle engine	997,905
Effect of load-factor research on wing design	984,900
Use of N. A. C. A. 2415 airfoil	628,757
Operation of engines with large valve overlap	598,742
Annual possible savings	10,507,904
To Government	5,188,499
To commercial aviation	5,419,405

N. A. C. A. COWLING

In arriving at the estimated possible savings through the use of the N. A. C. A. cowling on all types of airplanes, the following factors were considered for each type of airplane in use in the United States for military, naval, and commercial purposes during the fiscal year ended June 30, 1932:

1. Actual hours flown; reduction in drag through use of cowling (at cruising speed); reduction in horsepower required through use of cowling for same cruising speed; reduction in initial cost of engine of less horsepower required; reduction in cost of airplane maintenance and operation resulting from saving in weight, including: Saving on depreciation; saving in insurance and interest charges on commercial airplanes and engines; saving on fuel and oil; and saving in maintenance costs of airplane and engine.

2. From the gross saving thus computed for each airplane in service there was deducted the cost of installation and maintenance of the N. A. C. A. cowling.

3. The remainder is the net saving per year for each airplane of a given type.

These factors applied to the airplanes in use in the United States by the Army, by the Navy, and by commercial operators show estimated possible savings per year as follows:

Army	$1,686,800
Navy	1,286,600
Total, military	2,973,400
Commercial	2,325,900
Total annual savings from use of N. A. C. A. cowling	5,299,300

N. A. C. A. ENGINE-PROPELLER LOCATION

In arriving at the estimated possible savings through the use of the N. A. C. A. engine-propeller position in the wings of all types of multiengine airplanes the following factors were considered for each type of airplane in use in the United States for military, naval, and commercial purposes during the fiscal year ended June 30, 1932:

1. Actual hours flown.
2. Improvement in net efficiency due to use of N. A. C. A. engine-propeller location.
3. Reduction in horsepower required at cruising speed.
4. Reduction in initial cost of engines of less horsepower required.
5. Reduction in cost of airplane maintenance and operation resulting from saving in weight, including—
   (a) Saving on depreciation.
   (b) Saving in insurance and interest charges on commercial airplanes and engines.
   (c) Saving on fuel and oil.
   (d) Saving in maintenance costs of airplane and engine.

These factors, applied to the multiengine airplanes in use in the United States by the Army, the Navy, and commercial operators, show estimated possible savings per year as follows:

Army	$702,200
Navy	342,500
Total, military	1,044,700
Commercial	953,600
Total annual savings through use of N. A. C. A. engine-propeller position in multiengine airplanes	1,998,300

2-STROKE-CYCLE ENGINE

The conventional type of gasoline engine is a 4-stroke-cycle engine—that is to say, each piston makes 2 up strokes and 2 down strokes in delivering 1 power stroke. In the 2-stroke-cycle engine each down stroke of a piston is a power stroke. Certain physical difficulties have existed, however, to delay the development of the 2-stroke-cycle engine for general use in aircraft.

The National Advisory Committee for Aeronautics has conducted researches for several years to solve these difficulties. It has made definite progress on the fundamental difficulties involved, as, for example, in the scavenging of burned gases from the cylinders and in the injection of fuel under pressure. The progress thus far made in the committee's laboratory indicates that a 2-stroke-cycle engine having compression ignition and fuel injection can now be built at an average weight of 1.4 pounds per horsepower as compared with the present average weight of 2 pounds per horsepower.

Total horsepower developed in Army, Navy, and commercial airplanes—horsepower	413,725
At average of 2 pounds per horsepower for 4-stroke-cycle engine—pounds	827,450
At average of 1.4 pounds per horsepower for 2-stroke-cycle engine—pounds	579,215
Weight saved using 2-stroke-cycle engine—pounds	248,235
Multiplied by cost per year per pound of weight flown	$4.02
Annual possible saving	$997,905

EFFECT OF LOAD-FACTOR RESEARCH ON WING DESIGN

By scientific investigations conducted by the National Advisory Committee for Aeronautics to determine the distribution of air loads imposed on airplane structures in flight, it is now possible so to design airplane wings as to give requisite strength with minimum weight.

For convenience in evaluating the saving thus made possible in the annual operating costs (disregarding savings in production costs) the single-engine commercial airplanes have been estimated at 5,000 pounds each and multiengine commercial airplanes at 15,000 pounds each.

	Pounds
5,000-pound airplanes, 453, at 270 pounds saved per airplane	123,000
15,000-pound airplanes, 199, at 610 pounds saved per airplane	122,000
Gross weight saved on commercial airplanes operated in 1932	245,000

Annual saving, at $4.02 per pound per annum, $984,900.

USE OF N. A. C. A. 2415 AIRFOIL

Considering a typical cabin monoplane with N. A. C. A. 2415 wing installed in lieu of the previous conventional wing there would be, at a cruising speed of 120 miles per hour, a reduction in total drag including wing and control surfaces of 17.28 pounds per airplane.

	Cents
Cost per pound of drag per hour of flight	3½
Savings per hour of flight at 17.28 pounds drag saved per airplane	60

Possible savings per annum at 60 cents per hour of flight per airplane, based on number of airplanes used during 1932:

Army	$222,752
Navy	148,647
Total savings to Government	371,399
Commercial airplanes	257,358
Total savings per annum	628,757

OPERATION OF ENGINES WITH LARGE VALVE OVERLAP

The National Advisory Committee for Aeronautics through researches conducted at its laboratories at Langley Field, Va., has made possible an 18 per cent increase in power of aircraft engines by using large valve overlap combined with fuel-injection principle. Based on the aircraft engines in use in the United States during the fiscal year 1932, this principle makes possible an annual economic saving of $598,742, arrived at as follows:

Power saved—per cent	18
Total brake horsepower-hours developed during year on aircraft engines of all types	413,724,750
Assuming liberal estimate of 1,000 hours' operation per year, the horsepower developed was—horsepower	413,725
18 per cent of above horsepower saved—do	74,470
Equivalent weight saved at rate of 2 pounds per horsepower—pounds	148,940
Economic value of weight saved at $4.02 per pound per annum	$598,742

Mr. WOODRUM. The United States Shipping Board is given in this bill $3,202,744. Of this sum, the sum of $2,875,000 is for the emergency shipping fund. On the face of it, that looks like a large increase over last year's appropriation, and, of course, in dollars and cents it is, but, periodically we appropriate money to go into this operating deficit of the Shipping Board. The statement which you will find on page 16 of the report shows that the operating deficit of the Shipping Board is year by year getting smaller and smaller.

THE EMERGENCY FLEET APPROPRIATION

The Emergency Fleet appropriation is made up of a direct appropriation of a definite sum of money from the Federal Treasury, together with the appropriation of indefinite amounts from the several funds of the Shipping Board. These funds are:

(A) The amount of operating funds on hand at the beginning of the fiscal year.
(B) Under this head is carried the direct appropriation from the Treasury.
(C) Operating receipts.
(D) Such amount of the proceeds of sales as is necessary to meet liquidation expenses.
(E) Interest on bank accounts.

In order to compare the appropriations in different years for the Emergency Fleet operations it is necessary to strike a total of the sums estimated to become available under each of the above heads. Such sums are for each of the years indicated:

	1933	1934
(A)	$16,100,000	$8,600,000
(B)		2,875,000
(C)	1,338,500	864,200
(D)	1,500,000	1,000,000
(E)	20,000	5,000
Total	18,958,500	13,344,200
Deduct 1934 from 1933	13,344,200	
Reduction, 1934 under 1933	5,614,300	

OPERATING DEFICIT

The operating deficit of the fleet for the past five years, including the estimated deficit for 1934, has been as follows:

1930	$10,359,213.18
1931	9,294,229.43
1932	8,430,705.82
1933	5,819,971.00
1934	5,211,600.00

The estimated operating deficit for next year is thus $608,371 less than that for the current year.

This year we miss our old friend, the United States George Washington Bicentennial Commission. [Applause.] It is not here any more. Now, I want to put into the RECORD a few facts.

We have appropriated for the bicentennial commission $1,222,770. That sounds like a lot of money, and that is a lot of money, and I am going to do something now that our esteemed colleague, the gentleman from New York [Mr. BLOOM] has never wanted done in connection with this activity. I am going to tell you something about what the Government has gotten out of this thing in dollars and cents. The sale of the special issue of souvenir stamps, issued for the bicentennial commission, will be appreciably more than our total appropriation for the activity. It is already more than the appropriation, and it will run to $1,500,000 when they are through. Bear in mind, that is for the sale of souvenir stamps which the Government is not called upon to render any service for at all. It does not have to carry a letter for it.

I shall ask unanimous consent at this point to further extend my remarks by inserting in the RECORD a short statement of the George Washington Bicentennial Commission.

The CHAIRMAN. Without objection it is so ordered.

There was no objection.

Mr. WOODRUM. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

STATEMENT OF THE APPROPRIATIONS AND ESTIMATES FOR THE GEORGE WASHINGTON BICENTENNIAL COMMISSION

The total of the Budget estimates for the George Washington Bicentennial Commission is $1,690,360. The total of the appropriations is $1,222,770.

The estimates and appropriations by years are set out in the following table:

APPROPRIATIONS		ESTIMATES	
1930	$20,500	1930	$20,500
1931 (in second deficiency act)	362,075	1931 (H. Doc. 409)	364,875
Deficiency (2d)	77,000	Deficiency (H. Doc. 730)	87,560
1932	338,195	1932	338,195
Deficiency (1st)	225,000	Deficiency (H. Doc. 169)	427,000
1933	200,000	1933	452,230
Total	1,222,770	Total	1,690,360

Profits on the sale of bicentennial commemorative stamps are estimated to be from $1,000,000 to $1,500,000, as set out in the attached letter from the Bicentennial Commission.

SURVEY OF THE WORK DONE BY THE UNITED STATES GEORGE WASHINGTON BICENTENNIAL COMMISSION

In order to carry out the established program in an orderly and time-saving manner, the work of the commission was divided into various departments. It should be remembered that the object of the commission was not to concentrate activities in any one place but to carry the celebration to the people in their own homes and communities. Also, every suggested program and event was based upon the principle of strict economy. As briefly as possible this is a summary of the work of each department.

DEPARTMENT OF STATES, CITIES, AND TOWNS

Through this department were organized cooperating commissions and committees in every State, city, and town in the United States, as well as in the Territories. Special committees were also organized among the churches, fraternal and patriotic organizations, agricultural, civic bodies, etc. At the close of the celebration period, Thanksgiving Day, 1932, there were actively engaged in the United States 43,000 States, cities, and towns committees and 658,000 committees representing special groups of people, making a total of more than 700,000 separate and distinct committees—all actually cooperating.

The work of this commission did not consist merely in organizing these committees. After they were formed it was necessary to keep in constant contact with them so that we could advise and otherwise help them in their work in their own localities and among their own groups of people. We kept these committees constantly supplied with suggestions for participation and with material with which to carry out their programs if such material was requested. We supplied such committees with historical pamphlets, plays and pageants, special colonial music, model sermons, material for speeches, local publicity material, and in an infinite number of ways we assisted in making their local celebrations successful.

It is interesting to note that more than 1,500,000 separate and distinct bicentennial programs or commemorative exercises were carried out with the commission's assistance.

DEPARTMENT OF WOMEN'S ACTIVITIES

Realizing the importance of getting the full cooperation of the women's organizations of America, a separate department was created for this work. The woman's division contacted every known woman's society in America and assisted each in creating special bicentennial committees. A total of approximately 25,000,000 women in America actively participated in the bicentennial celebration.

During the preparatory stage of the commission's activities, the woman's division prepared, and the commission published, 12 distinct programs of cooperation for the various woman's organizations. These programs, with 48 program papers as the basis for addresses and discussions accompanying them, have been in constant use by practically every woman's society and organization in America. Besides, this division was in constant contact with the directors of the various woman's clubs and, as in the case of the States, cities and towns division furnished material of every type and description so that the splendid cooperation which we received from the women of America was made possible.

Another distinct feature of this division was the cooperation with the American Tree Planting Association to have George Washington memorial trees planted throughout the land. This activity resulted in 30,000,000 George Washington memorial trees being planted from February 22 until Thanksgiving Day, each planting representing an additional memorial program.

FOREIGN PARTICIPATION

While the United States Government did not officially invite the foreign governments to participate in this celebration, it was recognized very early that thousands of societies and individuals abroad were anxious to take part in this great event. The foreign-participation division was organized to take advantage of this opportunity, but foreign-participation activity was conducted without any expense to our own Government.

Seventy-eight foreign countries participated in the bicentennial celebration and this activity entailed a tremendous amount of work, since we attempted to assist all foreign organizations in presenting suitable programs. A complete report of the most interesting work done abroad would require several volumes. It is desirable to point out just one feature. Twenty-six foreign cities have named streets, parks, and squares for George Washington. In Germany, alone, four cities have named public thoroughfares for George Washington—the same in one city in Albania, three cities in Poland, and three cities in Italy. Statutes were erected and memorials were established at many places.

Besides foreign participation, this division handled special activities such as cooperation with the business interests of America, work on the bicentennial stamps, the bicentennial quarter, the bicentennial medals, etc. A great deal of work was done by this division with the foreign embassies in Washington, thus assuring successful programs not only abroad but among the foreign-element groups in this country.

EDUCATIONAL DEPARTMENT

Special emphasis was placed on bicentennial activity in the schools with the idea of bringing before the youth of America a truthful conception of our first President instead of the legendary figure which had heretofore been presented. Also it was recognized that by infusing new patriotic spirit in the youth of our land, we were laying the foundation for patriotism in the hearts of the American citizens of to-morrow and all future generations.

A special division of school activities was appointed, and this division contacted and worked with county superintendents of public schools, private and parochial schools, as well as with State and private colleges and universities.

Through this division were conducted nation-wide contests in the schools and colleges, in declamation, essay, and oratory, on the life of George Washington. It is important to point out that these contests stimulated a tremendous amount of interest in the Bicentennial Celebration and that more than 2,000,000 American boys and girls participated. Complete records of these contests, from every State, were kept.

A number of pamphlets were produced by this division, the most important being the handbook, or appreciation course, which was prepared to guide teachers in their work of teaching the life of George Washington during the bicentennial year. Many institutions of education in America offered and carried out special courses on the life of George Washington.

HISTORICAL DIVISION

This division prepared and edited the 15 historical pamphlets on the different phases of the life of George Washington, as well as several other important documents.

Recognizing the importance of having all our work historically accurate, no piece of historical material, or release for addresses, newspapers, or magazines was issued without the approval of the historical division. When one realizes the tremendous amount of written material distributed by this commission, and when it is seen how few and minor were the errors from a historical standpoint, we can very readily appreciate the value of this division.

All questions sent to this commission of a historical nature were referred to this division for answers. In short, every question of historic nature was left for final decision to this division.

DIVISION OF INFORMATION AND PUBLICATIONS

(Including publicity department)

In the publicity work the aim was to reach every city, town, and village of America through the newspapers, through the magazines, the radio, the movies, and every other possible form of communication.

From January, 1931, to December, 1932, this division actually wrote and distributed more than 3,500,000 words of material.

When we understand that this number of words is equivalent to 475 pages of paper like the New York Times, the tremendous output of this division can be realized. Articles for newspapers and magazines, speech material for radio programs or local addresses, motion-picture scenarios, and special articles were prepared and contacts made and established with the great press associations, newspaper feature syndicates, special correspondents, editorial writers, etc.

Besides the written words, this division sent out thousands of photographs, mats, and cuts of various pictures of George Washington and historical places, all for reproduction purposes.

All matters of a general nature were referred to this division and the letters of reply, for this division only, ran as high as 3,830 a month. To show the effect of this work it should be noted that in November, 1930, 958 clippings were received, while in the month of March, 1932, 122,308 clippings were received, a gradual increase throughout the period. It was necessary to have these clippings in order to follow closely the character of material most useful to the press.

Besides, this division took care of poster distribution. One million copies of the Athenaeum poster were sent to the school rooms of America, 50,000 flag charts were sent to libraries and other institutions, 100,000 copies of the Uncle Sam poster were sent to junior organizations, and some 25,000 Masonic pictures were distributed. This division is now compiling, editing, and arranging the final report of the commission in about nine volumes of approximately 750,000 words to the volume.

PLAYS AND PAGEANTS

Under the direction of the plays and pageants division, 19 plays and 13 pageants were written and published. These plays and pageants were printed or mimeographed for distribution and were presented by schools, churches, dramatic societies, civic organizations, etc., throughout the United States.

It is still impossible to determine the number of such productions. Besides this work, a costume book was prepared, as well as a pamphlet on how to present a pageant. These two books aided materially in encouraging dramatic programs throughout America, and in many foreign countries.

MUSIC DIVISION

The music of the colonial period was selected and a number of pamphlets containing colonial music were prepared. This material proved to be of tremendous help in planning and carrying out Bicentennial celebrations. Besides, one million copies of the George M. Cohan song were distributed, the choral ode, the Song of Faith, by John Alden Carpenter, and a special George Washington Bicentennial March by the late John Philip Sousa were distributed to aid in special programs.

The records of this division will be a valuable addition to the material and knowledge of our early American music.

PRINTING DIVISION

The services of a man with many years of experience were obtained in the getting out of our printed material. All material was printed in a high-grade manner at the very lowest possible cost. I can safely say that by creating this very small division the commission expedited the printing of all its material, insured a high degree of accuracy, and saved many thousands of dollars in the actual cost of printing. Besides the actual printing, this division took charge of making all cuts and art plates, and read and re-read all proofs. Every effort to keep the price to the minimum and at the same time present high-grade work was made.

DISTRIBUTION DIVISION

Approximately fifteen million pamphlets were sent out by this comparatively small department. In every case material was sent only upon written request. No attempt was made to distribute material in any wholesale manner. Records of every piece of literature which was sent out were kept. All the actual work of packing and mailing was done in this department and the dispatch with which orders were sent out, considering the size of the force working in this department, was remarkable.

ADMINISTRATION DEPARTMENT

This department, of course, kept all the records of employees as well as all the acts of business transacted by the commission. At no time did the commission have any difficulty with the Government Accounting Office. Every detail of this work was carried out in compliance with Government regulations. At one time some 10,000 letters a day were handled by this office. Now it receives from 200 to 300 letters a day.

Additional activities of this commission, not mentioned above, were carried out. Among them, the most important, of course, was the preparation and publication of the Definitive Writings of George Washington, edited by Dr. John C. Fitzpatrick. This work has progressed steadily since it was authorized by Congress. Of the estimated number of 25 volumes of this set, 6 have been completed. Up to this time the commission has been able to take care of the expenses incident to the publication of these six volumes and plans to continue this work as long as its appropriation holds out.

The exhibit of original portraits of George Washington and his compatriots, gathered from owners in many parts of this country and abroad, was also an outstanding achievement. This remarkable exhibit was shown at the Corcoran Gallery of Art and lasted for eight months. It was visited by hundreds of thousands of American people from all parts of the country. This project was executed without a slip-up in any particular.

Cooperation with the libraries was handled through the various departments and all the libraries of America were supplied with literature, pictures, bibliographical references, etc.

Thousands of people visited headquarters during the bicentennial period, and no matter how busy employees were these visitors were always shown around with the greatest courtesy.

The above is merely a digest of the work of the commission. To present a detailed report will require volumes.

CONCLUSION

The entire work of the United States George Washington Bicentennial Commission was conducted in a most economical manner. Every item of expenditure was carefully scrutinized and made in full accordance with Government regulations.

The personnel of the commission reached its peak in the spring of 1932, when 175 employees were on the pay roll. This number of employees lasted only a short time and gradually the personnel has been reduced until at the present time there are in the employ of the commission less than 50 people, who are necessary to the work of arranging, compiling, editing, and publishing the final reports of the commission. These reports themselves will be invaluable, not only to the Government itself but more especially to historians, students, and the children of the public schools in the years to come.

The commission does not expect to ask for any further appropriations, but has been so careful in its expenditures that it is believed that a sufficient amount is available of its past appropriations to complete its work.

Records of literature, mats, papers, programs, historical publicity, etc., will be contained within the nine volumes of the history of the commission. This report will also contain a chronological history of the commission itself, with a well-digested and fairly complete record of local activities in the United States and foreign countries. This printed material will be a storehouse of information concerning George Washington and his times not available in any other printed form.

Already many requests have been received for the report and it is being so arranged and indexed that volumes of special interest to libraries will be available without the necessity of the libraries themselves procuring other parts of the report.

Substantial progress has been made in the compilation of this report and many volumes of bound programs have been completed. These programs will present the work of participating groups all over the world. It is estimated that there will be more than 100 volumes of these bound programs. In addition there will be a bound collection of music, etc., and thousands of photographs of great historical value.

Those who are at present employed with the commission have been so employed from the earliest days of the commission's activities, and are, therefore, not only most available for the work of compiling the report, but are, in most cases, the only ones sufficiently familiar with details to complete the report quickly and economically.

Mr. STAFFORD. Does the gentleman know of any other easy way for the Government to make money?

Mr. WOODRUM. I may say to the gentleman that if we would further enlist the services of the distinguished gentleman from New York [Mr. BLOOM] he very probably could put on something that would help us balance the Budget. [Applause.]

Mr. MAY. Does the gentleman know of a name that is a greater advertising medium than that of General Washington, of Virginia?

Mr. WOODRUM. I may say to the gentleman from Kentucky that some of our colleagues were members of the commission, the distinguished chairman of the Appropriations Committee, the gentleman from Tennessee [Mr. BYRNS], and our distinguished friend from Connecticut, Mr. Tilson, together with some of the Members of the other body; and the people of the country and the Congress owe a very deep debt of gratitude and appreciation to these gentlemen, and especially to our colleague from New York [Mr. BLOOM], for this splendid celebration that has caused such an awakening of patriotic zeal and fervor and appreciation not only of Washington but of America and American ideals. [Applause.]

Mr. LAGUARDIA. Mr. Chairman, before the gentleman goes to another subject, will he yield for a question?

Mr. WOODRUM. I yield.

Mr. LAGUARDIA. What has become of our old friend, the sea service bureau?

Mr. WOODRUM. At the last session of Congress the subcommittee asked the Bureau of Efficiency to make a study of the sea service bureau and particularly to report to us whether or not there was any duplication of activities of the sea service bureau and the shipping commissioners of the

Department of Commerce. I have in my hand the report filed by the Bureau of Efficiency, which is very exhaustive, and which in substance says there is no duplication between the activities now being performed by the sea service bureau and the shipping commissioners, but it recommends a combination of them, saying it would likely be possible to save between $20,000 and $30,000 a year by combining these two activities.

Mr. LAGUARDIA. Is the sea service covered in a lump-sum appropriation?

Mr. WOODRUM. It has a lump-sum appropriation of about $75,000.

The committee did not disturb that item for the reason that undoubtedly in the plan of reorganization of the governmental activities, whatever it may be, that will come to us immediately we reconvene in special session; and before this bill even becomes effective, something will be done with the Shipping Board and all these activities. I shall be very pleased to have the gentleman from New York look at this report if he cares to. The Clerk has it.

Now, gentlemen, we come to the appropriation for Veterans' Administration carrying the vast sum of money that the American Government appropriates each year for its soldiers and their dependents.

I may say now what I said last year, but with more emphasis, that while it is true that this amount of money is a vast sum and a growing sum, yet, in my judgment, the Veterans' Administration is one of the most efficiently operated branches of the Federal Government. I believe the members of my subcommittee will bear me out in saying this. Our committee has found General Hines and his aides not only thoroughly versed and grounded in the fundamentals, but on the job and ready at all times to assist the committee and the Government in working out its problems, yet at the same time with a sympathetic view for the problems of the American veterans.

America has paid up to October 31, 1932, $15,701,006,409 for veterans' relief to veterans of all wars. Of this sum $5,474,054,484 has been spent on World War veterans.

It is interesting to see what some of our neighbor governments have done, because sometimes we hear complaints made of the treatment the American Government gives its soldiers and veterans. It is interesting to note what has happened in some other countries. I have a statement which I shall put into the RECORD and briefly refer to now which was given by the Administrator of Veterans' Affairs before the Joint Congressional Committee on December 10, 1932.

The question is frequently asked whether the benefits granted to ex-service men on our part is equal to or surpassed by our allies in the Great War. In this connection the following comparative figures are of interest. Statistics compiled by the War Department give the following figures for wounded casualties, exclusive of deaths:

British Empire	2,090,212
France	4,266,000
United States	234,300

The latest figures available indicative of the numbers receiving monetary benefits as a result of beneficial legislation incident to the World War are:

Great Britain	486,850
Canada	75,878
France	1,098,047
United States	776,812

These figures would seem to mean that of the ex-service men of the British Empire rated by our War Department to be wounded casualties, roughly one in four is receiving compensation, of France, one in four, while with us more than three times the number given as casualties are receiving direct monetary benefits.

As to the amounts disbursed in behalf of veterans of the World War in these three countries, I can only vouch for those of our own. Those I know to be correct. The others come from reliable sources, and I believe them to be correct. For the last fiscal year those for Great Britain were $174,802,060. For France they were $286,722,000. Our own appropriation for the year in behalf of the World War veterans was $860,635,000, and was practically all expended. Based upon the numbers reported as either dead or wounded, the annual expenditure of Great Britain, as a result of the World War, is $58 per man; of France, $51; and of the United States, $2,668.

Comparative statement of annual expenditures by United States and foreign countries for World War veterans and their dependents

	Men mobilized	Dead and wounded	This year's relief bill	Per capita based on men mobilized	Per capita based on dead and wounded
United States	4,757,240	322,497	[1] $860,635,000.00	$180.91	$2,668.66
Germany	13,000,000	6,111,862	298,690,000.00	22.98	48.87
France	8,410,000	5,623,000	286,722,000.00	34.09	50.99
Great Britain	6,600,000	3,000,000	174,802,060.00	26.49	58.27
Italy	5,615,000	1,597,000	69,853,300.00	12.44	43.74
Canada	619,636	232,045	61,123,000.00	98.64	263.41
Total for foreign countries	34,244,636	16,563,907	891,190,360.00	26.02	53.80

[1] That portion of Veterans' Administration appropriations made applicable to World War veterans for fiscal year 1932, including $312,000,000 appropriated to adjusted-service certificate fund.

NOTE.—The data used for foreign countries are taken from article appearing in the New York Times, June 5, 1932, and the information seems to be reliable. The data for United States veterans are from official information of record in the Veterans' Administration.

The above statement was made by the Administrator of Veterans' Affairs before the Joint Congressional Committee on Veterans' Affairs, December 10, 1932, and appears on pages 21 and 22 of the printed hearings.

America had mobilized during the World War 4,757,240 soldiers. Germany had 13,000,000; France had 8,410,000; Great Britain had 6,600,000; Italy had 5,615,000; and Canada had 619,636.

The per capita amount that is being spent by Germany for the relief of her veterans is $22.98 per year per veteran on the basis of mobilized strength.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. PATMAN. Will the gentleman state the wealth of the two countries, the wealth of Germany and also the wealth of the United States; also the national income of each country and make a comparison as to the ability of the two nations to pay?

Mr. WOODRUM. I may say to the gentleman from Texas that I do not believe I would care, even if I had the information now, to say anything about the wealth of America. I do not know. It depends on what is meant by wealth, as to how much wealth we have. Some of us may think we have a lot more than we really have when the show-down comes.

Mr. PATMAN. We all know what the national income is.

Mr. WOODRUM. We know what the national income is; we know the relative conditions of the two countries—$22.98 per mobilized veteran is the German amount; $180.91 is the American amount. On the basis of the dead and wounded the German per capita is $48.87 and the American $2,668.66.

Mr. PATMAN. Mr. Chairman, will the gentleman yield again right there?

Mr. WOODRUM. I yield.

Mr. PATMAN. The gentleman does not take into consideration that in Germany they have pensions for widows and orphans, and although the widow or orphan child of a World War veteran receives those benefits they are not charged up against veterans' benefits in that country. I do not believe the gentleman is taking those facts into consideration in his comparisons. The truth of the matter is they have doles and unemployment insurance for veterans of the World War and these benefits are not charged up against specific benefits for those veterans.

Mr. WOODRUM. Does the gentleman from Texas agree with me in this general statement, that America has been vastly more liberal with her veterans than any of her allies in the Great War?

Mr. PATMAN. The United States Government has been very generous, and I am sure the veterans are grateful; they should be grateful to the Government; but taking into consideration the ability of nations to pay, generosity should

only be extended in proportion to the ability of a nation to pay. I believe the gentleman will find that America has been no more generous than other countries.

Mr. GOSS. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. GOSS. I notice on page 30 of the report there appears the total permanent annual of $70,890,000. Now, of course, that is in addition to the amount spent on veterans, is it not?

Mr. WOODRUM. That is the Government life-insurance fund.

Mr. GOSS. No; it says "Veterans' Administration" under "permanent appropriation."

Mr. WOODRUM. That amount of $70,890,000, of course, should not really figure in the question of considering what the Government is spending on the veterans, because that amount of money has been recovered into the Treasury on premiums from life insurance.

Mr. GOSS. But that is an appropriation.

Mr. WOODRUM. It is an appropriation, but it has been collected from the veterans.

Mr. GOSS. Then out of the $80,000,000 total permanent appropriation you should deduct $70,000,000 because that has been impounded in the Treasury?

Mr. WOODRUM. That is correct.

Mr. GOSS. While I am on my feet I want to ask another question. These reappropriations on pages 21 and 23 of the report are not carried in the totals, are they?

Mr. WOODRUM. They are not carried in the totals.

Mr. GOSS. Can the gentleman inform us what the reappropriation is in reference to the arbitration and emergency board? They are not carried in the report on page 21.

Mr. WOODRUM. I think the gentleman will find that in the hearings. It is somewhat less than $80,000. I shall be glad to put that information in my remarks when I revise them.

Mr. STAFFORD. Reverting to the figures that the gentleman just gave before he was interrupted by the gentleman from Texas [Mr. PATMAN] will the gentleman amplify what the amount of $2,660 represents so far as the United States is concerned?

Mr. WOODRUM. The statement to which I have referred and from which I got the information I have given is the statement that was made before the joint congressional committee by the Administrator of Veterans' Affairs.

Mr. PATMAN. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. PATMAN. The gentleman made the statement a while ago that more than $5,000,000,000 has been expended for World War veterans alone. Is it not a fact that of that $5,000,000,000 a substantial part was for insurance that they paid themselves?

Mr. WOODRUM. Not a bit of it. That is exclusive of approximately $450,000,000 that was collected by the Government from the veterans for war-risk insurance.

Mr. PATMAN. The gentleman is just deducting the actual premium paid. Does he not think they should deduct all of it?

Mr. WOODRUM. I do not know what the gentleman means by "deduct all of it." There is a common fallacy that war-risk insurance has been paid for by the veterans. This is not true. The total liability of the Government on account of the war-risk insurance was $4,200,000,000, of which the veterans paid approximately $450,000,000.

Mr. PATMAN. They paid the premiums, though, that the Government required them to pay, and now because the Government should have a little loss there over and above the premium you think that should be charged against them and above their benefits?

Mr. WOODRUM. I am stating that of the $4,200,000,000 that the Government will pay for war-risk insurance $450,000,000 was paid by the veterans and the balance will be paid by the Government.

Mr. CHIPERFIELD. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. CHIPERFIELD. May I suggest to the gentleman that the House is intensely interested in the comment he is making on this bill. We fully realize that in the brief time allotted him he can not discuss veterans' legislation and benefits in full, and for one I would much prefer to hear him discuss the matter now under consideration by the House.

Mr. WOODRUM. I thank the gentleman. I do not object to being interrupted; in fact, I think the way we get information is through discussion, and I am perfectly willing to yield to gentlemen. I do not want any argument with any gentleman. I have no quarrel with the World War veterans. I have them in my district just the same as you gentlemen have them in yours.

I think I shall say here, at the risk of perhaps showing bad taste, there is not a Member of the House who gives more personal attention to the welfare and needs of his veterans than myself. My veterans know that I have their interests at heart; but let me also make this statement: I think we are at a crucial time in this country so far as the veterans are concerned, and what the veterans in America need to-day, both in and out of Congress, is not additional benefits so much as courageous leadership and people who will tell them the truth. I have found the veterans of my district reasonable. They are a body of patriotic men who served their country and they are responsive to leadership. They want to know the facts. They do not want any dole from the Government. They want what they think is coming to them, and, at times, they have had very bad advice.

I have no fight to make on the veterans in any way, shape, or form, but I want to give this committee, I want to give the country, and I want to give the veterans, through the medium of this discussion of their annual appropriation, such information as I can about the matter.

Mr. STAFFORD. Will the gentleman explain that $2,000 item?

Mr. WOODRUM. The statement from which I read is a statement, as I have said, which is headed:

A comparative statement of the annual expenditures of the United States and foreign countries for the World War veterans and their dependents.

It evidently does take into account the dependents. I shall read the first column. The United States had men, mobilized, 4,757,240; dead and wounded, 322,497; the annual appropriation was $860,635,000; on the basis of its mobilized troops, this was an expenditure of $180.91; and on the basis of its dead and wounded, an expenditure of $2,668.66 for veterans and their dependents.

The complete statement is in the RECORD.

Mr. HOPE. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. HOPE. The gentleman referred to the amount of five billion and some odd dollars as being the total expenditure for World War veterans. Does the gentleman have the various items that compose that total and the amount of each item?

Mr. WOODRUM. I would be pleased for each member of the committee who is interested in this matter—and I am sure we are all interested—to read the statement of General Hines before our subcommittee, beginning on page 500 of the hearings. This is a comprehensive statement, and it will take you about an hour to read it; but I do not believe you will find any question that suggests itself to you about this interesting subject that is not answered in his statement, and I think the gentleman from Kansas will find a breakdown of the figure referred to. If not, I shall be pleased to furnish it to him later.

Mr. MAY. Will the gentleman yield?

Mr. WOODRUM. Yes.

Mr. MAY. Does General Hines in this statement elaborate on the subject of the number of claims that are being improperly allowed, having reference to improper claims militating against meritorious claims? As I understand,

this is one of the important functions he is trying to perform.

Mr. WOODRUM. That is true, and a new survey is being made by the Veterans' Administration to try to find out the meritorious cases and to get rid of cases that do not have merit.

Mr. CONDON. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. CONDON. The gentleman has given us the per capita cost so far as the United States is concerned, and has compared it with Germany. Will the gentleman also give us the comparison between Canada and the United States and Australia and the United States?

Mr. WOODRUM. I have put that in the RECORD.

Mr. CONDON. Will the gentleman state now the comparison with Canada?

Mr. WOODRUM. Canada had 619,636 men under arms; 232,045 dead and wounded; and the per capita paid by Canada on veterans and their dependents, based on its mobilized troops, was $98.64, or practically one-half of the American expenditure; and, based on the number of dead and wounded, Canada paid $263.41, as against $2,668.66 paid by America.

This chart [indicating] shows the amount of money carried in this appropriation bill, direct cash money paid in benefits to the different classes of people who draw Army and Navy pensions. This covers everything except the World War.

There are 37 World War veterans who elected to file their claims under the general law. For what reason nobody understands; but they had the right and they did it. They get a smaller pension than they would get under the World War act; but they are under that plan, and about $10,000 of this amount is for that purpose.

We have four widows of the War of 1812 to whom we are still paying pensions.

We have 360 beneficiaries of the Mexican War, and you will notice that the number in each of these classes of beneficiaries is declining and the amount of the appropriation is less each year.

Of the Indian wars we have 9,346 dependents left, receiving somewhat over $4,000,000 a year.

The Civil War curve is, of course, downward. There are only 136,338 of these veterans and their dependents now living, taking something like $82,000,000 for 1934, as against $94,000,000 for 1933.

With respect to the Spanish-American War, we are paying benefits to 243,259 beneficiaries.

Of that number 196,467 were veterans and their dependents. I might say that something over 90 per cent of the living Spanish War veterans are on the pension rolls.

Mr. WILLIAMSON. Will the gentleman yield?

Mr. WOODRUM. I will.

Mr. WILLIAMSON. Can the gentleman give us the number of veterans who had service-connected disability?

Mr. WOODRUM. Approximately 10,000 out of the whole number have what we ordinarily refer to as service-connected disabilities.

Mr. STAFFORD. Can the gentleman tell us how many are widows?

Mr. WOODRUM. As of November 30, 1932, there were 196,467 veterans, 538 nurses, and dependent widows and children in different classes of 38,345 deceased veterans.

Mr. MAY. What was the total mobilization of the Spanish-American War soldiers?

Mr. WOODRUM. I have not the total number.

Mr. THURSTON. Will the gentleman yield? I think it is pertinent to explain that Spanish War veterans did not receive hospitalization until about 20 years after the war.

Mr. WOODRUM. That is correct.

Mr. MARTIN of Oregon. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. MARTIN of Oregon. Did the gentleman say that 90 per cent of the Spanish-American veterans are on the pay roll?

Mr. WOODRUM. Not 90 per cent of those mobilized but of those that are now living.

Mr. COCHRAN of Missouri. I thank the gentleman for yielding. I understood the gentleman to say that practically 10,000 of those veterans on the pension roll have been recognized as service-connection cases.

Mr. WOODRUM. Yes. In the Spanish War group.

Mr. COCHRAN of Missouri. Well, 10,000 have service-connection disabilities. Congress passed laws granting them service pensions and it was not required that they prove their disabilities to be service connected. That is the reason the number is so low. I am inclined to feel that there are closer to 75,000 who served in the Spanish War who would be able to prove beyond question their disabilities are the result of the service, resulting from what they had to eat and how they had to live, if they were required to do so to get recognition.

Mr. WOODRUM. Undoubtedly there is much force in what the gentleman says.

Mr. LEAVITT. Will the gentleman yield?

Mr. WOODRUM. I will.

Mr. LEAVITT. I am another Spanish War veteran who never applied for a pension. The gentleman's statement of the number includes those who get pensions for age as well as those who get pensions for disabilities.

I want to say that in that war the hospitalization was not only not given until many years after the war but during the war it was inadequate, and in many cases not available at all.

I saw wounded men after the fight at Santiago lying on the ground because there were not cots enough for them in the hospital at Siboney.

I was a member of a battalion, many of whom went over a month without any tents or coats and no change of underclothes. We had inadequate food. That was not unusual, and when you talk about the physical condition of these men you want to have in mind that the medical records in those days were not as they were in the last war, and many of the men having service-connected disabilities can not prove it. But those of us who were in that war know that those disabilities were the result of that service. I never applied for a pension. I was a youngster in that war and did not need it. But I am speaking for my comrades who suffered disabilities which I escaped.

Mr. WOODRUM. So much for the Army and Navy pensions. The total amount for 1934 is $219,930,000.

Mr. GOSS. Mr. Chairman, is the gentleman going to put that table in the RECORD?

Mr. WOODRUM. Yes.

Mr. MAY. Mr. Chairman, if the gentleman will permit, I have just one more question that I would like to have him develop in the course of his statement, and that is whether the record shows that General Hines has stated when the maximum pension charges based on the present trend will be reached and what it will amount to.

Mr. WOODRUM. I shall cover that.

Mr. LAGUARDIA. Did the figures the gentleman has stated include the Regular Army and Navy pensions carried in the appropriation bills?

Mr. WOODRUM. No. There is an item on this chart that I did not refer to, of the Regular Establishment. Would the gentleman like to have the figure on that?

Mr. LAGUARDIA. No, but I wanted to show that in addition to the figures that the gentleman gave, we also have the military and naval pensions, which will be carried in the appropriation.

Mr. WOODRUM. That is in the chart that I refer to.

Mr. REED of New York. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. Yes.

Mr. REED of New York. There have been rumors to the effect that many thousands of hospital records were destroyed either during their shipment over here, or were lost here or were lost over there, and no record kept, and that that has made it difficult for some men who had

service-connected disability to prove it. Has the gentleman any information upon that?

Mr. WOODRUM. I can not give the gentleman that information.

Mr. STAFFORD. And will the gentleman, in giving information as to the Spanish-American War veterans, tell us how many saw service outside of the United States.

Mr. WOODRUM. I do not have that information.

Mr. STAFFORD. It was a very small percentage.

Mr. LAGUARDIA. That is quite true, but conditions in the camps in this country were so poor that it is hardly fair to make a comparison.

Mr. STAFFORD. Oh, I recall the conditions of that time quite well.

Mr. CHIPERFIELD. If you take into consideration the official duration of the Spanish-American War, then a very large percentage of the total enlistment saw foreign service instead of a small percentage.

Mr. STAFFORD. Does the gentleman mean by that statement the service in Cuba and Puerto Rico?

Mr. CHIPERFIELD. And in the Philippines and in China.

Mr. STAFFORD. Oh, the Philippine service was a distinct service and independent of the so-called Spanish-American War service.

Mr. CHIPERFIELD. During the time it is covered by the official duration of the Spanish-American War; and during that period they saw service in China, the Philippines, and in the Boxer rebellion.

The CHAIRMAN. The time of the gentleman from Virginia has expired.

Mr. HASTINGS. Mr. Chairman, I ask unanimous consent that the gentleman's time may be extended a sufficient time in which to conclude his remarks.

The CHAIRMAN. Without objection, the gentleman's time will be extended for another hour.

There was no objection.

Mr. WOODRUM. I certainly do not want to take up that much time.

Mr. LEAVITT. Mr. Chairman, as I understand it, the official period of the Spanish-American War covered by the chart is from the breaking out of the war early in 1898 until some time, I think, in June, 1902. It includes the Spanish War as it had to do with the Cuban campaign, the expeditionary forces into the Philippines, followed by the insurrection there, and the Boxer expedition, and the China relief expedition. It includes all of those.

Mr. WOODRUM. Yes. I thank the gentleman for that. I invite your attention now to Chart No. 2—military and naval compensation. This is a chart that shows the World War expenditure in cash benefits to the veterans. The first item is disability compensation. That is the amount of money that we pay for service-connected disability. Gentlemen will observe that the curve is on the upward trend, that we have as of June 30, 1932, 363,474 awards, and that the estimated number for 1934 is 379,822 awards, with an estimated expenditure of $221,739,875.74 for service-connected disability alone.

The next is the retired emergency officers. The number of retired emergency officers is decreasing. It will be observed that we had for 1933, 6,350, and for 1934, estimated, 6,278. The appropriation estimated for 1934 is slightly larger than 1930 and for this reason:

The provisions of the economy act affected the pay of retired emergency officers, and certain deductions were made in payments made to those officers upon the theory that they were affected by the economy act. After investigation and consideration of the comptroller's office, and in the office of the Veterans' Administration, it was found that they had deducted pay from some of the officers from whom they should not have deducted it, and so the gross amount that we carry for 1934 is slightly larger. However, the actual pay roll for retired emergency officers will be on a constant decline, because the number of claims has been fixed, no more can be paid for that, and they will be smaller in number and amount each year.

Death compensation means payment made to widows and orphans and dependent parents of veterans who have died with service-connected disabilities. We are paying to dependents of 109,861 veterans who died with service-connected disabilities $39,389,836.53 for the next fiscal year.

Many of us have heard it said, "we ought to have a widows' and orphans' pension." We do have it and we have had it for years for all veterans who died of service-connected disabilities. Disability allowance is the item in the bill that is now very much under discussion—non-service-connected disability allowance, as the result of the act that was passed in July 1930. The number of claims there has gone up. It is estimated to be 520,965 for 1934, with an expenditure of $101,640,460.98. When this item came to the committee originally from the Bureau of the Budget, it called for $124,000,000 for 1934, but coincident with all of the public discussion that came up relative to this disability allowance, there was a very decided falling off in the number of claims being filed, to such an extent that the Veterans' Administration and the Bureau of the Budget felt justified in making a revised estimate for 1934, and took off something like $23,000,000 in that item.

Mr. HOPE. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. HOPE. I understand the Veterans' Administration is now going through all of these claims and reconsidering them in the light of new regulations, and that some claims which have been allowed are being taken off the roll at this time. Has that matter been considered by the gentleman's committee?

Mr. WOODRUM. That matter was considered in making this revised estimate in which they reduced their estimate over $23,000,000.

Mr. GIFFORD. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. GIFFORD. With reference to the $221,000,000 in connection with service-connected cases, is that likely to be constantly increasing or will it be lessened in amount? As time grows later from the war they are not able to connect them so readily.

Mr. WOODRUM. It will increase until 1946, when it will reach $267,100,000.

Mr. GIFFORD. I would like to ask the gentleman if he favors this sort of thing, to review these cases, wherein the Congress told them to give the presumption to the soldier who perhaps did not have sufficient evidence to actually prove service connection, and place him on the roll; and then 8 or 10 years after that, under review, under a new set of men to pass upon it, cut him off and say that they have now finally decided, after 8 or 10 years, that this was really not a proper service-connected case.

Mr. WOODRUM. I think the gentleman from Massachusetts [Mr. GIFFORD] misunderstands the observation of the gentleman from Kansas [Mr. HOPE]. That is not the review the gentleman was speaking of.

Mr. GIFFORD. I understand that. I am bringing up another sort of review.

Mr. WOODRUM. The Veterans' Administration, under the organic law, has a right, whenever a case is before it, to review ab initio, and if subsequent facts develop which convince the bureau that service connection was originally granted under a misapprehension, or contrary to the facts, they will have the right to break service connection; but I will say that that is a very rare occurrence.

Mr. GIFFORD. I have had that occurrence, and it seems to me it is a repudiation of a former finding.

Mr. WOODRUM. I quite agree that there should be most compelling reasons and most convincing proof. However, that is a very rare occurrence. The gentleman from Kansas [Mr. HOPE] was speaking of a general survey that the Veterans' Administration is now making of the disability-allowance cases, in which a great many of them are undoubtedly going off the rolls, for the reason that under the law if a man had a 25 per cent permanent disability he was entitled to go on the rolls for $12 a month. It was found in the administration of that law, in the medical examina-

tions, very often disabilities were combined. A man would have slightly defective vision and other minor disorders. All of them added together would make 25 per cent disability. There are very few mature men who could not find 25 per cent disability if they were all added together. But under the new regulation, I do not think it is so much a new regulation as it is enforcement of existing regulations.

Mr. GIFFORD. Was the gentleman on the floor and listening the other day when I suggested that my State had 1 out of every 9 of its soldiers on the pay roll, so to speak, while other States had 1 out of every 3 of its soldiers under this disability connection?

Mr. WOODRUM. I did not hear the gentleman's statement.

Mr. GIFFORD. Well, did the gentleman know that was true?

Mr. WOODRUM. No. I did not know that.

Mr. GIFFORD. Would that not be a matter for the committee to investigate at those particular places where so many are on the rolls?

Mr. WOODRUM. No. This is a subcommittee of the Committee on Appropriations. The House has a legislative committee. In addition to that, there is a special committee set up by the two branches of Congress that is giving careful thought and study to that problem.

Mr. BOILEAU. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. BOILEAU. By what right can the Veterans' Administration make a regulation which in effect changes existing law, to the effect that a person must have at least one major disability of 20 per cent? Is that the existing law?

Mr. WOODRUM. No. I do not think so. In passing the disability allowance act, as most of the other pension acts or veteran relief acts, there was left to the administration authority to formulate rules and regulations. The Congress said that the veteran who was permanently disabled to 25 per cent or more should have certain benefits. The Veterans' Administration in the beginning was somewhat liberal in saying what should constitute 25 per cent permanent disability. Now they have tightened up on it, and I think it is within their authority to pass such regulations which, in spirit, carry out what Congress meant to do in the act.

Mr. LAGUARDIA. Will the gentleman yield right there?

Mr. WOODRUM. I yield.

Mr. LAGUARDIA. It seems to me that if the Veterans' Administration originally had carried out the intent of Congress on service-connected disabilities, and particularly on combat disabilities, we would never have been confronted with the disability law which was passed. I am always willing to accept the judgment of the administrator on any non-service-connected disability, but it seems to me, when we come to a combat disability, where the veteran has been wounded in service or crashed in combat, the veteran should be given the benefit of the doubt, and that would cure a great many of the troubles.

Mr. STAFFORD. If the gentleman will permit, in the hearings before the Committee on Military Affairs at the last session it was stated positively that there was no intention on the part of any executive officer of the Veterans' Administration in any way to curtail compensation for real combat disability.

Mr. WOODRUM. The history of this disability act is interesting to those of us who were here during that time to recall. It will be recalled we had under consideration a bill reported by the Rules Committee for the purpose of liberalizing the World War act, particularly for the purpose of bringing in certain cases that were obviously service connected but proof of which was hard to secure. We got it into the House. After a great many amendments it was adopted. The bill was vetoed, or a veto was threatened, I have forgotten which, and as a compromise the disability allowance act came into being.

Mr. RANKIN. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. RANKIN. The truth is that the bill we had before the House went to the Senate. The Senate eliminated the objectionable amendments the House had added. When the bill came back to the House it was finally passed and, if anything, was a better bill from the Government's standpoint than it was when it originally passed the House, but it was vetoed by the present President. In order to sustain that veto it was agreed on the part of those who were in charge of the legislative program at that time that they would sustain the veto and pass another bill. Not one man out of fifty had read the bill that finally passed, but they brought it in after the veto was sustained and passed it under suspension of the rules. That is the present disability allowance law. That is how the bill got to be a statute. We had only 40 minutes in which to read and debate a very lengthy bill.

Mr. WOODRUM. Mr. Chairman, I shall refer briefly to another chart which I think will be found interesting. I had the same chart last year showing the hospital facilities, and patients admitted beginning with the fiscal year 1925 and running to the year 1932. Service-connected cases are indicated by the black-and-gray column.

You will observe that in 1932 there were some 28,000 service-connected cases admitted for hospitalization with about 18,000 remaining. It will be noted that the number of service-connected cases remaining in the hospitals has been practically static, for a long time through 1928, 1929, 1930, and 1931.

The black and vertical gray lines indicate the non-service-connected cases and that tells its own story; that is veterans admitted to hospitals for hospital treatment of disabilities not connected with the service.

There is a total admission in 1932 of some 148,000 or 149,000 cases, with an average number remaining of something like 42,000.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. STAFFORD. Is the chart limited to only World War veterans, or does it cover veterans of all wars?

Mr. WOODRUM. It shows all wars.

Mr. THURSTON. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. THURSTON. In the gentleman's opinion, would not the extensions for the years 1931–32 be chargeable to the adverse economic situation, veterans being unable to pay for hospitalization?

Mr. WOODRUM. Undoubtedly that enters into it.

Mr. RANKIN. Will the gentleman give us the comparative cost of this service?

Mr. WOODRUM. I will come to that a little later.

Chart No. 4 shows an interesting study. I will not take much time in discussing this. It shows a division of the different types of cases in the hospitals and you will observe the total, of course, compares with the other charts I have given here. It shows a pretty even distribution of the neuropsychiatric, tuberculosis, general, hospital, and domiciliary patients remaining in the hospital.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. STAFFORD. Can the gentleman give the present capacity of the hospitals and the present number housed in hospitals compared with the capacity?

Mr. WOODRUM. The Government has now remaining in the hospitals as of November 30, 1932, 45,136 veterans. That is divided between 325 institutions.

There are 70 Veterans' Bureau Hospitals, 18 Public Health Hospitals, 17 Navy, 8 Army, 2 Department of the Interior, and State and civil institutions, 210, making a total of 325 institutions, having 45,136 veterans remaining. Now we have available beds for something like 68,000 veterans, including the domiciliary care in the soldiers' homes.

Mr. ALLGOOD. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. ALLGOOD. Is it not a fact that the overhead is

about the same regardless of the number of patients in the hospitals?

Mr. WOODRUM. Practically. The per diem per bed is what the gentleman has in mind?

Mr. ALLGOOD. Yes.

Mr. WOODRUM. That is practically the same.

Mr. ALLGOOD. We have the physicians and the nurses.

Mr. WOODRUM. Yes.

Mr. ALLGOOD. So the increase in the number of patients does not materially increase the cost?

Mr. WOODRUM. Yes; as to personnel. Of course, you need more assistants, more doctors, and more nurses when you have more patients, but not relatively.

Now, the gentleman from Mississippi asked, or some one asked me the cost. It is estimated that in this appropriation of nearly $1,000,000,000 that approximately $55,000,000 will be for hospitalization and approximately $33,000,000 will be for cost of service-connected cases.

The cost per capita per bed is an interesting study in this hospital situation. The Veterans' Administration utilizes about 10,000 beds in Army, Navy, and Public Health hospitals. The care per day per patient averages at the rate of about $3.50 for Navy and Public Health Service hospitals, and $3.85 for Army hospitals. In the case of Veterans' Administration hospital that runs itself, the cost is $3.44. I think this is eloquent testimony to the efficient operation of the Veterans' Administration hospital.

Mr. LUCE. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. LUCE. Has the gentleman made any comparison of the cost per bed in the bureau hospitals and in the State institutions?

Mr. WOODRUM. I do not have information as to the comparative cost.

Mr. LUCE. I would suggest to the gentleman it would be very enlightening to him if he would find that out. He would discover, for example, that on the face of it, at any rate, the administration in some of the State hospitals is distinctly cheaper than it is by the United States, and with practically as efficient treatment. May I cite to the gentleman, for example, that the meats served in veterans' hospitals must be of better quality than the gentleman will be able to buy at the best hotel in this city. He will find that in the matter of the number of orderlies, the orderly being the equivalent of a nurse or the attendant in the hospital, the number of orderlies in veterans' hospitals is strikingly in excess of the number found necessary in the State hospitals. Can the gentleman suggest who would be the proper person to bring this to the attention of Congress?

Mr. WOODRUM. Obviously, the legislative committee is the proper forum, I should think.

Mr. LUCE. May I inform the gentleman that the legislative committee has not been called together at this session for any purpose whatever. How can the Veterans' Committee act unless it is assembled?

Mr. WOODRUM. I would suggest to the gentleman from Massachusetts that next year he come before the Subcommittee on Appropriations and give us the benefit of his sound judgment and fund of information and we will go into the matter.

Mr. RANKIN. Will the gentleman yield?

Mr. WOODRUM. Yes.

Mr. RANKIN. In reply to the gentleman from Massachusetts [Mr. LUCE], I desire to say, as chairman of the Committee on World War Veterans' Legislation, I have not called the committee together for any hearings for several reasons. In the first place, I have been at home sick nearly ever since Congress convened. Another reason is that you have a joint committee investigating veterans' legislation, and that joint committee is continuously holding hearings and making investigations on the very matters that would be before the Veterans' Committee. A further reason is that not a single member of the Veterans' Committee—and the gentleman from Massachusetts [Mr. LUCE] is a member of the committee—not a single one of them has asked for a hearing on any legislation before the Veterans' Committee.

Mr. LAGUARDIA. Will the gentleman yield in connection with the statement made by the gentleman from Massachusetts?

Mr. WOODRUM. Yes.

Mr. LAGUARDIA. It may be true that the per capita per bed cost in some State institutions is less than the $3.44 cost in the veterans' hospitals; but I have personally visited State institutions where a part of the establishment was set aside for Veterans' Bureau cases, and there was no comparison in the food or in the treatment or in the equipment which the veterans received, being paid from funds of the Veterans' Bureau, and the treatment given to the charges and patients of the State in such State institutions.

Mr. WOODRUM. I think the gentleman from Massachusetts will find that the cost per bed per patient compares favorably, when we consider what we get.

Mr. LUCE. Mr. Chairman, will the gentleman yield?

Mr. WOODRUM. Yes.

Mr. LUCE. Will the gentleman permit me to absolve my own State from any such imputation as the one that my friend from New York makes? I know that the treatment in the neuropsychiatric hospitals in my own State can not reasonably be asked to be better. It is generous yet economical. I would suggest to the gentleman that he take the figures as to the cost of maintaining hospitals in that State, at least, and compare them with the figures of the Veterans' Administration.

Mr. LAGUARDIA. And yet the gentleman complains that the specifications of the Veterans' Bureau call for wholesome, choice cuts.

Mr. LUCE. I maintain it is absolutely absurd that the specifications should require a higher grade of food than he or I can buy in any hotel in the city of Washington.

Mr. WOODRUM. It is interesting to note——

Mr. RANKIN. Mr. Chairman, I can not let that statement go unchallenged.

Mr. WOODRUM. I want to be courteous, but I hope the gentlemen will not get into any argument now, because I want to go on.

Mr. RANKIN. I just want to answer the statement of the gentleman from Massachusetts [Mr. LUCE]. The statement that the food served to the disabled veterans is better than you can buy in any hotel in Washington is absurd, as every Member of the House ought to know and does know.

Mr. WOODRUM. This [indicating] illustrates an interesting fact in connection with the thought that has been advanced by certain gentlemen that the Veterans' Administration ought to utilize the facilities of private hospitals.

The average cost to the Veterans' Administration for hospitalization in private institutions is approximately $7.76 per patient. It takes care of its own veterans in its own institutions at $3.44 a day. Of course, this includes board, lodging, medical fees, and everything else.

Mr. COCHRAN of Missouri. Does the gentleman mean to say that the Veterans' Bureau tells his committee that it can not get the private hospitals to take care of veterans for less than $7-plus per day?

Mr. WOODRUM. That is inclusive of all medical treatment, surgical fees, and everything.

Mr. COCHRAN of Missouri. There must be something wrong in the way they put the items together, because I know they have a contract in my city that calls for about one-half of that amount.

Mr. WOODRUM. You are speaking of the contract rate, and my figures include the cost of operations, nurses' fees, anæsthetics, and so forth.

Mr. CLAGUE. Does the figure of $3.44, to which the gentleman referred, take into consideration the overhead, cost of buildings, and so forth?

Mr. WOODRUM. That is the cost of personnel, food, medical and surgical treatment, maintenance of buildings, and all costs of operation.

Mr. COCHRAN of Missouri. That must be the cost when applied to some one who needs surgical treatment.

Mr. WOODRUM. It is the average.

Mr. COCHRAN of Missouri. How about the mental cases?

Mr. WOODRUM. The mental cases cost less. The average, $2.45 per day.

Mr. COCHRAN of Missouri. I was referring to mental cases. They have an agreement with the city of St. Louis to take care of their patients, and I know it is just a little over $3.

Mr. WOODRUM. Now, referring to the chart, briefly, because I want to speedily conclude, this chart shows the salaries. This is an interesting study, and I shall put it in the RECORD.

In the administrator's office during the next fiscal year they have cut out the special representatives that the administrator had in the field, and that work is absorbed by the budget officer through his present field representatives.

National homes have had an increase in appropriation because of the net increase of 7,500 beds. They had an increase of 1,271 personnel to take care of the increase of 7,500 members. Now, although the work had increased from June 30, 1931, to June 30, 1932, to the extent of 38 per cent more claims filed, yet the central office was able to get along with the same appropriation.

The hospitals show an increase because of bringing in new hospital facilities requiring additional personnel. Practically the whole increase for the Veterans' Administration is shown in the increased facilities for hospitals.

Mr. GRISWOLD. Will the gentleman yield?

Mr. WOODRUM. Yes.

Mr. GRISWOLD. Was there any attempt to ascertain what profits the Government derived from furnishing meals and quarters in hospitals?

Mr. WOODRUM. No.

Mr. GRISWOLD. Is the gentleman aware that the Government, in the veterans' hospitals, derives a profit?

Mr. WOODRUM. I was not aware of that fact.

Now, this chart here is a recapitulation of the other chart which I have shown you. It shows an appropriation of $110,538,514 for 1934, which is on its face about $5,000,000 less than in 1933, but you must take into account the 8⅓ per cent reduction which will make these figures about one million and a half dollars more for 1934 than it was for 1933.

Mr. SWING. Will the gentleman yield?

Mr. WOODRUM. I will.

Mr. SWING. When the suggestion was made to consolidate the various activities, General Hines said he would be able to save a large sum of money. Did the committee have before it the problem of multiplying the machinery by which decisions are made by which the money is administered, because it seems there are wheels within wheels, and the appealing from one board to another.

Mr. WOODRUM. We did not.

Mr. LUCE. Will the gentleman allow me one further inquiry?

Mr. WOODRUM. Certainly.

Mr. LUCE. In view of the increasing purchasing power of money, did this committee give any thought to the fact that if the veterans' appropriation had been cut 10 per cent, nevertheless every veteran who received relief would still be receiving more purchasing power than at the time the laws were enacted giving various forms of relief?

Mr. WOODRUM. We have given that consideration, and I will cover it in my remarks.

Mr. COLTON. Will the gentleman yield?

Mr. WOODRUM. I will.

Mr. COLTON. Before we leave that point, I want to say that there has been a substantial saving covering the period of the administration of the law of approximately $6,000,000.

Mr. WOODRUM. General Hines's statement shows that savings were effected in the administration parts of the Veterans' Bureau, so that out of the 1932 appropriation they turned back six and a half million dollars.

Mr. COCHRAN of Missouri. As a matter of fact, since the Veterans' Bureau was merged with the others, the Congress has passed many additional laws affecting the veterans that required them to employ a great many more people.

Mr. WOODRUM. Yes. So much for the present, and I shall not follow this chart through because we have already touched it in these other charts. Some gentleman asked me an interesting question of what we might expect in the future. The Veterans' Administration statisticians have made a very careful and thorough study of this problem. They find that, based on the present law, if there are no changes made in the laws, in 1958 there will be 2,832,000 veterans on the rolls, and that the total expenditure will be $1,081,200,000 per annum. That study as applied to the nonservice group alone, and the peak in number of veterans, 1,963,200, would be reached in 1955, with a peak in expenditures of $656,000,000 a year in 1963.

Mr. MARTIN of Oregon. What would be the total paid?

Mr. WOODRUM. I have already stated that, $1,081,200,000. That includes everything. That is the total expenditure. That is in 1958. The whole picture will reach a peak in 1958, with an estimated expenditure of $1,081,200,000.

Mr. ALLGOOD. That is practically what it is now.

Mr. COCHRAN of Missouri. And further assuming that the Congress passes no additional laws.

Mr. WOODRUM. That is correct.

Mr. RANKIN. What is the cost to-day, including the World War, the Spanish War, and the Civil War veterans, and the widows and orphans of all put together?

Mr. WOODRUM. Nine hundred and forty-five million nine hundred and eighty-eight thousand six hundred and thirty-four dollars.

Mr. RANKIN. So it will be approximately $100,000,000 more than it is to-day?

Mr. WOODRUM. Oh, no. The present bill carries $234,000,000 for adjusted-service certificates and war-risk insurance. These will have been paid out by that time, so the actual increase reflected is approximately $369,000,000.

Mr. RANKIN. And those are speculative figures of what would be the cost in 1958?

Mr. WOODRUM. Based on experience. It is an actuarial study for whatever it may be worth.

Mr. COCHRAN of Missouri. The gentleman will eliminate in that, so far as the veterans are concerned, the amount appropriated for civil-service retirement.

Mr. WOODRUM. This is the figure, $945,988,634.

Mr. COCHRAN of Missouri. And the other is separate and distinct?

Mr. WOODRUM. Yes.

Mr. BACON. And what is the comparative figure for this year? What will be the total paid in 1958?

Mr. WOODRUM. I have not that study. I have a chart that shows that, but it is not handy.

Mr. ALLGOOD. That eliminates the Spanish-American and the Civil Wars?

Mr. WOODRUM. It is for everything.

Mr. RANKIN. Does that include those Army and Navy pensions?

Mr. WOODRUM. I said that will be the payment in 1958.

Mr. RANKIN. If you add this Army and Navy pension, they would amount to $219,930,000, would they not?

Mr. WOODRUM. Yes.

Mr. RANKIN. And the military and naval compensation, $372,800,000. Does that include the Spanish War veterans?

Mr. WOODRUM. Yes; the Army and Navy pensions include everything except the World War.

Mr. RANKIN. Does that include the Civil War?

Mr. WOODRUM. Yes.

Mr. RANKIN. Then what is the World War compensation to-day?

Mr. WOODRUM. The military and naval compensation is the World War.

Mr. RANKIN. All of it is included in those two items?

Mr. WOODRUM. Military and naval compensation is entirely World War, and Army and Navy pensions is the Spanish American and all of the other wars, with the exception of $10,000 World War pensions.

Mr. DOUGLAS of Arizona. Just to clarify one point: I understand General Hines reported that military and naval compensation by 1958 would cost $1,081,000,000 annually.

Mr. WOODRUM. That includes the Army and Navy pensions also, as I understand it.

Mr. DOUGLAS of Arizona. I thought that was just the World War veterans.

Mr. WOODRUM. No. That includes all expenditures that will be made on that date under existing laws.

Mr. DOUGLAS of Arizona. Because there is quite a difference as to the base.

Mr. RANKIN. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. RANKIN. Does this figure also include the retirement pay of Army and Navy officers?

Mr. WOODRUM. No, sir.

Mr. RANKIN. What does that amount to?

Mr. WOODRUM. Only the retired emergency officers.

Mr. RANKIN. No. Not only the retired emergency officers but those in the Regular Establishment.

Mr. WOODRUM. Well, that figure does not come into this bill, and I do not know.

Mr. RANKIN. I was going to ask what it would amount to in 1950 if they are allowed the same increase as they have had in the last 10 years.

Mr. WOODRUM. Well, it will be plenty.

Mr. STAFFORD. The retirement pay is rather steady, because retirement is given them when they reach the age of 64, and they do not usually live a great time after that, or else they become Members of Congress.

Mr. WOODRUM. Now, in conclusion, I have tried to bring you information. The gentleman from Massachusetts asked if the subcommittee had considered the question of whether or not, in view of the fact that these benefits when originally granted were on the basis of certain conditions, and that conditions had now changed—whether the committee had considered any question of temporary reductions. The subcommittee and the full committee, at my suggestion, considered the question of whether or not, in view of the present economic crisis which the country faces, in view of the fact that the Government has been liberal and will continue to be liberal with its veterans, and in view of the absolute necessity of reducing the cost of Government and the almost impossible task of trying to do it if you do not touch the biggest item in the entire Federal Budget, it would not be reasonable to ask the veterans of all wars, and all of their dependents to take a temporary 10 per cent reduction for one year, which would have given us in this bill a reduction of $58,319,750.

Mr. RANKIN. Will the gentleman yield?

Mr. WOODRUM. I yield.

Mr. RANKIN. Does the gentleman include in that the retired Army officers?

Mr. WOODRUM. Oh, yes. Emergency officers.

Mr. RANKIN. Of the Regular Establishment?

Mr. WOODRUM. They are not in this bill.

Mr. RANKIN. I understand, but if that policy is to be pursued, those men whose salaries have been vastly increased, even since the World War, and whose retirement pay is out of proportion to the pay these boys are getting, ought to be given similar reduction.
